Bardonia subcommittee

Tax Lot(s): 58.11-3-1*

Owner: Nanuet Fire Engine Company #1
Zoning: R-15
Size: 1 Acre

This property is the northern portion of an L-shaped acre in R-15 zoning. The northern corner is occupied by a 30' x 50' block building, formerly used for public assembly by the Bardonia Men's Club, one of Clarkstown's first civic associations.

Attributes:

- Nominated by the public
- Its current use is a burden to the neighborhood. The parcel was poorly planned. The club building is aging and impractical because there is no off-street parking.
- The building is not well kept and its current use is archaic to the current neighborhood.
- Purchase will provide screening to surrounding residences not adequately protected in the substations/Men's Club Site Plan.
- Protection will create a neighborhood park of low maintenance and low liability
- Has potential as a site for a memorial to the original Bardonia Men's Club and its civic-minded founders; Bardonia, its Elementary School, its veterans and firefighters.
- Requires minimal cost for demolition and park-site development

Drawbacks:

- Property may be encumbered by long-term lease to the Bardonia Men's Club

*Owner wrote to the Town on 10/19/00 requesting that this parcel be removed from consideration.

PRIORITY RECOMMENDATIONS
MADE BY THE CLARKSTOWN OPEN SPACE ADVISORY COMMITTEE

- Existing Parks and Open Space
- Nominated Parcels

- ★ = Approximate Parcel Location

Nanuet Fire Engine Co #1 Parcel 58.11-3-1

*Owner submitted a written request to the Town that this parcel be removed from consideration on 10/19/00.

Central Nyack Subcommittee

Tax Lot(s): 65.11-3-46
Owner: Blake, Mary Bradley
Zoning: R-22
Size: 9.6 Acres

Attributes:

- This parcel is part of a much larger project that will connect open space and parkland belonging to PIP, Orangetown, Clarkstown and the County.
- It is adjacent to the 25-acre piece just linked to Schuyler Park with a state grant
- Connects the Long Path in Clarkstown with Buttermilk Falls and PIP land.
- Shows Clarkstown's commitment to this broad-based effort
- Excellent candidate for a State grant
- County Budget and Finance Committee has recommended purchase of adjoining land from Blake family and Nyack School District to protect the Long Path.

Drawbacks:

PRIORITY RECOMMENDATIONS
MADE BY THE CLARKSTOWN OPEN SPACE ADVISORY COMMITTEE

Congers subcommittee

Tax Lot: 35.18-1-4*

Owner: Davies, Niles M JR and Janet M

Zoning: R-22/M

Size: 79.5 Acres

Attributes:

- Large size parcel
- Central location
- Easy Access
- Outstanding view of Lake DeForest
- High recreation potential (9-hole golf course)
- Historic and cultural aspects
- Low maintenance cost
- Very high potential for development, should owner sell

Drawbacks:

*Owner has personally appeared at Town Board meeting to ask that property be removed from consideration and followed this with a written request on 10/31/00 of the same. While this is the most attractive piece of property nominated in Congers, the subcommittee recommends that the Town Board honor the owner's wishes and not pursue purchase at this time. Subcommittee suggests an offer to purchase development rights.

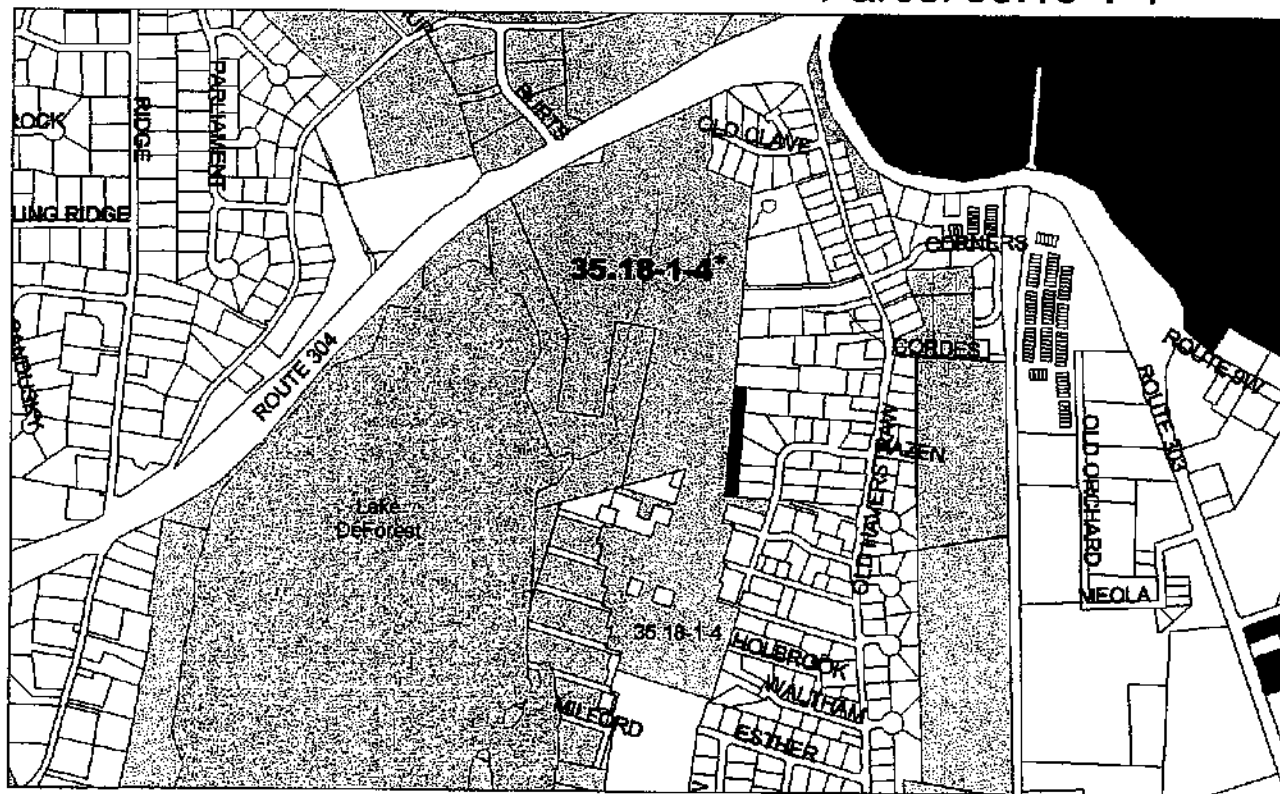

PRIORITY RECOMMENDATIONS
MADE BY THE CLARKSTOWN OPEN SPACE ADVISORY COMMITTEE

- Existing Parks and Open Space
- Nominated Parcels
- Lakes and Ponds

Parcel data: 6/97

Congers subcommittee

Tax Lot: 45.13-1-1*

Owner: Davies, Niles Jr. and Diehl Sylvia D

Zoning: R-40

Size: 6.9 Acres

Attributes:

- This property, the current Davies Home, Farm and Cider Mill is adjacent to Rockland Lake State Park
- Historic home on property – may be listed on historic register
- Working Farm
- Educational potential
- Easy access from Route 9W and Rockland Lake State Park

Drawbacks:

Owner plans to maintain property as working farm beyond their lifetime.

*Owner personally appeared at Town Board to request property be removed from consideration, followed by written request on 10/31/00 of the same. While this is the second most attractive piece of property nominated in Congers, the subcommittee recommends that the Town Board honor the owner's wishes and not pursue purchase at this time.

PRIORITY RECOMMENDATIONS
MADE BY THE CLARKSTOWN OPEN SPACE ADVISORY COMMITTEE

- Existing Parks and Open Space
- Nominated Parcels
- Lakes and Ponds

Congers subcommittee

Tax Lot(s):	35.15-1-32*	35.15-1-54
	35.15-1-34*	35.19-2-2
	35.15-1-37*	44.7-2-9
		44.7-2-17

Owner(s): Various
Zoning: Various
Size: 50 +/- Acres

Attributes:

- Nominated by a combination of the CDEC, Planning Board, and the Ad Hoc Committee
- Large parcel made up of several properties - collectively 50 acres +/- of former celery farm.
- Could provide Northern Congers with open space for bike and walking/running paths
- Rockland County owns 14.6 acres (Lot 35.1.9.2-2) through tax foreclosure
- Owner of Lot 44.7-2-9 stated that they would entertain an offer from the Town
- Contains Federal wetlands and NYS wetlands

Drawbacks:

- Limited access to residents
- Cost of development as park (paths on wetlands, for example)
- Some properties may contain terrain which precludes development and therefore do not warrant purchase.

*Owner of lots 35.15-1-32, 35.15.1-34 and 35.15.1-37 wrote to the Town on 12/7/01 requesting that these parcels be removed from consideration. The subcommittee recommends that Town Board honor the owners' wishes and not pursue purchase at this time.

Nanuet and Spring Valley subcommittees

Tax Lot(s): 63.11-2-2
Owner: Bonnabel, Henry
Zoning: R-15
Size: 10.5 Acres

Attributes:

- This piece of property has been recommended by every organization that has had input into the committee (PB/AH/PUBLIC/CDEC/CP)
- 30 houses could be built on the parcel, negatively affecting the Nanuet school district
- Land backs on Pascack Creek and has much wetland
- Fox, deer, blue heron, wild turkeys all sighted recently
- Fish in creek
- This property is contiguous to open space to the south – St. Agatha's wetland, which cannot be developed
- Currently used as a horse farm, with stables on site; present occupant may be willing to continue the operation
- Grant money may be available for therapeutic treatments in equestrian activities.

Drawbacks:

Nanuet and Spring Valley subcommittees

Tax Lot(s): 63.15-1-43*
63.15-1-44*

Owner: American Cyanamid (Lederle)
Zoning: R-22
Size: 53 Acres

Attributes:

- The Planning Board, the Ad Hoc Committee and the Public nominated this large parcel.
- Approximately 30 houses could be built on the parcel, negatively affecting the school district and traffic on narrow Convent Road
- Land is part of main Wyeth complex (to the south and east) and is bordered by Duryea, St Agatha's and Convent Road
- Wooded area provided natural habitat for animals driven out of contiguous neighborhoods and former nesting areas
- Contains mature trees, turkeys, fox
- Watercourse cuts through entire property, north to south
- Currently vacant land
- Parts of property good for community recreation – walking, bird watching
- No other recreational/park facilities available in that area of Nanuet

Drawbacks:

*Owner wrote to the Town on 11/2/00 requesting that these parcels be removed from consideration.

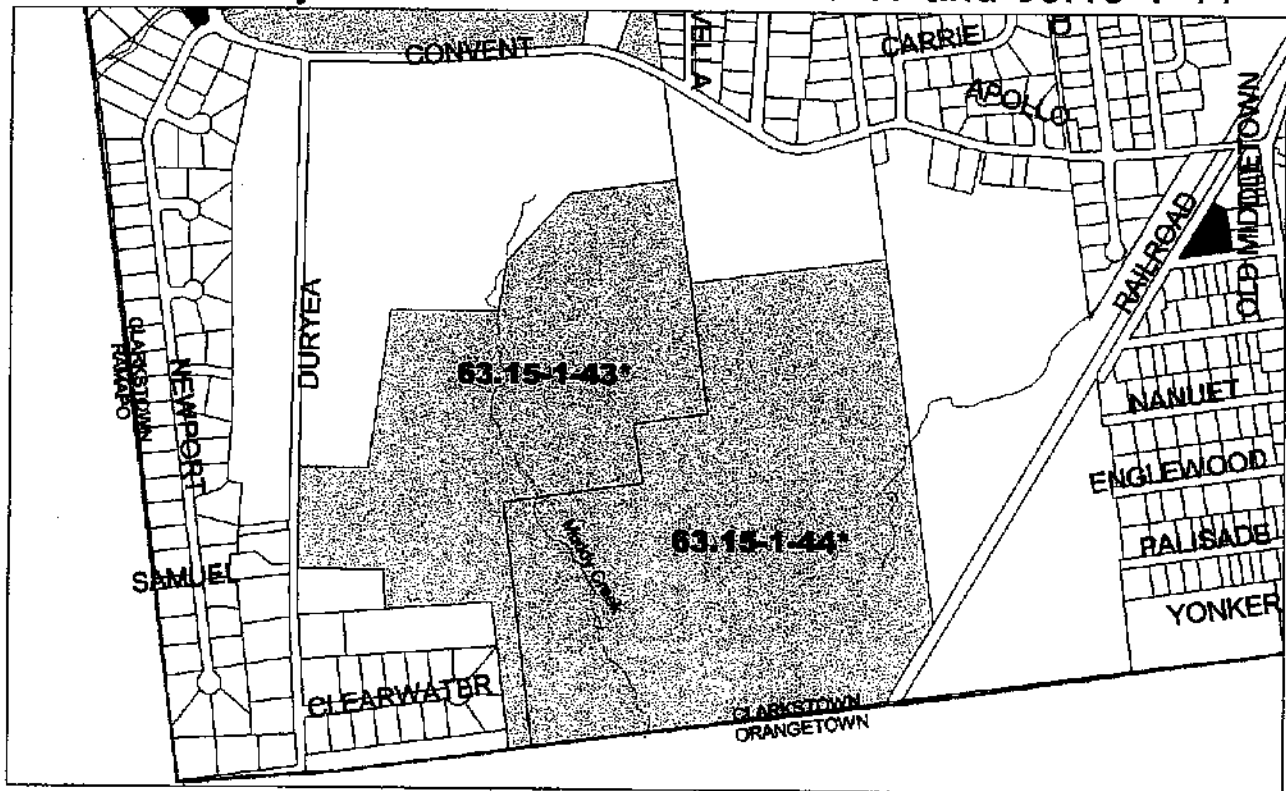

PRIORITY RECOMMENDATIONS

Nanuet and Spring Valley subcommittees

Tax Lot(s): 63.11-2-13* (North side of Convent Road)

Owner: St. Agatha's

Zoning: R-15

Size: 48.8 Acres

Attributes:

- This large parcel was nominated by the Comprehensive Plan Committee
- Continues green space from Bonnabel along the Pascack
- A site plan and special permit applications have been filed with the Town for senior citizen housing on the southeasterly portion of this property
- Drastic, devastating change on schools and roads if developed residentially, with unacceptable density
- Cleared land ready for development now
- Strongly urge purchase of this piece to prevent sprawl

Drawbacks:

*Owner wrote to the Town on 10/26/00 requesting that this parcel be removed from consideration.

Nanuet and Spring Valley subcommittees

Tax Lot(s): 57.20-1-49*

Owner: New Plan Realty Trust

Zoning: RS

Size: 22 Acres (small area along stream nominated for protection)

Attributes:

- Nominated by CDEC and at least one property owner
- This property lies behind Rockland Plaza by Naurashaun Creek
- Contains a Federal wetland and NYS wetland
- Area along stream to rear of shopping center should be protected to reduce or eliminate flooding.

Drawbacks:

*Owner wrote to the Town on 11/10/00 requesting that this parcel be removed from consideration.

Nanuet and Spring Valley subcommittees

Tax Lot(s): 57.14-3-2

Owner: DeStaso Enterprises (Hyenga Lake)

Zoning: MF-2

Size: 12.7 Acres

Attributes:

- Nominated by the public
- Multi-family units could be built, affecting sprawl, density and traffic
- Land in between Rte.59 and Pipetown Hill Road
- Contains a stream, a Federal wetland and a waterfall
- Old stone walls that may be historic
- Current use : low cost bungalow rentals

Drawbacks:

- Area would need clean up, then it could be left in natural state
- Dam should be rebuilt for safety, runoff and erosion control

64.13-2-49

Owner: Schmidt, Arthur Jr. and Alice
Zoning: R-15
Size: 7.2 Acres (2.8 and 4.4)

Attributes:

- These two properties were nominated by the CDEC
- They could be the site of up to 20 homes, if a road were built to connect with Highview or May Place
- They are the last refuge for small wildlife driven off by development
- Contain mature trees
- 2-57 has a stream which feeds into Naurashaun Creek
- Surrounded by development

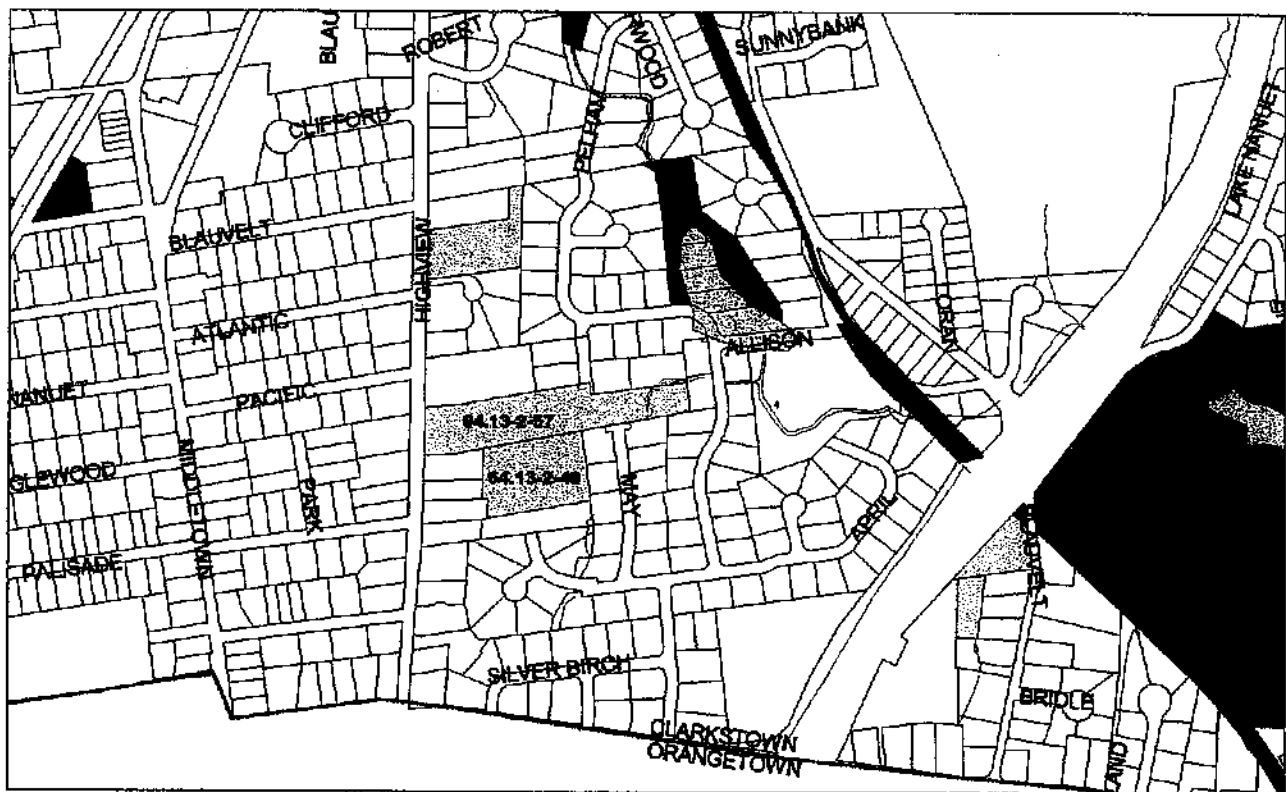

Drawbacks:

New City subcommittee

Overview

This subcommittee has considered all the parcels nominated in New City. It is our view that each parcel is important and worthy of protection by the Town as open space. The nominated parcels include a wide range of size and terrain and varying degrees of protection. Some parcels might ultimately be protected by easements with property owners or by other means, as well as the County's open space program. The following parcels have been chosen for immediate purchase, due to their size, potential for development and/or the greater good for the environment and all residents of Clarkstown – (people, plants and animals).

New City subcommittee

Tax Lot(s): 51.10-3-1; 51.9-1-49; 51.9-1-50*

Owner: Cropsey Farm; Cropsey Farm; Davies Farm, Inc.

Zoning: R-15; R-22; R-22

Size: 24.0; 9.7; 17.6 Acres

Overview

Cropsey Farm is a unique Clarkstown resource. Rockland County has expressed interest in acquiring Cropsey Farm and is in negotiations with owners. Subcommittee suggests that Clarkstown open space funds be used to supplement the County's offer.

Attributes: 51.10-3-1

- Nominated by the Planning Board, Ad Hoc Committee and the public
- Zoned R-15 (1/3 acre) – potential for 50 house lots, which would severely impact local schools and services.
- Property include portion of Demarest Kill, which feeds into the Hackensack River and is on the 100-year flood plain
- Stream supports fish, frogs, salamanders, etc.
- Property contains 18th Century sandstone house and rare type of barn
- Historic house and stone walls
- Willing seller
- Would provide passive park in area where no neighborhood park currently exists
- Owner in negotiation with County for purchase; Town could participate

Attributes 51.9-1-49

- This property was nominated by the public
- The parcel is contiguous to Davies Farm piece below
- Zoned R-22, it could be subdivided into +/-14 house lots.
- Property include portion of Demarest Kill, which feeds into the Hackensack River
- Contains active greenhouses and a garden center
- Willing seller is ready to subdivide
- School Superintendent Heebink has expressed interest in its educational potential
- Would provide passive park in area where no neighborhood park currently exists

Attributes: 51.9-1-50

- Nominated by the Planning Board, Ad Hoc Committee and the public
- Zone R-22 (1/2 acre) – potential for 30+ house lots, which would severely impact local schools and services.
- Property include portion of Demarest Kill, which feeds into the Hackensack River and is on the 100-year flood plain
- Application pending for development of 304 units for independent congregate living and assisted living. Public opposes development as out of character with neighborhood
- Site of former Davies Lake. Nearby homeowners retain "lake rights" in deeds.
- Use as passive park would be in keeping with former recreational use
- *Owner wrote to the Town on 11/1/00 requesting that this parcel be removed from consideration.

New City subcommittee

Tax Lot(s): 34.10-1-50* and 34.11-1-1*

Owner: Dellwood

Zoning: R-160

Size: 52.6; 166.5 Acres

Attributes:

- This is a country club with a golf course, tennis courts, catering, and clubhouse.
- Nominated by the Planning Board, Ad Hoc Committee and the public. The 166.5 acre parcel also nominated by the CDEC
- Zoned R-160. High development potential when current lease expires.
- Part of historic Zukor estate, site of silent movie making
- Contains irreplaceable mature trees and shrubs
- Contains magnificent old stone buildings and a catering hall.
- Could not be built today. Purchase agreement could be designed to allow some Clarkstown resident use until current lease expires

Drawbacks:

- Land under lease for an additional 16 years

*Owner wrote to the Town on 10/24/00 requesting that these parcels be removed from consideration.

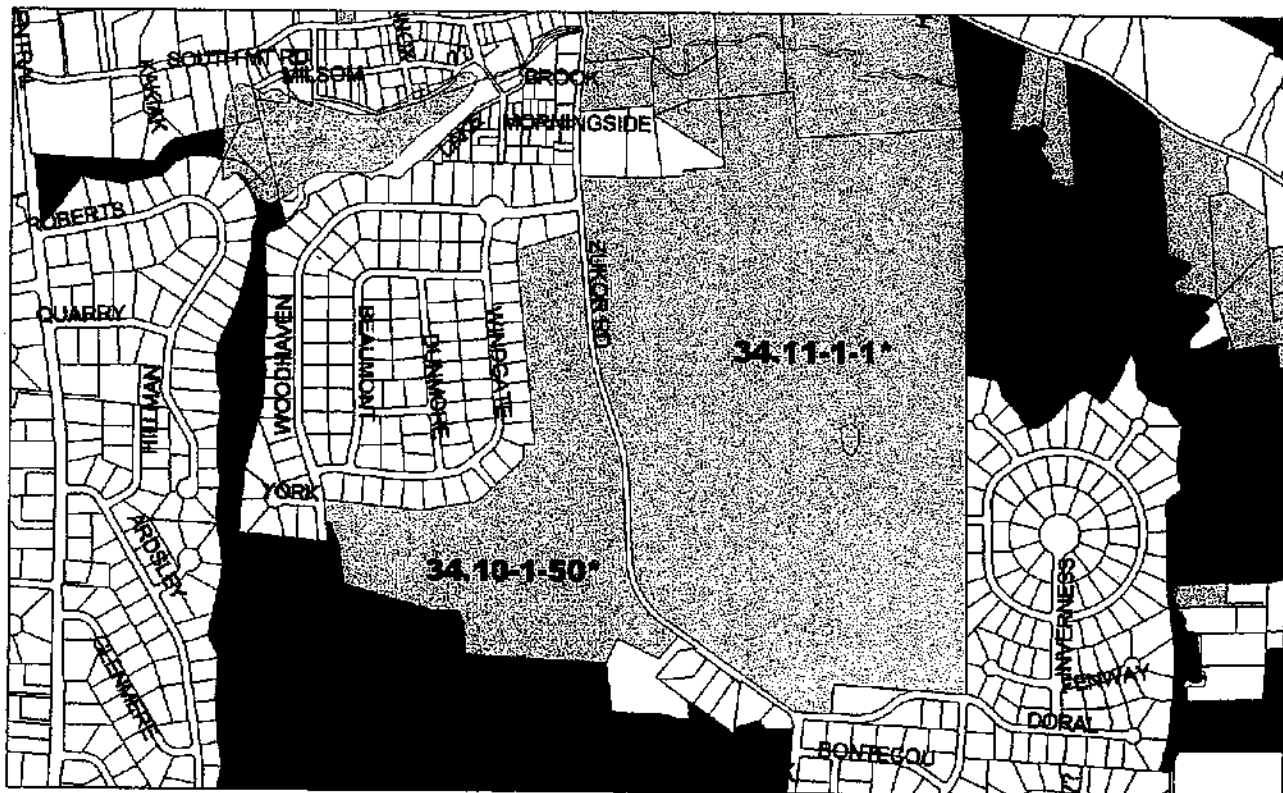

PRIORITY RECOMMENDATIONS
MADE BY THE CLARKSTOWN OPEN SPACE ADVISORY COMMITTEE

Basemap courtesy of Rockland County Planning
Parcel data: 6/97

New City subcommittee

Tax Lot(s): 33.20-2-8*; 34.17-1-1*; 42.8-2-16*
Owner: Joy Builders, Inc.; Hershkowitz Israel and Joseph
(Smith Farm)
Zoning: R-80
Size: 48.7 Acres; 61.3 Acres; 15.9 Acres

Attributes:

- Consists of 3 parcels. The two larger being contiguous and the third parcel a short distance away with access off Old Phillips Hill Road.
- Nominated by the Planning Board, Ad Hoc Committee and with considerable support from the public. Property well known to the public due to the high visibility of farm activities and seasonal farm stand that has operated for many years.
- Lowland and ridgeline very visible along well-traveled roadway connecting two Townships.
- Opportunity to protect a slope area that is distinct from areas overlooking the Hudson. (This same slope runs north-south and includes the hill on New Hempstead Road, Red Hill Road and Smith Road.
- Provides unspoiled views both within and beyond boundaries of property, promoting a “faraway feeling.” Views of South Mountain Park, High Tor State Park, across the valley towards Rtes. 9W/303 all the way to Westchester. The farm also provides an unspoiled backdrop for the distant view of the NYC skyline from South Mountain Park.
- Contains habitat for a diverse number of animals –small mammals, reptiles, amphibians, deer, coyote, raptors and migrating songbirds. The wood thrush, whose numbers have declined sharply in recent years, is still well represented here.
- The diverse terrain supports indigenous wildflowers (trillium, wild azalea), native shrubs and large trees. Contains forested areas free of invasive species. Includes some land never farmed.
- Contains wetland and seasonal wet areas that contribute to flood control and promote ground water replenishment. Several year-round creeks emerge from the base of the slope, which drain south to Crum Creek.
- Development potential exists for 70+ homes, which would increase sprawl and light pollution and have a negative impact on schools.
- Possible uses include model farm for education, nature trails, jogging, biking, driving range, etc.

*Owners wrote to the Town on 10/30/00 requesting that these parcels be removed from consideration.

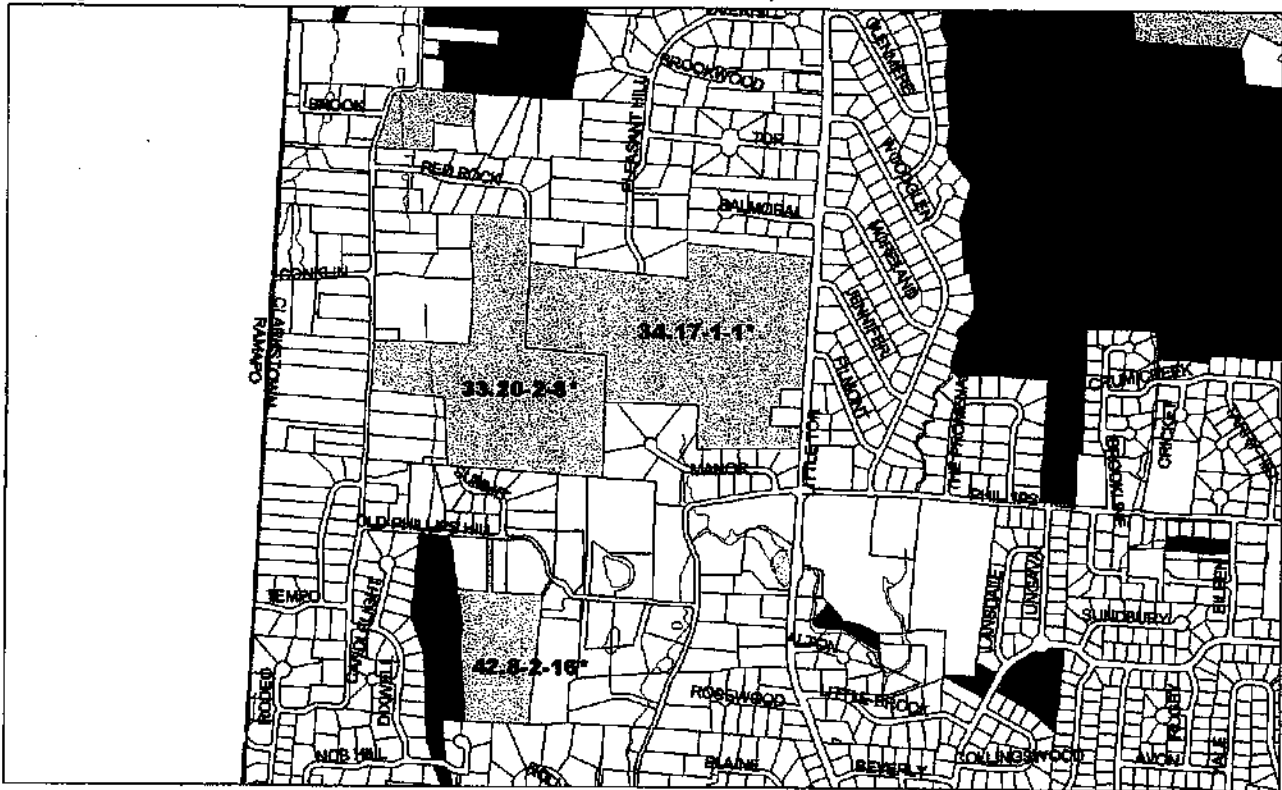

PRIORITY RECOMMENDATIONS
MADE BY THE CLARKSTOWN OPEN SPACE ADVISORY COMMITTEE

- Existing Parks and Open Space

26.17-2-18	26.19-1-1*	26.20-2-9	34.8-1-5
		33.8-2-1	

Owner: Various (Ridge of High Tor Mountain)

Zoning: R-80 and R-160

Size: Various

Attributes:

- Larger parcels nominated by the Planning Board, Ad Hoc Committee and the public.
Smaller parcels nominated by the public
- Connects open space; runs parallel to both High Tor and South Mountain State Parks
- Ridgelines control erosion and protect what lies below
- The Long Path runs along the top of the mountain.
- Preservation would create loop path from lowlands to highlands and over to Rockland Lake.
- Creates greenway path throughout community
- Is environmentally sensitive
- Historic
- Limits sprawl
- Protects the watershed; runoff drains into the Hackensack River and Lake DeForest
- Provides additional recreational activities

Drawbacks

- Multiple owners

*Owners wrote to the Town on 10/19/00, 10/26/00, 10/30/00, 11/1/00 requesting that these parcels be removed from consideration.

New City subcommittee

Tax Lot(s): 51.6-3-1*
Owner: Jolima Inc.
Zoning: R-15
Size: 14.2 Acres

Attributes:

- Nominated by the Planning Board, Ad Hoc Committee and the public
- Last piece of green area in a fully developed hamlet
- Designated as part of the National Wetlands Inventory of the US Dept. of the Interior
- Development potential extremely high. Owner wishes multi-family housing development. Even single-family homes would adversely impact schools, traffic congestion and services.
- Requires little improvement to serve as park
- Could serve as hub for hamlet revitalization
- Enjoys high public support

Drawbacks:

*Owner wrote to the Town on 11/1/00 requesting that this parcel be removed from consideration.

Valley Cottage, Rockland Lake and Upper Nyack Subcommittees

Overview

After considering all of the properties nominated in Valley Cottage, Rockland Lake and Upper Nyack, this subcommittee feels that preserving open space on West Hook Mountain will provide the greatest benefit. While all of the available property on the mountain should ultimately be purchased, the subcommittee has chosen four properties as the most important to purchase immediately. Acquiring these properties will:

- Protect a local treasure
- Continue the connection and protection of the unique Palisades Ridge
- Prevent development of West Hook
- Connect and improve multiple open space, park and recreation resources
- Improve links to existing parks and trails, including Hook Mountain State Park, Rockland Lake State Park and the Long Path
- Provide a better-connected corridor of linked greenway in the region.

Valley Cottage, Rockland Lake and Upper Nyack Subcommittees

Tax Lot(s): 59.8-1-31, 59.8-1-19

Owner: Mazzucca, Michael and Mary

Zoning: R-160

Size: 21.7 Acres, 3.1 Acres

Attributes:

- Nominated by the Planning Board, Ad Hoc Committee and the public
- Key to preventing further development of West Hook and loss of the ridgeline, not only on the Southwest side, but also all across the top.
- Prevents the extension of Sherry Dr., a public road, and easy access to water, sewers and electric to the mountain top.
- Protects a highly visible ridgeline from further development.
- There is a stream on the property and many native species of wildflower
- Willing sellers
- Owner plans to subdivide and grant access road if property is not purchased by the town

Drawbacks:

- House on property

PRIORITY RECOMMENDATIONS

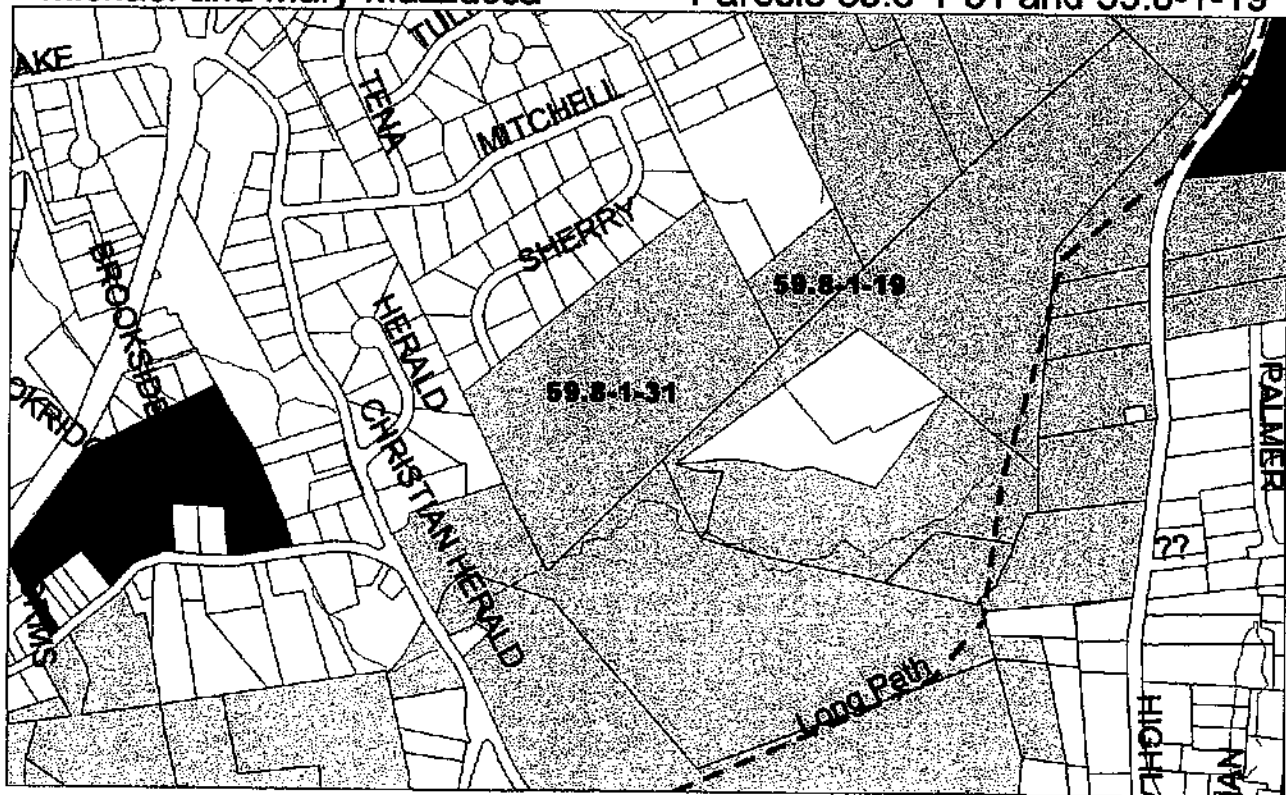

MADE BY THE CLARKSTOWN OPEN SPACE ADVISORY COMMITTEE

Valley Cottage, Rockland Lake and Upper Nyack Subcommittees

Tax Lot(s): 52.20-1-20* and 52.20-1-29-4*

Owner: Phoenix Homes
Zoning: R-160
Size: 15 Acres

Attributes:

- These properties were nominated by the Planning Board and Ad Hoc committees. One was also nominated by the public.
- These two contiguous pieces contain the last natural trail way for wildlife and hikers from Lake Road in Valley Cottage to the summit of West Hook.
- Connects to existing open space (Hook Mountain, Rockland Lake and the Long Path.)
- Slope provides the visual "background" for the surrounding neighborhood
- Proposed subdivision, currently before the Planning Board, has been scoped for significant adverse environmental impacts, including:

Impact on water quality and storm runoff

Construction of structures above the tree line, increased light pollution

- Proposed street system will open access to two adjacent sensitive properties which are also part of the entire West Hook project
- Stream and adjacent area slows water runoff and provides flood protection
- Creates new access to West Hook, so more people can enjoy the recreational opportunities.
- Parking for hikers could be inexpensively created.

Drawbacks:

- * Owner has personally appeared at Town Board meeting to ask that property be removed from consideration and followed this with a written request on 10/26/00 of the same.

Valley Cottage, Rockland Lake and Upper Nyack Subcommittees

Tax Lot(s): 59-08-1-29

Owner: Alimanestianu

Zoning: R-160

Size: 25.9 Acres

Attributes:

- This is the most dramatic piece on West Hook Mountain. It is the top of West Hook, facing East. Unspoiled, with a magnificent meadow. This has a world-class view and is visible as far as Westchester.
- Purchase will keep the mountain brow undeveloped
- As part of the Long Path, acquisition has been actively sought by the NY-NJ Trail Conference, the Historical Society of the Nyacks and the West Hook Preservation Association
- Protects habitat for plants and wildlife
- Offers unparalleled views of Hook Mountain, Upper Nyack and the River Towns
- Connects to existing open space (Hook Mountain, Rockland Lake and the Long Path)
- Reestablishes the route of a traditional hiking trail (the Long Path)
- Slows water runoff and protects areas of Valley Cottage and Upper Nyack from flooding
- Protects the public's view of the Mountain

Drawbacks:

PRIORITY RECOMMENDATIONS

MADE BY THE CLARKSTOWN OPEN SPACE ADVISORY COMMITTEE

West Nyack Subcommittee

Tax Lot(s): 58.16-1-61; 58.16-1-69

Owner: Hale, R.H.; Greany, Rosemary H.

Zoning: R-40

Size: 10.3 Acres; 2.2 Acres

Attributes:

- Parcels nominated by Robert Geneslaw
- Borders on Clarkstown South High School
- Adjacent to land owned by the County of Rockland
- Heavily wooded
- Stream edges both properties
- Location next to school lends itself to public use
- Insulates residents on Germonds Road from development
- Superintendent of Schools suggested that there might be some State funding available

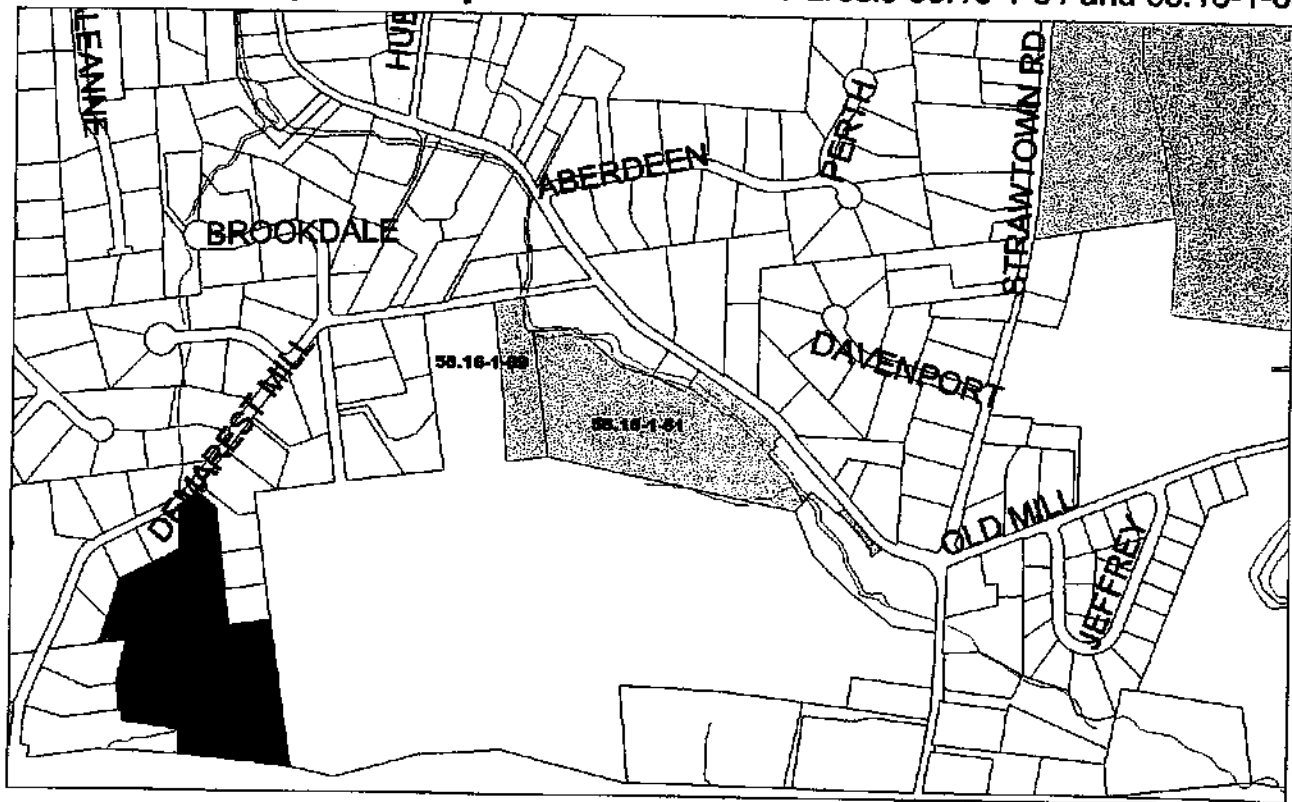

PRIORITY RECOMMENDATIONS

West Nyack Subcommittee

Tax Lot(s): 58.19-1-9

Owner: Reynolds Aluminum Development

Zoning: LO

Size: 36.1 Acres

Attributes:

- Parcel nominated by the public
- Largest parcel available in West Nyack
- Small lake and stream on property
- Could be partially developed, with Town selecting tenant

Drawbacks:

- Zoned light industrial. Protection would impact on the tax base of West Nyack.

PRIORITY RECOMMENDATIONS

West Nyack Subcommittee

Tax Lot(s): 65.5-2-20; 65.5-2-21

Owner: Conlon

Zoning: R-15

Size: 2.5 Acres; .9 Acres

Attributes:

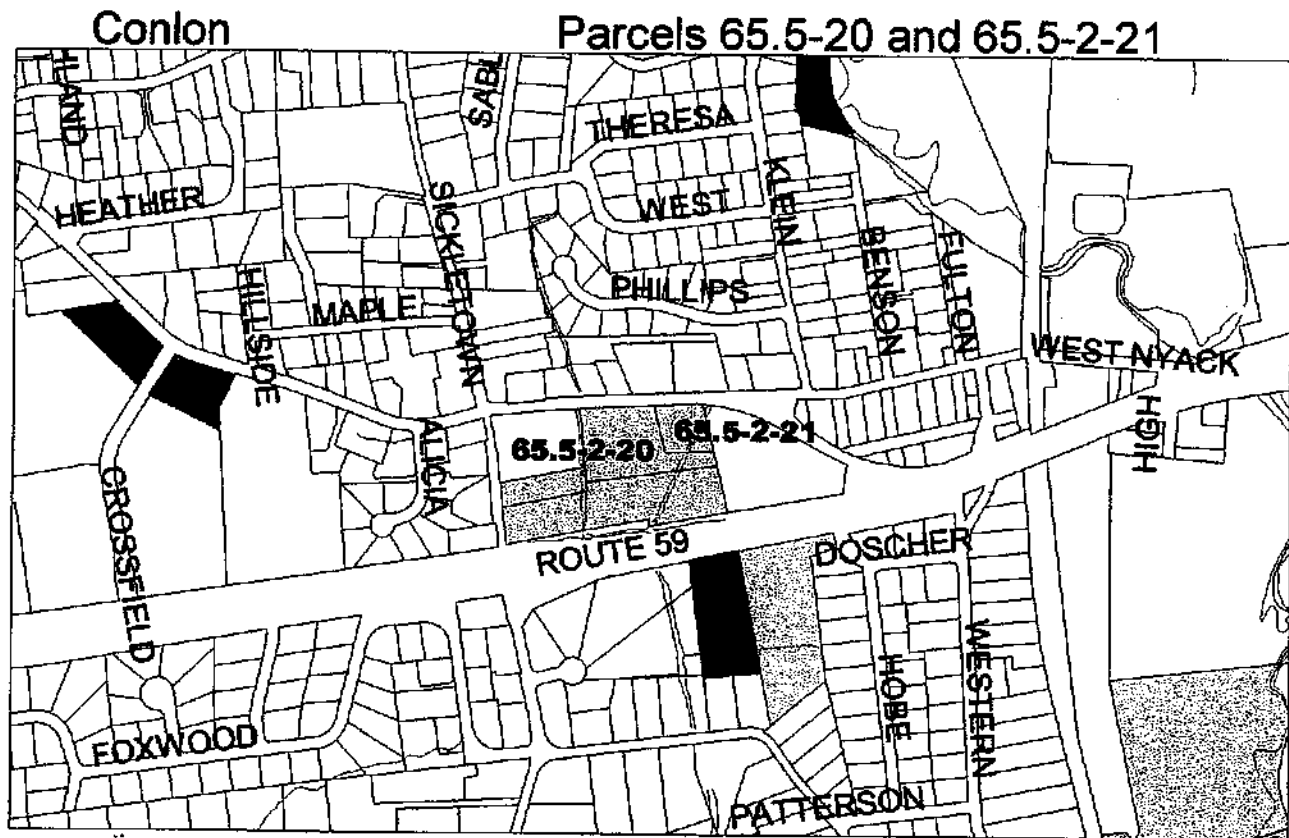

- Nominated by Clarkstown Planning Board, Comprehensive Plan and the Ad Hoc Committee
- Centrally located in Hamlet
- Would create a Village Green for West Nyack
- Both are currently vacant
- Properties have a stream and are wooded
- Located across from West Nyack Post Office
- Acquisition supported by many residents of West Nyack
- On Town's agenda for acquisition

Drawbacks:

West Nyack Subcommittee

Tax Lot(s): 65.9-1-3 (Dosier Avenue)

Owner: Marla Realty

Zoning: R-40

Size: 4.2 Acres

Attributes:

- Nominated by Clarkstown Dept. of Environmental Control
- Federal Wetland with a stream
- Forested
- Runs parallel to Rte 59 and provides a greenbelt buffer and flood control
- Connects open space

Drawbacks:

Properties bordering Lake DeForest

Tax Lot(s): Various

Owner: United Water Company; Rivervale Realty Co.; Corwick Realty Corp.

Zoning: R-160; M; R-160 and R-15

Size: Various

Attributes:

- Immediate action needed to protect forested border of reservoir
- Complete or partial protection will shield drinking water supply from runoff of lawn chemicals and soil
- Protection will prevent bank erosion and sediment buildup due to clearing
- Currently underprotected, with clearing going on well within 100 feet of high water line, in direct violation of the water company's mandate to protect drinking water.
- United Water has settled with resident charged with causing \$50,000 in damage to reservoir shoreline.
- Protection will retain current undeveloped view of reservoir

Drawbacks:

- Multiple owners

REPORT

STAFF ADVISORY COMMITTEE ON CLARKSTOWN OPEN SPACE ACQUISITION

This report is a summary of recommendations by the Supervisor's Staff Open Space Selection Committee. (The Staff Committee). Each Staff Committee member has a special knowledge or interest in open space matters. The report is the product of seven months' consideration by the Staff Committee of the factors it found to have a bearing on the short- and long-term aspects of open space protection in Clarkstown. The Report proposes a method for evaluating these factors and, thereby, to rank properties that have been proposed for open space acquisition.

Background: In 2002, a well-supported ballot question authorized Clarkstown to bond \$22M of open space purchases.

The town had previously adopted a set of acquisition guidelines. (Guidelines.)

It also appointed a citizens' Open Space Committee (Citizens' Committee), which, after developing separate guidelines of its own, proposed certain acquisitions on a hamlet-by-hamlet basis.

Task: Acquisitions began almost the moment the bond issue was approved. But the properties so-acquired were selected by an ad-hoc process, not necessarily congruent with the Guidelines *or* with the recommendations of the Open Space Committee.

Supervisor Gromack wanted a more orderly selection process for open space acquisitions. He appointed a Staff Committee on Open Space Selection. It comprised Town Attorney John A. Costa, , Chair, Director of Finance Kenneth Seltman, Director, Department of Environmental Control Luke Kalarickal, PE, Director, Parks Board and Recreation Commission Charles Connington, Town Board Representative Rudy Damonti, Town Planner Jose Simoes, Planning Board Chair Shirley Thormann and Deputy Town Attorney Martus Granirer.

When the Staff Committee was formed, about \$12M of the \$22 M bond issue remained uncommitted.

Guidelines: The Staff Committee decided to accept the town's Guidelines, with certain modifications, and to urge the Town Board to amend the adopted Guidelines accordingly. Because the connection of open land has multiple values for the town as a whole, the amendments emphasize the importance of links that would connect open spaces. These amendments are:

Replace § 2 (A) through (I) with:

- Steep slopes.
 - Wetlands.
 - Ridgelines.
 - Viewsheds, especially those visible *for* long distances, such as those seen from the Palisades Interstate Parkway.
 - High places, especially those visible *from* long distances, such as High Tor, Hook Mountain and West Hook Mountain.
 - Other places that display scenic qualities or from which they are visible.
 - Land and water with potential for restoring wetland and other environmentally sensitive areas that have been altered or adversely affected.
 - Mature woodlands.
 - Land or water that supports biodiversity or special habitat for plants, fish or wildlife.
 - Properties which can be restored or modified to support biodiversity or other environmental benefits.
 - Land or water that provides habitat corridors.
 - Land and water within a Critical Environmental Area (A specific geographic area designated by a state or local agency, having exceptional or unique environmental characteristics).
- Add CONSERVES WATERSHED to the list of attributes deserving protection.
 - Change “PROTECTS HILLTOPS” to “PROTECTS HILLTOPS AND HILLSIDES” in the list of attributes.
 - Emphasize that “SAFEGUARDS ENVIRONMENTALLY SENSITIVE RESOURCES” is an amalgam. It includes “CONSERVES BIO-DIVERSITY.” It also contains Scenic Value, which needs emphasis.

Evaluation formula: In the interest of realism, the attributes of the land being considered must be examined within the context of circumstances prevailing at the time the land is to be acquired. That means taking account of seller unwillingness (which ends the acquisition process); of urgency; of possible gifts or acquisition bargains; of opportunities to collect taxes even after the land is protected, as would be the case if the land becomes state parkland; and of potential inter-agency acquisitions, in which the cost is shared. In the formula, these circumstances become weighting factors, augmenting the values attached to the physical attributes of the land in question. That will increase score contrast for persons ranking the choices.

Local Recreation: Whether to make special allowance for possibly underprovided neighborhoods was an important Staff Committee topic. The Staff Committee concluded that open space money should be allocated strictly within the Guidelines, but that if parcels became available that would have local recreational benefit, even if left largely undeveloped, they were to be considered by the Parks Board and Recreation Commission as potential local parks, and, at the Commission's recommendation, the Town Board was then urged to consider their acquisition, but with money-in-lieu-of-land fees and not with open space money.

Conclusions: The Committee recommends certain measures to the Town Board.

1. The conduct of Clarkstown's Open Space Initiative – and its results – have been valuable. The effort deserves to be continued.
2. Clarkstown's Open Space Acquisition Guidelines should be modified as suggested here.
3. The Open Space Fund must be carefully husbanded.
 - Open Space funding should become an element of the town's long-range capital planning program.
 - Every effort must be made to obtain grants of money and gifts of land; and to share costs and acquisitions with other agencies, both government and private.
4. This committee's primary job has been to formulate a process for selecting open space acquisitions. The result is this report, the draft revised guidelines and the accompanying selection form.*

In developing these tools, the committee realized that prudent selection of open space holdings for Clarkstown is not a simple task. Because the choices are complex, time-consuming and, often, technical, the committee believes it would be helpful if it continued to advise the town board on actual acquisitions.

As it does now, that Open Space Advisory Committee (the Committee) should include representatives of the Supervisor and the Town Board, the Parks Board and Recreation Commission, the Department of Environmental Control, the Planning Department, the Comptroller's Office and, individually, the Planning Board Chair, the Town Attorney and a Deputy Town Attorney.

The Committee's effectiveness will be enhanced if it also includes, when and as needed, a naturalist with a background in bio-diversity or an organization dedicated to bio-diversity concerns, such as Hudsonia or Rockland County's Bio-Diversity Study Group. When necessary, the Committee should be enabled to consult with other specialists as well.

—January 12, 2006.

* The committee is aware that its as-yet unused selection form may need revision based on experience.

Evaluation of suggested open space acquisition

* See Environmentally Sensitive Resource attachment.
† Apply only if either incidental accompanies at least one main attribute.
⊗ Round to next higher whole number.

Executive Summary

E.1 BACKGROUND

In Clarkstown, New York, regional change finds itself at a crossroads. Growth is straining and blurring the boundaries between once rural and suburban neighborhoods, and global economic and environmental forces are changing expectations placed on public services and infrastructure. The Clarkstown Comprehensive Transportation Plan addresses transportation goals and strategies to improve and make available all types of travel. Based on the transportation network and current trends in demographics, the economy and travel, 11 long-term goals create a framework with which the Town of Clarkstown can guide policy decisions in the coming decades.

Roadway Network

The roadway network in Clarkstown is straining to keep pace with growth in the region, including automobile, truck, bus, and nonmotorized traffic. Clarkstown's 300 miles of roads are largely suburban in nature, where it is common to find winding residential streets, cul-de-sacs, and dead ends. Clarkstown has two Interstate Highways, including I-287, which traverses the Hudson River via the Tappan Zee Bridge, and the Palisades Interstate Parkway. Other highways in Clarkstown include U.S. Route 9W and State Routes (SR) 59, 303 and 304. Thirteen roads are maintained by the Rockland County Highway Department, serving as collector routes from smaller local streets. There are three roadways in Clarkstown with restrictions on vehicle heights, 12 roads with weight restrictions in place, traffic counters in 61 locations, and 21 locations with a high number of vehicle crashes.

Townwide Roadway Network Goals

Provide efficient travel between the Tappan Zee Bridge/I-287 corridor, SR-59 corridor, and other parts of Clarkstown. Congestion creates slower travel times for motorists to and from major destinations in Clarkstown, especially where traffic on major thoroughfares diverts onto local streets. The Town wants to maintain a good level of service on local roadways while providing access to major routes.

Add to economic strength and quality of life in Clarkstown by coordinating with Tappan Zee Bridge (TZB) reconstruction and other regional transportation initiatives. Alternatives to expanding capacity of the TZB will be evaluated for many years. The Access to the Region's Core (ARC) commuter rail tunnel between New York and New Jersey will likely have implications for Clarkstown in the future as well. Clarkstown understands that transportation

operates at a regional scale and should become an active part of all regional transportation projects.

Ensure that travel through Clarkstown enhances safety, lowering the number of vehicle crashes that occur in the area and minimizing conflict between travel modes. Most crashes in the Town do not result in human injury, but the incidents interfere with traffic flow and require costly response from municipal services. As population and businesses continue to grow in the area, more personal and freight vehicles will require access to the roadways. The town is prepared to improve points of conflict and designate appropriate uses of local roads.

Public Transportation Services

Public Transportation services operating within the Town of Clarkstown serve a vital function for local residents, workers and other travelers. Many Clarkstown residents depend on local transit services such as Transport of Rockland (TOR) and Clarkstown Mini-Trans for work, school, shopping, and entertainment trips. Line-haul bus services such as COACH USA carry New York City-bound commuters to the Port Authority Bus Terminal or the George Washington Bridge Bus Terminal in Manhattan, or to employment locations in Northern New Jersey. The TAPPAN ZEEExpress carries commuters from Rockland County across the Tappan Zee Bridge to employment locations and Metro-North Railroad stations in Westchester County. New Jersey Transit and Metro-North operate commuter rail service from Nanuet to New Jersey and Manhattan.

Clarkstown continues to add residents and businesses, which in turn has increased travel by all modes. Fuel prices are expected to rise, the population of older adults is growing and “baby boomers” are nearing retirement. In addition, commercial centers are expected to expand along SR-59 and I-287. A strong public transportation network is essential to reducing congestion, minimizing pollution, and providing mobility to residents who are less dependent on their cars.

Townwide Public Transportation Service Goals

Provide local public transportation services that promote sustainable travel options for Clarkstown residents, businesses, and visitors. Over half of local work trips are to places in Rockland County and nearby towns. Trends in demographics will place pressure on public transportation to meet the local and regional mobility needs – for work, shopping, and recreation.

Provide for commuter transit services to regional centers that are accessible, efficient, and safe. Clarkstown’s proximity to major highways, the TZB and the Hudson River provide excellent access to New York City and other major regional centers. Clarkstown should coordinate with other planning organizations and transit companies to ensure its development aligns with existing and future service.

Sidewalk and Pedestrian Facilities

The Town of Clarkstown street network, population, and mix of land uses and transit system provide a foundation for a walkable town, with comprehensive networks particularly in its Hamlet Centers. The sidewalk network generally provides a safe location for pedestrians to walk within a small geographical area, but robust connectivity between hamlets or residential areas and the denser commercial districts is lacking. Discussions with residents showed that requests for infrastructure and facilities related to walking and biking surpassed requests for roadway intersection improvements.

While the majority of the existing sidewalks are in good to fair condition, there are numerous locations elements that provide a barrier to walking. Some streets have missing sections of sidewalk, sidewalks in poor condition or obstructions such as utility poles that limit accessibility. The lack of curb ramps, except at major intersections, and limited access to crosswalks creates a barrier for those using assistive devices. The Town should ensure pedestrian paths that are free from obstructions, making sidewalks inaccessible for those using assistive mobility devices.

Townwide Sidewalk and Pedestrian Facilities Goals

Create a pedestrian environment that is accessible and provides useful connections between travel generators such as employment sites, residences, and shopping destinations. Perhaps the simplest and most environmentally sustainable travel mode is walking. Creating a cohesive network of sidewalks and paths supports the development of Hamlet Centers, use of public transportation, access to parks, and meeting travel needs related to Clarkstown's changing demographics and economic structure.

Provide a safe and enjoyable experience for users of sidewalks and other pedestrian facilities. Pedestrian facilities need to provide not only connections, but usable ones as well. Sidewalks are best accessed when they provide appropriate surfaces usable by people on foot and those using mobility devices; paths clear of obstructions enhance safety by reducing the need for pedestrians to enter the roadway.

Bicycle Facilities

The east side of Clarkstown is relatively well-served by bicycle facilities, with Route 9W providing a north-south bicycle route which connects to sections of the Hudson River Valley Greenway to the north and south. There also are two recreational bicycle trails both east of Route 9W, including the waterfront trail that connects Haverstraw to North Nyack and the loop road around Rockland Lake. However, recreational trails do not provide a viable means of transportation for would-be bicycle commuters.

As a transportation system, there is no designated network of bicycle routes, on street or off, connecting hamlet centers or other travel generators throughout Clarkstown.

Townwide Bicycle Facilities Goal

Create a cycling environment that is accessible, safe, and enjoyable. Cycling already is popular in Clarkstown, with access for local residents and visitors centered on Route 9W. The Town aims to make the cycling environment even better by providing regular maintenance, linking key neighborhoods and open spaces, and coordinating connections with Route 9W and neighboring communities.

Quality of Life

Approximately one-third of the air pollution in the region results from motorized travel. Other environmental effects of driving include excessive ambient noise, water runoff from roadways and parking lots, loss of nighttime darkness from street lighting, and waste from automobile maintenance and repair. Clarkstown is committed to preserving the natural resources that are essential to the area's quality of life.

Townwide Quality of Life Goals

Improve residents' health by reducing air pollution related to motorized travel. Clarkstown should improve air quality by reducing congestion, encouraging the use of public transportation, enhancing nonmotorized travel and facilitating regular monitoring. Noise from vehicles can reach unhealthy levels in some areas, calling for regular assessment of sound levels on major roadways. Appropriate street lighting also should be employed to maintain the rural environment.

Land Use

Land use in Clarkstown is comprised largely of low-density housing. Small, winding suburban roadways, often ending in cul-de-sacs, provide access to homes surrounded by private yards. These areas are punctuated by centers of more dense suburban development, often anchored by moderate intensity retail and other commercial uses. There are a number of government properties in the area, as well as land designated for public utilities and industrial activities.

The main areas of commercial use are located near I-287 and SR-59 near the southern side of the Town, and along SR-304 near the hamlet of New City. Informal analysis suggests that about a third of the commercial properties in each area are devoted to parking. While traditionally suburban or even rural, Clarkstown has opportunities to create centers of development that provide convenience, local character, and sustainable design, while maintaining the quality of life residents expect.

Townwide Land Use Goals

Develop Hamlet Centers with transportation options and connections. Clarkstown has been innovative in enhancing local land use and design regulations to create neighborhoods of more dense business and residential activity. These Hamlet Centers face the challenge of balancing spatial needs for various land uses with nonmotorized, automobile, large truck and bus transportation.

Create diverse mixed-use development areas that allow for walking and biking, and are well-served by public transportation. Clarkstown should align transportation with land use changes (density) to create sustainable travel and development patterns, minimizing congestion, and maximizing safety. While much of Clarkstown's land currently is developed, redevelopment opportunities may create changes in and demand for the local transportation network.

E.2 RESOLUTION STRATEGIES

The following strategies lay out a guide for future Town projects based on an analysis of Clarkstown's long-term transportation goals and current infrastructure gaps. Some strategies are site-specific, while others present policy tools to address future change. The strategies are grouped according to areas of transportation, as in the previous sections.

Roadway Network

Strategies for achieving goals in Clarkstown's roadway network target three main issues: traffic congestion, intersections with high-accident occurrences, and truck routing. Identified congestion corridors – based on both existing and predicted traffic due to population growth and planned developments – include SR-59, SR-303, SR-304, North Middletown Road near the SR-59 corridor, and New Hempstead Road/Congers Road in New City.

Traffic congestion suggestions include working with state and county departments to maintain and create access management programs along the congested corridors that alleviate traffic at driveways, and maintaining appropriate signal timing for efficient, moderated traffic flows. Other strategies, also addressed in the public transportation section, aim to increase transit ridership and thereby reduce the number of automobiles on the road. Similarly, land use strategies that focus development in areas with a mix of shopping, work and housing opportunities – as well as transit access – can encourage less dependence on the use of automobiles.

Critical crash locations, most located along congested corridors, can be addressed through systematic study followed by design treatments that account for specific environmental conditions.

Much of Clarkstown's economy depends on the ability to move freight and goods throughout the area. The economy is strongly supported by shipping of

consumer goods, and industrial supplies and products. Almost all of this freight, whether measured by value or by weight, moves by truck. All types of trips, including local distribution, deliveries, and freight passing through the Town, require a seamless network of roadways. In addition, local services such as utilities and waste disposal require routes that can efficiently and safely handle large vehicles. A congested local and regional road network, physical and locally imposed restrictions on truck movement and limited alternative truck routes can undermine Clarkstown's – and the regions – competitive economic position.

This Comprehensive Transportation Plan balances the needs of freight travel with the increasing numbers of drivers, cyclists, and pedestrians. All steps of visioning, analysis and prioritization process considered safe efficient truck routes with the fewest negative effects on the community. To this end, Clarkstown should work closely with Rockland County and neighboring municipalities to develop infrastructure on truck routes recommended in the Rockland County Freight Movement Study. The Town should continue to evaluate freight improvements, explore alternative routes, and consider shipping needs in the development of land use plans.

Public Transportation Services

Strategies for public transportation focus on improving bus travel times, increasing access to underserved areas, and improving bus operations. The suggested strategies for reducing bus travel times include creating bus-only lanes and pull-out areas during peak hours, focusing on portions of the congested corridors in Central Nyack, Nanuet and New City, as well as the access roads to Palisades Center Mall. The Town also should investigate a fixed bus stop system on the MiniTrans and TOR bus routes, as suggested by Rockland County studies.

Underserved areas have shortages of service to destinations used frequently by residents. One key strategy is to create a "Hamlet Circulator" to connect and encourage growing areas of development. Other areas to address include office developments on SR-303 near Congers and Valley Cottage, the SR-59 corridor to facilitate development following the Tappan Zee Bridge project, and the state and county parks located in Clarkstown.

Operational policy strategies address the frequency, hours and customer service aspects of the public transportation network. Key strategies include alleviating traffic congestion at key segments, coordinating transfers at existing hubs, expanding hours for routes on SR-303 and SR-304, adding intelligent transportation services (ITS) that use technologies to give minute-by-minute updates, bus locations, and create robust data collection to aid in service planning.

Sidewalk and Pedestrian Facilities

Given the extent of streets without sidewalks in the Town of Clarkstown, sidewalk construction should be prioritized first in areas that have the most

potential to serve pedestrians and where safety concerns arise. Therefore, sidewalk projects are high priority when within the hamlet centers, when within one-half mile of an above-average pedestrian traffic generator (e.g., transit stop, community center), serves a population using walking as a primary form of transportation, or completes or expands existing sidewalk connections.

Bicycle Facilities

All of the principal arterials in Clarkstown, the roads that most directly connect logical points of trip origin and destination, provide opportunities to identify safe shared use by bicycles and motorists. Recreational facilities are an important amenity for leisure activity and also can serve as a transition for riders who are not comfortable using on-street facilities. Connecting additional recreational facilities to generators and destinations via new on-street bicycle routes will encourage short on-street bicycle trips. This can shift the perception of cycling to that of a real transportation option, allowing new cyclists to use existing facilities to make safe and comfortable trips.

Quality of Life

Strategies for air and water pollution mitigation include collecting robust data sets to aid in project prioritization, improving public transportation service especially in congested corridors, and using roadside and paving design to minimize stormwater runoff. Strategies addressing noise pollution include implementing recommendations in the 2007 Rockland County Truck Route Study, while light pollution can be minimized by developing lighting standards that take advantage of technology and design elements available in street and structure lighting. Other strategies affecting quality of life in Clarkstown include improvements to the pedestrian and cycling networks to provide opportunities for active, transportation and exercise choices, and coordinating with regional authorities to maintain and publicize regional safety plans.

Land Use

Land use strategies focus on encouraging moderately dense, smart growth or transit-oriented development (TOD). The Town code encourages nonautomobile travel in Clarkstown's Hamlet Centers, with a mix of housing, shopping, employment, and recreational uses. The Town should find ways to apply Hamlet Center regulations more broadly, with specific focus on reducing parking requirements, increasing the mix of uses per building or parcel, increasing allowable building heights and increasing proximity to neighboring uses. Incorporating public transportation, pedestrians, bicyclists, cars and trucks into "complete streets" can move Clarkstown toward its transportation goals. The strategies should be supported by coordination between land development agencies and regional transportation planning organizations. In addition, the Town should explore having applicants for proposed development bear the cost

of developing transportation infrastructure as well as the costs of congestion and pollution due to increased automobile use.

E.3 POTENTIAL IMPACT

The strategies above each come with costs and benefits to the town in a variety of facets. Part of the overall planning process is to account for consequences in a way that minimizes unwanted effects and channels the results back into progressing the Town's goals for its transportation assets. The following sections describe briefly the key potential physical and social effects of the strategies above.

Roadway Network

Strategies associated with Clarkstown's roadway network have the potential to result in the greatest environmental and social impacts due to the high number of users and large amount of resources needed for construction and operation. Where road capacity is expanded or congestion reduced, there is potential to create "induced demand" as greater numbers of travelers take to the road because driving is easier. This will add to the amount of air, water and noise pollution generated. Adding to roadway surfaces also may increase storm water runoff due to these impervious surfaces. Increasing roadway speeds also increases the risk of injury due to crashes with vehicles, pedestrians and wildlife. Social effects to consider involve the allocation of resources to transportation projects that benefit the greatest number of residents.

Public Transportation Services

Improving transit service may increase the number of miles driven by local buses, adding to the associated pollution resulting from vehicle operations. Bus engines also create noise levels similar to trucks. Where parking facilities and bus stops are constructed, the development of land may have environmental effects, as does the addition of standard paving that increases storm runoff. Storing and servicing buses requires additional land development that can create local nuisances such as noise, odors and increased traffic. Finally, the addition of a "hamlet circulator" involves new vehicles and planning, requiring a substantial amount of effort, finances, and time.

Sidewalk and Pedestrian Facilities

Sidewalks and curbs channel storm water in the roadway that would ordinarily runoff into the soil. Other physical impacts include encroachments on existing trees, landscaping, fences and walls. While many of these obstructions that are close to the curb or edge of pavement may actually be within the town's right-of-way, it is important for the Town to be accommodating. Finally, some residents have moved to Clarkstown to enjoy the suburban environment may oppose sidewalks because they suggest urban levels of foot traffic, noise, and concrete.

Bicycle Facilities

The feasibility of bike trails, lanes and parking is heavily influenced by the degree to which a variety of environmental concerns can be avoided. Such concerns may include but are not limited to potential impacts to local ecology, the presence of possible hazmat/brownfield sites, effects on drainage, the availability of public right-of-way and the possible need for acquisition, conformity with local land use and zoning regulations and the presence of sensitive historic and/or cultural resources. Class 1 (off-street) trails are likely to require environmental assessment, particularly if the proposed facility is within designated parkland or where right-of-way is not already defined. A Class 2 (separated) lane should be preferred on roadways with a minimum shoulder of four feet, as capital work would not be required. If constructing a shoulder is necessary and feasible, the potential impacts described in the Roadway Network section should be considered.

Quality of Life

As the strategies addressing quality of life in Clarkstown are largely aimed to reduce transportation-related secondary effects, there are few impacts of the recommendations. Possible impacts are addressed in the preceding paragraphs.

Land Use

The impacts of the land use recommendations to create denser, walkable, and transit-accessible centers of development increase the amount of developed land in a small area. Increasing impervious and paved surfaces, storm water runoff can lead to localized flooding, groundwater contamination, or severe soil erosion. While nodes of development – as recommended in Smart Growth and Transit-Oriented Development guidelines – encourage trips by transit and walking, the density of attractive destinations also can increase automobile trips, leading to environmental impacts described in the Roadway Network section. There also can be a scarcity of parking due to competing land uses, which can reduce retail customer access. Social impacts include the loss of open space and increase in rents.

E.4 PROPOSED MITIGATION

The impacts above can be addressed by developing strategies that lead to positive changes in the transportation network and related infrastructure. The mitigation steps below provide a framework for addressing concerns.

Roadway Network

While roadway capacity can free up space for traffic or encourage use, other factors can influence individual decisions to drive. Strategies affecting parking supply, pedestrian and bicycle infrastructure and transit services should be

applied by the Town as ways to maintain efficient traffic levels. To address storm runoff, the Town can create and apply roadside and catchbasin design that diverts runoff in an environmentally sensitive way. Continual monitoring and cooperation with New York State environmental offices can help address issues before they become critical.

Where capacity increases are planned, effective enforcement and education programs, such as community “Street Smarts” programming, can maintain safe driving practices. To ensure that roadway strategies are socially equitable, the Town should participate in all required impact studies and reach out to local leaders and community members for input in the planning and design process.

Public Transportation Services

To mitigate the addition of bus service in Clarkstown, the transit agency should explore the use of hybrid-electric and other alternative fuel vehicles for any new purchases or rebuilds. The Town should conduct and participate in all comprehensive planning and outreach processes for the siting or expansion of new bus facilities or routes to ensure community input and support. While these processes are time-consuming, exploring temporary service adjustments or trial runs to augment service can enhance the planning stages.

Sidewalk and Pedestrian Facilities

The impact of additional stormwater is commonly handled by adding to the stormwater collection infrastructure through the use of catchbasins and underground storm sewers. In most cases engineered solutions can preserve much of the exiting character these elements provide while still accommodating a sidewalk that meets the ADA guidelines. Consensus building through outreach and education programs can bridge the gap between the benefits of a safe and walkable community and the stigma that sidewalks may hold for some residents.

Bicycle Facilities

Stormwater and environmental mitigation solutions are described in the above paragraphs. Consensus building through outreach and education programs can be used to publicize the benefits of a safe and walkable community and minimize negative connotations that bicycle use may hold for some residents.

Quality of Life

Possible mitigation strategies are addressed in the preceding paragraphs.

Land Use

The competition for space inherent in Smart Growth plans must be addressed early in the visioning and planning process, to incorporate a mix of land uses and transportation modes into design and land use policies. The Town should

consult with leading suburban communities implementing Smart Growth strategies, elicit community input, and create phases of development that can be adjusted to meet local needs. Enhanced data collection on transportation resources will enhance the process and assist in monitoring the results of future development. Environmental impacts of increased land cover can be addressed through roadside and catchbasin design that diverts runoff. Roadway planning also should incorporate and take into account the preservation of local open spaces to enhance local social interactivity.

Conclusion

The vision and goals of the comprehensive transportation plan were developed not only by studying the Town's existing transportation infrastructure, but also by considering community wants and needs. The analyses performed identified system limitations and resources that were then used to develop implementable projects. The long-term impacts of each of the proposed projects were studied to determine potential negative impacts on the community, considering the social, environmental and economic issues that may arise in conjunction with transportation projects. Proposed projects were then prioritized based on how well the project would further the Town's vision and goals, while minimizing negative impacts on the community. Each step of this process was crucial to presenting a reasoned and well-informed list of potential actions to improve Clarkstown's transportation network and connections throughout the region.

1.0 Existing Conditions Inventory and Report

1.1 ROADWAY NETWORK

Clarkstown has nearly 300 miles of roads in an area of 41 square miles. Local roads are maintained by the Clarkstown Highway Department. The local street network is largely suburban in nature, where it is common to find winding residential streets, cul-de-sacs, and dead ends. Clarkstown has two interstate highways that provide access through and to the town. Four major roadways are maintained by the New York State Department of Transportation, and five are maintained by the Rockland County Highway Department.

Table 1.1 Major State and County Roadways in Clarkstown

Roadway Name	Jurisdiction	Length (Miles)	Lanes (Not Including Turn Lanes)
Palisades Interstate Parkway	NYS PIP Commission	5	4
I-287	NYS Thruway Authority	5.5	6
U.S. 9W	NYS DOT	6	2
SR-59	NYS DOT	6	2-6
SR-303	NYS DOT	6	2-4
SR-304	NYS DOT	7.5	2
CR-23	Rockland County	6	2
CR-27	Rockland County	2.5	2
CR-33/33A	Rockland County	8	2
CR-35/35A	Rockland County	4.5	2
CR-80	Rockland County	8	2-3

Source: New York State Department of Transportation

The two interstate highways in Clarkstown are the Palisades Interstate Parkway and Interstate 287/87. The Palisades Interstate Parkway (PIP) traverses Clarkstown diagonally after originating at the George Washington Bridge and running to Bear Mountain where it intersects with U.S. Route 6/202. The speed

limit is between 50 and 55 miles per hour (mph). The PIP has two 12-foot lanes in each direction (northbound and southbound). Rights-of-way average 400 feet wide and opposing roadways are separated by wide medians and are enclosed by a dense buffer of naturally occurring vegetation. The parkway continues to provide access to thousands of acres of parkland and is a major transportation route from the northern part of New Jersey to Bear Mountain State Park. Only passenger cars are allowed on this roadway. According to the New York State Office of Parks, Recreation, and Historic Preservation, the Palisades Interstate Parkway has encouraged orderly suburban growth and preserved natural areas for public benefit.

Interstate 287 (I-287) runs east-west through Clarkstown in conjunction with Interstate 87 (I-87), also called the New York State Thruway. The speed limit is 55 miles per hour. For most of its length through Rockland County, there are three lanes in each travel direction (eastbound and westbound) with a shoulder of approximately 12 feet on either side. A marked median of approximately 15 feet divides the travel directions with a metal traffic barrier extending the majority of the roadway. The right-of-way crosses with other roadways 12 times within the town boundaries, plus one water and two railway crossings. The crossings include 12 bridges over the Interstate, and 6 bridges over other rights-of-way. Four major interchanges are located along the Thruway in Clarkstown, providing access to the Palisades Interstate Parkway, Route 9W (9W), State Route 59 (SR-59), and State Route 303 (SR-303).

The interstate highways meet approximately 10 miles to the west of the Clarkstown border near Suffern, New York, where I-87 extends north through New York State to Canada, passing through Albany and the Adirondack Park Preserve. I-287 travels southwest through New Jersey, heading east in central New Jersey and intersecting with Interstates 80 and 78 – both major connectors west – and Interstate 95 (a.k.a. “New Jersey Turnpike”), a major north-south thoroughfare running between the northeast and southern United States. I-287 and I-87 diverge approximately seven miles to the southeast of Clarkstown on the east side of the Hudson River, after crossing the Tappan Zee Bridge. I-287 continues east through Westchester County, terminating at I-95. I-87 extends south to New York City.

An important regional development affecting Clarkstown is the Tappan Zee Bridge/I-287 Environmental Review Project. The study is investigating the future of the deteriorating Tappan Zee Bridge and portions of the I-287 corridor. The Westchester Rockland Tappan Zee Futures Task Force released the preliminary results of the study in September 2008 and suggested the team focus on replacing the bridge to accommodate greater traffic demand, enhanced bus lanes, and commuter rail connections to New York City. In the long term, the improved traffic flow and transit services will facilitate travel to and from Clarkstown to Westchester County, New York City, and New England. A Final Environmental Impact Study (FEIS) is expected to be completed in 2010. The New York State Department of Transportation (NYSDOT) is planning an initiative to help municipalities evaluate opportunities for Transit-Oriented Development associated with transit enhancements from the project. Clarkstown will participate in this initiative and the FEIS in order to communicate the Town's priorities.

State highways in Clarkstown include 9W, SR-59, SR-303, and State Route 304 (SR-304). Route 9W traverses the eastern edge of the Town through the hamlets of Central Nyack, Valley Cottage, Rockland Lake, and Congers. The highway parallels the Hudson River from the New Jersey side of the George Washington Bridge (Fort Lee, New Jersey) on the southern end to the City of Albany, New York to the north where it intersects with State Route 9 (SR-9) and State Route 20 (SR-20). It has a speed limit ranging from 30 to 55 mph. It parallels the Palisades Interstate Parkway south of Clarkstown, and is a popular route for cyclists due to the wide roadway shoulders and slower vehicle travel speeds.

SR-59 runs east-west through the south end of Clarkstown, passing through the hamlets of Central Nyack, West Nyack, and Nanuet. The speed limit ranges from 30 to 55 mph. The road meets an interchange approximately eight miles west of Clarkstown, where travelers have access to other north or southbound highways. Major interchanges within the town include I-287, the Palisades Interstate Parkway, and SR-304. SR-59 provides access to numerous retail, office, and industrial areas, including the Nanuet Mall, Rockland Plaza, Palisades Center, and the Spring Valley Marketplace. The roadway has three 12-foot travel lanes in each direction with up to two additional turning lanes in the west, and is only two lanes east of the Palisades Interstate Parkway. Traffic flow is separated by a 15-foot raised median west of the Palisades Interstate Parkway.

SR-303 follows a north-south route across the eastern half of Clarkstown, crossing the border between New York and New Jersey parallel to 9W. The speed limit is 35 mph in dense areas and rises to 55 mph in less developed areas. The roadway has two lanes in each travel direction with a narrow shoulder in some sections, and one lane in either direction with striped medians and shoulders in dense traffic areas north of I-287. The roadway extends from an intersection with 9W in Congers southward through Valley Cottage to Orangetown and the Hamlet of Tappan where it becomes two-lane Bergen County (New Jersey) Route 505 and continues south. Major interchanges occur with I-287 and SR-59. Population and employment continues to increase along

the route and has, therefore, become a major route for commuter travel and commercial traffic, as well as a draw for commercial and residential development. According to various studies and community input, concerns over traffic safety and operational problems, along with quality of life issues are important in surrounding communities.

SR-304 has one terminus at an intersection with 9W just north of Congers in Clarkstown. The speed limit ranges from 35 to 55 mph. The roadway extends from there at an angle to the southwest past Lake De Forest, and then runs north-south through New City, Bardonia, and Nanuet. The roadway has one travel lane in either direction with a wide shoulder in the northern area of Clarkstown. It becomes wider (approximately 55 to 75 feet wide) with a striped median and turning lanes at intersections as it arrives at New City and continues south. It crosses over the Palisades Interstate Parkway and I-287 and crosses the border into New Jersey, narrowing similar to SR-303. The roadway passes through dense semi-urban development in New City, including shopping and office park destinations.

In addition to State roads, Rockland County roads connect many of the residential areas of Clarkstown. Strawtown Road (CR-23), Middletown Road/Little Tor Road (CR-33), and West Clarkstown Road (CR-35) offer north-south routes into hamlet centers and each cross through New City, Bardonia, and Nanuet. Germonds Road (CR-27) links Strawtown Road and West Clarkstown Road, while Congers Road (CR-80) traverses the Town from Rockland Lake to Ramapo, New York. Congers Road crosses Lake De Forest on its northern end on a causeway. The speed limit for all of these roads is 30 mph.

Roadway Characteristics

As part of the inventory of transportation assets, the study team compiled additional roadway data, such as vehicle height restrictions, steep grades, and weight restrictions. This information was received primarily from the Rockland County Truck Route Study and the Rockland SR-59 Corridor Study. The information is summarized below and illustrated in Figure 1.2.

- There are three roadways in Clarkstown with restrictions on vehicle heights, including the intersection of South Pascack Road and Lawrence Street near Smith Road (CR-60) and SR-59, a portion of the Palisades Interstate Parkway near the southern border of Clarkstown, and on Western Highway at the intersection with SR-59.
- Nine intersections in the Town were analyzed as part of the transportation plan. These can be found in Section 1.3. Four of the intersections are located in the Hamlet of Nanuet, three in New City, one in Central Nyack, and one in Valley Cottage.
- Rockland County collects traffic count data in 61 locations in Clarkstown, with the majority located on SR-59, Middletown Road (CR-33), New Hempstead Road/Congers Road (CR-80), and the Palisades Interstate

Parkway. Steep grades are marked in only two locations in this area, on Central Highway (CR-33) near the northern border of the Town, and on New Hempstead Road between Phillip Hill Road and Little Tor Road.

- Twelve roads in Clarkstown have weight restrictions in place, including eight for up to 10 tons (Kings Highway, Western Highway, Strawtown Road, Germonds Road, Middletown Road, West Clarkstown Road, Collyer Avenue, and Haverstraw Road). There are four roadways with restrictions above 15 tons, including Strawtown Road, Middletown Road, part of West Clarkstown Road, and part of New Hempstead Road.

Accident “Hotspot” Identification

Transportation safety has been identified by citizens as an important area in need of further attention. To further that goal, an accident analysis was performed to identify existing traffic safety hazards.

Methodology

Accident records were obtained from the Clarkstown Police Department. The records cover all accidents in the years 2006 and 2007 and included information on location, time of day, date, and whether injuries occurred. These data were imported into geographic information system (GIS) software and analyzed. Further background data were downloaded from the U.S. Census Bureau and the New York State Geographic Information Clearinghouse. The files were used to project the accident data onto viewable maps that include political boundaries, roads, and other roadway characteristics (Figure 1.2).

Accidents included in this report were recorded by the Clarkstown Police Department, and do not include incidents occurring on the Palisades Interstate Parkway or I-87, as those roads fall under the jurisdiction of the New York State Police and data were unavailable.

In order to identify the location of accident “hotspots,” the number of occurrences for each intersection listed in the accident reports was counted. The accidents were then grouped into three quantile groups, each representing one-third of the total number of accidents.

Analysis

Injuries

Of the 4,528 accidents that occurred in the two-year period, 777 involved at least one injury. The data did not allow for more rigorous analysis regarding number of injuries or fatalities involved in these accidents. The following section provides more location-specific injury analysis.

Accident Hotspot Identification

Three classifications were developed based on the total number of accidents over the two-year period. The classifications are: 1 to 4 accidents; 5 to 17 accidents; and greater than 18 accidents. For the purposes of this analysis, the largest classification, greater than 18 accidents, represents high-priority intersections. The frequency of accidents at these intersections indicates that additional safety measures should be pursued as there are likely problematic physical design or other safety issues.

Twenty-one high-priority intersections have been identified (see Table 1.2 and Figure 1.2). All of the high-priority intersections are located in three main corridors. These corridors are the most traveled corridors in Clarkstown and likely have high accident numbers due in part to higher traffic volumes.

The Route 59 corridor stands out with 11 intersections that experienced 18 or more accidents over the two-year period. The SR-303 corridor is the location of 5 high-priority intersections (including the interchange at SR-59), and the SR-304 corridor also contains 5 such intersections.

While all of these intersections feature exceedingly high numbers of accidents, the rate of accidents that result in injuries varies considerably. For instance, SR-59 at Grandview Avenue experienced 41 accidents over two years, 4 (9.8 percent) of which were injury accidents. This would indicate that the accidents that occur at this intersection generally occur at lower speeds and are overall less severe. In contrast, of the 21 accidents that occurred at the intersection of SR-304 and Bardonia Road, 9 (42.9 percent) were injury accidents. This would indicate that these accidents occur at higher speeds and are more severe or pose a risk to traveler safety.

Review of aerial imagery of the intersections with the highest percent of injury accidents reveals some potential factors such as problematic intersection geometry that should be investigated further in a future study. The accident data does not contain detailed information about the type of accident or the exact location of the accidents. The accidents described at these intersections may not be attributable to factors visible from satellite imagery. For example, it is possible that the signals at these intersections need timing coordination, or speed limits may be too high.

At the intersection of SR-304 and Bardonia Road the roadways intersect each other at a right angle but there are multiple entry/exit points close to the intersection. The limited sight lines combined with these entry/exits points could be a contributing factor to the high number of accidents at this intersection.

Likewise, review of the intersection of SR-304 and West Nyack Road reveals similar geometry. The roadways meet at a right angle and on the northwest corner there are multiple entry and exit points. It also may be possible that sight lines are further limited by vegetation on the corners.

Table 1.2 High-Priority Intersections

Intersection	Total Number of Accidents (Two-Year Total)	Number of Injury Accidents	Percent Injury Accidents
SR-59 and New Clarkstown Road	25	2	8.0%
SR-59 and Grandview Avenue	41	4	9.8%
SR-59 and Hutton Avenue	40	9	22.5%
SR-59 and Middletown Road	29	6	20.7%
SR-59 and College Avenue	40	5	12.5%
SR-59 and Smith Street	52	8	15.4%
SR-59 and Crosfield Avenue	47	11	23.4%
SR-59 and Palisades Center Drive	29	8	27.6%
SR-59 and SR-303 (Ramps)	39	5	12.8%
SR-59 and Broome Boulevard	33	5	15.2%
SR-59 and Waldron Avenue	60	9	15.0%
SR-304 and West Nyack Road	27	8	29.6%
SR-304 and Demarest Mill Road	26	4	15.4%
SR-304 and Bardonia Road	21	9	42.9%
SR-304 and Germonds Road	56	13	23.2%
SR-304 and Leona Avenue	19	3	15.8%
SR-304 and Congers Road	18	2	11.1%
SR-303 and Palisades Center Drive	42	8	19.0%
SR-303 and Storms Road	23	5	21.7%
SR-303 and Lake Road (Valley Cottage)	41	8	19.5%
9W and Lake Road (Valley Cottage)	20	7	35.0%
New Hempstead Road and North Main Street	25	3	12.0%

Source: Town of Clarkstown Police Department.

Time of Day

There are an inordinate number of accidents that registered as having occurred between midnight and 1:00 a.m. It is likely that this aberration is due to improperly input or processed data. Accidents seem to rise and fall with peak travel hours during the morning commute, lunch hour, and evening commute. Table 1.3 presents the temporal distribution of accidents.

Table 1.3 Temporal Distribution of Vehicular Accidents

Time of Accident	Number of Accidents	Monthly Average
12:00 a.m.-1:00 a.m.	382	15.92
1:00 a.m.-2:00 a.m.	154	6.42

Intersection Inventory

Nine intersections were selected by the Town of Clarkstown for additional examination as a result of known traffic and/or congestion issues, access considerations, community complaint(s), and other concern. Additional examinations included performing field research and photologging to confirm intersection geometrics and roadway marking, as well as requesting traffic control device information from the Clarkstown Highway Department. The intersections included in this study were:

- Waldron Avenue at Broadway, Central Nyack;
- Church Street at Blauvelt Road/College Avenue, Nanuet;
- Church Street at Highview Avenue, Nanuet;
- Pascack Road at Lawrence Street, Nanuet.
- West Nyack Road at College Avenue, Nanuet;
- Maple Avenue at Demarest Avenue, New City;
- South Main Street at Second Street/Twin Elms Lane, New City;
- South Main Street at Third Street, New City;
- Kings Highway at New Lake Road, Valley Cottage;

Each intersection includes a drawing of the intersection noting the number of lanes, width of lanes, signage, traffic devices, line striping, crosswalks, line of sight issues, and drainage structures (see Figures 1.3 to 1.11). Additionally, all digital photography has been tagged with geospatial data, and is incorporated into the project geodatabase and a GIS program for further analysis and review.

1.2 SIDEWALK AND PEDESTRIAN FACILITIES

A comprehensive inventory of existing sidewalk and pedestrian facilities within the Town of Clarkstown boundaries was performed to fully understand the condition and state of sidewalks. The findings build the basis for the strategies recommended in the following sections. The Town of Clarkstown street network, population, and mix of land uses and transit system provide a foundation for a walkable town, with comprehensive networks in New City, Nanuet, and Congers. The existing sidewalk network provides a safe location for pedestrians to walk within a small geographical area, but robust connectivity between hamlets or residential areas and the denser commercial districts would further develop travel options and safety for users.

Sidewalk Inventory Methodology

Initial Screening

The planning team performed screening analysis utilizing data collected from the Americorps Volunteer Sidewalk Survey, the Mid-Hudson South Bicycle and Pedestrian Plan and the County's Planimetrics database to locate all existing sidewalks within the Town of Clarkstown. This research was supplemented by an initial field screening of the Town's pedestrian facilities by car to visually locate existing sidewalk facilities.

Local roadways, collector roadways, and arterial roadways were screened during the inventorying process.

GIS Database Development

To effectively plan for future pedestrian facilities, the planning team walked the collector and arterial roadways and visually noted the condition of the sidewalk network, including physical quality, connections between sidewalk segments, elements, or obstructions to any pedestrian facility, and crosswalk locations and quality. A systematic procedure for collecting data was developed using GIS databases created and managed using the computer application ARCPAD. The database consists of four shapefiles, which were used to store data on the physical characteristics. Photographs were also taken to provide future reference information. The following data was collected:

- Material – Asphalt, Concrete, Grass, Pavers, Gravel, Unimproved;
- Total Width – (Measured to nearest tenth of a foot);
- Condition – Good, Fair, Poor;
- Utility Strip – Yes, No;
- Utility Strip Material – Asphalt, Concrete, Grass, Pavers, Gravel, Unimproved;

- Utility Strip Width – (Measured to nearest tenth of a foot); and
- ADA compliance – Cross slope, quality of surface, width of sidewalk, and other engineering-related factors.

Crosswalks connecting sidewalk segments were categorized according to their position and orientation, as well as marking design, including standard parallel lines, ladder type lines, raised surface, or other styles.

Elements and observations collected included physical objects that fall within or adjacent to the pedestrian facilities being indexed. These elements consisted of sign posts, fire hydrants, tree, telephone poles, street lights, mailboxes, pedestrian ramps, etc.

Digital photographs were taken for each sidewalk segment and at other critical locations. The photographs were geo-tagged and hyperlinked to a point shape file. In the final product, the user will be able to click a point within the GIS system and see a photograph of the area.

Information Analysis

The entire database of sidewalk and pedestrian facilities information was analyzed along with other information regarding Clarkstown's infrastructure. Figure 1.12 illustrates the sidewalk analysis.

Existing Sidewalk Conditions

The Town of Clarkstown street network, population, land uses, and transit system provide a foundation for a walkable town. The network of sidewalks is more comprehensive in the Hamlet Centers of New City and Nanuet than that of West Nyack, Central Nyack, and Congers.

An analysis was completed of existing sidewalk conditions on roadways in the town (including collector streets and major corridors). The sidewalk network generally provides a safe location for pedestrians to walk within a small geographical area; however, much of the connectivity between hamlets or residential areas and the denser commercial districts is lacking.

Where practicable, Town streets should provide adequate facilities to allow for safe and comfortable pedestrian travel. It was imperative to identify the pedestrian generators like schools, houses of worship, downtown districts, and transportation hubs where the development of a sidewalk network is essential to encourage walking as a safe viable transportation alternative.

Legend

Sidewalk Condition

- Poor
- Fair
- Good

— County Highway

— Interstate Highway

— State Highway

— Local Road

Municipal Boundary

* Note - Sidewalk Elements viewed distinctly when zoomed in

Through this analysis, five priority corridors were identified that provide the most connectivity to pedestrian generators but have the poorest walking conditions:

- New Hempstead Road (SR-80);
- Congers Road (SR-80);
- SR-304;
- SR-303; and
- SR-59.

While the majority of the existing sidewalks are in good to fair condition, there are numerous locations with elements that provide a barrier to walking. Some streets have missing sections of sidewalk, sidewalks in poor condition, or obstructions that limit accessibility and present safety hazards. The lack of curb ramps, except at major intersections, and limited access to crosswalks creates barriers for those using assistive devices. With the exception of SR-304, detectable warning surfaces have not been provided on most curb ramps. Obstructions within the sidewalks were not found to be a major issue. However, in some areas utility poles within the sidewalk limited the clear path of travel making sidewalks inaccessible for those using assistive devices, such as wheelchairs.

1.3 PUBLIC TRANSPORTATION SERVICES

Public Transportation services operating within the Town of Clarkstown serve a vital function for local residents, workers and other travelers. Many Clarkstown residents depend upon local transit services such as Transport of Rockland (TOR) and the Clarkstown Mini-Trans for intra-town or intra-county work, school, shopping, and entertainment trips.

Line haul bus services such as COACH USA carry New York City-bound commuters to the Port Authority Bus Terminal or the George Washington Bridge Bus Terminal in Manhattan, or to employment locations in Northern New Jersey. The TAPPAN ZEEexpress carries commuters from Nanuet, West Nyack, and other locations in Rockland County across the Tappan Zee Bridge to employment locations and Metro-North Railroad stations in Westchester County. New Jersey Transit and Metro-North operate commuter rail service from Nanuet to New Jersey and Manhattan.

Transportation “hubs” provide convenient access at major centers and facilitate convenient transfers between rail, bus, walking, and automobile. The Palisades Center Mall is one such hub, with transfers between bus lines, as well as the Lot J Park-and-Ride facility with access to the TAPPAN ZEEexpress. Another hub is the Nanuet Train Station, located near Nanuet Mall and the Exit 14 Park-N-Ride off the NYS Thruway. Nanuet Mall is itself a hub as well, with major bus lines sharing stops in the parking lots. Expansion at this location is planned, as the

State of New York is exploring options to utilize part of the Nanuet Mall parking lot to connect local transportation facilities.

Figure 1.13 shows the transit services operating within Clarkstown and the following sections describe each of the transit services in detail.

Transport of Rockland

Transport of Rockland (TOR) manages 11 bus transit routes throughout Rockland County. Five of those routes operate in Clarkstown. The TOR 59 bus operates on SR-59 between Suffern and Nyack, and serves the Nanuet, West Nyack, and Central Nyack areas of Clarkstown. Major activity centers such as the Nanuet Mall and Palisades Center are served by TOR 59. The TOR 91 route operates between Spring Valley and Nyack via New City and Haverstraw. The New City area and Palisades Center are portions of Clarkstown served by the TOR 91 route. TOR 92 operates between Spring Valley and Nyack via Pearl River and Sparkill. While TOR 92 operates primarily in Orangetown, the route enters Clarkstown to serve Palisades Center. TOR 93 operates between Sloatsburg in Ramapo and Nanuet Mall in Clarkstown. TOR 97 operates between Stony Point and the New Jersey state line, passing through Clarkstown on SR-303 and serving Commuter Lot J adjacent to Palisades Center.

Clarkstown Mini-Trans

Clarkstown Mini-Trans is a community transit service operated by the Town of Clarkstown. Mini-Trans operates five routes throughout the Town. All routes converge on Nanuet Mall, which provides easy access for Town residents to this employment and activity center, and provides a location for transit riders to transfer to other Mini-Trans routes or TOR services. Mini-Trans Route A operates between Nanuet Mall and Congers via Palisades Center and Valley Cottage. Mini-Trans Route B operates between Nanuet Mall and New City via Germonds and Bardonia. Mini-Trans Route C operates in the western portion of Clarkstown between Nanuet Mall and South Mountain Road via West Clarkstown Road and Little Tor Road. Mini-Trans Route D operates along the southern tier of the Town, between Nanuet Mall and Central Nyack. Mini-Trans Route E operates between Nanuet Mall and New City via Brewery Road, Congers Road, and SR-304.

Coach USA

Coach USA is a privately owned bus operator, providing bus service geared toward Manhattan-bound commuters, with stops at the Port Authority Bus Terminal (42nd Street) and George Washington Bridge Bus Station (178th Street) in New York City. Their services have been available to Rockland County commuters for over 60 years.

| Mini Trans | Bus Shelters | Roads |
| Red And Tan | Park and Ride Lots | Commuter Rail |
| Tappan ZExpress | Existing | Municipal Boundary |
| Transport of Rockland | Rail Station | |
| | Proposed | |

Tappan ZEEexpress

The Tappan ZEEexpress service is managed by Transport of Rockland. The service operates between Suffern and points in Westchester County such as Tarrytown and White Plains, which are major activity centers and have train stations served by Metro-North Railroad. The Tappan ZEEexpress makes stops in Clarkstown at the Exit 14 Park-N-Ride facility on SR-59 in Nanuet and at Lot J at Palisades Center.

Park-N-Ride Facilities

There are 13 park-and-ride lots in Clarkstown. While the parking lots are open to any customers, most facilities are used by commuters to locations outside of the Town. Costs and the lines served differ at each location. All lots are maintained by the Town of Clarkstown, with funding available from local, Rockland County and New York State sources. Park-N-Ride facilities are an important link in providing public transportation resources that reduce regional greenhouse gases, lower gasoline costs for individuals, and improve mobility in the region.

Each location serves different customers and provides amenities depending on the needs and available resources. A list of the facilities is provided below, grouped by location.

Exit 14 (I-287 at SR-59) North, East and West Lots, Nanuet

The north, east, and west lots off of Exit 14 on I-287 have over 600 parking spaces total (225, 188, and 80 spaces, respectively). The North lot is located on the north side of Route 59 at New York State Thruway Exit 14. The East and West lots are located on the south side of Route 59. They are designed with landscaping, lighting and, on the east lot only, a shelter for waiting passengers. The lots currently are operating at or above capacity. All three lots offer parking free of charge or permit. Available transit services include TOR Route 59; Red and Tan Routes 45E, 11A, 11C, and 49, COACH USA Express, TAPPAN ZEEexpress, OWL, and Spring Valley Jitney.

Middletown Road at SR-59 (next to Exxon), Nanuet

The Middletown Road Park-N-Ride lot is located on the southwest corner of the Route 59 and Middletown Road intersection, across Middletown Road from the Nanuet Mall. The lot offers free parking and contains 25 parking spaces, 2 of which are handicapped accessible. The lot operates at approximately half capacity on a typical weekday. There is a convenience store nearby and lights in the parking lot. Transit services available at the Middletown Road lot include TOR Route 59, Red and Tan Routes 46, 47, 20, 11A, and 11C, and Clarkstown Mini-Trans Route C.

Nanuet Mall, Nanuet

A Park-N-Ride has been secured in the parking lot of the Nanuet Mall in Nanuet, with entrances on SR-59. There are 50 parking spaces available for customers riding the Pascack Valley train line, Red and Tan 11A and 11C routes, and TOR 20, 46, 47 and 59 buses. There are stores nearby and lights in the parking lot.

Smith Street at SR-59, Nanuet

The Smith Street Park-N-Ride lot is located on the north side of SR-59 between Smith Street and SR-304. No fees or permits are required to park in the facility's 286 parking spaces. Seven ADA spaces are available. The lot is served by TOR Route 59, Red and Tan Routes 47, 49, 20, and 11A, and Clarkstown Mini-Trans Routes A and E.

Nanuet Metro-North Railroad Station North and South Lots (Prospect Street at South Middletown Road), Nanuet

Located on Prospect Street near the Nanuet Train Station are two lots, with 332 spaces in Lot 1, and 229 spaces in Lot 2, as well as 12 handicapped-accessible parking spaces in each lot. No permits or fees are required, and the lots have access to stores, a pay phone, passenger shelter, newspapers, mailboxes, and lighting. The lots are accessible by the Pascack Valley rail line, Red and Tan routes 11A and 11C, and TOR Routes 20, 46, and 47.

North Middletown Road at Palisades Interstate Parkway, Bardonia

With 105 spaces including three situated for handicapped access, the Park-N-Ride lot is located on the east side of North Middletown Road on the south side of the Parkway. The lot has a passenger shelter, lighting, a telephone and newspaper boxes. This lot is not served directly by public transportation and is, therefore, used by carpool commuters only. Fees or permits are not required.

SR-59 at SR-303 Exit 12 – Lot J (Palisades Center), West Nyack

The Palisades Center Park-N-Ride Lot J is located adjacent to Palisades Center Mall in West Nyack near the intersection of I-287 and SR-303. It is Clarkstown's largest single Park-N-Ride facility. There are over 1,000 parking spaces available, serving commuters to New York City aboard Coach USA and other commuter buses. Spaces also are available for rideshare users (approximately 40 spaces) and pull-up lanes are used by "kiss-and-ride" commuters, or those who are being dropped off or picked up. There is a shelter available to waiting customers, with schedules and other information posted inside. No fees or permits are required to use Lot J.

SR-59 at SR-303 Lots 1 and 2, West Nyack

Two parking lots complement the Palisades Center Mall Lot J Park-N-Ride. Lot 1 is located north of Route 59 and Lot 2 is located south of Route 59. There are no

fees for parking in these lots. Lot 1 has 230 parking spaces available with four handicapped accessible spaces. Lot 2 has 200 general and 10 handicapped accessible spaces available. Available transit services include TOR Routes 91, 92 and 97. The spaces also are used by carpool passengers.

The following table catalogs the location, available capacity, and a snap-shot of utilization at each of the Park-N-Ride facilities in the Town of Clarkstown.

Table 1.4 Park-N-Ride Facility Catalog

Park-N-Ride Facility	Hamlet/ Village	Parking Spaces	Utilizatio n Snap- Shot

Parking utilization is based on a.m. visits to the facilities between Mondays
and Fridays in 2008/2009.

* Lots were at or over capacity.

New Jersey Transit-Metro North Railroad

There is one commuter rail station in Clarkstown, located in the Hamlet of Nanuet. The Nanuet Train Station is served by New Jersey Transit-Metro North Railroad Pascack Valley Line. Because there currently is only one track on this line, the Pascack Valley Line operates more trains from Spring Valley to Hoboken, New Jersey during morning commuting hours, with only four trains providing morning trips to the area. The trains primarily serve customers from Hoboken to Spring Valley during the evening peak commute with trains arriving every 15 to 30 minutes. Very limited service operates in the reverse direction until 9:10 p.m. Commuters using the Pascack Valley line may transfer at Secaucus, New Jersey to trains bound for Pennsylvania Station in Midtown

Manhattan or to Port Authority Trans-Hudson (PATH) services in Hoboken to reach Lower Manhattan.

Mobility and Transit Trends

All of these roadway and transit services create a network that covers large portions of the Town and serves the transport needs of many of Clarkstown's residents. Travel surveys by the U.S. Census Bureau, as well as anecdotal experience suggest that traffic congestion has been on the rise since the 1990s. Clarkstown's population and job opportunities have increased steadily over the years, although some housing, shopping and work choices have been located in areas inaccessible from public transportation. Equally important, the costs of driving have been relatively inexpensive. As shown in Figure 1.14, the percentage of workers who drove to work alone grew from 75 percent to over 77 percent from 1990 to 2000, while alternatives such as carpooling declined. The percentage of Clarkstown residents who take buses to work increased modestly over the same time period, while the percentage of residents who use taxis, trains, and other types of transit services remained nearly level.

For Clarkstown residents who do not work at home, their commutes have been growing longer. As Figure 1.15 illustrates, the percentage of Clarkstown residents who had a commute of 20 minutes or less was higher in 1990 than it was in 2000. At the same time, the percentage of residents who endured a commute of 40, 60, or even 90 minutes or more increased between 1990 and 2000.

Figure 1.14 Means of Transportation to Work for Workers Residing in Clarkstown 1990 and 2000

Source: U.S. Census Bureau.

Figure 1.15 Travel Time to Work for Workers Residing in Clarkstown 1990 and 2000

Source: U.S. Census Bureau.

1.4 BICYCLE FACILITIES

Bicycling is important in Clarkstown for both commuting and recreational riding. Cycling has been growing in popularity across the region, often around town centers and moderate length stretches where bicycle lanes are provided. Recreational use continues to grow on Route 9W and on local roads. While work and shopping trips by bicycle can help reduce traffic congestion and automobile emissions, recreational cyclists can help support local businesses.

Bicycle Route 9W

Bicycle Route with signage.

Cyclists gathering outside The Runcible Spoon Bakery in Nyack on Route 9W.

9W follows the west side of the Hudson River from the New Jersey-New York border in Palisades, New York to Albany, and serves as the primary bicycle route through the Hudson River Valley. On the segment through the Town of Clarkstown, 9W has a striped shoulder/bicycle lane, which is in good condition. It is typically wide enough to serve as a bicycle lane, although at points where the shoulder lane narrows (as pictured above), cyclists take the right side of the moving lane and drivers must pass with caution.

Greenway Trail

Facing north.

Facing south.

The Greenway Trail is a shared use waterfront trail which runs approximately five miles along the Hudson River from Upper Nyack to the Village of Haverstraw. The trail is partially paved, partially gravel and is in good condition. It is accessible from 9W at both the north and south ends via local roads. The Palisades Interstate Park Commission owns and maintains this trail.

Rockland Lake State Park Bicycle Trail

Inner trail.

Outer trails run parallel to Rockland Lake.

Rockland Lake State Park has two bicycle facilities. The inner trail is for slow moving cyclists and pedestrians, following the edge of Rockland Lake for most of its circumference. The outer trail is Rockland Lake Road (CR-80), which also serves as an access road for vehicles entering and circulating around the lake and state park. Both are in good condition. Rockland Lake Road is within a half mile of the Nyack Beach-Hook Mountain Greenway Trail, accessible via local roads.

Rockland Lake State Park Outer Bicycle trail.

Bicycle counts conducted on Rockland Lake Road show a weekday peak of about 10 cyclists per hour and a weekend peak of about 25 cyclists per hour. Figure 1.16 illustrates visually the bicycle facilities currently located within, passing through, or neighboring Clarkstown.

1.5 TRAFFIC AND PEDESTRIAN GENERATORS

An inventory of major traffic and pedestrian generators was assembled for Clarkstown based on data from the Rockland County Department of Planning and through extensive field research and confirmation. The generators are

described below to provide a comprehensive understanding of the influence of these sites on travel. Travel associated with these uses applies to any travel mode depending on the availability of facilities such as parking, sidewalks, and public transportation. The conclusion of each section presents a listing of facilities identified as major generators of traffic and/or pedestrian activity. Figure 1.17 documents the location of generators within Clarkstown.

Commercial Centers: Small Office and Retail

Commercial centers attract travelers for jobs and services offered at these locations. In relation to transportation, commercial uses are typically analyzed separately for office and retail (shopping) uses and are presented here in that way.

Small Office Uses

Office locations include uses such as law firms, financial services, and dentist offices. They are integral to urban developments such as Transit-Oriented Development and Clarkstown's Hamlet Centers. Most travel occurs during peak travel times, or "rush hour." Peak travel normally occurs from 8:00 a.m. to 9:00 a.m. and 5:00 p.m. to 6:00 p.m., Monday through Friday. These locations also may generate significant traffic during lunch hours, typically from 12:00 p.m. to 1:00 p.m. Other travel during business hours may include occasional individual travelers, as well as supply deliveries. An example of small office uses in Clarkstown is the New City Business District.

Retail Centers

Retail locations attract employees and users (shoppers) throughout the day and evening. These locations may be located singly or grouped in malls or shopping centers. Retail uses include grocery stores, restaurants, and clothing stores. The employees at these locations may travel during peak hours, although stores typically stay open later than other uses. Retail locations attract users during non-peak hours, including weekends. Some travelers include retail locations during their morning or evening commute, making these locations contributors to peak-hour travel. Delivery of goods for many retail uses occurs before or after retail business hours.

Major retail travel generators for Clarkstown include Palisades Center Mall in West Nyack, Nanuet Mall in Nanuet, New City Hamlet Center, the Spring Valley Marketplace in Nanuet, and Rockland Plaza in Nanuet. Although the Marketplace is located in Spring Valley, it still has major influence on travel within Clarkstown borders.

Industrial Centers: Office and Natural Resources

Industrial centers attract travelers for jobs and material transport. Uses may include manufacturing plants, warehouses, or rock quarries. Travel for employees occurs primarily during peak hours. Some industrial businesses offer mass transportation for employees using vans or buses. Pick-up or delivery of material and goods throughout the working day is typical and utilizes large vehicles that may have a significant effect on automobile traffic.

Industrial Office and Warehouse Uses

Office uses include office parks, executive parks and suites and industrial office and warehouse centers. Most travel occurs during peak travel times, or “rush hour.” Peak travel normally occurs from 8:00 a.m. to 9:00 a.m. and 5:00 p.m. to 6:00 p.m., Monday through Friday. These locations also may generate significant traffic during lunch hours, typically from 12:00 p.m. to 1:00 p.m., if food services are outside walking distance. Other travel during business hours includes major and minor supply deliveries by truck, as well as an occasional individual traveler. Major industrial office uses in Clarkstown include office parks near Brenner Drive in Congers, Corporate Way in Valley Cottage, on the SR-59 corridor and on South Pascack Road near SR-59 in Nanuet.

Quarries

Rock extraction and crushing from quarries is a major industrial activity in Clarkstown. The two major quarries are operated by Tilcon west of SR-303 in West Nyack and north of SR-304 in Congers. Travel for employees occurs primarily during peak hours. Pick-up or delivery of material and goods throughout the working day is typical and utilizes large vehicles that may have a significant effect on automobile traffic and quality of life due to engine noise and exhaust.

Government Facilities

Government facilities generate travel for jobs and services offered at these locations and are used similarly to commercial office locations. These locations include uses such as city hall and the courthouse. High travel occurs during peak travel times for employees. These locations also may generate significant traffic throughout the day for users with work to conduct at these offices. Government facilities may experience significant increases in travel by all modes for civic activities such as voting.

Major generators associated with governmental activity are located in New City. They include the Rockland County governmental offices, the Rockland County court house, and the Town of Clarkstown municipal offices.

Houses of Worship

Houses of worship typically contribute to off-peak travel. These may include churches, synagogues, and mosques. Weekend travel increases are common. Houses of worship also may affect traffic flow due to automobile parking needs. Other significant travel may occur during occasional community events, when safety concerns are important similar to school and community center locations.

Schools

The residential nature of Clarkstown has led to the development of a number of public and private schools of various sizes, located in nearly all areas of the Town. The high number of students at these locations, combined with a higher-than-usual number of pedestrians and carpooling create important concerns for managing transportation resources and planning for safe future development.

Elementary Schools

Elementary schools typically contribute to peak travel times; based on a school schedule from 8:30 a.m. to 3:00 p.m. Travel is generated notably by school buses, which make frequent stops in residential neighborhoods and at schools. Children also may be dropped off individually at the school by automobile. Safety is a primary concern due to high pedestrian and bicycle traffic near schools, as children do not have access to cars. Lower speed limits (15 mph) are in effect when children are present. After school programs operated at the school, as well as differing release times for kindergarten and preschool children may extend school hours into evening peak travel time.

Secondary Schools

Secondary schools (middle and high school) contribute to peak travel times, based on a school schedule from 8:30 a.m. to 3:00 p.m. Traffic is generated by school buses and individual automobiles. Safety is a primary concern due to high pedestrian and bicycle traffic near schools, as many youth do not have access to cars. Lower speed limits (15 mph) are enforced when youth are present. After school activities occur with regular frequency and may spread the peak travel times. Travel may significantly increase near the school during large events occurring during evenings and weekends.

Major generators associated with high school activities include, Clarkstown North Senior High School in New City, Clarkstown South Senior High School in West Nyack, Albertus Magnus High School in Bardonia, Felix Festa Middle School in Bardonia, Nyack Senior High School in Upper Nyack, and Nanuet Senior High School in Nanuet.

Community and Recreation Centers

Community and recreation centers typically contribute to off-peak travel. Many activities occur after school until the end of peak travel times at youth-oriented centers. Safety is a primary concern due to high pedestrian use at these centers. Parking and pick-up/drop-off areas may affect automobile traffic. Parents also may visit the center with children in strollers, making sidewalk condition an issue. Community centers sponsoring activities for older adults or functioning as “senior centers” are used by residents who also especially need a safe, comfortable walking environment. Recreation centers may attract travelers around peak hours for those participating in activities (i.e., swimming) before or after the business day. Community and recreation centers attract weekend users,

as well, for both incidental use and large events. Most community centers in Clarkstown are of a smaller variety that serve the local neighborhood.

Residential Community (Multifamily or Active Adult Residences)

Residential communities are diverse in demographics and can be age-restricted. The areas may be composed of single-family detached homes, attached single-family homes (townhouses), apartment buildings, or a combination of these. The relative residential density in suburban environments affects transportation due to increased travel at intersections between neighborhood and the regional street networks. Connecting streets often approach local roads with higher travel speeds; presenting safety concerns for drivers and pedestrians at these locations.

For multifamily communities, residents may have a significant effect on peak-hour travel for all modes due to travel for work and school. Where children are present and amenities (schools, retail) are located within walking distance, pedestrian safety will be a key issue during peak hours, especially where there is access to roadways with higher speed limits. Where facilities are available, the area may attract travelers during those hours for various activities.

Adult-only communities, or senior living communities, typically contribute to off-peak travel. Many activities occur during business hours, as many residents have retired from work and will make trips throughout the day. Some adult communities provide amenities such as health care services or senior community centers, which may contribute to pedestrian travel. In general, a higher proportion of older adults use mobility devices or do not drive, highlighting pedestrian and public transit issues. Parking and pick-up/drop-off areas for public transportation and private vehicles may affect the speed and safety of automobile and pedestrian traffic at intersections. Issues related to Community Centers will apply where these facilities are available. Tables 1.5, 1.6, and 1.7 summarize the multifamily housing and senior adult residences mix by Hamlet Center areas within the Town of Clarkstown.

Table 1.5 Hamlet Center Multifamily Housing Units by Tenure

Libraries

Libraries generate travel throughout the week. Highest travel will occur during events in a way similar to community centers and schools. Safety is a key concern, as libraries are often used by children and young adults, many of whom travel by foot or bicycle. Parents also may visit the library with children in strollers, making sidewalk condition an issue. Automobile traffic may be affected by patrons stopping by the library before or after work to return or pick up materials or family members. Clarkstown's three libraries contribute primarily to local travel.

Hamlet Centers

The Town of Clarkstown has created Hamlet Center zoning overlay districts that offer incentives for development and guide site and building design. The Hamlet Center overlays currently are located in New City, Congers, and Valley Cottage. Zoning overlays are planned for Nanuet, Central Nyack, and West Nyack. Concentrations of traffic generators exist in these locations.

The Hamlet Center overlay guides the creation of accessible, walkable, and attractive "downtown" centers that create a sense of identity, preserve architecturally significant buildings, stimulate the business environment, and provide a safe walking environment. Hamlet Center overlays also encourage a mix of land uses, most notably by including provisions for one-bedroom apartments over retail stores.

Development in Hamlet Center overlay zones will generate trips for residents, workers, and visitors. A great majority of local trips in Clarkstown are by automobile, so intersection conflicts – including access to parking – will be a key issue for roadways near Centers. With an increase in pedestrians and cyclists, safety is a main issue and may require slower driving speeds. While shopping and recreational trips occur throughout the day, employees of businesses and

residents will travel mostly during peak hours, with main paths of travel to and from major roadways.

1.6 LAND USE AND ZONING

According to 2008 tax files from Rockland County and the Town of Clarkstown, land use in Clarkstown is largely low-density residential. Small, winding suburban roadways, often ending in cul-de-sacs, provide access to homes surrounded by private yards. These areas are punctuated by parcels of more dense urban development, often anchored by moderately intense retail and other commercial uses. There also are a number of government and quasi-government properties in the area, as well as land designated for public utilities and industrial activities.

The main areas of commercial use are located near I-287 and SR-59 near the southern end of the Town, and along SR-304 near the Hamlet of New City. Major commercial centers to the south include Spring Valley Marketplace, Nanuet Mall, Rockland Plaza, and Palisades Center. The commercial area in New City is comprised of separate buildings and small retail structures. About half of the commercial properties in each zone are devoted to parking.

Areas zoned or registered as public utilities, which include services such as water and electricity, are located at the southern border of Clarkstown, around Lake De Forest, and extend slightly northwest from the lake. Major industrial uses include a rock quarry at the southern end of Lake De Forest near West Nyack, an industrial park off of SR-303 near Congers and an additional rock quarry at the northern end of Lake De Forest. Major industrial office uses in Clarkstown include office parks near Brenner Drive in Congers, Corporate Way in Valley Cottage, and on South Pascack Road near SR-59 in Nanuet.

Large public institutional uses include schools, a cemetery, and a number of municipal buildings, many of which are located near SR-304 and south of I-287. Clarkstown also enjoys public open space in Rockland Lake State Park on the Hudson River, Kennedy Dells County Park between Little Tor Road and SR-304, Mountain View Park near I-287 and SR-59, as well as a number of local open spaces, ball fields and small parks throughout the Town. Four country clubs and/or golf courses also are located within Clarkstown.

Figures 1.18 and 1.19 document the current land use and zoning within Clarkstown, respectively.

1.7 SYNTHESIS OF PUBLIC OUTREACH DATA

Beginning in late 2007 and throughout 2008, the Town of Clarkstown engaged its citizens in updating the Town's Comprehensive Plan. As part of this outreach effort, the following meetings were held to solicit the public's opinions and ideas and to create a vision for the entire town and for their respective hamlets.

Townwide Meetings

Kickoff for Public Participation Identification of Ideas	October 25, 2007
Comprehensive Plan Meeting	May 15, 2008

Hamlet Area Workshops

Nanuet, Spring Valley, and Bardonia	December 3, 2007
Valley Cottage and Upper Nyack	January 10, 2008
Congers and Rockland Lake	January 24, 2008
New City	February 4, 2008
West Nyack, Central Nyack, and Nyack	February 21, 2008

The following details the information gathered during these meetings with regards to transportation issues.

Methodology

The public comments and concerns expressed during the meetings were gathered and posted by Clarkstown on the Town's Comprehensive Plan web site. The following analysis is based on the information posted on the web site.

The posted comments were entered into a database using the following fields:

- Meeting;
- Issue;
- Comment/Concern;
- Specific Place;
- If Yes, Where; and
- Additional Notes.

The raw database can be found in Appendix B of this technical memorandum.

Meeting – Indicates at which meeting the comment was made.

Issue – A general description of the comment as pertaining to one of the following categories:

- Bicycle/Pedestrian;
- Road;
- Safety;
- Sidewalk;
- Traffic;
- Transit;
- Trucks;
- Tappan Zee Bridge Project; and
- Other.

While many of these issues may overlap, the categories represent the major themes revealed by the comments received.

Comment/Concern – A more detailed description of the comment in terms of a specific concern or desired action. Some examples of the comments/concerns are:

- More transit service;
- More bike paths or pedestrian walkways and pathways;
- Plan coordination (among various levels of government); and
- Increased truck traffic concerns.

While the actual wording is unique to each comment, similar comments were described in a consistent manner in order to capture shared ideas and input.

Specific Place – A yes or no statement as to whether the commenter identified a geographic location specific to their concern.

If Yes, Where – Refers to the previous question in order to capture any specific roads or intersections identified in the comments.

Additional Notes – A place for any pertinent information that could not be captured by any of the previous fields.

Once input into the database, the information was tabulated and counts of responses to each field were made based on the entire population of comments, as well as according to each hamlet area workshop.

A total of 130 distinct comments were made through this outreach process. The most comments were received at the kickoff meeting and 20 comments each were received at the New City, Valley Cottage/Upper Nyack, and West Nyack/Nyack/Central Nyack hamlet area workshops.

Townwide Comments and Concerns

Based on all of the comments received, participants identified the issue of roads most frequently. In addition, more than 20 of the 130 comments received were related to the issue of transit. Bicycle/pedestrian issues also were brought up frequently as an area of concern.

Coinciding with the issue of roads, the most requested action in the comments/concern field was for intersection improvements. Of the specific intersections mentioned, SR-303 and Lake Road in Congers was cited by the most number of people. Other comments and concerns requested plan coordination with other initiatives going on at various levels of government, including coordination with the Tappan Zee Bridge project. When aggregated, requests for more bicycle and pedestrian infrastructure and facilities constitute a significant number of comments (23) and actually surpass the requests for intersection improvements. While the actions and suggestions detailed in the comments/concerns field varied, they do reveal a concern to address the needs not only for the private vehicle driver, but also for the transit rider, pedestrian, and bicyclist.

Hamlet-Specific Comments and Concerns

Nanuet, Spring Valley, and Bardonia

Roads and sidewalks were of greatest concern based on the comments at this workshop. The specific actions and recommendations varied but included: road improvements, sidewalk maintenance, street paving, and the development of new traffic patterns on the SR-59 corridor.

Valley Cottage and Upper Nyack

The most prominent issue identified at this workshop was roads, specifically a desire for intersection improvements. SR-303 was mentioned in a number of contexts, including the intersection at Lake Road, a desire to increase the road's capacity, and a desire to increase bicycle and pedestrian access along the route. Bicycle/pedestrian issues, traffic concerns, and concern over coordination with the Tappan Zee Bridge project also were identified by more than one participant.

Congers and Rockland Lake

Five of the six comments regarding roads requested intersection improvements at this hamlet workshop. Again, SR-303 was identified as the major site of these desired improvements, specifically its intersection with Lake Road in Congers, the Executive Park, and Hilltop. In addition to roadway improvements, bicycle/pedestrian improvements and new and improved sidewalks also were mentioned in a number of comments.

New City

Transit and bicycle/pedestrian issues were identified most frequently in comments from New City. With regards to transit, comments ranged from a desire to increase ridership and rail service to the desire for a high-speed train directly to Manhattan. Bicycle/pedestrian comments focused on a need for bike storage and more bike paths.

West Nyack, Nyack, and Central Nyack

For this hamlet area workshop, traffic was the dominant issue followed by road and sidewalk needs. There also were requests for analysis, including more research on the CSX freight line, what kind of freight is carried and whether or not the CSX Bridge needs to be replaced. Participants also requested analysis of commuter lot usage for the lots on SR-59 and SR-303.

Conclusion

The public outreach for the Comprehensive Plan thus far has revealed that certain issues such as roadway improvements, expanding the transit system, and increasing bicycle and pedestrian access and facilities affect the entire town. The hamlet area workshops reveal that while these issues and concerns may be shared, the priority of each issue may differ between hamlet areas. This information was used in developing a prioritization strategy for identifying and executing transportation projects.

2.0 Transportation Improvement Goals

2.1 TOWNWIDE GOALS

The Clarkstown Comprehensive Transportation Plan identified transportation improvement goals and strategies to improve all types of travel in Clarkstown and neighboring communities. The plan is based on an analysis of the current state of the transportation network in Clarkstown. The goals described here for Clarkstown's transportation infrastructure and services resulted from the analysis of the current condition of these assets. The data was organized using a GIS database that allowed for detailed overlays of the transportation network in relation to the land uses and facilities the network serves. Transportation needs were identified based on current long-range forecasts of population, employment, and development in the region. These regional trends provided insight into gaps in transportation service that may arise within the next few decades. The goals also reflect the local resident input gathered at community workshops.

The study team organized Clarkstown's transportation needs into 11 long-term goals. Detailed with more specific objectives, these goals create a framework with which the Town of Clarkstown will guide spending and policy decisions in the coming decades.

Roadway Network

- Provide efficient travel between the Tappan Zee Bridge/I-287 corridor, SR-59 corridor, and other parts of Clarkstown.
- Add to economic strength and quality of life in Clarkstown by coordinating with the Tappan Zee Bridge/I-287 Environmental Review project and any other regional transportation initiatives.
- Ensure that travel through Clarkstown enhances safety, lowering the number of vehicle crashes and minimizing conflict between modes.

Public Transportation

- Provide local public transportation services that promote sustainable travel options for Clarkstown residents, businesses, and visitors.
- Provide for commuter transit services to regional centers that are accessible, efficient, and safe.

Sidewalk and Pedestrian Facilities

- Create a pedestrian environment that is accessible and provides useful connections between travel generators such as employment sites, residences, and shopping destinations.
- Provide a safe and enjoyable experience for users of sidewalks and other pedestrian facilities.

Bicycle Facilities

- Create a bicycling environment that is accessible, safe, and enjoyable.

Quality of Life

- Improve residents' health and maintain rural character by reducing pollution related to motorized travel.

Land Use

- Develop Hamlet Centers with transportation options and connections.
- Create diverse mixed-use development areas that allow for walking and biking, and are well-served by public transportation.

2.2 GAP ANALYSIS

A “gap” analysis was performed to determine where the existing transportation network falls short of meeting the Town’s goals. The characteristics of transportation-related infrastructure and operations in Clarkstown were reframed and presented as discrete issues that can be addressed through construction and policy strategies. These strategies are described in the following section “Development of Transportation Improvement Strategies.” The gaps are presented below by related goal categories.

Roadway Network

Concerns regarding automobile traffic in the Town of Clarkstown center on three main issues: congested corridors, intersections with high crash occurrences, and truck routing. The study defined where these issues affect the transportation infrastructure, and the extent to which they present obstacles to achieving Clarkstown’s future transportation goals. The corridors identified are based on both existing and predicted traffic volumes based on population growth and planned projects, particularly commercial properties.

Congested Corridors

Congested corridors include links in the roadway network that experience travel times at less than free-flow levels for any part of a 24-hour day. These corridors

are based on available data, including historical traffic counts, accident reports, a truck routes study, as well as personal experiences of people involved in the public meeting portions of the Comprehensive Plan public outreach process. The corridors include (in both directions):

- SR-59 between New Clarkstown Road in Nanuet to the west and I-287/87 in Central Nyack to the east:
 - Ten accident hotspots;
 - Dense collection of access management locations;
 - Major truck route (to Nanuet Mall and Palisades Center in West Nyack); and
 - County transit system’s trunk line (TOR 59).
- SR-303 from the southern border of Clarkstown in West Nyack to U.S. Route 9W to the north:
 - Three accident hotspots;
 - High transit ridership at SR-303 and Brenner Drive (developing technology corridor);
 - Additional commercial space anticipated for technology corridor; and
 - Additional commercial space anticipated for Clarkstown Executive Park.
- SR-304 from SR-59 to the south in Nanuet to Laurel Road in New City:
 - Five accident hotspots;
 - High transit ridership at SR-304 and West Nyack Road; and
 - Six schools or churches within a quarter-mile of SR-304.
- Middletown Road (CR-33) from Church Street to the south in Nanuet to Germonds Road and the Palisades Interstate Parkway to the north:
 - One accident hotspot (SR-59);
 - Nanuet Train Station on the Pascack Valley commuter rail line;
 - Three Park-N-Ride facilities;
 - Access to Nanuet Mall and Rockland Plaza; and
 - Small commercial area near curve at New Valley Road/Milich Lane.
- New Hempstead/Congers Road (CR-80) from the border of Clarkstown with Ramapo, to Brewery Road in New City:
 - Two accident hotspots; and
 - Generators in New City (along and near Main Street) are expected to increase traffic as County grows.

Figure 2.1 documents the identified gaps in the roadway network.

Public Transportation

Clarkstown and the surrounding region continue to develop and need efficient and safe public transportation. Rockland County is still transitioning from a rural and village transit service into a more heavily used and dynamic suburban transit market. Clarkstown is served by three different local bus services, as well as commuter buses traveling to locations in New York City, Westchester County, and New Jersey. In addition, New Jersey Transit trains stop in Nanuet and Spring Valley, carrying passengers to routes along the Pascack Valley Line. Taxis, both individual and shared, have been useful for the indirect, suburban roadway network in Rockland County. Concentrations of retail and warehousing in Clarkstown attract workers from all directions, as does access to commuter routes and car sharing on the area highways.

An analysis of challenges to the public transportation network included comments from Clarkstown residents and public officials, mapping of local origins and destinations, ridership counts from individual transit lines, and incorporation of information compiled in the Economic Development report for the 2009 Clarkstown Comprehensive Plan. The analysis illustrated challenges in bus travel times due to congestion, access to underserved neighborhoods and generators, and operations providing accessible hours and quality customer service.

Congestion

Congested traffic in Clarkstown (see Roadway Network) is an impediment to efficient bus travel. In addition, increased ridership is straining the flag-down bus stop system used by Transport of Rockland and MiniTrans. The following geographic areas experience travel times above local averages:

- SR-59 between New Clarkstown Road in Nanuet to the west and SR-304 to the east;
- SR-59 between SR-303 and Mountainview Avenue in Central Nyack. In particular Mountainview Avenue/New York State Thruway Exit 11 in Nyack;
- SR-303 from its intersection with SR-59 West Nyack to Storms Road in Valley Cottage to the north;
- Main Street (Old SR-304) between Laurel Road and Phillips Hill Road in New City; and
- Congers Road (CR-80) at the intersection with SR-304.

Underserved Areas

Underserved areas were examined by comparing transit routes with land uses and travel generators in the Town, as well as boarding and alighting counts from the 2007 Rockland County Bus Stop Study. A comparison of transit to planned

development and priority neighborhoods also was used to identify areas of need. Areas below represent current and forecasted gaps in transit service:

- New City (along South Main Street).
- Nanuet and West Nyack (on the SR-59 Congested Corridor) have planned expansions near Palisades Center. These and other projects will be encouraged by planned roadway and transit development on the I-287/Tappan Zee Bridge corridor.
- Congers technology corridor (SR-303 and Brenner Drive).
- Hamlet centers (New City, Congers, Valley Cottage, Central Nyack, West Nyack, and Nanuet) will include greater density of the built environment, streetscape improvements and mixed use development.
- Regional Parks (Rockland Lake State Park, Hook Mountain State Park, Blauvelt State Park, High Tor State Park, South Mountain County Park, Mountain Ivy County Park, and Kennedy Dells County Park).

Operations

Operational policy for the areas three local transit providers reflects the largely suburban network, with limited service in some directions, long headways, uncoordinated transfers, and little late-night service. For transit to support the goals outlined in the previous section, it must meet riders' needs for all types of trips. Operations also must keep pace with changing trends in demographics and the economy. Clarkstown represents a concentration of jobs in the service sector, which is unique in the hours and locations of work. Gaps in operations were analyzed by comparing generators to transit routes, analyzing overlap between bus schedules, incorporating public feedback and analyzing hypothetical trips for feasibility. Key concerns include the broad issues below (which are addressed in following sections).

- Palisades Center, Rockland Plaza, and Nanuet Train Station lack coordinated transfers with wait times up to 30 minutes and uncertain arrival times;
- Limited service hours for north-south route corridors in both directions: TOR 91/97 and TOR 49;
- Lack of up-to-date route information at fixed bus stops, transfer points, and park-and-rides; and
- Unsafe or insufficient shelters for riders waiting for buses due in part to the area's "flag-down" system for public transit.

Example Transit Trip 1: New City to Congers

Travel between the hamlet centers of New City and Congers, approximately three miles apart and separated by Lake DeForest, lacks convenient bus connections throughout the day. Some connections require approximately one hour of travel time while other require long waits between buses. The TOR 91

bus travels from New City to Congers via Haverstraw to the north every hour from 6:00 in the morning to 8:00 in the evening with a travel time of 52 to 60 minutes. The Red and Tan 9A and 9AT buses run between New City and Congers every 60 minutes during non-peak hours, and every 30 minutes between 3:30 and 6:30. In the opposite direction the shorter headways are from 8:30 to 10:40 in the morning, and 8:45 p.m. to 12:00 a.m. The Red and Tan lines do not operate on a flag-down service along Congers Road (CR-80), and the direct connection affords a 10-minute trip. The Clarkstown MiniTrans buses offer connections between New City to Congers via the SR-59 corridor. For example, a trip using the B line from New City with a coordinated transfer to the A line to Congers at Nanuet Mall requires 62 minutes of travel time. MiniTrans operates from approximately 7:00 a.m. to 7:00 p.m., limiting the types of trips available. Other local routes on the SR-59 corridor require up to three transfers and up to 83 minutes travel time.

Example Transit Trip 2: Nanuet to Congers

Commuters traveling to employment parks on SR-303 north of Route 59, and who live west of SR-303 (New City, Nanuet, and Spring Valley) face low transit access. Using the Palisades Center as a transfer point, transfers from the eastbound TOR 59 to the TOR 91 or TOR 97 northbound buses are available approximately every 30 minutes. A critical transfer for business hours (8:31 a.m. TOR 91 run) requires a nearly 20-minute wait. The previous bus requires the same wait time, and the run after (8:57 a.m.) has only a 3-minute wait, which may lead to a missed transfer. Similarly, for people who live on SR-303 and travel west of Palisades Center, the trip home would include a nearly 30-minute wait for the next TOR 91 or TOR 97 bus. There are no connections to the TAPPAN ZEEExpress with less than a 30-minute wait and quarter-mile walk for residents on or near SR-303.

Example Transit Trip 3: New City to Route 59

Commuters traveling by bus from New City along SR-304/Main Street to destinations on SR-59 will find convenient transfers and headways during the morning and evening rush hours. Wait times for transfers between the Red and Tan 49 line and the TOR 59 bus are less than 15 minutes, on average. For reverse commuters – those living in the increasingly populated Route 59 corridor who work to the north near SR-304 – transit options are limited. There are no afternoon or evening routes out of New City traveling south on Main Street, leaving only the Clarkstown Mini Trans B or E buses, each having circuitous routes east or west of Main Street at headways of over an hour.

Figure 2.2 documents the identified gaps in the public transportation network. Transit routes are shown in different colors, overlain on characteristics of the town and transportation network such as residential development and congested corridors. This map was used in conjunction with other analyses to visually see where service is operating in relation to existing and planned development, and roadway use.

Pedestrian Facilities

Through an analysis of existing conditions, four priority corridors were identified that provide the most connectivity to pedestrian generators and have the poorest walking conditions. These same corridors also experience the largest shares of automobile traffic, due to a scarcity of diverse connections.

- SR-59;
- SR-303;
- SR-304; and
- New Hempstead Road/Congers Road (CR-80).

Barriers to walking include missing sidewalks, sidewalks in poor condition or obstructions limiting accessibility. Obstructions include cracks, uneven surfaces, raised sections of sidewalk, utility poles, missing curb ramps at intersections. The following sections describe specific sidewalk issues grouped by hamlet center or neighborhood (based on U.S. Census Designated Places).

Nanuet

SR-59 is a major commercial district in the hamlet of Nanuet. Other main roadways in the transportation network include South Pascack Road (CR-35), New Clarkstown Road (CR-35A), Middletown Road/Main Street (CR-33), Main Street (SR-304), West Nyack Road, Smith Street, Church Street, and Convent Road (CR-46).

The sidewalks in poor condition that should be repaired or replaced include these locations:

- Route 59 between College Avenue and Smith Street; and
- Smith Street between Route 59 and Church Street.

Missing segments of sidewalk that should be installed include:

- New Clarkstown Road (CR-35A) between Perlman Drive and Overlook Boulevard;
- South Pascack Road (CR-35) between Route 59 and Convent Road (CR-46);
- Convent Road (CR-46) between South Pascack Road (CR-35) and South Middletown Road (CR-33);
- West Nyack Road between College Avenue and SR-304; and
- South Middletown Road (CR-33) between Church Street and the Clarkstown-Orangetown border.

Bardonia

SR-304 and North Middletown Road/South Little Tor Road (CR-33) are major north-south roadways in the hamlet of Bardonia, connecting the commercial

centers of New City and Nanuet. Germonds Road (CR-27) is a main connector between Main Street and North Middletown Road/Little Tor Road. Additionally, near the intersection of Germonds Road and Middletown Road there is both a Synagogue and a middle school.

Sidewalk in poor condition that should be repaired or replaced exists in these locations:

- SR-304 between SR-59 and Bardonia Road/Ludvigh Road;
- SR-304 between Germonds Road and Virginia Street; and
- Germonds Road between Gerlach Drive and Germonds Village.

Missing segments of sidewalk for the overall transportation network that should be installed include:

- Germonds Road between Gerlach Drive and Middletown Road.

New City

Main Street (CR-29) is a major north-south roadway through the hamlet of New City. Little Tor Road (CR-33), and the northern segment of SR-304 are other major north-south roadways in New City. Congers Road/New Hempstead Road (CR-80) is a major east/west roadway connecting New City with the Palisades Interstate Parkway to the west and the hamlet of Congers, located to the east across a causeway traversing Lake Deforest. Other main roadways in the area include West Clarkstown Road (CR-35A) and Collyer Avenue (CR-76).

Sidewalk in poor condition that should be repaired or replaced include these locations:

- South Main Street between Second Street and Demarest Avenue; and
- South Little Tor Road between Red Hill Road and New Valley Road.

Missing segments of sidewalk for the overall transportation network that should be installed include:

- SR-304 between Virginia Avenue and South Main Street;
- North Main Street (CR-29) between Phillips Hill Road and Old Route 304 (CR-90);
- Congers Road (CR-80) between Strawtown Road and Prides Crossing;
- New Hempstead Road (CR-80) between Main Street and the Clarkstown/Ramapo border;
- West Clarkstown Road (CR-35A) between Franklin Lane and New Hempstead Road (CR-80); and
- Little Tor Road (CR-33) between New Hempstead Road (CR-80) and Moreland Road.

West Nyack

SR-59 is a major east-west roadway in the hamlet of West Nyack, connecting the commercial centers of Nanuet and Nyack. Other main roads in the transportation network include Sickletown Road/Strawtown Road (CR-23), West Nyack Road (SR-59A) and SR-303.

Missing segments of sidewalk for the overall transportation network that should be installed include:

- SR-59 between West Nyack Road and Waldron Avenue; and
- Strawtown Road (CR-23) between SR-59 and Germonds Road.

Valley Cottage

SR-303 is a major north-south roadway in the hamlet of Valley Cottage. Other key streets include Lake Road, Christian Herald Road, and Ridge Road, although these roadways are suburban or rural and see little car or pedestrian traffic.

Missing segments of sidewalk for the overall transportation network that should be installed include:

- SR-303 between Lake Road and Emerald Road.

Congers

SR-303 and Kings Highway (CR-13) are major north-south roadways in the hamlet of Congers. Lake Road/Congers Road (CR-80) is a major east-west roadway, connecting Congers with the commercial center in New City, located across Lake Deforest via the causeway.

Missing segments of sidewalk for the overall transportation network that should be installed include:

- SR-303 between Emerald Road and Lake Road (CR-80);
- Kings Highway (CR-13) between Reginald Drive and Congers Road (CR-80); and
- Lake Road/Congers Road (CR-80) between Kings Highway (CR-13) and Strawtown Road, including the Lake De Forest causeway.

Figures 2.3 to 2.8 document the identified gaps in the sidewalk/pedestrian facilities within Clarkstown by hamlet centers or neighborhoods.

Bicycle Facilities

Compared to Clarkstown as a whole, the east side of the Town is relatively well served with bicycle facilities, with Route 9W providing a north-south bicycle route which connects to sections of the Hudson River Valley Greenway to the north and south. There also are two recreational bicycle trails, both east of Route 9W; including the waterfront trail that connects Haverstraw to Upper Nyack and the loop road around Rockland Lake.

These recreational trails do not, however, provide a viable means of transportation for would-be bicycle commuters. The waterfront trail is too remote from likely trip origin and destination points and it is ‘paved’ with compacted stone screenings which discourages use by the type of skinny high-pressure ‘road-bike’ style tires most commuters favor. The loop road around Rockland Lake while paved does not connect any likely commuter origin and destination points.

As a transportation system, there is no designated network of bicycle routes, on street or off, connecting hamlet centers or other specific points of trip origin and destination to one another throughout the Town. There are no east-west on-street routes marked or signed for cyclists. With the exception of Route 9W, there are no north-south on-street routes marked or signed. In essence, the entire Town is a ‘gap’.

Bicycle commuters can be expected to travel distances up to 10 miles each way in favorable weather on a regular basis provided they have access to safe and convenient routes connecting residential districts to likely destinations such as employment centers, shopping areas, and entertainment venues.

Cyclists who are commuting are no different than motorists who are commuting. They want a route that is efficient and direct. This means that all of the principal arterials in the Town, the roads that most directly connect logical points of trip origin and destination, should be studied to identify ways that they can be made safe for designated shared use by bicycles and motorists.

Quality of Life

Developments of Clarkstown’s transportation system are closely linked with the quality of life available here. As noted in the long-range vision, travel impacts enjoyment of the environment, personal health, and access to services and resources.

To explore areas of need in the transportation infrastructure, the planning team analyzed feedback from public visioning sessions and existing regional plans for environment, housing, and land use. Maps were created to compare transportation resources to various uses and to identify design issues. In addition, the results of traffic analysis allowed for interpolation of quality of life issues. Key concerns are listed below.

- **Air Pollution** – This is a key concern where congestion stalls traffic, leading to an increase in emissions similar to a single point source. Vehicle emissions have been shown to contribute to global warming and smog at regional scales and beyond, and respiratory illnesses and building wear at localized scales. Particular geographic areas in Clarkstown to address include:
 - SR-59 between New Clarkstown Road in Nanuet to the west and I-287/87 in Central Nyack to the east;
 - SR-303 from the southern border of Clarkstown in West Nyack to Lake Road in Valley Cottage to the north;
 - SR-304 from SR-59 to the south in Nanuet to Laurel Road in New City;
 - North Middletown Road (CR-33) from Church Street to the south in Nanuet (Nanuet Mall) to Germonds Road and the Palisades Interstate Parkway to the north; and
 - New Hempstead Road (CR-80) from the border of Clarkstown with Ramapo, to Brewery Road in New City.
- **Noise Pollution** – This is critical where industrial, warehousing and deliveries lead to frequent truck traffic. Noise pollution disrupts day-to-day life for businesses and residents, and can lead to a decline in land values. Particular geographic areas in Clarkstown include:
 - SR-59 Corridor;
 - Doescher Avenue (intersection of SR-59); and
 - Quarries.
- **Light Pollution** – Overlighting (too much light) can have negative effects on wildlife in undeveloped areas and can compromise the use and enjoyment of public and private spaces. Forms of light pollution observed in Clarkstown include:
 - Light trespass (light from one property spilling onto another) or glare; and
 - Sky glow near shopping centers, where a “dome” of light is cast into the night sky.
- **Water Pollution** – While no information on water quality within the Town borders was available at the time of the writing of this plan, it is generally understood that the watershed areas in Clarkstown are susceptible to water pollution due to transportation infrastructure. Contributing factors include impermeable paving material in roads, sidewalks, and parking lots that lead to stormwater runoff that can overload streams and carry pollutants such as oil into the watershed.

The Clarkstown Highway Department has investigated the use of alternatives to road salt to mitigate excess Sodium Chloride (salt) that can be washed into the watershed and harm fish, wildlife and vegetation. The town also has created an anti-icing procedure that applied a 20 percent salt solution to specific high-risk roads prior to a storm. This has reduced the need for the application of salt to these roads and resulted in cost savings and fewer vehicle crashes. The solution also recycles stormwater runoff that would have otherwise been discharged into local streams or sewage systems. For more information, please see the Appendix memorandum on Roadway Anti-Ice Products.

- **Walking and Biking** - Clarkstown lacks a fully developed network of walking and cycling paths that enable travel that can improve personal health. Non-motorized transportation also may contribute to improved sense of community in neighborhoods where walking facilities increase personal interactions. Several parks are available that would be well served by non-motorized connections from residential areas and public transportation.
- **Security** - Clarkstown does not have its own public regional emergency evacuation plan. However, the Town participates in the Rockland County Radiological Emergency Preparedness plan, which has a traffic management plan for the Indian Point Energy center in case of evacuation. Clarkstown also has the City Watch public notification system to notify residents as needed. Having evacuation and other security plans and policies in place that are regularly coordinated with related agencies, and communicated broadly to the public, can facilitate an efficient and safe response by the community.

Land Use

While Clarkstown aims to preserve the suburban and even rural character that continues to attract businesses and residents, sprawling land use patterns present challenges to achieving their transportation goals. Given existing conditions and projected population growth in the region, local roads will be pushed to support traffic flows to expanding areas of development, leading to compromised safety and increasing congestion.

To identify challenges to achieving transportation goals in relation to land use patterns, the team analyzed land uses by tax lots, zoning maps, prior planning studies, regional development plans, and conversations with community members. Land use influences transportation goals through zoning law, which dictates the allowance for development, parking requirements and design, public transportation access and street design. Key land use gaps identified include:

- **Suburban Sprawl** - Low-density and single-use development leaves travelers dependent on travel by car. Examples include malls and other commercial areas on SR-59 without safe pedestrian connections, executive office parks

located north of the main commercial areas on SR-303 and dead-end street design in residential areas.

- Large parking lots surrounding businesses leads to long walking distances from street to building fronts, and adds to storm runoff and water pollution.
- The lack of master planning and other regulations that encourage public transportation use; secondarily improves traffic flow and provides safe route for customers.

3.0 Transportation Improvement Strategies

3.1 IMPROVEMENT STRATEGIES

The following strategies lay out a guide for future projects based on an analysis of Clarkstown's long-term transportation goals and the current infrastructure gaps to achieving those goals. Some strategies are site-specific, while others present policy tools to address future change. The strategies are grouped according to areas of transportation, consistent with the previous sections.

Roadway Network

Strategies for achieving goals in Clarkstown's roadway network target three main issues: traffic congestion, intersections with high crash occurrences, and freight truck routing. Identified congestion corridors – based on both existing and predicted traffic due to population growth and planned developments – exist on segments of SR-59, as well as SR-303, SR-304 and Middletown Road (CR-33) near SR-59 and New Hempstead Road/Congers Road in New City.

Traffic congestion suggestions include creating access management programs along the congested corridors that alleviate traffic slowing as drivers use driveways. Signalization, or the timing of intersections with traffic lights, is another key approach in mitigating traffic congestion in Clarkstown. The Rockland County Highway Department published recommendations to improve signalization and roadway geometry at 46 intersections in the Town, 11 of which are located in congested corridors described in this report. The report detailed traffic data (AM and PM peak hour turning movement volumes), roadway geometry, detector locations, speed limits, signage, pedestrian volumes, parking regulations, signal timing, phasing and equipment information was collected for the existing conditions. The Town of Clarkstown has implemented all signal timing recommendations found in the report. For more information, see the Appendix document titled "Data Collection and Analysis for Traffic Signal Retiming of Locally Maintained Traffic Signals on the NYMTC Best Practice Model."

Critical accident locations, mostly located along congested corridors, can be addressed through systematic study and design treatments that account for specific environmental conditions. Truck routes were addressed in a 2007 report by Rockland County. The strategies in the report are consistent with the goals outlined in this plan and will be used to achieve the Town's goals. No additional freight strategies were identified in this report.

Strategies in other sections of this chapter also address roadway congestion. The public transportation section includes strategies to increase transit ridership and reduce the number of automobiles on the road. Similarly, land use strategies that reduce suburban sprawl through a mix of transit accessible shopping, work and housing opportunities, as well as transit access, can encourage less dependence on car use.

Systemwide and Policy Strategies

- Coordinate with Rockland County to ensure traffic signalization in congested corridors improves the flow of traffic in Clarkstown and at a scale that addresses regional traffic congestion.
- Establish policies for street design that accommodates all travel modes (walking, cycling, cars, transit, and freight) and applies traffic calming treatments that accommodate safe driving practices.
- Improve transit access to commercial and retail centers to encourage non-automobile travel to the area (see Transit Strategies in this section).
- Expand capacity at existing Park-N-Ride facilities. Consolidate access points with nearby locations to minimize obstacles.
- Use the Clarkstown zoning code to address access management for new development in order to minimize driveway conflicts with traffic and pedestrians.

Geographic Strategies

SR-59 between New Clarkstown Road in Nanuet to the West and I-287/87 in Central Nyack to the East

- Investigate the 10 accident hotspot intersections on Clarkstown roads, prioritize them by safety impact, and implement case-specific mitigation.
- Investigate alternatives for a bus-only lane on SR-59 during periods of highest transit and automobile congestion. The plans should compliment developments related to the Tappan Zee Bridge project.
- Address access management to parking lots between Middletown Road near Nanuet Mall and Rockland Plaza, and New Clarkstown Road (33 driveway locations).

SR-303 from the Southern Border of Clarkstown in West Nyack to Route 9W in Congers to the North

- Investigate three crash hotspot intersections on Clarkstown roads, prioritize them by safety impact, and implement case-specific mitigation.

- Address access management, public transportation and site design issues:
 - Reduce traffic congestion in the growing Congers Technology Corridor (SR-303 and Brenner Drive) reduce traffic congestion in this growing area (See Land Use Strategies); and
 - Valley Cottage Executive Office Corridor (SR-303 and Brenner Drive) reduce traffic congestion in this growing area (See Land Use Strategies).

SR-304 from SR-59 to the South in Nanuet to Laurel Road in New City

- Investigate five accident hotspot intersections on SR-304, prioritize them by safety impact, and implement case-specific mitigation.
- Redesign the intersection of South Main Street and New Hempstead Road/Congers Road in New City (near SR-304).
- Widen the roadway to accommodate bus stops that allow for passing traffic (See Transit Strategies).

Middletown Road (CR-33) from Church Street to the South (Nanuet Mall) to Germonds Road and the Palisades Interstate Parkway to the North

- Improve access for drivers to the Nanuet Train Station on the Pascack Valley rail line by addressing rush-hour queuing on the tracks, as well as connections to SR-59 and I-287.

New Hempstead Road (CR-80) from the Eastern Border of Clarkstown with Ramapo, to Brewery Road in New City

- Investigate two critical accident hotspot intersections at New Hempstead Road and Main Street, and Congers Road at SR-304, prioritize them by safety impact, and implement case-specific mitigation.
- Work with Rockland County to address access management in New City governmental parking areas to further reduce the number of driveways entering New Hempstead Road.
- Coordinate with Rockland County and the Town of Ramapo to address congestion on New Hempstead Road/Congers Road (CR-80) near the Clarkstown border.

Public Transportation Services

Strategies for public transportation focus on improving bus travel times and on-time performance, increasing access to underserved areas and improving overall bus operations. The suggested operational strategies for reducing bus travel times include creating bus-only lanes during peak hours and pull-out areas, focusing on portions of the congested corridors in Central Nyack, Nanuet, and New City, as well as the access roads to Palisades Center Mall. The Town

also should investigate a fixed bus stop system on the MiniTrans and TOR bus routes in order to consolidate time needed for boarding and alighting.

Underserved areas have shortages of service to destinations used frequently by residents. One key strategy is to create a “Hamlet Circulator” to connect and encourage growing areas of development. Other areas to address include office developments on Route 303 near Congers and Valley Cottage, the SR-59 corridor with potential development following the Tappan Zee Bridge project, and the state and county parks located in Clarkstown. Policy strategies address the frequency, hours, and customer service aspects of the public transportation network. This includes coordinating transfers at existing hubs, expanding hours for routes on SR-303 and SR-304, adding information technology services (ITS) for minute-by-minute updates at bus locations and developing robust data collection to aid in service planning.

Systemwide and Policy Strategies

- Transition to a fixed-stop bus system for the Transport of Rockland bus routes in Clarkstown. Locations, facilities, and expected results are described in the 2007 Clarkstown Bus Stop Study.
- Identify opportunities for coordinated transfers at Palisades Center, Rockland Plaza, and the Nanuet Train Station that achieve passenger wait times of less than 15 minutes.
- Continue to explore ITS for local and regional transit services, giving customers access to up-to-date “next bus” information, schedules and service advisories at transit stops and stations.
- Establish procedures with transit agencies to create and maintain safe, convenient pedestrian facilities between bus shelters and local travel generators.
- Add bike parking at transit hubs and other high-use transit stops.
- Incorporate transit stops and routes into the Clarkstown land use regulations so these assets are considered with new developments in Clarkstown.
- Work with government partners and private bus companies to develop more bus routes and stops near parks and open spaces in Clarkstown that encourage transit trips for recreational activities.
- Coordinate future studies of Bus Rapid Transit and Light Rail Transit on SR-59 with efforts to improve the Tappan Zee Bridge.
- Implement data collection processes that comply with National Transit Database requirements and aid in planning future services to meet demand.
- Encourage and undertake a marketing campaign with local businesses to advertise in public transportation facilities and infrastructure while also

encouraging them to provide and disseminate public transportation information such as maps and schedules.

Geographic Strategies

- Create bus-only lanes on the Route 59 corridor during peak hours to facilitate more efficient passage for public transportation.
- Create bus route through Palisades Center Mall parking lots that does not conflict with cars that are parking (At the time of this report, Rockland County is working with Palisades Center to find appropriate space for public transportation on the property).
- Create a “hamlet circulator” bus line traveling among the hamlet centers, with coordinated transfers and stops on the SR-59 corridor.
- Address capacity and traffic conflict issues at the intersection of Mountainview Avenue and SR-59.
- Seek ways to separate bus stop locations and pull-out lanes at these locations:
 - SR-303 from SR-59 to Storms Road in Valley Cottage;
 - North Main Street between Laurel Road and Phillips Hill Road in New City;
 - Other bus stops on North Main Street in New City; and
 - Congers Road (CR-80) at the intersection with SR-304.
- Expand service hours on the TOR 91 and 97, providing more frequent service and “reverse commute” trips on the SR-303 corridor.
- Explore need for service expansion to the Congers technology corridor (SR-303 and Brenner Drive).
- Create a bus stop hub facility in New City for MiniTrans, TOR, and Red and Tan bus lines.

Sidewalk and Pedestrian Facilities

Taken together, requests for more bicycle and pedestrian infrastructure and facilities were key issues for Clarkstown residents during public meetings regarding local transportation, actually surpassing requests for other roadway improvements. While the concerns and ideas for sidewalks and pedestrian facilities varied, they revealed a concern for the safety of non-motorized travelers, including pedestrians, transit riders, and bicyclists.

The goal of improving the sidewalk network is to provide a comfortable and safe environment for pedestrians while improving the walkability of the town. To do this, the sidewalk construction was prioritized in areas where there are high numbers of travelers, safety concerns limit walking and where walking is a primary means of transportation.

There are two main impediments to a safe pedestrian environment. One are gaps in the sidewalk network. These are described in the previous section of the transportation plan.

These areas tended to coincide with the congested corridors listed in the Roadway Network section. To summarize, sidewalk projects within hamlet centers and that meet the following criteria received priority attention:

- Safety risks to pedestrians due to design of sidewalk route, crossing area, or lack of sidewalks;
- Safety risks to pedestrians on existing sidewalks due to poor surface conditions;
- Located within one-half mile of a facility that generates higher-than-average pedestrian traffic (such as a transit stop or a library);
- Serve a population that uses walking as a primary form of transportation (such as school-age children); and
- Fill in or expand the existing sidewalk network.

Systemwide and Policy Strategies

- Create the Clarkstown Complete Streets Initiative to bring together a diverse group of community members, government partners, and funders to develop new ways to provide roadways that are safe for all users, including pedestrians, cyclists, transit riders, and automobile drivers.
- Create a Street Smarts Program to provide educational activities for community members to learn how to share sidewalks, bike paths, and roadways safely with other users. The program would be modeled from similar municipal programs in New York and other states. For further information, see Figure 3.3 in this section.
- Create Safe Routes Programs for students and older adults. Safe Routes programs include streetscape improvements to increase safety, awareness outreach to drivers in high-use pedestrian areas, and pedestrian-education programs to promote healthy and safe walking. For further information, see Figure 3.3 in this section.

Geographic Strategies

- Create and improve the sidewalk network focusing on the segments displayed in the accompanying map and detailed below. The segments presented in the table represent locations meeting the priority criteria: high use, safety risk to pedestrians, population served and enhancing the existing network.

Table 3.1 outlines the sidewalk and pedestrian facility locations recommended for improvement.

Table 3.1 Recommended Sidewalk Improvements

Hamlet	Project Segment	Length (Mile)	New/Improve
Bardonia	Germonds Road between Gerlach Drive and Middletown Road	0.6	New
	McCarthy Way from Parrot Road to Strawtown Road	0.6	New
	SR-304 between SR-59 and Virginia Street	2.2	New/Improve
	West Clarkstown Road from New Clarkstown Road (or Burda Lane) to South Little Tor Road/Middletown Road	0.9	New
Congers	Congers Road (CR-80) between Kings Highway (CR-13) and Strawtown Road	1.2	New
	Kings Highway (CR-13) between Reginald Drive and Congers Road/Lake Road (CR-80)	0.1	New
	Kings Highway from First Street to Endicott Street	0.5	New
	Lakeland Avenue between Amanda Lane and Beechwood Drive	0.3	New
	Vermont Avenue, Massachusetts Avenue, Vermont Avenue, Colton Street, Butler Street	0.25	New
Nanuet	Convent Road (CR-46)/South Pascack Road (CR-35) from South Middletown Road (CR-33) to SR-59	1.8	New
	Grandview Avenue from SR-59 to Convent Road	0.9	New
	New Clarkstown Road (CR-35A) between Perlman Drive and Overlook Boulevard	0.3	New
	Old Nyack Turnpike Road between South Pascack Road and Sherwood Drive	0.4	New
	Pipetown Hill Road between South Central Road and South Pascack Road	0.4	New
	Prospect Street from Briar Road to South Middletown Road	0.8	New
	South Middletown Road (CR-33) between Church Street and the Clarkstown–Orangetown border	0.8	New
	Smith Street between SR-59 and Church Street	0.2	Improve
	South Pascack Road (CR-35) between SR-59 and Convent Road	1.0	New/Improve
	SR-59 between College Avenue and Smith Street	0.5	Improve
	West Nyack Road between College Avenue and SR-304	0.6	New

Hamlet	Project Segment	Length (Mile)	New/Improve
New City	Burda Avenue/Lane from South Little Tor Road to Red Hill Road	1.1	New
	Congers Road (CR-80) between Strawtown Road and Prides Crossing	0.5	New
	Elmwood Drive between East Calvary Drive and Congers Road	0.5	New
	Goebel Road between SR-304 and CR-80	0.4	New
	North Little Tor Road (CR-33) between New Hempstead Road and Moreland Road	1.7	New
	North Main Street/Zukor Road between Phillips Hill Road and Doral Court	0.5	New
	New Hempstead Road (CR-80) between N. Main Street and the Clarkstown/Ramapo Line	1.8	New
	Old Route 304/Haverstraw Road between N. Main St. and 9W	1.7	New
	Phillips Hill Road between North Little Tor Road and N. Main Street	0.9	New
	Red Hill Road from Burda Lane to West Clarkstown Road	0.5	New
	South Main Street between Second Street and Demarest Avenue	0.2	New
	Saw Mill Road	0.7	New
	West Clarkstown Road (CR-35A) between Red Hill Road and New Hempstead Road (CR-80)	0.6	New
	Zukor Road from Old Route 304 to Doral Court	0.3	New
Valley Cottage	SR-303 between Emerald Road and Lake Road (CR-80)	1.1	New
	Casper Hill Road from Storms Road to SR-303	0.4	New
	Kings Highway from Crusher Road to Karin Court	0.9	New
West Nyack	SR-59 from West Nyack Road and the Nyack Village Line	1.0	New/Improve
	Strawtown Road (CR-23) between SR-59 and Germonds Road	0.6	New

Bicycle Facilities

Cyclists who are commuting are no different than motorists who are commuting. They want a route that is efficient and direct. This means that all of the principal arterials in the Town – the roads that most directly connect logical points of trip origin and destination – should be made safe for designated shared use by bicycles and motorists.

There are three classes of bicycle paths with varying degrees of infrastructure intensity and cyclists' exposure to motorized traffic.

1. Class 1 includes off-street trails, either paved or graveled. These paths may be found in parkland or where right-of-way is not already defined.
2. Class 2 routes are separated but on-street bike lanes, usually with more than a minimum shoulder width of four feet. The lane may be designated with a single stripe, symbols, painted lane, or a combination of these.
3. Class 3 routes are shared bicycle lanes, meaning there is no separate facility, with bikes sharing space with vehicular traffic. Class 3 routes are signed to indicate a shared lane, with no further physical alterations. This is most appropriate where vehicle speeds are slow and cyclists may be passed safely.

The recommendations below are based on analysis that considered existing projects, open space and transportation assets and travel generators. The Palisades Trailway has been studied and designed, and the first phase already has been built in Orangetown, and can now be extended through Clarkstown. The CSX West Shore rail line runs north-south near Route 303 and currently is used for freight purposes alone but can be designed to accommodate non-motorized uses. Opportunities for potential off-road trail development may exist within the right-of-way and land surrounding Lake DeForest.

Systemwide and Policy Strategies

- Adopt a bicycle network plan and develop a route implementation program taking into consideration prioritization processes, design, safety, convenience, quality of experience, proximity to trip generators, and ease of implementation.
- Connect recreational cycling routes to generators and destinations via new on-street bicycle routes that encourage short on-street bicycle trips.
- Raise awareness of bicycle resources to shift the perception of cycling to that of a real transportation option while educating drivers and cyclists on safe practices.

Geographic Strategies

- Work with the Palisades Interstate Park Commission and other authorities to implement the planned bicycle facilities on the Palisades Interstate Trailway.

- Assess the feasibility of existing plans for a Class 1 or Class 2 bike route on SR-59 between West Nyack and Nanuet.
- Assess the feasibility of a rail-with-trail along the CSX River Line. Clarkstown should coordinate with CSX, Rockland County, and NYS DOT Region 8. The study should include possible trail design alternatives.

As noted by the Federal Highway Administration and other organizations, rails-with-trails are operating under a wide variety of conditions. There are no national standards or guidelines that dictate rail-with-trail facility design. Key design issues to address include setback from the tracks, barriers between the trail and the tracks, rail crossings, and proper signs or other warning systems. Design decisions must take into account the characteristics of the track segment, including available land, vegetation, topography, sight distance, train speed and frequency, types of crossings, and the presence of tunnels or bridges. See figure 3.2 for more information.

- Assess the feasibility of a trail around Lake DeForest to provide recreational and commuter access to this large public space.
- Establish a Class 2 bicycle lane network using the routes displayed in the Figure 3.1 and detailed in Table 3.2. Planned paths are routes separated from vehicular traffic that are already designed and could be constructed the soonest. Studied paths are separated routes that have been recommended as part of this report or other studies. Studied Routes are on-road cycling paths suggested in this plan or other studies.

Table 3.2 Recommended Class 2 Bike Lanes: Four-Foot Shoulder on Roadway

Route	Point 1	Point 2	Length (Mile)	Width (Feet)	Shoulder (Feet)	Widen	Design Issues

Figure 3.2 Rail-With-Trail Bicycle Paths

Rail-with-trail facilities have been successful as recreational trails near rail lines in New York and around the United States. Key design issues to address include setback from the tracks, barriers between the trail and the tracks, rail crossings, and proper signs or other warning systems. Design decisions must take into account the characteristics of the track segment, including available land, vegetation, topography, sight distance, train speed and frequency, types of crossings, and the presence of tunnels or bridges.

The Traction Line Recreation Trail is a multi-use trail located on an abandoned trolley corridor in Morris County, New Jersey. The three-mile trail runs from Morristown to Madison along a portion of New Jersey Transit's Morris and Essex Line. A continuous chain-link fence and grassy strip separate the trail from the active rail line. The trail connects to two New Jersey Transit rail stations and other multi-use trails. The trail meets standards of the Americans with Disabilities Act. The Morris County Park System designated the trail in the 1986 on land donated from the Jersey Central Power and Light Company and a one-mile extension was built on land donated by JCP&L and Fairleigh Dickinson University in 1998.

Quality of Life

Strategies for air and water pollution mitigation include robust data collection to aid in project prioritization, improving public transportation service especially in congested corridors, and using roadside and paving design to minimize stormwater runoff. Strategies addressing noise pollution include implementing recommendations in the 2007 Rockland County Truck Route Study, while light pollution can be minimized by developing lighting standards that take advantage of technology and design elements available in street and structure lighting. Other strategies affecting quality of life in Clarkstown include improvements to the pedestrian and cycling networks to provide opportunities

for active, transportation and exercise choices, and coordinating with regional authorities to update and publicize a regional evacuation plan.

Systemwide or Policy Strategies

- Continue to collaborate with air pollution monitoring along Clarkstown roadways and prioritize congestion mitigation where traffic-related pollution is highest.
- Incorporate street lighting design and placement into the Town code to minimize light pollution. For example, consult the Town of Warwick, New York regulations.¹
- Develop policies and research to encourage the use of permeable pavers, bioswales, and other storm runoff mitigation treatments on any paved transportation infrastructure.
- Incorporate minimum space and programming requirements for neighborhood parks, plazas, and playgrounds into zoning regulations for Clarkstown Hamlet Centers.
- Continue to support new equipment, procedures and training related to roadway anti-icing and use of road salt in order to maintain high levels of driver safety, local water quality, and cost-effectiveness.
- Implement the Pedestrian and Bike strategies for improving the walking environment to support healthy commuting and recreational activities.
- Coordinate with neighboring and regional authorities to develop and publicize emergency evacuation routes that will be free from flooding or other obstructions.
- Create “complete streets” design template for introduction in Hamlet Centers and other developments that incorporate all transit modes with emphasis on safety and convenience (See Figure 3.3 below).
- Create a “street smarts” townwide traffic safety campaign that relies on increased public education and active community participation in practicing attentiveness, patience, and a willingness to share the road with fellow drivers, cyclist, and pedestrians equally (See Figure 3.3 below).

Geographic Strategies

- Work with Orangetown, Rockland County and NYSDOT to find a multi-jurisdictional solution to the Doescher Avenue truck routing concern.
- Institute recommendations in the 2007 Clarkstown Truck Route Study to mitigate noise pollution by consolidating truck routes on SR-59.

Figure 3.3 Complete Streets and New Haven's Street Smarts

Sources: City of New Haven, Connecticut; National Complete Streets Coalition; Voorhees Transportation Center at Rutgers University.

Land Use

The land use strategies focus on encouraging moderately dense new and infill development that follows the tenets of smart growth and transit-oriented development (TOD). These development strategies aim to encourage growth that is environmentally, socially, and culturally sustainable in the long term. This includes, for example, constructing low-energy buildings, reducing automobile use and creating vibrant “downtowns” with a mix of residential, work and retail.

Clarkstown already has codes that facilitate non-automobile travel in Clarkstown's Hamlet Centers. Clarkstown should aim to find ways to apply Hamlet Center regulations more broadly across the Town and in all cases incorporate ideas from residents, business owners, developers, and community leaders. Some ways to allow for more efficient land development may include reducing parking requirements, increasing the mix of uses per building or parcel, increasing allowable building heights, and increasing proximity to neighboring uses. Incorporating public transportation, pedestrians, bicyclists, cars, and trucks into "complete streets" will ensure that Clarkstown achieves its transportation goals. The strategies should be supported by coordination between land development agencies and regional transportation planning organizations. In addition, opportunities should be explored to include the cost of developing transportation infrastructure, as well as costs of congestion and pollution due to additions in automobile use.

Systemwide and Policy Strategies

- Change Clarkstown Town Code to increase allowable densities for technology, commercial, and office developments on the SR-303 Corridor (Technology Corridor, Executive Park).
- Change Clarkstown Town Code to increase allowable densities for technology, commercial, and office developments on the SR-59 corridor.
- Change Clarkstown Town Code to increase allowable densities for commercial, residential, and mixed-use development within Hamlet Centers.
- Explore opportunities to amend Hamlet Center zones to include provisions for access management, sidewalk development, public transportation stops, traffic calming, and reduced parking requirements.
- Explore creative parking requirements in the Clarkstown Town Code to accommodate a range of land and transportation uses.
- Incorporate development, maintenance, and congestion costs for transportation infrastructure related to new residential, commercial, industrial, or mixed use development in Clarkstown to reflect impacts on the roadway network and encourage more dense development patterns.
- Change Clarkstown Town Code to incorporate public transportation infrastructure – pull-out lanes, travel lanes, sidewalk shelter space – into Hamlet Center zoning to allow for public transportation access.
- Phase in "complete streets" roadway design in Clarkstown Hamlet Centers. Complete streets create a transportation environment that accommodates pedestrians, cyclists, transit, trucks, and cars with equal safety, accessibility, and efficiency. The design model also can be applied to pedestrian corridors described above.

Geographic Strategies

- Change Clarkstown Town Code to increase allowable Floor Area Ratios (FAR) and decrease parking needs for technology, commercial, and office developments on the SR-303 Corridor near the Congers Technology Corridor and Executive Park. Continue encouraging the application of Hamlet Center overlay design guidelines for new development to increase access by transit.
- Encourage additional zoning changes in the Congers Hamlet Center from SR-303 to Rockland Avenue (affecting R-10, LS, and LIO zones) to create opportunities for new development with decreased parking requirements and mixed multifamily residential and commercial uses.
- Facilitate infill mixed-use development on underused parking lots on properties fronting Kings Highway and Old Lake Road in the Valley Cottage Hamlet Center.
- Encourage the implementation of mixed use development in Nanuet.
- Explore infill development incentives in Nanuet on Prospect Street, South Middletown Road and First Street. Uses should compliment the regional shopping uses at Nanuet Mall. Create a Hamlet Center overlay district for Nanuet that maintains the character and design of neighboring Hamlet Center overlays and improves access to the Nanuet Train Station near Orchard Street and Prospect Street.
- Assess opportunities in New City to reduce parking requirements and create site design guidelines (and incentives) for new development on New Hempstead Road, Main Street, Third Street, Calvary Drive and Squadron Boulevard.
- Designate small public parks and playgrounds on publicly owned or institutional land in New City. Parks should be readily accessible by pedestrians and cyclists and free from conflicts with automobile uses. Parks should be preserved to provide community space as development densities increase in the Hamlet Center.

3.2 POTENTIAL IMPACTS AND MITIGATION MEASURES

The strategies above each come with costs and benefits to the town in a variety of ways. Part of the overall planning process, including any future site-specific recommendations, is to account for consequences in a way that minimizes unwanted effects and/or channels the results back into progressing the Town's goals for its transportation assets. The following sections briefly describe the key potential physical and social effects of the strategies above and the mitigation steps to begin addressing these concerns.

Roadway Network

Potential Impacts

Strategies associated with Clarkstown's roadway network have the potential to result in the greatest environmental and social impacts due to the high number of users and the large amount of resources needed for construction and operation. Where road capacity is expanded or congestion reduced, there is potential to create "induced demand" as greater numbers of travelers take to the road because driving is easier. This will add to the amount of air, water and noise pollution generated.

Additionally, adding to roadway surfaces also may increase storm water runoff due to these impervious surfaces, and the need for continued anti-icing chemicals and other maintenance. Increasing roadway speeds also increases the risk of injury due to crashes with vehicles, pedestrians, and wildlife. Given limited municipal budgets, social effects to consider involve the equitable allocation of government resources to projects of all types (e.g., housing, transportation, energy) that will benefit the greatest number of residents.

Mitigation Measures

Many factors can influence individual decisions to drive, and these can be explored by Clarkstown to mitigate pollution and safety issues associated with roadway traffic. Strategies affecting transit services, parking supply and pedestrian and bicycle infrastructure should be applied with forethought as ways to maintain efficient traffic levels and provide viable alternatives. Improving signalization reduces costs and pollution associated with congested motor traffic, as noted in the Appendix item "Data Collection and Analysis for Traffic Signal Retiming of Locally Maintained Traffic Signals on the NYMTC Best Practice Model." Regularly evaluating signalization can ensure equipment and traffic are appropriately coordinated.

To address storm water runoff, the Town can create and apply roadside and catchbasin design that diverts runoff in an environmentally sensitive way. Continual monitoring and cooperation with New York State environmental offices can catch issues before they are critical. For more information on the Town's anti-icing activities to mitigate runoff of potentially harmful amounts of sodium chloride, please see the Appendix memorandum "Roadway Anti-Ice Products."

Where capacity increases are planned, effective enforcement and education programs, such as community "Street Smarts" programming, should maintain safe driving practices. To ensure that roadway strategies are socially equitable, the Town should participate in all required impact studies and reach out to local leaders and community members for input in the planning and design process.

Public Transportation Services

Potential Impacts

Improving transit service may increase the number of miles driven by local buses, adding to the associated pollution resulting from vehicle operations. Bus engines also create noise levels similar to trucks. The development of parking facilities and bus stops may have negative environmental effects. For example, the addition of standard paving increases storm water runoff. Storing and servicing buses can create local nuisances such as noise, odors and increased traffic. Finally, the addition of a “hamlet circulator” involves new vehicles and planning, each requiring a substantial amount of time and finances for development.

Mitigation Measures

To mitigate the addition of bus service in Clarkstown, the transit agency should explore the use of hybrid-electric and other alternative fuel vehicles for any new purchases or rebuilds. The Town should conduct and participate in any comprehensive planning and outreach processes for the siting or expansion of new bus facilities or routes to ensure community input and support. While these processes are time-consuming, the Town should explore temporary service adjustments or trial runs to augment service during planning stages.

Sidewalk/Pedestrian Facilities

Potential Impacts

Sidewalks and curbs channel storm water in the roadway instead of running off into the soil. While solutions adequately deal with this, it adds to the cost of installing sidewalk. Other physical impacts include encroachments on existing trees, landscaping, fences, and walls. While many of these obstructions that are close to the curb or edge of pavement may actually be within the town’s right-of-way, it is important for the Town to be accommodating. Finally, some residents have moved to Clarkstown to enjoy the suburban environment and, therefore, oppose sidewalks because they suggest urban levels of foot traffic, noise, and concrete.

Mitigation Measure

The impact of additional stormwater is commonly handled by adding to the stormwater collection infrastructure through the use of catchbasins and underground storm sewers. In most cases engineered solutions can preserve much of the existing character these elements provide while still accommodating a sidewalk that meets the ADA guidelines. Consensus building through outreach and education programs will help to bridge the gap between the benefits of a safe and walkable community and minimize some of the stigma that sidewalks may hold for some residents.

Bicycle Facilities

Potential Impacts

The feasibility of bike trails, lanes, and parking is heavily influenced by the degree to which a variety of environmental concerns can be avoided. Such concerns may include but are not limited to potential impacts involving:

- Purchase of property or purchase of easements depending on the existing right-of-way;
- Moving utility poles;
- Moving guide rails;
- Excavating or filling of embankments;
- Moving and/or replacing stormwater catchbasin with bicycle safe designs;
- Cutting trees; and
- Encroachment on stream courses or wetlands.

Route identification also requires attention to local ecology and wildlife corridors, hazmat and brownfield sites, effects on drainage, conformity with local land use and zoning regulations and the presence of sensitive historic and cultural resources.

Class 1 (off-street) trails are likely to require environmental assessment, particularly if the proposed facility is within designated parkland or where right-of-way is not already defined. A Class 2 (separated) lane should be preferred if a roadway has a minimum shoulder of four feet, as capital work would not be required. If constructing a shoulder is necessary and feasible, the potential impacts above should be considered.

Mitigation Measures

Stormwater and environmental mitigation solutions have been discussed in the Sidewalk/Pedestrian Facilities section. Consensus building through outreach and education programs will help to publicize benefits of a safe, walkable and bikeable community and minimize negative connotations that bicycle use may hold for some residents.

A few of the studied bicycle routes have unique characteristics that raised concerns in their ability to provide a safe and reliable cycling environment. The following describes these routes, the perceived negative impact, and reasoning why these routes would provide important connections between popular destinations and contribute positively to the quality of life in Clarkstown.

- **Old Mill Road, Snake Hill Road and Crusher Road** provide an east-west connection near the southern end of Clarkstown. The road is steep but safe

for experienced cyclists. Signing these roads as bicycle routes would add safety needed due to truck traffic at the quarry.

- **Storms Road – Christian Herald Road** are part of the east-west connection above, terminating at North Broadway, which offers a route to the Hudson River, the Nyack Beach-Hood Mountain Trail, and Upper Nyack businesses.
- **Casper Hill Road** is a short segment intended to connect Kings Highway to SR-303. Kings Highway runs through the Valley Cottage hamlet center, thereby making its extension to SR-303 very useful.
- **A Lake DeForest bike path** may be most feasible along the east side of the lake. A trail along the east bank of DeForest Lake would connect Old Mill Road to Congers Road (CR-80), and would help create connections between park land and other multi-use trails in Clarkstown.
- **CSX Rail-With-Trail** facility is recommended along the existing CSX freight rail line. Typically, the trails require cooperation from the rail operator and legal allowances made to the organization that will construct and maintain the trail. Some trails are used as service roads by the railroad operators. The Clarkstown trail would differ from on-street bicycle lanes by offering safety and diversity as a multi-use recreational space free from vehicular traffic, convenient for less experienced cyclists.

Guidance on trail construction must be pieced together from standards related to shared-use paths, pedestrian facilities, railroad facilities, and roadway crossings of railroad rights-of-way. Useful documents include the AASHTO's 1999 Manual on Uniform Traffic Control Devices, Americans with Disabilities Act publications for pedestrian facilities, and reports such as "Compilation of Pedestrian Devices In Use At Grade Crossings" by the Federal Railroad Administration in January 2008. Other resources include the U.S. DOT Federal Highway Administration's August 2002 report entitled "Rails-with-Trails: Lessons Learned: Literature Review, Current Practices, Conclusions," and the Rails To Trails Conservancy's November 2000 report entitled "Rails-with-Trails: Design, Management and Operating Characteristics of 61 Trails Along Active Railroads."

For information on the Traction Line Recreation Trail as a local example for rail-with-trail development in Clarkstown, please see Figure 3.2 above.

Quality of Life

Potential Impacts

As the strategies addressing quality of life in Clarkstown are largely aimed to reduce transportation-related secondary effects, there are few impacts of the recommendations. Similar potential impacts are addressed in the preceding sections.

Mitigation Measures

Possible mitigation strategies are addressed in the preceding sections.

Land Use*Potential Impacts*

The impacts of the land use recommendations to create denser, walkable, and transit-accessible centers of development increase the amount of developed land in a small area. By increasing impervious/paved surfaces, storm water runoff can be a localized problem leading to localized flooding, groundwater contamination, or severe soil erosion. While nodes of development encouraged in Smart Growth and TOD encourage trips by transit and walking, the density of attractive destinations also can increase automobile trips, leading to environmental impacts described in the Roadway Network section. There also can be a scarcity of parking due to competing land uses, which can reduce retail customer access. Social impacts include the loss of open space and increase in rents.

Mitigation Measures

The competition for space inherent in Smart Growth plans must be addressed early in the visioning and planning process, to incorporate a mix of land uses and transportation modes into design and land use policies. The Town has initiated outreach to leading suburban communities implementing Smart Growth strategies, elicited community input, and facilitated phased development to account for adjustments to local needs. The Town should continue these efforts.

Data collection for transportation resources should be enhanced to increase efficiency and increase monitoring of outcomes related to future development. Environmental impacts of increased land cover should be addressed through roadside and catchbasin design that diverts runoff. Roadway planning also should incorporate and take into account the preservation of local open spaces to enhance local social interactivity.

3.3 TRANSPORTATION IMPROVEMENT STRATEGY TABLES

The Transportation Improvement Strategy Tables outline the specific geographic strategies detailed in the previous section for quick reference and comparison. The strategies are arranged by category as in the previous sections, addressing roadway network, public transportation, sidewalk and pedestrian facilities, bicycle network, quality of life and land use. In some cases, the strategies are generalized to present an overall view of the approach.

Potential negative environmental and social effects of each strategy are outlined in the following tables. The likelihood of each effect occurring and, therefore, requiring mitigation is ranked as low, medium, or high. This is a general assessment of the risk of the effect occurring, based on local geography, on-site assessment, and standard project construction processes. The last column lists suggested mitigation strategies to counter any negative environmental or social effects of the primary strategy. This information should give the Town the opportunity to assess in general the resources required to address each issue through these strategy alternatives. Each strategy also will require further study and site-specific design as part of the implementation process.

Table 3.3 Roadway Network Strategies

Primary Strategy	Location	Potential Negative Effect	Likelihood	Mitigation Strategy
Improve crash hotspot intersections on Clarkstown Roads	Route 59	Increased Speed	High	Enforcement and site design to maintain appropriate speeds
	Route 303	Increase in Vehicle-Miles Traveled (VMT)	Medium	Increase public transportation options Decrease parking availability Develop walking and bicycling options
	Route 304			
	Middletown Road	Benefits accrue to drivers in specific neighborhoods only.	Low	Develop prioritization practice for improvements based on safety, access, proximity to pedestrians and generators, and planned development.
	New Hempstead Road			
Bus-only lane	Route 59	Increased automobile congestion	Medium	Design to allow uncongested flow of automobiles using forecasts of traffic that includes diversion of trips to transit.
		Additional paved surfaces lead to increased stormwater runoff.	Low	Use roadside design and paver material that minimizes storm runoff
		Long timeframe	High	Initiate early planning process to coincide with TZB improvements
		High infrastructure cost	High	Seek creative funding for bus infrastructure that is part of regional developments.
Address access management to parking lots	Route 59 from Middletown Road to New Clarkstown Road	Increased vehicle speed	Low	Enforcement and site design to maintain appropriate speeds
	New City Congers Tech Corridor Valley Cottage Exec Corridor Nanuet Train Station	Increase in VMT	Low	Increase public transportation options Decrease parking availability Develop walking and bicycling options
Redesign “jog” intersection in	South Main Street and New	Increased vehicle	Low	Street design facilitating safe driving speed,

Primary Strategy	Location	Potential Negative Effect	Likelihood	Mitigation Strategy
New City to provide additional stacking and a sense of neighborhood character	Hempstead Road/Congers Road	speed (safety)		"gateway" treatment components, and increase pedestrian flows through park-like designs Signal timing to moderate driving speeds
Coordinate and regularly evaluate Clarkstown-maintained traffic signals; Work closely with Rockland County and New York State DOT to address signalization on other congested corridors	11 locally maintained signals in congested corridors (see above)	Increased vehicle speed (safety)	Low	Regularly evaluate and adjust signal timing and intersection infrastructure to maintain optimal signalization. Work closely with Rockland County and New York State DOT to assess and adjust other signals on congested corridors.
		Increased pollution from additional drivers due to "induced demand."	Low	Signal coordination reduced traffic congestion, reducing overall emissions given the same number of drivers.

Table 3.4 Public Transportation Strategies

Primary Strategy	Location	Potential Negative Effect	Likelihood	Mitigation Strategy
Create a "hamlet circulator" bus line traveling between hamlet centers	Local Roads	Air, noise and water pollution associated with additional vehicles	Low	Use hybrid-electric or other alternative-fuel engines that operate with less air and noise pollution than standard combustion engines.
		Traffic congestion (air, water, and noise pollution)	Low	Create separated bus facilities that minimize traffic conflicts at bus stops
Fixed-stop bus system for the Transport of Rockland bus routes in Clarkstown	Transit routes on SR-59, SR-303, SR-304: (TOR 59, 91, 94, 97)	Design may require increased paved area, or other landscape/construction alterations.	Low	Apply water runoff treatments such as bioswales or permeable pavers that eliminate stormwater runoff.
		Increased walking distance for some riders between stops	Low	Work with neighborhood residents near stops to participate in stop location plan. Install sidewalks to provide safe access to bus stops. Increase education and access to ADA compliant bus options.
Bus stop hub facility for MiniTrans, TOR and Red and Tan bus lines.	New City	Design may require increased paved area, or other landscape/construction alterations.	Low	Apply water runoff treatments such as landscaping or permeable pavers that eliminate stormwater runoff.
Separate bus stop locations and bus travel lanes	Route 59 Route 303 in Valley Cottage Main Street in New City	Design may require increased paved area, or other landscape/construction alterations.	Medium	Apply water runoff treatments such as landscaping or permeable pavers that eliminate stormwater runoff.
	Congers Road and Route 304	Traffic congestion (air, water, and noise pollution)	Medium	Explore opportunities to expand roadway capacity (at the shoulder or median) to accommodate transit facilities.
Create bus route through Palisades Center parking lots	Palisades Center Mall	Traffic congestion (air, water, and noise pollution)	Low	Separate the bus route from automobile uses or create a routing alternative.

Primary Strategy	Location	Potential Negative Effect	Likelihood	Mitigation Strategy
Expand service hours on the TOR 91 and 97	Route 303	Air, noise and water pollution associated with additional vehicles	Low	Use hybrid-electric or other alternative-fuel engines that operate with less air and noise pollution than standard combustion engines.
Add bus stop locations near parks that encourage transit trips for recreational activities.	Parks	Design may require increased paved area, or other landscape/construction alterations.	Low	Apply water runoff treatments such as bioswales or permeable pavers that eliminate stormwater runoff.

Table 3.5 Sidewalks and Pedestrian Facility Strategies

Primary Strategy	Location	Potential Negative Effect	Likelihood	Mitigation Strategy
Install new sidewalk sections to improve connections and usability.	40 segments: See Table 3.1 in this section.	Increase in impermeable paved surfaces.	Medium	Use permeable pavers where possible. Use landscape designs to mitigate stormwater run off and conserve vegetation.

Table 3.6 Bicycle Facility Strategies

Primary Strategy	Location	Potential Negative Effect	Likelihood	Mitigation Strategy
Class 1 bike routes (separated)	Route 9W Palisades Interstate Trailway West Shore Line Rockland Lake Road	May increase water runoff where path added	Low	Use permeable pavers where possible. Use landscape designs to mitigate stormwater run off and conserve vegetation.
Class 2 bike routes (in street)	13 routes: See Table 3.2 in this section	May increase water runoff where road shoulder added	Low	Use pavers and landscape design that minimize runoff.
Class 3 bike routes (shared)	13 routes: See Table 3.2 in this section	Traffic congestion (air, water, and noise pollution)	Low	Promote efficient lane use with education and lane markings for cyclists and drivers.

Table 3.7 Quality of Life Strategies

Primary Strategy	Location	Potential Negative Effect	Likelihood	Mitigation Strategy
Work with agencies to find a solution to the Doescher Avenue truck route	Western Highway and Route 59	Relocation of Residents	High	Work with residents to create an acceptable relocation plan. Research an alternate construction plan allowing access of 13-foot trucks from Western Highway to SR-59.
“Complete streets” roadway design.	Clarkstown Hamlet Centers	Traffic congestion (air, water, and noise pollution)	Low	Promote efficient lane use with education and lane markings for cyclists and drivers.

		Increase in impermeable paved surfaces	Low	Use pavers and landscape design that minimize runoff.
--	--	--	-----	---

Table 3.8 Land Use Strategies

Primary Strategy	Location	Potential Negative Effect	Likelihood	Mitigation Strategy
Revise the minimum parking requirements	Town-wide	Inequitable transportation (parking) access if parking costs to user increase.	Low	Increase public transportation service and access.
Increase allowable densities for technology, commercial, and office developments	Route 59 and Route 303 Corridors	Traffic congestion (air, water, and noise pollution)	High	Promote efficient travel through education and lane markings for cyclists and drivers.
		Increased storm runoff (pavement, buildings)	High	Use pavers and landscape design that minimize runoff.
		Increase building emissions/heat	High	Require or “incentivize” green building techniques that use energy efficiently.
		Increase light pollution	Medium	Use lighting design and policy that provides safe areas without excess glare.
Increase allowable densities for residential and mixed use developments	New City Hamlet Center	Traffic congestion (air, water, and noise pollution)	Medium	Promote efficient travel through education and lane markings for cyclists and drivers.
	Congers Hamlet Center			
	Valley Cottage Hamlet Center	Increased storm runoff (pavement, buildings)	Medium	Use pavers and landscape design that minimize runoff.
	Nanuet Hamlet Center	Increase building emissions/heat	Medium	Require or “incentivize” green building techniques that use energy efficiently.
	Central Nyack Hamlet Center	Increase light pollution	Medium	Use lighting design and policy that provides safe areas without excess glare.
	West Nyack Hamlet Center	Reduce open space available to public	Medium	Acquire more open space and develop local parks.

4.0 Project Prioritization

The Clarkstown Comprehensive Transportation Plan (CTP) has presented 10 townwide goals for its transportation network, an inventory, an analysis of the current state of the transportation network in Clarkstown, and strategies for meeting the townwide goals. This section builds on the previous analysis and general strategies to present a list of specific transportation projects ranked in a suggested order of importance to Clarkstown.

4.1 PROJECTS DEVELOPED FROM STRATEGIES

The prioritization process used the transportation strategies identified in the previous section to create over 100 discrete transportation projects. Projects differ from the strategies in that they denote actions on a scale and scope that fit within resources available to the Town of Clarkstown for planning, implementation, and maintenance of transportation infrastructure. Projects also were defined as actions that would be appropriate for typical funding and operational requirements, which allowed strategies to be reconfigured based on a mix of characteristics such as geography, scale, and infrastructure type. It is expected that projects will change in terms of these characteristics over time, and that the Town may add or remove projects from this working list.

While each of the projects suggested has a positive benefit to Clarkstown's transportation network, the availability of funding and other resources make it necessary to choose among them. Many issues and events factor into which projects are finally implemented, including location, cost, available funding, public input, and political processes, as well as the estimated benefit of the completed project.

This section describes the analytical process used to measure project benefits, followed by the suggested rankings of the projects organized by project type. The suggested ranking tool should prove useful for decision-makers and Town planners to quickly assess current and future transportation projects. The results provide an estimate of project needs and benefits that can be used for defining additions to Clarkstown's transportation infrastructure.

Table 4.1 outlines the transportation projects developed using the prioritization process.

Table 4.1 Project Prioritization Tree

Level 1 (Project Type)	Level 2 (Project Location)	Level 3 (Project Name)
Access Management	SR-59	Nanuet Mall/Rockland Plaza Access Management Treatment Palisades Center Mall Access Management Treatment
	SR-303	West Nyack Access Management Treatment

Light Pollution		Develop light pollution minimization plan/lighting design regulations to complement the Clarkstown Town Code.
Water Pollution		Create design standards for use of porous pavers on new paved surfaces Require asphalt parking lots greater than 10,000 square feet to significantly reduce water runoff
Air Pollution		Reduce VMT through strategies outlined in Public Transportation and Roadway Network sections of this Plan.
Zoning and Land Use		Expansion of Hamlet Center overlay districts Revise parking requirements for retail, office and industrial uses
Zoning and Land Use		Adopt design guidelines to reflect prioritization of land development that

Level 1 (Project Type)	Level 2 (Project Location)	Level 3 (Project Name)
(continued)		increases availability of residential, retail and office uses near multimodal transit stops and stations. Require open/recreation space and programming requirements for neighborhood parks, plazas and playgrounds in Hamlet Center overlay districts that preserve spaces for community interaction Clarkstown Transportation Corridor Land Use / Zoning Analysis Studies (303, 304, 9W, 59)

4.2 PRIORITIZATION METHODOLOGY

Over 100 transportation projects were identified in Clarkstown. Though cost estimates have not been completed for all of the projects, it is certain the sum of their costs exceeds the resources that town, state, and Federal sources are able to allocate to transportation improvements in Clarkstown. Decisions on which projects should be advanced first should, therefore, be made by prioritizing the projects. Prioritization is a process by which projects are vetted or ranked according to how relevant or effective the project will be at meeting a number of criteria. Since state and Federal funding sources are not likely to fund every project that is needed, a prioritized list helps policy-makers advance Clarkstown's most effective transportation projects first.

The prioritization process was undertaken in four steps:

1. Develop a project evaluation tool which evaluates projects based upon criteria related to the goals of the Clarkstown Comprehensive Transportation Plan.
2. Expand the project evaluation tool to include criteria related to specific categories of projects, including access management, signal coordination, accident analysis, public transit, sidewalk, and bicycle projects.
3. Evaluate the projects.
4. Produce a prioritized list of projects based upon each project's performance in the project evaluation exercise. The prioritized lists of projects are provided in Section 3.0 of this document.

Project Evaluation Tool Development

A project evaluation tool was developed for the purpose of comparing projects in order to identify those which have the greatest benefit to the Town. The tool needed capabilities to evaluate each project's relevance to the overall CTP goals, and to compare projects within specific categories against one another in order to produce a prioritized list of projects within each category. The categories correspond to the likely pools of funding that the projects would draw upon, and include access management projects, signal coordination projects, accident analysis projects, public transit projects, sidewalk projects, and bicycle projects. For example, if Clarkstown were to receive a state grant which can be used for sidewalks, it would be valuable for the Town to have its sidewalk projects evaluated against one another so that the most effective sidewalk projects are developed first.

The following principles guided the development of the prioritization tool.

- Clarkstown's CTP goals and policy objectives drive the prioritization process and selection of evaluation criteria.
- The evaluation criteria used to evaluate each of the project categories are specific to the category, while reflecting the goals of the CTP.

- The evaluation criteria are reasonable in number, avoiding redundancy.
- Due to varying levels of data available, the evaluation criteria should rely on planning-level assessments of impacts where possible.
- The prioritization methodology adopted by Clarkstown should provide a consistent and uniform way of comparing projects.
- The prioritization process is as transparent as possible.

Townwide Goal Evaluation

The evaluation tool that was developed lists all of the projects identified in the CTP, key relevant information about each project such as project type and location, and evaluation criteria related to the goals of the Plan that were scored to produce a “CTP Goal Score.” Each project was rated on a scale of low, moderate, or high based on how well the project addresses eleven specific evaluation criteria based on the town-wide goals identified in Table 4.2. Each criteria awarded a “low” score during the evaluation gave the project one point, while projects received two points for every “moderate” and three points for every “high” response. Therefore, the minimum subtotal score a project could receive was 10 points, while the maximum possible score was 30 points.

Table 4.2 Clarkstown Townwide Transportation Goals

Goals (See Section 2 for more information on the townwide planning goals)

- ◆ Provide efficient travel between the Tappan Zee Bridge/I 287 corridor, SR 59 corridor, and other parts of Clarkstown.
 - ◆ Add to economic strength and quality of life in Clarkstown by coordinating with the Tappan Zee Bridge/I 287 Environmental Review project and any other regional transportation initiatives.
 - ◆ Ensure that travel through Clarkstown enhances safety, lowering the number of vehicle crashes and minimizing conflict between modes.
 - ◆ Provide local public transportation services that promote sustainable travel options for Clarkstown residents, businesses, and visitors.
 - ◆ Provide for commuter transit services to regional centers that are accessible, efficient, and safe.
 - ◆ Create a pedestrian environment that is accessible and provides useful connections between travel generators such as employment sites, residences, and shopping destinations.
 - ◆ Provide a safe and enjoyable experience for users of sidewalks and other pedestrian facilities.
 - ◆ Create a bicycling environment that is accessible, safe, and enjoyable.
 - ◆ Improve residents' health and maintain rural character by reducing pollution related to motorized travel.
 - ◆ Develop Hamlet Centers with transportation options and connections.
 - ◆ Create diverse mixed-use development areas that allow for walking and biking, and are well-served by public transportation.
-

Expansion of the Tool to Include Category-Specific Evaluation

Additional evaluation tables were developed for each category of projects, within which each project receives a “Project Performance Score.” This score reflects how well the project achieves the goals specific to the project category it best fits. Access management projects, for example, were grouped and evaluated against criteria specific to access management projects, such as whether or not each project is located on a congested corridor, how many driveways are in each access management study area, etc. Category evaluation sheets were developed for access management, signal coordination, accident analysis, public transit, sidewalk, and bicycle projects. The projects received a “low,” “moderate,” or “high” score for each criteria, which was summed to provide a subtotal. This subtotal, plus the subtotal from the CTP goals evaluation, produced a grand total project score for each project in each category.

The following paragraphs describe the Project Performance Score criteria identified for each project category.

Access Management Evaluation Criteria

Project located on a congested corridor – This criterion is intended to recognize the merits of projects which are located on Clarkstown’s “congested corridors,” where access management has the greatest potential to alleviate congestion. Projects located on one of the identified “congested corridors” would receive a score of “high,” while projects located in an area of significant traffic volume but were not designated “congested corridors” would receive a “moderate” score. “Low” scores would be given to projects located in low-volume corridors.

Extent of existing curb cuts – This criterion represents the number and/or width of curb cuts that currently exist in each project area. A “high” score was given to areas where multiple curb cuts occur within 100 to 300 feet of roadway length, or where curb cuts spaced farther apart are wide enough that vehicle movements could be unpredictable or dangerous for pedestrians and other vehicles. A “moderate” score was given to areas where multiple curb cuts exist in stretches of roadway up to 500 feet, or where some unusually wide curb cuts exist. “Low” scores were given to areas where curb cuts were infrequent or spaced more than 500 feet apart over most or all of the project area.

Number of accidents occurring at driveways in the project area – Access management projects have the potential to increase safety. The greatest safety needs are at the locations where accidents are prevalent. Accident data from the Clarkstown Police Department were used to develop scores for this criterion. The number of projects was divided into thirds based upon the number of accidents in each project area. The third with the highest number of accidents received a “high” score, those in the middle one-third received a “moderate” score, and the third with the least accidents received a “low” score.

Extent to which curb cuts can be reduced in the project area – Access management projects would aim to reduce curb cuts in the project area; however,

there may be instances when that may not be achievable due to physical constraints or lack of alternative access. The “high,” “moderate,” and “low” scores for this criterion reflect a planning-level understanding of the feasibility of the project to significantly change the number of curb cuts.

Traffic volume in the project area – Traffic volume shows the utilization of the roadway and the number of trips that would be affected by the project. The projects, divided into thirds based upon traffic volume, were scored “high,” “moderate,” or “low” based upon which third of the population of projects they fell within.

Extent of pedestrian facilities in the project area – Pedestrian facilities would be impacted by access management projects. Curb cuts create areas of conflict between vehicles and pedestrians, and access management projects could reduce their prevalence. Where pedestrian facilities exist in the entire project area, a score of “high” was given. A score of “moderate” was given to projects where pedestrian facilities exist on one side of the roadway, or on a significant portion of the roadway in the project area. Projects in areas where there is little to no pedestrian infrastructure received a score of “low.”

Project consistent with NYSDOT access management standards – Based upon an examination of the prevalence of curb cuts, intersections, and a perception of property lines derived from GIS, a judgment on how well each access management project adheres to state access management guidelines was made. A project that would likely adhere to NYSDOT’s curb cut and intersection spacing guidelines received a score of “high.” A “moderate” score was given to projects which would likely face challenges in meeting the guidelines, while “low” scores were given to projects which would face significant challenges to meet the guidelines.

Signal Coordination Evaluation Criteria

Project located on a congested corridor – This criterion is intended to identify projects which are located on Clarkstown’s “congested corridors.” Signal coordination can alleviate congestion. Projects located on one of the identified “congested corridors” received a score of “high,” while projects located in an area of significant traffic volume but were not designated “congested corridors” received a “moderate” score, and “low” scores were given to projects located in low-volume corridors.

Project is located in a transit corridor – Signal coordination projects could have implications for transit services. Coordinating signals shortens travel time for all vehicles, including buses. There also is the potential to give signal priority or preemption to transit vehicles. Projects that received a “high” score in this category have more than one transit route operating in the project area, preferably routes of different types (such as a regional service as well as local services). “Moderate” scores were given to projects in areas where only one transit service operates, or where there is a lower level of service among several

transit providers. “Low” scores were given to projects where there are no regularly scheduled transit services operating.

Travel-time delays attributable to signalization in the project area – This criterion gives credit to projects which address a known signalization problem. In areas where signalization has been cited as an issue, either by community members in the CTP project or other recent transportation studies in the area, a score of “high” was given. A “moderate” score was conferred on projects where signalization could be a contributing factor to reducing delays or enhancing safety. A “low” score was given to projects for which signalization is not now, nor likely in the near future to be a major cause for concern.

Extent of signalization in the project area – This criterion assesses the number or the concentration of signalized intersections in each project area. A “high” score was given to projects where there are signalized intersections located at intervals of 200 to 1,200 feet apart. “Moderate” scores were given to projects in areas where there are a few instances of clustered signalized intersections, or if the intersections are spaced slightly beyond 1,200 feet, up to 1,800 feet apart. In areas where signals are not clustered, or there are few signals at all, a “low” score was given.

Number of pedestrian generators in the project area – Signalization has implications for pedestrians, as signal optimization may increase vehicle travel speeds, and coordination with pedestrian phases where pedestrian signals exist also must be achieved. To assess the level of pedestrian activity that occurs or may be likely to occur, the prevalence of pedestrian generators in each project area should be considered. A “high” score was given to projects in areas where pedestrian generators are clustered. In areas where there are pedestrian generators spaced more than 600 feet apart, a “moderate” score was appropriate. Where few or no pedestrian generators exist, a score of “low” was given.

Project located on a Clarkstown/local roadway – Signal coordination is generally the responsibility of the agency which has jurisdiction over the roadway(s) in the project area(s). Projects located on Town roadways can be completed by the town, whereas projects in other jurisdictions require partnerships with county and/or state departments. This changes the role of the town from project sponsor to project partner or advocate. A “high” score was given to projects on roadways in the town’s jurisdiction. All other roadways received a “low” score.

Accident Analysis Evaluation Criteria

Project located on a congested corridor – This criterion is intended to identify projects which are located on Clarkstown’s “congested corridors.” Accidents can be the result of traffic congestion. Projects located on one of the identified “congested corridors” received a score of “high,” while projects located in an area of significant traffic volume but were not designated “congested corridors”

received a “moderate” score, and “low” scores were given to projects located in low-volume corridors.

Number of accidents in the project area – The greatest safety needs are at the locations where accidents are prevalent. Accident data from the Clarkstown Police Department were used to develop scores for this criterion. The population of projects was divided into thirds based upon the number of accidents in each project area. The third with the highest number of accidents received a “high” score, those in the middle one-third received a “moderate” score, and the third with the least accidents received a “low” score.

Severity of reported accidents – The projects were divided into thirds to produce scores based on the severity of accidents, or the number of injuries reported. The third with the highest number of injuries received a “high” score, those in the middle one-third received a “moderate” score, and the third with the fewest reported injuries received a “low” score.

Ability to improve pedestrian safety – Accident analyses should address safety concerns for all modes of transportation. As such, the projects which improved conditions for all travelers received higher scores. A project is likely to have higher implications for pedestrian safety if there are both pedestrian facilities and generators located in the project area. For the presence of both, a score of “high” was conferred. If sidewalks exist in the absence of pedestrian generators, or vice versa, a “moderate” score was appropriate. The absence of both pedestrian facilities and pedestrian generators in the project area resulted in a score of “low.”

Ability to improve bicyclist safety – Similar to pedestrian safety, a project is likely to have higher implications for cyclist safety if there are both bicycle facilities and travel generators located in the project area. For the presence of both, a score of “high” was given. If bicycle facilities exist in the absence of identified generators, or vice versa, a “moderate” was given. The absence of both bicyclist facilities and bicyclist generators in the project area resulted in a score of “low.”

Ability to improve vehicular safety – This criterion is a judgment on the capability of a project to improve traffic safety. This judgment was made based upon potential physical constraints and operational issues. In this case, “high,” “moderate,” and “low” scores were conferred to express the likely ability of a project to address these issues and achieve the goal of improving traffic safety.

Public Transit Evaluation Criteria

Project located on a congested corridor – This criterion is intended to identify projects which are located on Clarkstown’s “congested corridors.” Public transit can suffer significant delays in congested areas. Projects located on one of the identified “congested corridors” received a score of “high,” while projects located in an area of significant traffic volume but were not designated “congested

corridors” received a “moderate” score, and “low” scores were given to projects located in low-volume corridors.

Improves accessibility to transit for Clarkstown residents and businesses – This criterion rewards projects which serve high concentrations of residential and business areas. Projects which serve primarily residential or commercial zones (80 percent or more), particularly high-density zones, received a “high” score. Where residential and commercial zones compose 60-80 percent of the project area and where limited high-density residential or commercial zones exist, a “moderate” score was conferred. In areas where more than 60 percent of the project area is residential or commercial, and there are no higher-density residential or commercial areas, a “low” score was appropriate.

Improves transit travel time – Travel-time savings can be a significant boon to transit services. In coordination with the transit operators, “high,” “moderate,” and “low” scores were given to projects which provide the transit operators with the greatest, moderate, and least *value* attributable to travel-time savings.

Improves reliability of transit service – Reliability is an important factor for passengers who depend on the transit service to complete the trip on-time every time. Projects which use advanced technologies to maintain on-time performance were eligible for a “high” score. “Moderate” scores were applied to policy decisions or travel-time savings which improve reliability. “Low” scores were given to projects for which little to no reliability benefit was foreseen.

Enhances connectivity between major ridership generators – Transit services should have the goal of providing connections to major transit ridership generators. Those projects which connect two or more clusters of three or more generators received a “high” score. Projects connecting one cluster of three or more generators with generators outside the cluster, or which connect two or more distinct, unclustered travel generators, received a “moderate” score. If a project does not serve at least two travel generators, it received a “low” score.

Improves efficiency of transit operations – The operational efficiency of transit services directly affects the service costs and ultimately the customer experience. A project received a “high” score if it provides a major improvement to the operational efficiency and reduces the cost per passenger of the current transit services located within Clarkstown, on an order of magnitude scale (as real, discrete costs were not available for all transit services). A project which scored “moderate” in this category achieves this objective to a lesser degree, while a project with a score of “low,” although valuable, does not provide a significant improvement to operational efficiency.

Sidewalk Evaluation Criteria

Project located in a Hamlet Center – Hamlets are centers of activity and mixed land uses where a significant amount of pedestrian traffic can be expected. A project located within a hamlet district received a “high” score. A project located on the fringe or edges (within one-quarter mile walking distance) of a hamlet

received a “moderate” score, while a project more than one-quarter mile from a hamlet was issued a “low” score.

Ability to enhance connectivity and continuity to the sidewalk network – To create a true network, sidewalks should be connected at both ends to other sidewalks. Projects which received “high” scores in this criterion are those which connect to other sidewalks at both ends of the project. If a project creates a sidewalk that connects to another sidewalk only at one end, or intersects with an existing sidewalk along its course, or connects at both ends to sidewalks that are proposed or planned but not yet in existence, a “moderate” score was appropriate. Sidewalk projects which will not connect to segments of the existing network at either end, or which connect at only one end to a planned or proposed sidewalk, received a “low” score.

Ability to enhance accessibility to transit stops within one-quarter mile – Transit stops are important nodes in the sidewalk network. Once someone departs a transit vehicle, they become a pedestrian. Pedestrian facilities should connect transit stops to travel destinations. Projects along which transit stops either exist or are recommended in the Rockland County Bus Stop Study, received a “high” score. “Moderate” scores were given to projects which are located within one-quarter mile of a transit stop but do not serve the transit stop directly. A “low” score was given to projects located more than one-quarter mile from a transit stop.

Ability to enhance accessibility to pedestrian generators within one-quarter mile – Sidewalks should connect pedestrian generators. Those projects which connect two or more clusters of three or more generators received a “high” score. Projects connecting one cluster of three or more generators with generators outside the cluster, or which connect two or more distinct, unclustered generators, received a “moderate” score. If a project does not serve at least two pedestrian generators, it received a “low” score.

Ability to enhance accessibility to households within one-quarter mile – This criterion rewards projects which serve high concentrations of residential areas. Projects which serve primarily residential land uses, particularly high-density zones, received a “high” score. Where nonresidential zones compose 20-40 percent of the project area, or where no high-density residential zones exist, a “moderate” score was conferred. In areas where more than 40 percent of the project area is nonresidential, and there are no higher-density residential zones, a “low” score was given.

Ability to enhance accessibility to businesses within one-quarter mile – This criterion rewards projects which serve high concentrations of business areas. Projects which serve primarily industrial/office or commercial zones, particularly high-density zones, were issued a “high” score. Where non-industrial/office and noncommercial zones compose 20-40 percent of the project area, or where no high-density industrial/office or commercial zones exist, a “moderate” score was conferred. In areas where more than 40 percent of the

project area is non-industrial/office or noncommercial, and there are no higher-density residential or commercial areas, a “low” score was appropriate.

Bicycle Evaluation Criteria

Project provides circulation through and within a Hamlet Center- Hamlet centers are areas with mixed uses, and either generate or have the potential to generate volumes of bicycle traffic. Projects which enhance the circulation of bicycles in these busy hamlet areas should receive consideration. “High” scores were reserved for projects located within a hamlet center. “Moderate” scores were given to projects which are adjacent or enter into, but not through a hamlet center. “Low” scores were given to projects which have no components within a hamlet center.

Project provides linkages between activity centers - Projects which link activity centers provide routes for cyclists to use while performing their day-to-day tasks. If a project connects three or more generators or hamlet centers, it was given a “high” score. If a project connects two generators or hamlet centers, a “moderate” score was issued. “Low” scores were given to projects in which one or no activity centers are served.

Extent of attractions and/or activity centers located along the route - Along the route, attractions and activity centers supplement the bicycle travel demand. “High” scores were given to projects which pass through hamlets or at least two generators along the route. “Moderate” scores were given to projects with one or two generators along the route. “Low” scores were given to projects where there are no generators or activity centers located along the route.

Access to transit facilities - Bicycles are often used to reach transit services, many of which provide bicycle racks on-board buses or near bus stops and train stations. “High” scores were given to projects which serve multiple bus stops served by more than one transit provider, or which serve a train station. “Moderate” scores were conferred to projects which serve multiple bus stops along one transit route, or a single stop served by more than one transit service. “Low” scores were issued to projects which do not provide access to transit services.

Ability to enhance accessibility to households within one-quarter mile - This criterion rewards projects that serve high concentrations of residential areas. Projects which serve primarily residential land uses, particularly high-density zones, received a “high” score. Where residential zones compose 60-80 percent of the project area, but where high-density residential zones may not exist, a “moderate” score was conferred. In areas where less than 60 percent of the project area is nonresidential, and there are no higher-density residential zones, a “low” score was appropriate.

Ability to enhance accessibility to businesses within one-quarter mile - This criterion rewards projects which serve high concentrations of business areas. Projects which serve primarily industrial/office or commercial zones (80 percent or more), particularly high-density zones received a “high” score. Where

industrial/office and commercial zones compose 60-80 percent of the project area, but where high-density industrial/office or commercial zones may not exist, a “moderate” score was conferred. In areas where less than 60 percent of the project area is industrial/office or commercial, and there are no higher-density industrial/office or commercial areas, a “low” score was given.

Cost of Implementation – The cost of a project is another important factor which should be considered when planning which projects should be advanced. The project evaluation tool includes a provision for factoring in capital and operating/maintenance costs into the category-specific evaluation sheets. Because the level of planning for each project in the Clarkstown CTP varies, and most projects have not advanced to a stage where discrete capital or operation/maintenance costs are known, an estimate was developed based on available information and professional expertise and knowledge of similar types of projects. Based on order of magnitude, the cost estimation scale ranges from one dollar sign (\$) for the lowest cost to five dollar signs (\$\$\$\$\$) for the highest costs. Land acquisition or unknown remediation costs were not factored into the cost estimation. This scaled cost estimate did not factor into the scoring of the projects. Rather, it serves as a supplemental qualitative feature by which the projects can be compared to one another.

4.3 PRIORITIZED PROJECTS

The following sections outline the results from the prioritization of identified projects. Projects are categorized by thematic project type and have three score values – CTP Goal Score, Project Performance Score, and a summed Total Prioritization Score. As discussed previously, the CTP Goal Score reflects a projects ability to meet the overall CTP goals. The Project Performance Score reflects a project’s ability to achieve performance measures that are unique to each project type. Since different project types maintain varying objectives and performance measures, Project Performance Scores and Total Prioritization Scores can only be compared with and prioritized among projects within the same project type category.

Each section provides a narrative on the prioritization that occurred and a table outlining the prioritized projects in rank order (highest to lowest score). Some sections also contain a map figure illustrating the location and priority of the project. A projects priority value was calculated by placing the CTP Goal Score and the Project Performance Score on an x-y axis, respectively, and graphing these values on a scatter plot. As observed in Figure 4.1, each dot on the scatter plot represents a project. The scatter plot was divided into four quadrants based on the median values for CTP Goal Scores and Project Performance Scores. The upper right-hand quadrant, which maintained high scores in both measures, have the highest priority. The upper left-hand and lower right-hand quadrants contain one high score value and one score value in the moderate to low range. As such project located in these sections are medium priority projects. Projects

that fell in the lower left-hand quadrant received two low score values and are as low-priority projects.

Access Management Projects

The Nanuet Hamlet Center and Nanuet Mall/Rockland Plaza Access Management projects received the highest scores in this category. The projects are located in some of the most intensely developed commercial corridors in Clarkstown. The Nanuet project is in an area with more pedestrian activity and more curb cuts than the Nanuet Mall/Rockland Plaza area, which gave the Nanuet project marginally higher Project Performance Scores. The Central Nyack Access Management Treatment project received one point more than the Nanuet-area projects because of its proximity to the Tappan Zee Bridge. This proximity increases the likelihood that the transit component of the bridge replacement project will include a transit hub and additional traffic generators in the area of Central Nyack and West Nyack. The Central Nyack project received fewer points than the Nanuet-area projects due to fewer curb cuts and the absence of pedestrian activity along SR-59 in Central Nyack, when compared to Nanuet. Table 4.2 lists the prioritized access management projects in descending order according to Total Prioritization Score. Figure 4.2 is a map illustrating the locations and priority value of the high- and medium-priority access management projects.

Table 4.3 Prioritized Access Management Projects

Number	Project Name	Score		
		CTP Goal	Project Performance	Total Prioritization
1	Nanuet Access Management Treatment	18	20	38
2	Nanuet Mall/Rockland Plaza Access Management Treatment	18	18	36
3	Central Nyack Access Management Treatment	19	17	36
4	Palisades Center Mall Access Management Treatment	19	16	35
5	New City Access Management Treatment	17	16	33
6	Valley Cottage Access Management Treatment	17	15	32
7	Congers Technology Corridor Access Management Treatment	17	13	30

Signal Coordination Projects

Of the signal coordination projects, the SR-59 Signal Coordination Plan scored the highest in both the CTP Goal Score and Project Performance Score. Signal coordination projects on SR-304 and SR-303 received the same scores. However, each performed stronger and weaker in certain categories. The SR-304 project did not score as highly as the SR-303 project in the “located on a transit corridor” category because there is less transit service and frequency on SR-304 than on SR-303. SR-304 scored high in the pedestrian generators category, while SR-303 scored moderate. Table 4.3 lists the prioritized access management projects in descending order according to Total Prioritization Score. Figure 4.3 illustrates the locations of high priority signal coordination projects.

Table 4.4 Prioritized Signal Coordination Projects

Number	Project Name	Score

Accident Analysis Projects

Of the 21 accident analysis projects, the intersection of SR-59 and Waldron Avenue received the highest score in the prioritization (36). The intersection's location in proximity to the I-287/Tappan Zee Bridge Corridor and the SR-59 Corridor, the high level of transit service and the number of generators located near this intersection contributed to its high score. This intersection also is the most dangerous intersection in Clarkstown, with the highest number of accidents and related injuries. Four intersections received 34 points, including the intersections of SR-59 and Smith Street, SR-59 and Crosfield Avenue, SR-59 and SR-303, and SR-303 and Palisades Center Drive. The number of accidents and injuries at these locations combined with the proximity of these intersections to congested corridors, transit corridors, and pedestrian generators contributed to their high CTP Goal and Project Performance scores. Table 4.4 lists the prioritized accident analysis projects in order of their Total Prioritization Score, and Figure 4.4 maps the accident analysis project locations and priority in implementation.

Table 4.5 Prioritized Accident Analysis Projects

Number	Project Name	Score		
		CTP Goal	Project Performance	Total Prioritization

Transit Improvement Projects

Of the 11 transit improvement projects, the “Hamlet Center Circulator” scored the highest overall goal score, along with transitioning to a fixed-stop bus system. It also had the highest project performance Score along with the “Nanuet Transit Connectivity Plan.” A “Hamlet Center Circulator” transit service would improve connectivity and transit travel time between Clarkstown’s hamlets. The pedestrian activity and mix of generators in and near hamlet centers allowed this project to achieve high scores in those categories. A fixed-stop transit system would improve transit travel time, reliability, and efficiency. The Nanuet Transit Connectivity Plan, which would provide better connections between bus transit systems and the Nanuet Train Station, received high scores due to the improved transit time and reliability associated with transfers between services, and the benefits that could accrue to the hamlet center of Nanuet with the establishment of a transit hub there. Table 4.5 lists the prioritized transit improvement projects in order of their Total Prioritization Score.

Number	Project Name	Score		
		CTP Goal	Project Performance	Total Prioritization
1	“Hamlet Center Circulator” route traveling between hamlet centers	25	15	40
2	Nanuet Transit Connectivity Plan	23	15	38
3	Fixed-stop bus system for Transport of Rockland and Clarkstown MiniTrans bus routes	25	13	38
4	Separated transit lane on State Route 59 through West Nyack and Nanuet	22	15	37
5	Separate bus route through Palisades Center Mall parking lot	22	15	37
6	Increase runs and service hours on State Route 304	21	14	35
7	Increase runs and service hours on State Route 303	21	14	35
9	Clarkstown Park-and-Ride expansion – 15 locations	19	13	32
10	ITS for transit services focusing on real-time customer information	19	12	31
11	Marketing and advertising campaign partnering with local organizations	13	8	21

Sidewalk Improvement Projects

A total of 37 pedestrian facility projects were prioritized based on the Goal and Project Performance Scores. The stretch of SR-304 from SR-59 to Virginia Street near the Hamlet of Bardonia received the highest score. This major roadway connects the SR-59 commercial corridor to a long stretch of residential and commercial areas, as well as schools, houses of worship, employment centers and some segments of existing sidewalks. Due to the size of this project, cost is a key issue to consider.

New Hempstead Road (CR-80) between Main Street in New City and the Clarkstown/Ramapo border, Prospect Street from Briar Road to South Middletown Road, and SR-59 from West Nyack Road to the Nyack Village Line each received the second highest overall scores. The SR-59 segment received a high CTP Goal Score, as it would provide key connections for pedestrians between Hamlet Centers, community facilities, as well as Palisades Center and other retail and employment sites. New Hempstead Road passes through New City, providing access to major government, religious and commercial areas, as well as a key connection to nearby residential streets. Prospect Street connects the Nanuet train station to an area that would benefit from a safe, obstruction-free sidewalk, providing a key alternative to SR-59. The prioritized list of sidewalk projects is provided in Table 4.6. Figure 4.5 illustrates the locations and the priority of the sidewalk projects throughout Clarkstown.

Table 4.7 Prioritized Sidewalk Improvement Projects

Number	Project Name	Score		
		CTP Goal	Project Performance	Total Prioritization
1	SR-304 between SR-59 and Virginia Street	20	17	37
2	New Hempstead Road (CR-80) between North Main Street and the Clarkstown/Ramapo line	19	17	36
3	Prospect Street from Briar Road to South Middletown Road	19	17	36

Bicycle Facility Projects

Upon completion of the prioritization of bicycle facility projects, there was a four-way tie for the highest total score. Paths on Main Street in New City, Middletown Road, SR-303, and SR-59 each received equally strong scores. Bicycle routes on SR-303 and SR-59 were a strong match to CTP goals, while the former two roadways scored higher on their local performance characteristics. This difference may be in part due to the scale of the projects, as the larger roadways (SR-59 and SR-303) will have the greater townwide connectivity and benefits. Conversely, these projects also will require the greatest coordination and costs to implement. A complete list of prioritized bicycle facility projects is provided in Table 4.7 below.

Table 4.8 Prioritized Bicycle Facility Projects

Number	Project Name	Score		
		CTP Goal	Project Performance	Total Prioritization
1	Main Street/Old Route 304 (New City)	18	18	36

Quality of Life Initiatives

Three quality of life initiatives were prioritized. Because the three initiatives contained different types of projects intended to achieve the aims of different aspects of the quality of life in Clarkstown, it was deemed inappropriate to develop specific performance criteria. The three initiatives were prioritized according to how well they addressed the overarching CTP goals. The initiative to require water runoff reductions for large parking lots received the highest score due to the potential to limit water pollution and flooding. Also, the encouragement of smaller surface parking lots improves the urban design potential in hamlet centers, making the environment more pedestrian- and bicycle-friendly. Implementing lighting design regulations in hamlet centers improves the quality of life by reducing light pollution and improving the design of hamlet centers and streetscapes. Creating design standards for use of porous pavers reduces water runoff. The prioritized list of quality of life initiatives is provided in Table 4.8. Because these are townwide initiatives, no map of project locations was developed for this category.

Table 4.9 Prioritized Quality of Life Initiatives

Number	Project Name	Score		
		CTP Goal	Project Performance	Total Prioritization
1	Require asphalt parking lots greater than 10,000 square feet to significantly reduce water runoff	17	N/A	17
2	Develop light pollution minimization plan/lighting design regulations	14	N/A	14
3	Create design standards for use of porous pavers on new paved surfaces	13	N/A	13

Land Use Initiatives

Similar to the quality of life initiatives, the five land use initiatives were a diverse set of project types and were prioritized according to the manner in which they addressed the CTP goals. The expanded adoption of design guidelines that increase the availability of various land uses near multimodal transit stops and stations received the highest score due to the positive implications for transit, pedestrian, and bicycle use. The Hamlet Center overlay districts achieved a high score as well, due to the transit-, pedestrian-, and bicycle-friendly nature of mixed-use urban design that is found in those districts. Park and open space requirements also scored highly because of the pedestrian and bicycle opportunities, environmental protection and quality of life improvements that can accompany that initiative. The full list of prioritized land use initiatives is provided in Table 4.9. Because most of the land use initiatives have townwide

applicability, no map of specific project locations was prepared for this set of projects.

Table 4.10 Prioritized Land Use Initiatives

Number	Project Name	Score		
		CTP Goal	Project Performance	Total Prioritization
1	Adopt design guidelines to reflect prioritization of land development that increases availability of residential, retail and office uses near multimodal transit stops and stations.	27	N/A	27

3	Require open/recreation space and programming for neighborhood parks, plazas and playgrounds in Hamlet Center overlay districts that preserve spaces for community interaction	21	N/A	21
4	Clarkstown Transportation Corridor Land Use / Zoning Analysis Studies (303, 304, 9W, 59)	18	N/A	18
5	Revise parking requirements for retail, office and industrial uses	15	N/A	15

5.0 Identification of Funding Strategies and Programs

The following Federal and state programs offer funding opportunities to implement the proposed projects in the Comprehensive Transportation Plan. The following sections also outline the areas where funding criteria match the needs identified in the Comprehensive Transportation Plan. Lastly, there is an explanation of funding already available to Clarkstown for transportation improvements. Many of these projects align with those strategies developed for the Comprehensive Plan and the Town should do whatever is possible to ensure such project funds are utilized.

The Procedures for Locally Administered Federal Aid Projects (PLAFAP) is a manual available on the NYSDOT web site (www.nysdot.gov) that serves as a comprehensive resource to ensure that Federal funding reaches the local levels and that local levels of government apply for funding in a manner consistent with Federal and state regulations. The Regional Local Project Liaison (RLPL) for Region 8, which serves Rockland County, is Carolyn Ryan and she can be contacted at (845) 431-5884. She is the first point of contact for any PLAFAP questions. In addition, both Patrick Gerdin and Joseph Pyzowski with Rockland County are invaluable resources as both work extensively with the State and NYMTC on soliciting state and Federal funding for the County.

5.1 FEDERAL PROGRAMS

The following Federal programs are funded in the most recent Federal transportation legislation, SAFETEA-LU, which is due to expire in 2009. As of today, most of these programs are running on their final cycle and are no longer accepting applications. There has been considerable debate in the transportation community about what the next Federal legislation will look like and what programs will likely be continued or included. The programs listed below have survived several iterations of legislation. However, there is no certainty that any of these programs will be included.

Additional uncertainty comes out of the fact that passage of previous Federal transportation legislation attempts have taken years longer than expected. Should long delays occur during this next legislative cycle, it is unclear whether SAFETEA-LU and its attendant program would be extended or other stopgap measures be deployed. Furthermore, discussions with the Rockland County Highway Department has intimated that the New York Metropolitan Transportation Council (NYMTC), Clarkstown's local metropolitan planning organization (MPO) and major distributor of these funds, will not be receiving

new program applications for the Transportation Improvement Program (TIP) for up to two fiscal years given the current economic climate.

Transportation Enhancement Program

Overview

This program, as administered by the Federal Highway Administration, provides funds for projects that aim to expand transportation choices and enhance the transportation experience. This includes bicycle and pedestrian enhancements as well as scenic or historic projects, landscaping and environmental mitigation.

Eligibility

Twelve Transportation Enhancement Activities are eligible for these funds:

1. Provision of facilities for pedestrians and bicycles;
2. Provision of safety and educational activities for pedestrians and bicyclists;
3. Acquisition of scenic easements and scenic or historic sites (including historic battlefields);
4. Scenic or historic highway programs (including the provision of tourist and welcome center facilities);
5. Landscaping and other scenic beautification;
6. Historic preservation;
7. Rehabilitation and operation of historic transportation buildings, structures, or facilities (including historic railroad facilities and canals);
8. Preservation of abandoned railway corridors (including the conversion and use of the corridors for pedestrian or bicycle trails);
9. Inventory, control, and removal of outdoor advertising;
10. Archaeological planning and research;
11. Environmental mitigation:
 - a. To address water pollution due to highway runoff; or
 - b. Reduce vehicle-caused wildlife mortality while maintaining habitat connectivity.
12. Establishment of transportation museums.

Application Process

Applications are submitted to the appropriate MPO (NYMTC in Clarkstown's case) and/or the regional office of the State Department of Transportation which, along with Federal Highway Administration (FHWA) officials, screens the

applications for completeness and eligibility requirements. The MPO then evaluates, ranks, and prioritizes the applications that are determined to be eligible. A Central Advisory Committee receives and prioritizes lists and makes selection recommendations to the Governor. Applicants can have their applications prescreened by DOT coordinators in advance of deadlines for suggestions to improve their application.

Funding Information

- Minimum/Maximum Funding: \$100,000/\$2 Million
- Required Local Match: 20 percent

Contact Information

Doug Cotton
Region 8 TEP Coordinator
4 Burnett Boulevard
Poughkeepsie, NY 12603
Telephone: (845) 431-5788
E-mail: dcotton@dot.state.ny.us

Potential Funding Alignments

- Pedestrian Facilities and Facility Improvement projects, specifically the Complete Streets Initiative.
- Bicycle Network Improvement projects.
- Hamlet Center transportation improvement projects.

Additional Information

Pedestrian and Cycling activities are the category of projects that receive the greatest share of funding in New York.

Congestion Mitigation and Air Quality (CMAQ) Improvement Program

Overview

This program has been included in Federal transportation legislation since 1991. It is administered jointly by the FHWA and the Federal Transit Administration (FTA) and provides funds for projects that reduce criteria air pollutants regulated from transportation-related sources. SAFETEA-LU requires states and MPOs to give priority in distributing CMAQ funds to diesel engine retrofits, and other cost-effective emission reduction and congestion mitigation activities that provide air quality benefits. SAFETEA-LU also requires the Secretary of the Federal Department of Transportation to evaluate and assess the effectiveness of a representative sample of CMAQ projects to determine the direct and indirect

impact of the projects on air quality and congestion levels, and to ensure the effective implementation of the program.

Eligibility

The goals of the CMAQ program are reducing air pollution through promotion of operational and technological improvements, the targeting of major freight bottlenecks, and relieving urban congestion. The funds are moderately flexible and have been used to fund a variety of projects that meet these goals.

Eligible Projects/Programs

- Transportation activities in an approved State Implementation Plan, transportation control measures to assist areas designated as non-attainment under the Clean Air Act Amendments (CAAA) of 1990.
- Pedestrian/bicycles off- or on-road facilities, including modification of existing public walkways to comply with the Americans with Disabilities Act.
- Intermodal Surface Transportation Efficiency Act (ISTEA) management and monitoring systems.
- Traffic management/monitoring/congestion relief strategies.
- Transit (new system/service expansion or operations).
- Alternative fuel projects (including vehicle refueling infrastructure, clean fuel fleet programs, and conversions).
- Public/private partnerships and initiatives.
- Inspection and maintenance (I/M) programs.
- Intermodal freight.
- Telecommunications.
- Travel demand management.
- Project development activities for new services and programs with air quality benefits.
- Public education and outreach activities.
- Rideshare programs.
- Establishing/contracting with transportation management associations (TMA).
- Fare/fee subsidy programs (operating subsidies have a three-year limit).
- Diesel retrofits.
- Truck stop electrification.

- Experimental pilot projects/innovative financing.
- Other transportation projects with air quality benefits.

Ineligible Projects

- Construction of projects which add new capacity for single-occupancy vehicles.

Application Process

The Federal funds are distributed through state DOTs and MPOs. Within NYMTC, CMAQ funds for Rockland County are administered through the Mid-Hudson South Transportation Coordinating Committee. Projects are usually solicited via an advertisement by the local MPO through the Transportation Improvement Program (TIP) process.

Funding Information

- Maximum funding information not available
- Funding requires 20% local match
- Program is reimbursement based

Potential Funding Alignments

- Access Management projects.
- Intersection Analysis and Improvement projects.
- Pedestrian Facilities and Facility Improvement projects.
- Bicycle Network Improvement projects.

Surface Transportation Program (STP)

Overview

This program provides flexible funding to be used by states and localities for projects on any Federal-aid highway, including the National Highway System, bridge projects on any public road, transit capital projects and intra-city and intercity bus terminals and facilities.

Eligibility

STP funds are divided amongst several subprograms, including:

- STP (Anywhere) – These STP funds are available for projects anywhere in the State. They represent 30 percent of all STP funds and require a 20 percent state match to the 80 percent of funding supplied by the Federal government.
- STP ENHANCE – The Surface Transportation Program (Enhancement Program) is a program that has 10 percent of the formula-based STP funds designated for transportation enhancement activities to assist communities attain social, cultural, aesthetic, and environmental goals. These enhancement projects must relate to the intermodal transportation system by function or by impact. The State generally does not provide matching funds, those are typically produced locally. This program encompasses 10 percent of total STP funding.
- STP FLEX – Surface Transportation Program (Flexible) is the most versatile of the formula-based STP funds used for a variety of transportation improvements to include “flexing” fund to transit projects.
- STP LG Urban – The Surface Transportation Program (Large Urban) is a formula-based STP funds suballocated for an urbanized area with a population over 200,000 and is used for a variety of transportation improvements.
- STP RAIL – The Surface Transportation Program (Rail) has a portion of the STP Safety funds are used for rail-related safety projects.
- STP RURAL – Surface Transportation Program (Rural) is a formula-based STP funds suballocated for non-urbanized areas typically on roads classified as rural minor collectors.
- STP SAFETY – The Surface Transportation Program (Safety) is 10 percent of the formula-based STP funds that must be designated for safety projects such as railway/highway grade crossings or hazard elimination programs on any public road.

Application Process

Similar to CMAQ funds, STP funds are distributed through state DOTs and MPOs. Within NYMTC, CMAQ funds for Rockland County are administered through the Mid-Hudson South Transportation Coordinating Committee.

Funding Information

- Maximum funding information not available
- Funding requires 20% local match
- Program is reimbursement based

Contact Information

Jean Shanahan
4 Burnett Boulevard
Poughkeepsie, NY 12603
Telephone: (845) 431-7921
E-mail: jshanahan@dot.state.ny.us

Potential Funding Alignments

- Access Management projects.
- Transit Improvement Program projects.
- Pedestrian Facilities and Facility Improvement projects, specifically the Complete Streets Initiative.
- Bicycle Network Improvement projects.

Recreational Trails Program

Overview

This program offers 80 percent Federal funding with a sliding scale (see 23 USC 120). Federal agency project sponsors may provide additional Federal funds up to a total Federal share of 95 percent. Other Federal programs may provide matching funds toward the non-Federal share if the project also is eligible under the other Federal program. Recreational Trails Program (RTP) funds may be used to match other Federal programs if the project also is eligible under other Federal programs. States may allow a programmatic match for funds from non-Federal sources. “Soft-match” (donations of funds, material, services, or new right-of-way) may be permitted from any project sponsor, whether a public agency or private organization.

Eligibility

The RTP provides funds to states to develop and maintain recreational trails and trail-related facilities for both non-motorized and motorized recreational trail uses. Examples of trail uses include hiking, bicycling, in-line skating, equestrian use, cross-country skiing, snowmobiling, off-road motorcycling, all-terrain vehicle riding, four-wheel driving, or using other off-road motorized vehicles.

Each state administers its own program, usually through a state resource or park agency. Each state develops its own procedures to solicit and select projects for funding.

Funding Usage

Maintain and restore existing trails:

- Develop and rehabilitate trailside and trailhead facilities and trail linkages;

- Purchase and lease of trail construction and maintenance equipment;
- Construct new trails (with restrictions for new trails on Federal lands);
- Acquire easements or property for trails;
- Assess trail conditions for accessibility and maintenance;
- Develop and disseminate publications and operation of educational programs to promote safety and environmental protection related to trails (including supporting non-law enforcement trail safety and trail use monitoring patrol programs, and providing trail-related training) (limited to five percent of a state's funds); and
- State administrative costs related to this program (limited to seven percent of a state's funds).

Application Process

New York State may make grants to private organizations or to municipal, county, state, Federal, or other government agencies. Projects may be on public or private land, but projects on private land must provide written assurances of public access.

States are encouraged to enter into contracts and cooperative agreements with qualified youth conservation or service corps to perform construction and maintenance of recreational trails.

Funding Information

- Maximum funding information not available
- Program is administered through New York State
- Federal Government splits half of total allocation evenly among states, and the other half proportionally based on a state's proportion of recreational activity.

Contact Information

Robert W Reinhardt, Director of Planning
Parks, Recreation, and Historic Preservation
Agency Building #1 17th Floor
Empire State Plaza
Albany NY 12238

Telephone: (518) 474-0415

Fax: (518) 474-7013

E-mail: robert.reinhardt@oprhp.state.ny.us

Potential Funding Alignments

- Plan and Implement Class 1 and Class 2 bicycle routes.

National Highway System Funds

Overview

These (80/20) funds are more flexible than interstate highway funds and can be used for any type of highway project, including transit or other transportation projects in the corridor, maintenance and capital improvements.

Eligibility

Project Eligibility is determined by the State.

Application Process

Funds are distributed through the State.

Funding Information

- Federal share usually 80%, local share 20%

Contact Information

Richard Peters, Regional Planning and Program Manager
NYSDOT Region 8 Office
Eleanor Roosevelt State Office Building
4 Burnett Boulevard
Poughkeepsie, NY 12603
Telephone: (845) 431-5723

Potential Funding Alignments

- Transit Improvement Program projects, specifically to coordinate with the Tappan Zee Bridge Project.

Federal Safe Routes to School (SRTS)

Overview

The Safe Routes to School Program (SRTS) empowers communities to make walking and bicycling to school a safe and routine activity.

Eligibility

The Program makes funding available for a wide variety of programs and projects, from building safer street crossings to establishing programs that encourage children and their parents to walk and bicycle safely to school.

Application Process

Funds are administered by the New York State Department of Transportation.

Funding Information

The legislation established a number of parameters related to program funding which address the following items:

- **Apportionment Formula** – Funds are provided to each state and the District of Columbia by formula based on the State’s percentage of the national total of school-aged children in Kindergarten through eighth grade. Apportionments will be updated by FHWA as new national enrollment data becomes available.
- **Minimum Allocation** – No state shall receive less than \$1 million in any fiscal year.
- **Infrastructure and Non-Infrastructure Funds** – Funds are made available for two different types of projects (infrastructure and non-infrastructure), with not less than 10 percent and not more than 30 percent of each state’s apportionment required to be spent on non-infrastructure activities.
- **Duration of Availability** – Funds shall be available for obligation in the same manner as if such funds were apportioned. Funds are not transferable and must remain available until expended.
- **No Local Match Permitted** – The Federal share of the cost of a project or activity shall be 100 percent.
- **Set-Aside for Administrative Expenses** – Prior to distributing funding to the states, FHWA may deduct up to \$3 million each year for administrative expenses to carry out the SRTS Program.

Contact Information

Greg Hart
Region 8 SRTS Coordinator
4 Burnett Boulevard
Poughkeepsie, NY 12603
Telephone: (845) 431-5724

Potential Funding Alignments

- Safety Improvement Program projects.
- Pedestrian Facilities and Facility Improvement projects.
- Bicycle Network Improvement projects.

5.2 STATE PROGRAMS

Most transportation funding is allocated by the Federal funding categories outlined above. New York State has a number of transportation funds from which it allocates money for projects. Some of the funds include the

transportation infrastructure renewal fund, mass transportation operating assistance fund, dedicated highway and bridge trust fund, dedicated mass transportation trust fund, and the transportation safety account. These funds are maintained by gas, petroleum and other motor vehicle-related fees (State Environmental Resource Center). However, state funds are not allocated through categorical programs such as those outlined at the Federal level. For example, the Statewide Mass Transportation Operating Assistance (STOA) provides flat funding to transit operators based on passengers and vehicle miles traveled. State funds, when listed in the TIP appear to be allocated in terms of gap or match funding for those programs already receiving some form of Federal money. One example of such as program is the Municipal Street and Highway Program, also known as the Marchiselli Program, which helps match Federal aid for municipalities. (NYSDOT) However, there is a reimbursement program offered by NYSDOT for eligible projects.

State Dedicated Funds are available for improvements to state roads. If the Town can identify a project to improve a state road or possibly an intersection of a local road with a state road, contact at the Region 8 NYSDOT office.

NYSDOT Region 8 Office

Richard Peters
Regional Planning and Program Manager.
Telephone: (845) 431-5723

Consolidated Local Street and Highway Improvement Program (CHIPS)

Overview

The Consolidated Local Street and Highway Improvement Program (CHIPS) was established by the Legislature in 1982. The applicable rules for the Program are contained in Section 10-c of the State Highway Law. Apportionments to municipalities are calculated annually by NYSDOT according to formulas specified in this section of the Law.

Between State Fiscal Year (SFY) 82-83 and 90-91 (April 1, 1982 – March 31, 1991) all CHIPS funds were distributed on a direct grant quarterly allocation basis. In 1991, State Legislation restructured CHIPS into two separate and distinct components. One was the Operation and Maintenance (O&M) direct grant component, funded from the State's General Fund, and the other was the Capital reimbursement component, funded from the sale of New York State Thruway Authority bonds.

While no CHIPS O&M funding has been included since the SFY 01-02 State Budget, the Legislature “converted” these funds into additional CHIPS Capital funds that have been appropriated since SFY 02-03.

Eligibility

Municipal

Counties, cities, towns, and villages that report local road mileage under their local jurisdiction are eligible for funding. The annual CHIPS apportionments to municipalities are calculated according to the CHIPS allocation formula specified in Section 10-C of the Highway Law. While several other factors are considered such as municipal funding levels and historical percentages for counties, cities, towns and villages, the two most important data inputs for this allocation process are local highway inventory (LHI) mileage (for all municipalities) and motor vehicle registrations (for counties and NYC) that are reported annually to NYSDOT.

Project

The municipality is responsible for selecting projects and, for eligibility, must certify that the project is expected to have a useful service life of at least 10 years. It also is important to note that this reimbursement program is only for those roadways that are not part of the state highway system or local roadways maintained by the State.

Refer to Appendix A of the April 2007 CHIPS Capital Guidelines for examples of the six project types (highway resurfacing, highway reconstruction, traffic control devices, bridge/culvert rehabilitation, bridge/culvert replacement, and “other”) that are considered eligible for CHIPS Capital reimbursement. It is important to note that this is a reimbursement program and the service life of at least 10 years indicate that the needs for the project must be installation or improvement of infrastructure. While the CHIPS program could not be used to reimburse an access management plan, it could be eligible to execute the necessary roadway improvements once the plan is developed.

Ineligibility

- Operation and maintenance activities such as pothole repairs, crack sealing, snow removal, brush and weed control, street cleaning, highway planning studies, administrative disbursements (including administering CHIPS) not associated with a specific CHIPS Capital project, and purchase of materials not associated with a specific CHIPS Capital project.
- State highways, including locally maintained state arterials in cities.
- Parking lots or parking garages that are not both owned by a municipality and linked to a transit purpose.
- Sanitary sewers, water lines and other utilities that are not impacted by a highway/bridge reconstruction project.
- Bicycle access features outside the highway right-of-way.

- Amounts paid by a locality for interest or indirect costs (e.g., costs of issuance) on local bonds or notes issued to finance eligible project costs.

Application Process

Forms and application instructions can be found at:
<https://www.nysdot.gov/programs/chips>

Funding Information

- Funding is calculated based on a formula determined in the application packet.
- Program is reimbursement based.

Contact Information

Doreen Holsopple
4 Burnett Boulevard
Poughkeepsie, NY 12603
Telephone: (845) 431-5817

Potential Funding Alignments

- ITS and signal coordination projects.
- Lane widening for curbs and bike lanes.
- Light pollution minimization plan.

Additional Information

Based on historical funding administration, a strong relationship, and clear communication with the local MPO, NYMTC is essential. Though it is unclear exactly what future funding programs will look like, the Mid-Hudson South Transportation Coordinating Committee at NYMTC will likely have a great deal of influence on where those dollars are spent.

County/Local Contribution to Projects

County and local money is usually allocated once Federal funding has been identified. For example, if CMAQ funding provides 80 percent funding to a project, 15 percent may be provided by the State through Marchiselli funds, and 5 percent contributed by the County. If Marchiselli funds are not available, those funds may be provided by other funding means such as state bond financing. The County typically provides 10 percent funding on park-and-ride projects where 80 percent of the funding is provided by Federal dollars and the remaining 10 percent by the State.

In terms of funding for planning projects or studies, the primary funding source would be the MPO, through the Unified Planning Work Program. However,

competition for these funds is tough, especially given that Rockland and Westchester counties compete with New York City for those funds.

Current Clarkstown Transportation Funding

Current CMAQ-Funded Projects for Clarkstown in the TIP

- 850210 and 803041: Route 59 from Route 303 to Broome Boulevard; Left turn lanes at the Hub shopping center and Broome Boulevard.
- 850220: Route 303 at Lake Road; Valley Cottage highway reconstruction.
- 875757: Clarkstown Parking Reimbursement; for park-and-ride spaces in New City along the 304 corridor.
- 875868: Route 33 Bike/Pedestrian Improvements; for the Town of Clarkstown.
- 875895: Sidewalk Construction; to access New City business district.
- 875907: Pascack Road at Lawrence Street; left turn lane on southbound Pascack approach, drainage improvements, and installation of sidewalk.
- 875966: Germonds Road and PIP Intersection Reconstruction; part of the County Signal Retiming Study.

Current STP-Funded Projects for Clarkstown in the TIP

- 875458: Congers Road Reconstruction; Turning lanes, drainage improvements, and sidewalk/curb installation.
- 875903: Pascack Road Reconstruction; Smith Road to Pipetown Hill Road, replace below-grade crossing with RR bridge and add sidewalks.
- 878028: Lawrence Street Sidewalks; Install 1,920 linear feet total of new sidewalk.

Current National Highway (NHS)-Funded Projects for Clarkstown in the TIP

- 803026: Route 59 Sickletown Road to Route 303; Approach work and bridge rehabilitation.

Other Funded Projects for Clarkstown in the TIP (Funding Sources Not Identified)

- 809343: PIP North Middletown to Route 9W; Rehabilitate bridges.
- 875964: West Shore River Line: Improve safety and designation of quiet zone crossings.
- 875523: New Hempstead Road (CR 80-RTE 304 PIP); Reconstruct road, construct new bridge, add turning lanes and reconstruct drainage, installation of curb and sidewalk.

- 850221: Route 303 at Valley Cottage Library: Install right turn lane.
- 875904: State Bike Route 9; Rockland Lake river trail and Dunderburg mountain trail rehabilitation.
- 8T0414: PIP Trailway, Stage 3; Western Highway to NYS Thruway, new/improved pedestrian facility.
- 8T0415: PIP Trailway, Stage 4; NYS Thruway to Route 202, new/improved pedestrian facility.

According to the Rockland County Highway Department, the order of these projects may be switched around should priorities for the Town change. However, only the money allocated for the Town for each year can be accessed, regardless of the project.

Future Clarkstown Transportation Funding

United State Economic Recovery Act

In addition to the above mentioned projects, NYMTC has prepared a list of project that could be potentially funded by the National Economic Recovery Legislation currently being developed. The Clarkstown sponsored projects included in this list are:

- South Main Street Reconstruction; and
- Road Resurfacing and Reconstruction.

Tappan Zee Bridge Reconstruction

The studies of the Tappan Zee Bridge alternatives suggest that greater traffic flows of all types can be expected in Clarkstown and neighboring communities, and proposed express transit improvements will add a much-needed transit connection across the Hudson River. The possible installation of major transit hubs in the Town have the potential to change the type and intensity of land use around these areas, in addition to increased roadway and pedestrian traffic.

To date, the study teams have not defined financial resources for local governments responsible for the development and maintenance of the areas around the transit stops. Given the TZB plans, however, the Town should coordinate with Federal, state, and county governments and other representatives to secure resources to mitigate new developments in Clarkstown.

New City Hamlet Center Vision Plan*

CHAPTER ONE

INTRODUCTION AND VISION STATEMENT

The New City hamlet is the community's center and a destination for work, shopping, and public gathering. The hamlet is the home to the Rockland County offices, the County Courthouse, the Clarkstown town hall, a wealth of local businesses, professional offices, eateries, service shops, a small range of housing options, parks, athletic fields and nature preserves, and great opportunities for public gathering and festivals.

The hamlet center is an important part of the community fabric. However, local residents and visitors, whether visiting the hamlet for work, entertainment, or daily shopping tasks, are often frustrated by the overall experience of being in New City. A commonly-heard statement at public workshops

- "I would never bring a friend from out of town to downtown New City"
- highlights the lack of pride and general sense of disappointment with the area.

For years, the New City Hamlet Center has been the focus of community concern and controversy, as well as a variety of planning and revitalization projects dating back to the 1960s. However, almost every planning initiative and strategy met significant resistance and resulted in disappointment. The Vision Plan presents and establishes a new prototype for planning in New City through an inclusive collaborative process designed to build strong consensus and a community-supported vision for the future.

Rockland County Courthouse

Residents working together to plan for New City's future

Town of Clarkstown and County of Rockland

The foundation of this plan consists of dialogue, consensus building, and a comprehensive approach to visioning. The vision plan is unique in recent history in that the county and town are close partners working together to address the range of issues facing the hamlet center and sharing project costs. Furthermore, neighborhood and civic groups have also been closely involved in the process, through participation on planning committees and workshops, and have contributed greatly to development of the plan.

PURPOSE — A PLACE TO BE PROUD OF

The primary purpose of this plan is to establish broad community consensus and illustrate the overriding vision for the New City Hamlet Center. In addition, the plan provides a short- and long-term implementation guide for government, civic groups, businesses, and resident stakeholders related to land use and zoning, transportation, design, and general renewal of the hamlet.

At the first Vision Plan workshop (March 2006), participants were asked: “What would it take for this project to be considered a success?” Initial answers generally revolved around very specific, physical improvements

– “we have got to fix up Bradlee’s” or “there’s not enough parking.” However, after continued discussion one simple statement summarized why people were

South Main Street in New City

interested in the plan and participating in the meeting: “Let’s make New City a place to be proud of!”

New City Hamlet Center Vision Plan

PLANNING AREA

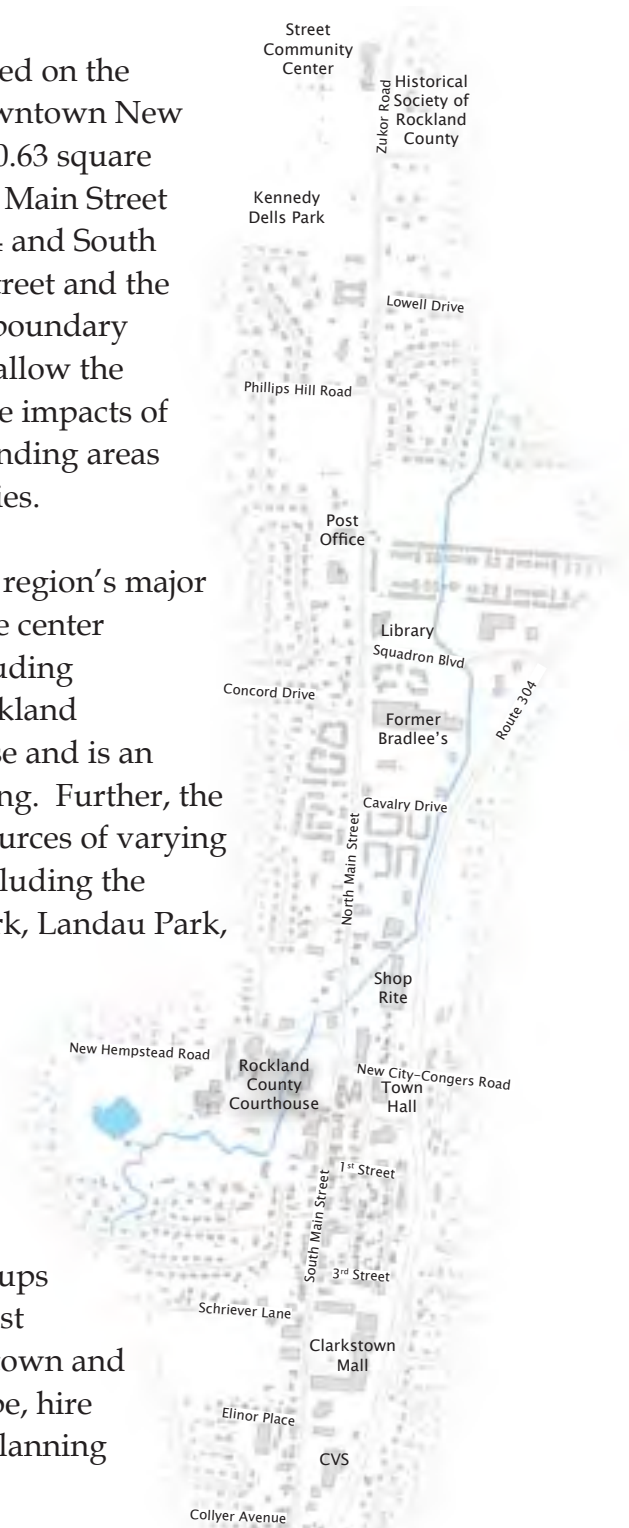

The Vision Plan boundary is generally based on the Town of Clarkstown's designation for Downtown New City and covers an area of approximately 0.63 square miles. The project area includes the entire Main Street corridor from the intersection of Route 304 and South Main Street to Zukor Road/North Main Street and the Street Community Center. However, the boundary was generally considered to be flexible to allow the community and consultants to consider the impacts of decisions within the corridor upon surrounding areas and to focus on key issues and opportunities.

The New City Hamlet Center is one of the region's major commercial and civic destinations. It is the center of municipal and county government including the Clarkstown government complex, Rockland County offices, and the County Courthouse and is an important place for commerce and shopping. Further, the study area includes a number of park resources of varying sizes for residents and visitors to enjoy including the Kennedy Dells Park, the Demarest Kill Park, Landau Park, and the historic Dutch Garden.

PLANNING PROCESS

The New City Hamlet Center Vision Plan is a collaborative effort of local residents and property owners, local and county government officials and staff, community business people, and civic groups and organizations. To ensure for the widest participation and community benefit, the town and county worked together to design the scope, hire consultants, guide the project, and share planning costs.

A steering committee consisting of key stakeholders was established to guide the consultants during development of the plan and to ensure that the project responded to the diverse needs of the community. Groups and

Town of Clarkstown and County of Rockland

organizations represented on the planning committee included the Little Tor Neighborhood Association, South Little Tor Neighborhood Association, Downtown New City Corporation, New City Chamber of Commerce, the Town of Clarkstown, County of Rockland, Clarkstown Garden Club, and the New City Civic Association. Consultants held several meetings with the steering committee to refine ideas and consider recommendations and strategies. Plan committee members also helped facilitate workshops and focus sessions and assisted with communication and outreach to the public.

Four (4) public workshops formed the foundation of the public outreach program, each of which included a brief consultant presentation, short break-out discussions by topic area, and a final summary and presentation by participants. Postcard notifications were mailed to residents within a ½ mile radius of the study area, email announcements sent to distribution lists and a community web site – www.newcityvision.net – was maintained to post schedules and draft materials and to keep the public informed on progress.

In addition to the large public workshops, a series of smaller focus group sessions were conducted to gain insight into specific issues of key concern including parking and parking management (sponsored by the New York Metropolitan Transportation Council), streetscape design, the local businesses community (opportunities for promotion and economic development), the Central Gateway area (Main Street intersection with New City – Congers and New Hempstead), and the Rockland County Campus.

Workshop participants discussing the South Main Streetscape

New City Hamlet Center Vision Plan

DOCUMENT ORGANIZATION

This document is organized around a set of planning principles and themes – Vision; Destination New City; Circulate New City; and Form New City – with recommendations and strategies grouped under each theme. The Vision Plan outline:

Chapter 1: Introduction and Vision

- Project introduction and the overall vision for the hamlet, the desired future condition;

Chapter 2: Destination New City

- Recommendations to enhance the “Destination” areas, the features that draw people to New City;

Chapter 3: Circulate New city

- Focuses on roadway, streetscape and pedestrian concepts for Main Street;

Chapter 4: Form New City

- Details land use, zoning, and organizational strategies for realizing the vision; and

Chapter 5: Conclusion and Implementation

- Summarizes the planning concepts and highlights implementation roles.

Town of Clarkstown and County of Rockland

VISION STATEMENT

A vision statement is a consensus-building tool used to represent a community's desired future. The statement can also be used to guide the development of specific planning strategies and recommendations as well as to measure implementation and overall program effectiveness. The New City Hamlet Center vision statement represents a target by which to measure implementation and success.

NEW CITY HAMLET CENTER VISION

In the future, the New City Hamlet Center will be a vibrant, pedestrian-friendly community center with a wealth and diversity of business and job opportunities. The hamlet will include pleasant places for all ages through a mixed-use environment of entertainment, businesses, parks, and living opportunities and be strengthened by the presence of the town and county government offices whose workers shop, dine, and contribute to the overall vitality of the area.

It is envisioned that links to enhanced park and recreation facilities such as Dutch Garden and the Demarest Kill County Park will bring residents and workers closer to the natural beauty of the area while the overall design and density of the hamlet will reflect the character of a traditional small town Main Street.

Surrounding neighborhoods will benefit by renewal of the Hamlet Center by being within walking distance of shops, restaurants, businesses, the courthouse, government offices, parks and other activity centers. New development will be sensitive to the existing neighborhoods and carefully designed to minimize adverse impacts to quality of life.

Workshop participants selected these two images from other communities as their favorites during an image preference survey at the first workshop in March 2006

CHAPTER TWO

DESTINATION NEW CITY

Enhance and Strengthen New City's Civic, Cultural, Recreation, and Commercial Destinations

The New City Hamlet should be re-envisioned as a major destination center for civic life, culture, recreation, and commerce and as an alternative to the area's regional malls. Building on the qualities that make the hamlet special and important – its destination elements – New City can be transformed into a true “place” to experience and enjoy public life.

The hamlet already has many of the distinctive and typical components of a great Main Street community including thriving businesses, civic facilities such as the courthouse and parks, history and historic structures connecting the community to its past, and opportunities for civic and cultural engagement. Destination New City strengthens the elements that make the hamlet a place where people want to be – whether for shopping, work, or living. Please see the *Destination New City* map at the end of this chapter for a summary of recommendations.

Destination New City - Main Street transformed into public marketplace. Photo: Baum Image Group Inc.

UNIFY CIVIC AND RECREATION CLUSTERS

The public parks, the government centers, and the other civic resources of the hamlet are the foundation of New City's strength as a community destination. The number and diversity of these civic “draws” – whether for work at the county offices, sports at the Kennedy Dells Park, or borrowing a book from the library – are responsible for bringing a significant portion of the Clarkstown and Rockland County community into New City every day. In general, goals for these civic and recreation destination areas include:

- Use design to create an overall and consistent theme for New City's Civic Destinations;

Town of Clarkstown and County of Rockland

- Create synergy between resources and build off of success; and
- Mitigate the adverse impacts of change and development on surrounding neighborhoods.

UNIFY AND ENHANCE THE NORTHERN GATEWAY

This destination area includes a variety of important community resources including the Street Community Center (where a number of Vision Plan public meetings were held), Kennedy Dells Park, and the Historical Society of Rockland County. Similar to other sections of the hamlet, the Northern Gateway includes a mix of community resources, facilities, attractions, and ownership. Nevertheless, through continuing partnerships, the destination element can be strengthened by creating a unified campus theme across the area.

- Coordinate the facilities and resources of the major properties (Kennedy Dells, Street Community Center, and Historical Society) through a comprehensive and unified campus planning approach including consistent signage, lighting, landscaping, and overall aesthetic themes and shared resources (e.g., parking areas).
 - o Establish physical connections between resources including a pedestrian crossing between the Historical Society and Street Community Center, formal shared parking arrangements and consistent signage.
 - o Coordinate expansion of the Historical Society of Rockland County with other areas of the campus. For example, any modifications to the town property at the corner of Zukor Road (North Main Street) and Haverstraw Road should help to unify the campus and enhance the cultural heritage and rural qualities of the area.
- Integrate all Northern Gateway projects (e.g., pedestrian connections, cultural and community activities) with gateway treatments that meet the community vision, such as a roundabout that is being contemplated by the County at the North Main Street / Zukor Road / Haverstraw Road (Old Route 304) intersection.

1832 Blauvelt House at the Historical Society campus on Zukor Road.

New City Hamlet Center Vision Plan

- Improve pedestrian connections to surrounding neighborhoods (specific details and concepts are found within the streetscape section of the plan – Circulate New City).
- Consider the Northern Gateway for additional cultural and community activities such as a performing arts center, theater, and expanded youth outreach and activities. *Note: monitor parking availability as use increases and consider formal shared parking arrangements and overflow areas for major events.*

RECOGNIZE THE NORTH MAIN STREET CIVIC AND COMMUNITY AREA

With the library and post office serving as anchors, visitors are drawn to North Main Street for a variety of daily tasks and needs such as mailing letters and packages, picking up a book, or participating in community events. In addition, the senior housing facility and small commercial area help establish this section of North Main Street as a secondary destination for the New City Hamlet.

Sunrise assisted living facility in the North Main Civic area.

- Continue to reinforce the arrival at this secondary destination through additional streetscape and pedestrian improvements such as new street trees, landscaped medians, benches and streetlamps. The County has helped to establish this destination by constructing new sidewalks here.
- Enhance links between the library, the post office, surrounding neighborhoods, and North Main Street.
- Integrate the Diamond Derby Ranch horse farm into the destination area and consider opportunities to promote the area's agricultural history. This property could be a prospect for the town's open space program if the owner is interested in conservation opportunities.

CELEBRATE THE CENTRAL GATEWAY – THE HAMLET'S COMMUNITY CENTER

The Central Gateway is the hamlet's primary destination and presents a wonderful opportunity to enhance public activities and civic life. This area is already a major community center and includes the Rockland County Courthouse and government

Town of Clarkstown and County of Rockland

office buildings, the Town of Clarkstown government offices, local community facilities such as the town police and courts and the New City Fire Department, and a number of service, dining, and commercial establishments.

The Central Gateway is a place to participate in public life and build community spirit. The courthouse lawn and vicinity is home to a number of civic events including the Rockland County Fair held in the Spring and the New City Festival held in September. These events are very popular and draw thousands of residents into New City for fun and leisure activities. The town, county, and community civic groups should continue and build on these partnerships to more firmly establish the Central Gateway as the Civic Destination for Clarkstown and Rockland County.

- Provide additional opportunities for festivals and public events such as farmers' markets and concerts or performances.
- Utilize a continuing campus plan approach to the county lands in the central gateway. The diversity of users (office workers, county officials, park visitors, etc.) highlights the need for a comprehensive approach to planning for this area. The Central Gateway County Campus Vision Graphic (page 12) highlights a number of recommendations that were developed through the planning process and focus sessions with county officials and staff. An overall master plan would provide the county and community an opportunity to refine and further investigate the feasibility and desirability of these concepts.
 - o Establish direct pedestrian connections between Main Street, Landau Park, Dutch Garden and Demarest Kill Park.
 - o Enhance Demarest Kill Park through the provision of trails along the creek, additional picnic areas, and establishment of public spaces for performances.
 - o Consider relocating access to the campus closer to the downtown core of the hamlet near Eberling Drive. This spot provides an excellent 'gateway opportunity' to the New City Hamlet Center as the existing structures in this location may be removed as part of the county facilities plan, presenting

*Rockland County Fair on South Main Street.
Photo: Baum Image Group, Inc.*

New City Hamlet Center Vision Plan

the opportunity for access relocation. However, redesign of the intersection should take into account concerns of residents in the vicinity of the campus regarding through traffic and intersection alignments to avoid funneling of traffic into residential areas. To mitigate

Proposed view of Dutch Garden from South Main Street.

traffic concerns, automobiles exiting the campus could be discouraged from using Eberling Drive by means of a roundabout, signage or other design features (for example, cars leaving the campus could be required to make either a left or right hand turn onto New Hempstead Road).

- Enhance Landau Park, a pocket park, dedicated to the memory of Kevin Landau, a Clarkstown firefighter who died serving the community, is a great spot for eating lunch, relaxing and being a part of the downtown area. Efforts by the Clarkstown Garden Club and the Downtown New City Corporation are already under way to improve the park and recognize this important spot in New City. Recommendations for Landau Park include:
 - o The Town of Clarkstown should coordinate ongoing volunteer efforts to improve the park. Currently, improvement concepts sponsored by the Clarkstown Garden Club and the Downtown New City Corporation are running in parallel and should be united to ensure for a consistent theme and concept and to increase funding mechanisms.
 - o Remove parking spaces from the eastern section of the park. These spaces are generally used by the fire station during emergency responses. Reserved, on street parking spaces could be established on Maple Avenue to make up for the loss of these two or three spots.
 - o Continue the sidewalk from New City – Congers Road to Maple Avenue along Landau Park and in front of the fire station (west side of Maple Avenue).

Rockland County: Conceptual Plan for New City Office Center and Campus

New City Hamlet Center Vision Plan

REALIZE MAIN STREET NEW CITY THROUGH CONTINUED PARTNERSHIPS AND INVESTMENT IN THE RENEWAL OF COMMERCIAL CENTERS

New City's commercial establishments, the variety of professional offices, retail and services shops, and eateries comprise a strong, local attraction base for the area and in conjunction with the civic and community elements have the potential to be part of a great Main Street destination.

Landau Park is a comfortable place to sit and relax in New City.

However, New City residents and visitors also desire a wider range of businesses and shops than currently present in the hamlet. According to the Downtown New City Corporation's 2006 survey, desired commercial uses include more high-scale retail, quality food stores and cafes, and family style restaurants. In a separate survey also sponsored by the Downtown New City Corporation, business owners and operators identified the streetscape (streets, trees, landscaping and sidewalks) as the first priority for improvement in New City followed by parking availability, marketing/promotion of businesses and improved façades.

Destination New City promotes the enhancement of the hamlet's commercial centers and the realization of the Main Street vision through continued public – private partnerships. General goals and principles for these destination areas include:

- Unified design themes based on character areas (suburban, hamlet, central hamlet);
- A structural improvement program to enhance facades, buildings and signage;

Sidewalks are needed along this portion of Maple Avenue to connect to Landau Park and New City – Congers Road.

Town of Clarkstown and County of Rockland

- A unified economic development strategy including enhanced marketing and promotion of New City's commercial destinations;
- Improved pedestrian connectivity to major employment centers to take advantage of "target audiences" such as county/town employees; and
- Enhancement of the Demarest Kill by uncovering and exposing portions buried under parking lots (known as "daylighting") and creating a trail system along the creek.

Streetscape improvements including new sidewalks, lighting, and street trees are desired (and planned).

CENTRAL GATEWAY COMMERCE

The commercial area at Main Street, New Hempstead Road and New City – Congers Road is a major component of the overall central gateway and the primary entrance to the New City Hamlet. The existing built form and landscape is extremely auto-oriented, disconnected (internally as well as to the rest of Main Street) and is an unattractive entrance to the community. Nevertheless, there are tremendous opportunities to create a high quality mixed-use environment – enhancing the commercial components and tying the area into the surrounding civic resources and facilities, the proposed streetscape enhancements for Main Street, and the overall hamlet theme.

Specific strategies include:

- Establishing the central commerce area as a primary re-development focus for the community and the 'signature gateway' for New City;
- Enhancing pedestrian circulation throughout the central gateway and improving connections between commercial, civic and park resources;

Existing shopping plaza at the intersection of New City – Congers Road, Main Street, and New Hempstead Road.

New City Hamlet Center Vision Plan

- Promoting a traditional Main Street style of redevelopment with two- to three-story buildings, public spaces and mixed uses including retail and office on ground floors and opportunities for high quality housing above (housing could also be set aside for emergency responders who need easy access to the nearby Clarkstown Fire Station); and
- Utilizing a phased approach to renewal to minimize the impact to existing businesses.

Destination New City: Redevelopment concept for the intersection of New City – Congers Road, Main Street and New Hempstead Road

Overcoming Challenges

There are a number of barriers and impediments to renewal of this area – most of these challenges will only be overcome through public – private partnerships. For example, the gas station and automobile repair shops are inconsistent with the vision for this area while segmented property ownership, two cemeteries, and the Demarest Kill creek (which is buried underground in this area) complicate redevelopment scenarios. Structured parking will need to be added to a central, walkable location in the vicinity. Further, the existing retail and office businesses, dining establishments and the small area of single-family homes would likely be impacted by modifications and must be addressed during future planning efforts. To overcome these challenges the town, county, New York State (in particular the Department of Transportation for Route 304 access opportunities), private businesses, and property owners, must be partners in the process as well as in cost-sharing and mitigation of development constraints.

SOUTH MAIN STREET – CONTINUE THE MOMENTUM

South Main Street is New City's retail, shopping and dining core. There are a number of thriving businesses and examples of success to build upon. For example, the new CVS plaza was redeveloped with a consistent façade and improved landscaping. Other smaller establishments have worked to improve their properties through landscaping, outdoor spaces, pedestrian lighting and quality signage.

Building on the momentum of local entrepreneurial spirit, South Main Street can become a destination as a 'great street' for shopping, dining, working and living. The streetscape elements promote creation of a walkable destination which would include a high quality pedestrian experience consisting of well-maintained sidewalks, landscaping and street trees, pedestrian-scaled lighting, comfortable public space, and opportunities for outdoor cafes and dining. An existing example in New City is the La Terrazza restaurant's landscaping and outdoor seating area where the building and landscaping contribute to a pleasant pedestrian experience walking along South Main Street.

However, the quality depends not only on the presence of streetscape elements such as shade trees and benches but also on how surrounding buildings frame the street. A great street is enclosed and shaped by the structures that line it and should feel like a comfortable room.

In Clarkstown, the region, and New York State, there is a shortage of quality public places for people. New City can be a great place – a place of which to be proud, enjoy and show off to friends and visitors. Accomplishment of this vision will require a major shift in thinking and attitudes and the community must participate and work together towards that common goal.

- Re-envision South Main Street as a walkable, traditional main street hamlet. Incorporate this concept and theme into the town's regulatory system (zoning) as well as economic development, marketing and promotion materials.
- Improve the streetscape to encourage safe walking and easy connections between businesses so patrons can park their car once and walk between businesses, eateries and workplaces.
- Ensure for design consistency in architectural styles, façade, signage and building layout.
- Initiate an enhancement program for façades, landscaping and streetscape maintenance.
- Ensure that renewal is sensitive to the surrounding residential areas, particularly the west side of Main Street.

New City Hamlet Center Vision Plan

- Work with property owners to identify redevelopment and renewal opportunities that are consistent with the Vision Plan.
- Improve access to and from Route 304, particularly to remove truck traffic from Main Street.

La Terrazza's outdoor seating and landscaping enhance the downtown environment.

NORTH MAIN STREET COMMERCE

At the center of this commercial destination is the reuse of the former Bradlee's shopping center as a Super Stop and Shop supermarket (currently being reviewed by the Clarkstown Planning Board). Due to scale and design, this center is suburban in character and auto-focused and uses are more uniform, rather than mixed. This section of the hamlet is distinct from the Central Gateway and South Main Street and serves a different purpose. Enhancements to the North Main Street Commerce area will relate directly to private investment to shopping centers such as the

Strip malls can be 'humanized' through architectural treatments, consistent façades, appropriate signage and lighting and pedestrian amenities such as walkways, benches, and awnings.

Precedents

Of course, there are many examples of communities that have re-invented themselves to become destinations and alternatives to standard, conventional strip-mall development which can be used as models or inspiration. Workshop participants consistently mentioned Ridgewood New Jersey as a successful “Main Street community” which has many of the elements desired in New City such as diverse and quality shops that line the sidewalk, creating an engaging “street wall,” ample landscaping and pedestrian amenities (benches, lights, appropriately-scaled signs, etc.), diverse and quality shops and on-street parking.

Ridgewood's Main Street is a pleasant experience for pedestrians.

Few visitors to Saratoga Springs today would recognize the city 30 years ago when the downtown was struggling and dominated by strip malls, an incoherent streetscape, unattractive façades, and was in a general state of disrepair. While New City's renewal will be decidedly different than Saratoga Springs, there is a lot to learn about the ability to transform an existing, built environment and advance a seemingly unachievable vision. Redevelopment in Saratoga Springs was and continues to be a partnership between the residential community, property owners, business operators and the city government where all groups work together towards a common goal of creating and enhancing one of the county's most cherished Main Street communities.

Before and after in Saratoga Springs. The strip mall and parking lot became a mixed-use building fronting Broadway.

New City Hamlet Center Vision Plan

former Bradlee's plaza. The town can partner in these improvements through promoting and requiring development projects that achieve the following:

- Minimize total impervious coverage through landscaping, open space, and innovative techniques such as pervious materials for overflow parking lot areas;
- Continue to require an enhanced, high quality aesthetic in landscaping, design, and signage. Ensure that even large buildings "fit in" and do not look like giant boxes; and
- Promote internal and external connectivity for pedestrians through sidewalks, trail connections to Demarest Kill Park, and crosswalks through parking areas.

This parking lot in Albany, NY includes a safe, quality pedestrian connection between parking areas and the office building.

Town of Clarkstown and County of Rockland

Phasing change: these simulations demonstrate how a consistent façade and streetscape improvements can contribute to a great pedestrian experience and improved South Main Street.

Northern Gateway

- Maintain small town atmosphere and connections to rural heritage.
- Unify resources and facilities through coordinated campus plan approach.
- Improve pedestrian connections internally and to surrounding neighborhoods.

Maintain connections to the agricultural and rural heritage in the Northern Gateway

North Main Street Commerce

- Provide a quality suburban commercial destination. Minimize “box-type” structures and ensure for quality facades, landscaping, buffers and pedestrian amenities such as including sidewalks and trails along the Demarest Kill.
- Minimize ‘hardscape’ and overall lot coverage through “low impact” development techniques such as pervious surfaces and landscaped parking lots.

North Main Street Civic Center

- Secondary destination center for the hamlet recognized through streetscape enhancements and improved pedestrian connectivity between civic resources and surrounding neighborhoods.

Central Gateway and New City Civic Center

- Signature gateway and focal point for the hamlet with redevelopment opportunities to establish a traditional Main Street and high quality pedestrian spaces.
- Improved links between county offices, courthouse, parks, town offices and other civic amenities strengthen this central destination. Link the Demarest Kill Park and creek to Dutch Garden, the courthouse law, Main Street, and Landau Park.
- Develop a system-wide master plan for public lands and government facilities to coordinate diverse needs of county and local government, the New City community, with the goals of the vision plan.

Celebrate the Central Gateway
A vision of the ‘signature gateway’ at the intersection of Congers, Main, and New Hempstead

South Main Street Commerce

- Anchor for the southern section of the hamlet provides shopping, services and dining for residents, visitors and workers.
- Short-term enhancements to façades, parking areas, landscaping, pedestrian environment.
- Long-term strategies allow for re-use and establishment of a traditional Main Street hamlet and destination including hamlet-scale structures and opportunities for mixed-uses.

Connect the County Campus and Dutch Garden to Main Street

Special Gateway Treatment: Consider special gateway treatments, such as roundabouts, special plantings and pavings, to celebrate and enhance access at the north and south ends of town along Main Street.

Civic, Cultural, and Recreation Destinations

Commerce and Mixed-Use Destinations

NEW CITY VISION PLAN

Enhance and Strengthen New City’s Civic, Cultural, Recreation, and Commercial Destinations

This page intentionally left blank

CHAPTER THREE

CIRCULATE NEW CITY

Enhance Multi-modal Travel in the Hamlet through a Great Streets Initiative

North and South Main Street is the hamlet's spine, stretching over two miles and is part of the transportation system that connects Clarkstown and the area residents to the town's municipal center, the county courthouse and government campus. Main Street and the other roads in the hamlet provide automobile connections between this diverse set of uses and allow residents, visitors and employees to move through New City. In addition to facilitating automobile travel, streets provide bicycle and pedestrian mobility. Streets also serve as conduits for utilities, enable access to structures such as businesses and homes and provide spaces for the community to experience public life.

However, Main Street and New City's circulation system is trending towards a single function – automobile mobility – and in many ways the street is failing in that purpose. While the road is clearly designed for automobile use, few motorists actually enjoy the experience of driving through the hamlet. Circulate New City is a comprehensive program designed to re-establish and enhance the diverse functions of the hamlet's roadway system. Circulate New City celebrates the street and public spaces and, combined with other sections of the vision plan, is an important part of the renewed traditional hamlet design and style.

North and South Main Street in New City.

ROADWAY AND STREETScape PROGRAM

The existing Main Street streetscape does not encourage pedestrian activity. Sidewalks, particularly along South Main Street, are narrow (some less than 4' wide) and in disrepair and there are no pedestrian amenities such as street trees, benches, or pedestrian-scaled lighting which enhance the walkability of downtown areas. Furthermore, throughout the study area there are excessive curb cuts for driveways, creating conflict points between vehicles and pedestrians and difficult turns across oncoming traffic.

A consistent, well-designed streetscape will be a major unifying component for Main Street. Improvements will create a pleasant, walkable environment for pedestrians whether walking for recreation, shopping, or on lunch break. The recommended streetscape improvements provide a consistent theme while recognizing the differences between each major section of the study area. The following principles form the basis for the streetscape and circulation recommendations:

- Maintain and enhance partnerships for improvement of the streetscape and utilize incentives to encourage participation in the project.
- Create a hamlet environment that supports and encourages an active and safe street life.
- Establish an appropriate image for the hamlet through consistent signage, streetscape, landscaping, and overall design and form for each section of the hamlet – South Main Street, the Central Gateway, and North Main Street.

Many sidewalks are in need of repair and modification. In this case, the walkway is interrupted by a utility pole.

Image: Sidewalks in Hudson, NY contribute to a quality experience for pedestrians.

New City Hamlet Center Vision Plan

Create and Maintain Partnerships

Accomplishing a traditional Main Street comprehensive streetscape for New City will require coordination and cooperation between the town, county, state and federal highway officials, local businesses, property owners and the community as a whole. Improvements to the streetscape will enhance the quality of Main Street and the value of properties in the vicinity. However, businesses will be impacted during construction periods and elements such as widened sidewalks and on-street parking may require shared access points and parking arrangements between adjacent properties.

Offer Incentives and a Comprehensive Package

To encourage community buy-in and partnership, a set of incentives should be offered as part of the overall streetscape package. For example, property owners in the district who limit curb cuts or establish cross-easement agreements for parking could be awarded a density bonus for future redevelopment or reduction in requirement such as parking or lot coverage to allow expansion or redevelopment of the property.

The town must partner with property owners and businesses to consolidate access points and improve the streetscape environment.

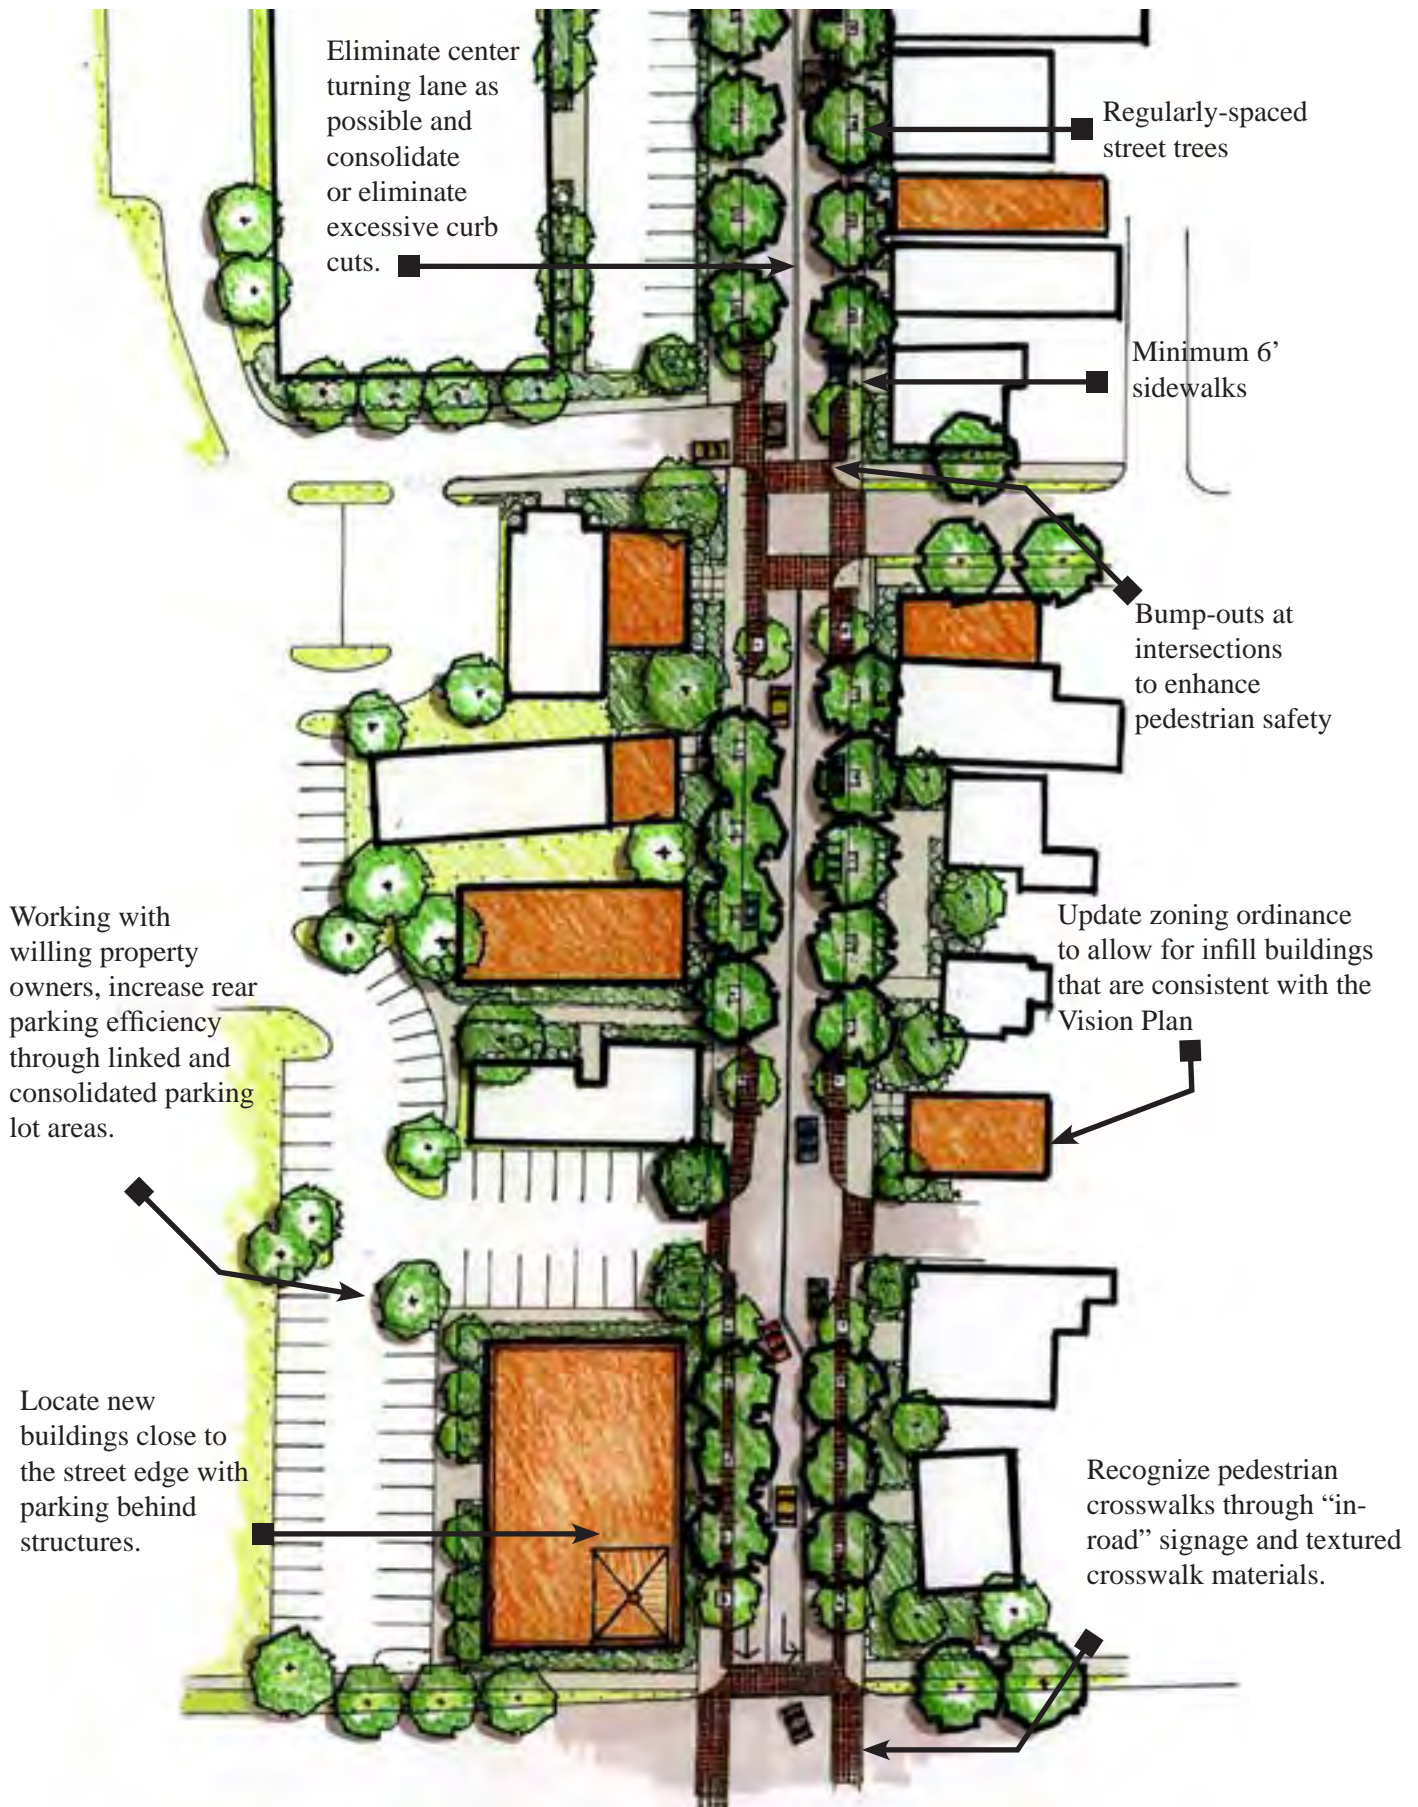

MAIN STREET STREETScape VERNACULAR

South Main Street

The Town of Clarkstown recognized the need to improve the pedestrian environment several years ago and is prepared to reconstruct the South Main Street section of the road and streetscape. Preliminary concept plans have been developed as part of this Vision Plan which should be refined and used as a guide during implementation and construction. Improvements are recommended to both sides of the South Main Street streetscape including:

- Providing sidewalks at least 6 feet wide with additional area to accommodate street trees, benches, trash receptacles, pedestrian-scaled lighting and other amenities;
- Reducing the number of curb cuts and driveway access points by creating shared driveways and shared parking lots;

Town of Clarkstown and County of Rockland

New City Hamlet Center Vision Plan

This proposed concept for the South Main Street streetscape shows opportunities for on-street parking, pedestrian-scaled lighting, and other pedestrian amenities.

- Eliminating the center turning lane where possible, and identifying additional areas for on-street parking;
- Establishing safe pedestrian crossings through bump outs at key intersections which will reduce the crossing distance for pedestrians;
- Using textured crosswalks or pavers and “in-street” signage to define intersections;
- Utilizing pedestrian-scaled lighting. For example, light fixtures 15 to 18 feet in height along South Main Street with taller fixtures and more grandiose proportions at key locations such as the Central Gateway and County Courthouse;
- Using a common landscaping theme of street trees and plants throughout South Main Street and completing the pedestrian realm through site furnishings such as benches, quality trash receptacles and bollards;
- Locating new buildings close to the street edge with parking behind; and
- Working to remove visual clutter of excess signage and overhead utilities.

Features such as textured crosswalks (above) and in-street signage (below) enhance safety for pedestrians

Utilities

Most of the existing utility poles along South Main Street will be relocated as part of the road widening and streetscape project. The town should use this opportunity to either bury or relocate these facilities behind structures during reconstruction of the roadway and sidewalks (scheduled for 2007 or 2008). The Town of Clarkstown is currently investigating the cost for burying utilities in West Nyack and this information will be essential to decision-making process and moving forward in New City.

Buried utilities in communities can be an essential component of streetscape improvements. Image: shows Mamaroneck Avenue (Mamaroneck, NY) where utilities were recently re-located underground.

Phasing of South Main Street Streetscape Improvements

Folding in each of the most challenging elements of the streetscape improvement project including curb cut consolidation, creating on-street parking and addressing overhead utility lines, would be best accomplished by dividing the work into phases. The first phase should include a smaller pilot project area - perhaps from New City - Congers Road south to Third Avenue where each of the design elements would be installed for the community to see. In this way, the design and construction process can be fine-tuned and appropriately adjusted for later phases and completion of the project.

Suggested "pilot project area" on South Main Street could be a showcase for streetscape improvements.

CELEBRATE THE CENTRAL GATEWAY'S IMPORTANCE AND IDENTITY

The Central Gateway area includes the Rockland County campus, the Clarkstown offices, and the surrounding parks, retail shops, restaurants and other businesses in the vicinity of New City - Congers Road, New Hempstead

New City Hamlet Center Vision Plan

Road and Main Street intersection. Streetscape design must take into consideration the level of traffic and the importance of New Hempstead Road as a cross-county connector route, the diversity of civic, commercial and park resources and the 'gateway element' of this area.

Central Gateway Streetscape Design Framework

The streetscape at the Main Street, New Hempstead Road and New City – Congers Road intersection should be consistent with the design of South Main Street (brick or stone paved crosswalks, pedestrian-scaled lighting, formal planters, street trees, benches, etc) while incorporating design elements that reflect the importance of the County seat and New City's Central Gateway.

For example, sidewalks along North Main Street in the Central Gateway should be between 10 to 15 feet wide with ample plantings, benches and pedestrian amenities. Lighting in this area, while being consistent with the South Main Street concept, should be of a 'signature' style and recognize the importance of the County Courthouse and gateway. Where possible, landscaped medians should be employed to further enhance the gateway and recognize the entrance into New City. Utility poles and wires in front of the county courthouse should be relocated underground or behind structures.

The Rockland County Courthouse is a major element of the Central Gateway.

Incorporate wide, well-landscaped sidewalks, such as these in Saratoga Springs, NY, to enhance the public realm.

Establish a 'signature' streetscape at the Central Gateway.

Town of Clarkstown and County of Rockland

North Main Street: Connectivity and Quality Suburban Environment

North Main Street is owned and maintained by Rockland County and was recently re-constructed and widened. There are sidewalks on both sides of the street south of the post office while the sidewalk on the west side continues north ending just after the intersection of North Main Street and Phillips Hill Road. The objectives for the North Main Street streetscape are to improve automobile and pedestrian safety and connectivity and improve the overall roadway aesthetics through landscaping and traffic calming by utilizing the following strategies:

- Unify and link the area with the rest of the hamlet through streetscape and landscaping techniques. For example, additional street trees and landscaping along the sidewalks would soften the hardscape of the road, provide for more pleasant pedestrian areas, and minimize the 'highway' characteristics of the road;
- Utilize landscaping as visual buffers from large-scale development east of the roadway. Informal planting beds and stone wall-style treatments could be employed to promote and enhance the overall suburban character of North Main Street;
- Employ landscaped medians to create a boulevard effect. This will enhance the overall aesthetics and improve safety as a traffic calming device. Initially, medians could be located where the center turning lane is 'cross-hatched' and unrelated to turning or access points. A more aggressive retrofitting scheme would

This proposed concept for the North Main Street streetscape shows opportunities for landscaped medians and pedestrian-scaled lighting.

New City Hamlet Center Vision Plan

incorporate consolidation of access points and elimination of sections of the turning lane and replacement with a boulevard-style median; and

- Initiate an access management program. In general, throughout North Main Street, the number and extent of curb cuts and access points to businesses is a hazard for automobiles and pedestrians and adversely impacts the quality of the streetscape and the overall aesthetics. A cooperative access management effort between the town, county and property owners in this area should be initiated to encourage fewer access points, shared driveways and parking, and general coordination between adjacent lots.

North Main Street Civic – Hamlet-style Streetscape

The portion of North Main Street near the library and post office referred to as North Main Civic is highlighted as a potential secondary ‘hamlet destination.’ Here, the streetscape design could be designed to recognize the importance of this mixed-use/civic area through elements such as pedestrian-scaled lighting, brick/concrete crosswalks, formal street trees and planters, benches and other pedestrian amenities (similar to the proposed South Main Street streetscape).

Hamlet-style streetscape consistent with South Main Street is proposed for this secondary destination area along North Main Street.

Zukor Road/Kennedy Dells Civic and Recreation – Rural Streetscape

The northern edge of the study area transitions to Zukor Road and the community facilities in that area (parks, community center, historical society). The character of the roadway retains a rural setting and is distinct from the rest of Main Street (North and South). Only minimal improvements to the roadway and streetscape should be employed here to improve connectivity and pedestrian safety and access to these facilities.

- The unmaintained multi-use path present along portions of Zukor Road should be reconstructed and extended south to the

Town of Clarkstown and County of Rockland

current sidewalk terminus at Phillips Hill Road. Informal landscaping should be incorporated into the path to enhance and maintain the 'rural characteristics' of Zukor Road.

- Streetscape elements such as signs, benches, lighting, multi-use paths and crosswalks should be consistent and serve to unify this area as a civic destination for the community.

Existing conditions on Zukor Road.

This proposed concept for the Zukor Road area includes recommendations for multi-use trails and a natural, informal landscaping treatment.

ROADWAYS AND CONNECTIVITY

Main Street is an important north to south connector for the community. The road ties together community parks, residential areas, shopping districts, and municipal facilities. The ideas presented here will redefine South Main Street as a pleasant, walkable street where the pedestrian areas are as important as travel lanes for automobiles. However, the use of more on-street parking as well as the elimination of curb cuts and the center turning lane where possible will likely impact vehicular traffic. The following strategies should be considered for overall roadway connectivity and circulation.

New City Hamlet Center Vision Plan

Increase use of parallel roads

Parallel roads can help alleviate thru traffic along South Main Street and should be incorporated into the overall enhancement program. Design keys such as signage and way-finding elements can be used to divert some traffic to Maple Avenue and Route 304. Furthermore, if property owners are interested in redevelopment opportunities, Maple Avenue could be extended south to provide direct access into the Clarkstown Mall property. This extension would increase connectivity in the hamlet and alternatives for travel within the downtown core.

Maple Avenue runs parallel to South Main Street, providing direct access to Town Hall, and includes new sidewalks and on-street parking.

Initiate an Access Management Program

Throughout New City, a strong approach to access management is needed. This should start with a policy to reduce the number of existing curb cuts and limit new gaps in the streetscape through shared access drives and shared parking lots. In the future, zoning and site plan regulations can be modified to limit the number of access points with the intent of improving automobile and pedestrian safety throughout the corridor.

Through the re-development process, the town and county can provide incentives to property owners who participate in the access management program with the overall objective promoting cross-lot connectivity with primary access points located at controlled intersections.

Address Key Intersections

During the streetscape project, the town can also improve certain troublesome intersections. There are preliminary plans to modify the New Hempstead/ New City – Congers Roads, Schriever Lane, and Collyer Avenue intersections with South Main Street. These three intersections should be considered during the streetscape project and modified to improve clarity, safety for automobiles and pedestrians, and traffic flow.

Town of Clarkstown and County of Rockland

- At Schriever Lane, there are opportunities to work with property owners to coordinate enhancement of the intersection with the Clarkstown Mall entrance and consolidated access.
- Collyer Avenue is confusing for motorists and should be modified.
- The intersection of South Main Street and Route 304 (the merge) is an excellent gateway opportunity. Working with the New York State Department of Transportation, this intersection could be redesigned as a roundabout to acknowledge the entrance to New City and improve safety.

South Main Street and Collyer Avenue with proposed re-alignment (top sketch).

New City Hamlet Center Vision Plan

New Hempstead Road, Main Street and New City – Congers Road Intersection

The primary Central Gateway intersection consists of a “jog” in the road pattern that increases turns and slows traffic in the area. A traffic control timing and phasing plan was developed by traffic consultants Frederick P. Clark which could be implemented immediately and should improve flow of traffic at this intersection without expansion of the roadway or major infrastructure modifications.

In addition to investigating traffic flow, a number of alignment alternatives were developed (these are included in the appendix). Rockland County has planned improvements to the intersection, including additional turning lanes and is evaluating a slight widening of New City–Congers Road near Kevin Landau Park to accommodate a second receiving lane (pedestrians would use the walkway within the park). This would allow phasing for a double left turn from Main Street, which would improve the traffic flows. This concept will be further evaluated through collaboration between Town and County to determine opportunities that preserve, maintain and improve the existing sidewalk while meeting long-term traffic needs from both a vehicular and pedestrian perspective. Alternatives discussed during the Vision Plan process included a “town green” arrangement with a one-way couplet, a roundabout at the existing entrance to the shopping plaza, and a relocation of New Hempstead Road to the north behind the Bank of New York.

As the main access point to the county campus and route through New City, the New Hempstead Road, Main Street, and New City – Congers Road intersection presents challenges for automobiles and pedestrians.

The planned intersection improvements should be reviewed to take into account opportunities to increase pedestrian safety and connectivity across New Hempstead Road, Main Street, and New City – Congers Road. Recognizing the importance of this road for thru traffic, access to the Palisades Parkway, and access to the county campus, the town and county should continue working together to finalize a plan for this primary central gateway intersection. For example, a dedicated pedestrian crossing phase which excludes autos from turning on red or otherwise interfering with pedestrian traffic could be implemented to improve safety.

Town of Clarkstown and County of Rockland

Include the New York State Department of Transportation in Future Planning

Route 304 provides access to South and North Main Streets at several points through New City. However, additional access points at major destination areas are recommended to alleviate truck traffic on Main Street and increase overall connectivity. Specific opportunities include the Clarkstown Mall area and DeCicco's plaza and the Shop Rite on North Main Street. As a New York State highway, any changes or modifications to Route 304 will require partnership and cooperation with the New York State Department of Transportation (DOT). Discussions with the DOT Region 8 office in Poughkeepsie are ongoing as part of the Vision Plan process and will continue through implementation.

This sea of parking is inconsistent with the Vision Plan and a walkable hamlet.

PARKING

Inadequate parking has been consistently mentioned at community workshops as a major concern and an issue to be addressed. Currently parking for each use is located directly on-site and there are no municipal parking lots except for lots serving the town hall and the county campus. However, it is important to recognize that the policy of requiring every business in a downtown or hamlet environment to provide on-site parking results in a number of unintended but adverse consequences to walkability, aesthetics, and economic development.

Requiring each business to provide on-site parking results in a high ratio of surface parking (asphalt) to buildings, landscaping and other uses; reduces development potential and opportunities for redevelopment and expansion; and dramatically reduces the ability to create a walkable streetscape. People will not generally walk from one end of a parking lot to another through the “sea of parking” which degrades the quality of the pedestrian experience. However, they will walk long distances when the environment is set up for pedestrians such as malls or traditional Main Street downtowns.

A quick analysis of the central and south hamlet areas shows that parking lots comprise approximately 3,000,000 square feet (almost 70 acres) with 1,200,000 square feet (less than 30 acres) of land dedicated to buildings. That's two and

New City Hamlet Center Vision Plan

Town of Clarkstown and County of Rockland

a half times as much space for parking than buildings! This ratio is similar to what is found at regional shopping malls, not downtown districts. With this in mind, it is less likely that the lack of parking spaces is the problem, but rather the allocation and form of lots, connectivity between parking lots and buildings, and the overall arrangement of parking facilities for each business.

Overall Approach to Parking Management

An overall parking plan for the New City Hamlet Center should be developed to identify ways to manage the amount of parking needed for businesses, government offices, shops and residences. Important elements to consider include shared parking opportunities, demand management, on-street parking, impacts of parking regulations and standards, mitigation of spillover outside of the hamlet, and facility needs. Initial recommendations are included below:

- Consolidate existing parking lots where owners are interested. In general, the town, county, and business owners and operators must continue to work as partners to take advantage of and better-manage existing parking resources. Consolidation of segmented lots and shared parking arrangements would help to better utilize existing parking areas. The town could offer incentives for shared parking arrangements where property owners are willing and interested;
- Prioritize parking for customers. Create priority parking areas for clients and customers near businesses and long-term parking for employees in less critical areas of the downtown;
- Initiate a demand management program for all major employers in the hamlet starting with the town and county government. Currently, every driver in New City expects and gets free parking.

Shared access and consolidated parking lots, like these behind structures in Ridgewood, NJ, increase parking efficiency for downtown businesses while minimizing impact on the Main Street streetscape.

New City Hamlet Center Vision Plan

There are no incentives not to drive and park at work or to minimize automobile use other than frustration with traffic and finding a spot. Demand management programs reward those who elect to rideshare, walk, bicycle or otherwise arrive at a workplace without the use of an automobile. Some of the most innovative programs reward the “non-parkers” with a \$5 bonus for not driving to work. Demand management programs have proven to reduce the strain on existing parking facilities and are several times more cost effective than construction of new lots or structures;

- Update parking regulations and development standards to reflect the Vision Plan. This would include a reduction in parking standards or the use of parking waivers where projects meet the objectives of the Vision Plan. The Planning Board could also offer incentives for interconnected parking lots or shared parking between commercial properties;
- Establish a parking authority to collect payment-in-lieu-of on site parking which could be allocated to municipal parking facilities and maintenance;
- Identify areas for municipal structures. Because the per space cost for parking in a garage can be much more expensive than a typical surface space (as much as 20 or 30 times as expensive), structured parking facilities often do not make financial sense and user fees are rarely (if ever) high enough to cover costs. Once demand management and shared parking arrangements are maximized, the community should re-evaluate the need, desirability and appropriate locations of structured parking facilities;
- If structured parking is needed, utilize slope conditions for simple ‘decked’ approach to parking structures. These conditions are found at the town hall property, police department facility, and

Officials in Saratoga Springs, NY took advantage of the pre-existing topography on this site to construct a simple decked parking structure.

Town of Clarkstown and County of Rockland

areas of the county campus and could provide a less expensive way to accommodate more automobiles in the hamlet;

- Coordinate parking structures as part of major redevelopment projects at larger parcels. Areas of the hamlet where significant redevelopment could occur include the Central Gateway and the Clarkstown Mall (DeCicco's plaza, etc.); and
- A concept for one-way streets to allow for angled parking along Maple Avenue and South Main Street was suggested and considered as part of the Vision Plan process. Generally, one-way streets are utilized to increase traffic flow, enhance safety by eliminating oncoming traffic at intersections and turns, and allow for alternative parking arrangements such as on-street and angled parking. However, there are also a number of adverse impacts related to these types of circulation systems including the loss of overall connectivity, limits to business visibility and specifically to New City, the one-way system would only be viable for a maximum of three or four blocks. Further, angled parking on both sides of South Main Street, under a one-way street pattern would utilize the entire right of way resulting in no sidewalks and only a single travel lane. Hence, one-way circulation is not recommended for South Main Street. As an alternative, the town should consider angled parking on one side of Maple Avenue under a two-way road pattern. This could serve as a pilot program for the community's acceptance of angled parking and the benefits to businesses of more on-street parking.

Zukor Road and Northern Gateway

- Improve pedestrian connectivity between neighborhoods and civic/park resources and internally between community facilities.
- Consider new gateway amenities such as a roundabout at Zukor Road intersection with a central feature such as a monument or welcome sign.

Northern Gateway Streetscape Concept

North Main Civic Streetscape

- Utilize hamlet-style streetscape elements to establish a traditional Main Street form, create visual recognition of arrival in this destination area, and enhance pedestrian connections between civic resources through textured crosswalks (e.g., brick/stone) and other amenities such as bicycle racks and benches.

North Main Streetscape Concept

Where road widths allow, medians would have trees; in narrow areas medians would be landscaped.

South Main Streetscape

- Improve the pedestrian environment through new sidewalks, street trees, formal planters, pedestrian scaled lighting, and pedestrian amenities such as benches, trash receptacles, bicycle racks and brick or stone crosswalks.
- Initiate an access management program to consolidate and limit curb cuts, encourage shared access and parking areas, remove the center turning lane as possible and allow for on-street parking where appropriate.
- Initiate a pilot program to bury utility wires in one section of South Main Street and prepare the new streetscape for future alternatives including relocation behind structures, in parking areas, or underground.

South Main Streetscape Concept

Streetscape Character Areas:

Generally Rural Qualities

Maintain natural vegetation, utilize multi-use paths & trails, provide plantings in informal beds and reflect natural conditions as possible.

Generally Suburban Characteristics

Streetscape elements include sidewalks, landscaped roadways through informal-style plantings, boulevard-style medians and buffers from large-scale commercial uses and parking areas.

Traditional Hamlet Streetscape

Elements include sidewalks, plantings in formal boxes or hanging baskets, street trees, pedestrian-scaled lighting, benches, brick or stone pavers for crosswalks and other pedestrian amenities.

North Main Streetscape

- Utilize planted medians within the North Main Street roadway to soften the hardscape and enhance the road aesthetic.
- Consolidate curb cuts and promote single-access points, shared access, linked parking and other access management techniques to the greatest extent feasible.

Demarest Kill Blueway

- Develop Demarest Kill trail from county campus to North Main Secondary Civic Center at Squadron Blvd.
- Promote “day-lighting” of the creek at the Shop Rite Plaza as part of any future redevelopment.

Central Gateway Streetscape

- Create a high quality, ‘signature gateway’ into New City that recognizes the importance and identity of this area through streetscape design and prominent pedestrian spaces.

South Main Streetscape Detail

South Main Gateway Streetscape

- Recognize New City Hamlet’s southern gateway through consistent signage and enhanced landscaping.
- Consider new alignments for roadway including a roundabout at Route 304 intersection with a central feature such as a monument or welcome sign.

NEW CITY VISION PLAN
Circulate New City

Enhance multi-modal travel through and within the hamlet

This page intentionally left blank

CHAPTER FOUR

FORM NEW CITY

Ensure that future Development is Consistent with the Vision Plan

The New City Vision Plan is a consensus-building process. Through this effort, a number of workshops, meetings, presentations, and discussions have been held to identify common goals and a concept for the future of the New City Hamlet Center. Implementation of this concept will require follow-through by civic leaders and municipal staff and officials as well as continued participation by residents and business people. Form New City is the foundation for long-term enhancement of the hamlet. These strategies relate to municipal policies such as land use regulations and parking standards, new institutions and organizations and opportunities for public-private partnerships for re-development and re-use.

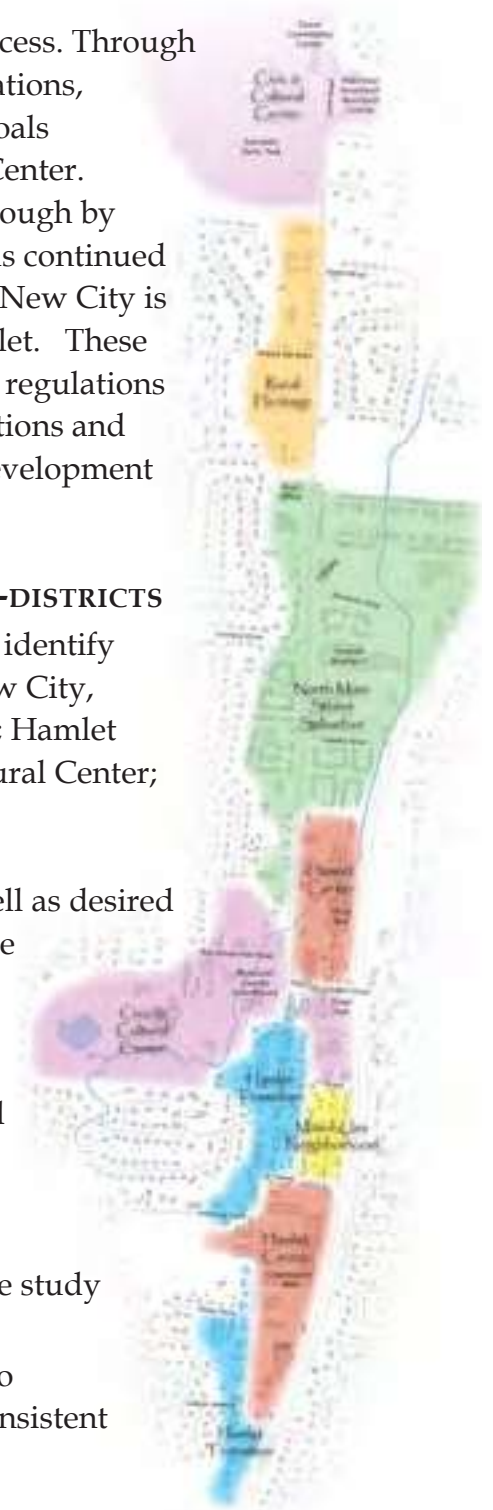

CHARACTER AREAS APPROACH – LAND USE SUB-DISTRICTS

To help conceptualize distinct areas of the hamlet and identify specific land use strategies for sub-districts within New City, six “character areas” were established: Hamlet Center; Hamlet Transition; Mixed-Use Neighborhood; Civic and Cultural Center; North Main Street Suburban; and Rural Heritage.

These categories relate to the existing conditions as well as desired future vision for each area and can help to guide future decision-making, particularly related to zoning and land use planning. Please note that the boundaries and proposed standards described for each character area should serve only as a conceptual framework and guide for implementation of the plan.

While each area is distinct, there are a number of recommendations that cross through much or all of the study area, including:

- The initiation of an incentive zoning program to encourage design and redevelopment that is consistent with the Vision Plan;

Town of Clarkstown and County of Rockland

- Reducing parking requirements and standards. As the town's parking management program moves forward (shared parking, etc.), existing standards can be reduced. In the meantime, allow the Planning Board to waive or minimize requirements where projects are consistent with the Vision Plan;
- Reviewing all projects in the Hamlet Center for consistency with the Vision Plan. Graphic design guidelines could be developed by the town to further expand on architectural and site layout concepts;
- Utilizing the sign ordinance recently adopted by the Clarkstown Town Board. Additional standards specifically for the hamlet character areas may be needed; and
- Incentivizing investment in projects that significantly advance the Vision Plan. For these projects, initiate a "fast-track" review process and provide the Planning Board with authority to waive or minimize certain standards such as parking requirements and setbacks through incentive zoning. These procedures should be designed to provide development flexibility while eliminating the need for additional board(s) review (e.g., Zoning Board of Appeals).

NEW CITY HAMLET CHARACTER AREAS

Hamlet Center: This character area is located in two portions of the hamlet and includes many significant opportunities to re-use, change and create a traditional Main Street.

The northern hamlet center character area focuses on the existing Shop Rite plaza at the intersection of New City – Congers Road, New Hempstead Road, and Main Street. These

stores and parking lots are the first impression visitors experience when entering New City from the east or west. The southern hamlet center character area is focused on the Clarkstown Mall and vicinity along South Main Street.

Sketch of Hamlet Center concept.

New City Hamlet Center Vision Plan

The Hamlet Center areas are unique in that they include relatively large parcels of land where one or two re-development projects could dramatically change the character and form of New City. These areas are highly visible properties with generally older strip mall structures.

The existing zoning for these areas (Community Shopping) is not consistent with the vision plan and should be updated. New zoning districts should be developed refining the concept of the hamlet center including the specific district boundaries, area and bulk standards, uses, signage and incentives.

Recommendations for the Hamlet Center district include:

- Front yard setbacks: maximum of 30' with no minimums except to allow for large sidewalks and cafe-type settings. Overall, buildings should be located closer to the street with parking prohibited or highly restricted between structures and the public right-of-way;
- Height: up to 35' with allowances for taller features such as cupolas and pitched roofs through incentives;
- Uses: Mix of commerce, retail, public spaces and high quality living (with incentives for housing dedicated to emergency service personnel). All ground floors facing the public street should be commercial space; and
- Scale and intensity: highest density traditional Main Street character area. Floor area ratio of up to 2.0

Parking should be secondary to the streetscape and located behind structures.

Hamlet Transition: This character area includes parcels along the west side of South Main Street in close proximity to existing residential neighborhoods. Similar to the Hamlet Center areas, there are a number of opportunities for re-use and establishment of the traditional hamlet concept. However, lots on the west side of Main Street are generally shallower and smaller than those on the east side and consist of fewer strip plazas under single ownership. Further, this

Town of Clarkstown and County of Rockland

character area abuts large single-family neighborhoods where concerns about expansion of commercial uses and activities close to homes have been expressed. Re-development of these sites must be sensitive to the surroundings and potential adverse impacts to residential areas.

Existing zoning in these areas should be updated to promote a traditional hamlet style in keeping with the vision plan. Recommendations include:

- Front yard setbacks: maximum of 30' with no minimums except to allow for large sidewalks and cafe-type settings;
- Parking lots prohibited or highly restricted between structures and the public right-of-way;
- Height: up to 35';
- Uses: Mixed (commerce, retail and high quality residential with quality public spaces). All ground floors facing the public street should be commercial space; and
- Scale and intensity: Medium density traditional Main Street character area. Minimize impacts to adjacent neighborhoods. Floor area ratio of up to 1.5

The existing scale of the mixed-use district should be maintained.

Mixed-use Neighborhood: This character area is located along Maple Ave and Park Ave just east of South Main Street and includes many recently renovated structures. The neighborhood is a mix of small scale professional offices, service operations and residences. Existing zoning should be updated and a new district established to maintain the current scale of this character area. Preliminary suggestions for the district include:

- Front yard setbacks: recognize existing setbacks (generally 5' to 10');
- Parking lots prohibited or highly restricted between structures and the public right-of-way;
- Height: up to 35';
- Uses: Mixed (commerce, retail and residential); and
- Scale and intensity: recognize existing scale. Floor area ratio of up to 1.0

New City Hamlet Center Vision Plan

Civic and Cultural: There are two civic and cultural character areas in the hamlet. The first is located at the Northern Gateway and includes Kennedy Dells County Park, Street Community Center, and the Historical Society of Rockland County. The second area is a part of the Central Gateway along New Hempstead Road, New City – Congers Road and Maple Avenue. This character area includes the County Campus, Rockland County Courthouse, Clarkstown Town Hall, the Fire Station and Police Department. Current zoning in these areas is a mix of residential, office and community shopping.

To recognize these areas and ensure that public projects contribute to the overall vision of the hamlet, the town should establish a civic and cultural zoning district. While most of this land is in public ownership, the zoning categorization would coordinate existing land use with the town's development regulatory system.

Town of Clarkstown's Police and Courts building (above) and Town Hall (park shown below) are parts of the Civic and Cultural character area.

Rural Heritage: This area serves as a transition to the Northern Gateway section of the hamlet. The area is generally built-out but includes the only farm in the study area – the Diamond Derby farm. There are no major recommendations for modifications to zoning district boundaries or uses in this area. However, landscaping standards should be enhanced to require maintenance of natural vegetation to the greatest extent possible and to encourage the use of informal planting styles.

North Main Street Suburban: A diverse mix of shopping, office, civic and residential uses including the former Bradlee's shopping center, the library, post office and a senior housing center are included in this area. While there are

Town of Clarkstown and County of Rockland

numerous opportunities for increased connectivity for pedestrians, this character area is predominately auto-oriented.

- Consider a hamlet-style zoning district for the civic and business area around the post office, library and senior housing center. Otherwise, general boundaries for zoning districts are appropriate.
- Increase requirements for pervious coverage for all projects in these areas and improve connectivity through trails and sidewalks through site planning process.
- Utilize landscaping in parking lots through medians and pedestrian walkways, to minimize large asphalt areas and minimize stormwater runoff through low impact development techniques designed to address stormwater management on the site (e.g., bio-retention swales).

ORGANIZATIONAL AND ADMINISTRATIVE CONCEPTS

Enhancement strategies for New City will rely on diverse participation and leadership from within the community. Local stakeholders such as the Clarkstown Garden Club, the Downtown New City Corporation and the New City Chamber of Commerce have already mobilized efforts to increase awareness of New City and improve and beautify the hamlet. Rockland County is poised to upgrade New Hempstead Road as well as provide improved public access to the county campus' wonderful park and historic resources. The Town of Clarkstown is also in position to re-construct South Main Street and improve the streetscape. These groups, organizations and elected officials make up the social capital needed for community enhancement. By continuing to work together the impact of these efforts will be multiplied and the community will realize that real change is happening in New City.

The town should continue to engage civic and community groups in planning and outreach programs. This planning process has provided civic groups with a platform for pro-active community involvement and a forum for communication and partnership. There is significant interest in continued participation in planning and community renewal programs. Already, the

Continue to involve the community in dialogue during plan implementation. Above - a Vision Plan workshop break-out group at the Street Community Center

New City Hamlet Center Vision Plan

Downtown New City Corporation has established a sub-committee to monitor and advance implementation of the Vision Plan. The partnership established between the county, town and the other stakeholder groups represents a special relationship and a success unto itself. The town and county should designate a formal plan implementation group to coordinate the community's social capital with enhancement and implementation efforts.

ADDRESS MAINTENANCE AND ENFORCEMENT ISSUES

Workshop and meeting participants continually expressed a desire to see a clean, well-maintained Main Street and downtown area. Certain issues, such as reconstructing sidewalks, have been purposefully held back to allow the vision plan process to complete in order to create a better design concept. However, as implementation moves forward a renewed effort will be needed to ensure for long-term maintenance of the hamlet.

- Enforce and monitor compliance with zoning regulations. The town may need to allocate additional staff time to monitor compliance with standards for housing, signage, site maintenance, landscaping and other performance standards detailed in site plan approval.
- Allocate resources to maintain streetscape. The new streetscape will include a number of community amenities that will require maintenance and upkeep such as planters, benches, trash receptacles, bike racks, and similar features. A process should be formalized for monitoring the condition of these features and budget set aside to fix or replace broken items.

Enhance capacity to monitor compliance with zoning regulations for elements such as use, signage, service, storage and utility areas and upkeep of required landscaping.

Town of Clarkstown and County of Rockland

- Consider establishment of a Business Improvement District for South Main Street for the purposes of maintenance, business promotion, landscaping, branding of the hamlet, etc. The Business Improvement District would be a voluntarily action and created by property owners, through a local law authorized by the town board and funded by a special tax assessment on commercial properties in the district.

ESTABLISH THE ADMINISTRATIVE MECHANISMS TO ENCOURAGE AND ENABLE CHANGE

As described in the Vision Plan, there are a number of challenges and hurdles to success. These challenges include fragmented ownership, incompatible land uses, limited or uncoordinated parking, maintenance of infrastructure such as sidewalks, code enforcement and traffic congestion (to name a few). The Business Improvement District could be a key element in long-term maintenance and improvement of the hamlet. However, to initiate change, an entity or mechanism will likely be needed to help coordinate renewal projects. The following organizations should be considered for plan implementation and enhancement of New City:

- A re-development authority or local development corporation to undertake economic development activities and to work with developers and property owners on renewal projects;
- A parking authority to establish and maintain municipal parking lots and receive funds in lieu of parking from development projects; and
- Business Improvement District (mentioned above).

Rural Heritage

- Transition area to Northern Gateway.
- Maintain connections to rural and agricultural heritage.
- Protect natural vegetation to greatest extent possible.
- Work with farm operator to maintain active agriculture within the hamlet.

North Main Street Suburban

- Maintain generally suburban use, design and development pattern.
- Require increased landscaping for parking lots and buffer areas and pervious surfaces to limit stormwater runoff.

Civic and Cultural Center

- Focus for civic, recreation and community events.
- Formalize park areas and establish community service zoning classification to recognize civic and cultural uses and scale.
- Enhance façades and signage standards.

Hamlet Center

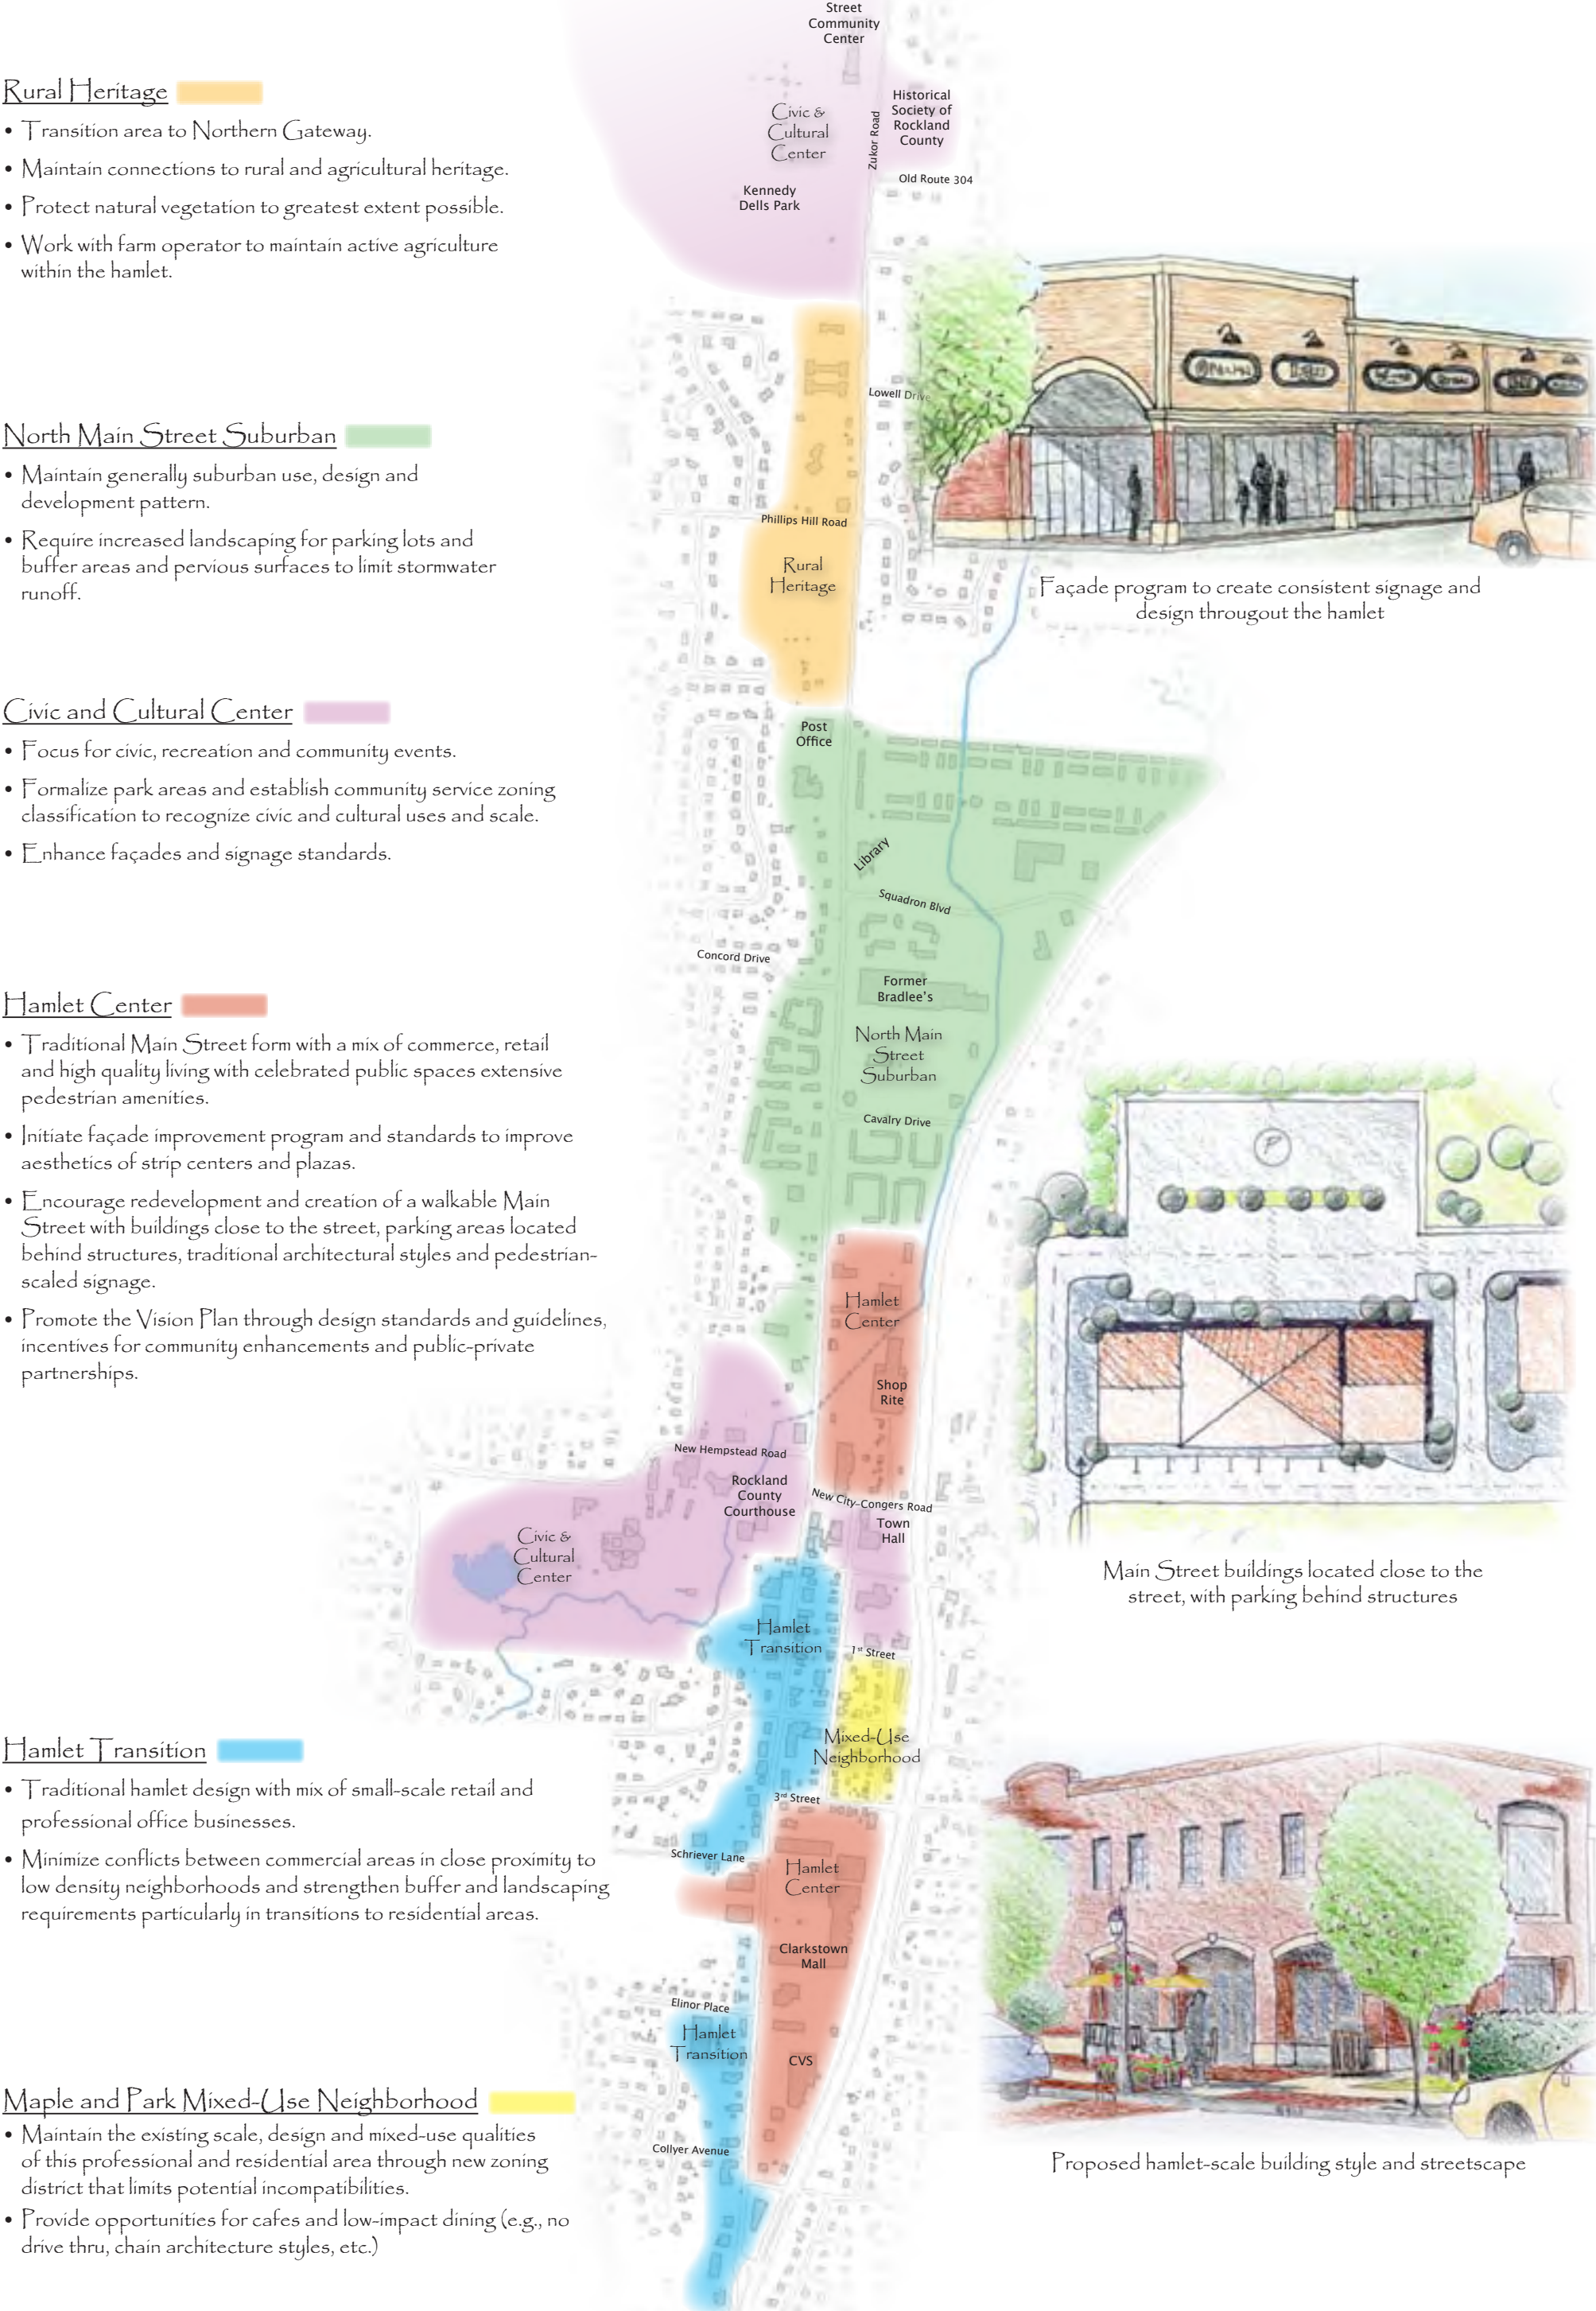

- Traditional Main Street form with a mix of commerce, retail and high quality living with celebrated public spaces extensive pedestrian amenities.
- Initiate façade improvement program and standards to improve aesthetics of strip centers and plazas.
- Encourage redevelopment and creation of a walkable Main Street with buildings close to the street, parking areas located behind structures, traditional architectural styles and pedestrian-scaled signage.
- Promote the Vision Plan through design standards and guidelines, incentives for community enhancements and public-private partnerships.

Hamlet Transition

- Traditional hamlet design with mix of small-scale retail and professional office businesses.
- Minimize conflicts between commercial areas in close proximity to low density neighborhoods and strengthen buffer and landscaping requirements particularly in transitions to residential areas.

Maple and Park Mixed-Use Neighborhood

- Maintain the existing scale, design and mixed-use qualities of this professional and residential area through new zoning district that limits potential incompatibilities.
- Provide opportunities for cafes and low-impact dining (e.g., no drive thru, chain architecture styles, etc.)

Façade program to create consistent signage and design throughout the hamlet

Main Street buildings located close to the street, with parking behind structures

CHAPTER FIVE

CONCLUSION AND IMPLEMENTATION

Realize the Vision Plan through Continuing Partnerships, Dialogue and Collaboration

Enhancement of New City has been an objective and goal in Clarkstown and Rockland County as far back as the 1960s. To a certain extent, this document represents not only the work over the past several months, but the collective insights of residents, civic groups, community leaders and business people gained over the previous years and decades. More important than the physical document, graphics, maps and reports, the partnerships created for the visioning process have flourished and are the true success story of the process. It is hoped that the vision plan's enduring legacy is not only the improvement of New City, but the formation of long-lasting partnerships, cooperation and communication.

A COLLECTIVE VISION WITH INDIVIDUAL RESPONSIBILITIES

The Vision Plan for the New City Hamlet Center is a guide for the whole community and implementation falls squarely on those who participated in its development. Each group represented on the committee and each individual who participated in a workshop has a role to play including New City residents, business people, town and county staff and elected officials. While the plan represents a collective vision, much of its implementation will be based on individual actions:

- Property owners working with the town and neighbors to provide shared access and eliminate extra curb cuts to enhance the streetscape and make the hamlet safer for pedestrians;

Working together makes the seemingly insurmountable “doable.” Above - Supervisor Gromack addresses participants at a Vision Plan workshop

Town of Clarkstown and County of Rockland

- Business operators maintaining landscaped areas with healthy trees and shrubs and minimizing visual clutter such as excessive signage;
- Developers working pro-actively with neighbors in the project review and site plan process to understand and mitigate concerns prior to finalizing designs; and
- Neighbors participating as partners in the process and support and advocating for the realization of the Vision Plan and enhancement of New City.

MUNICIPAL ROLE

Of course, the Town of Clarkstown is in a position to directly implement the plan through investments in the built landscape (e.g., the streets and streetscape) as well as policy-making such as zoning and development regulations. In addition to these specific efforts, the town should take a leadership role in coordination of the various pieces of the plan in order to limit redundancies, conflicts and frustration. Highlights of the municipal role in implementation of the Vision Plan include:

Short Term:

- Establishment of an implementation task force;
- Encouragement and facilitation of a South Main Street Business Improvement District;
- Modification of zoning regulations along South Main Street;
- Installation of physical improvements including South Main Street streetscape and roadway infrastructure, community park improvements (e.g., Landau Park);
- Marketing of events, promotions and maintenance (e.g., street flower program).

Longer Term:

- Coordinate with County policy and administrative changes such as parking demand management strategies, creation of municipal parking;
- Implementation of economic development efforts including marketing and promotion and establishment of authorities (e.g., Local Development Corp.);
- Establishment of a local development corporation or similar entity.

COUNTY ROLE

Rockland County manages and maintains the most important and visible property in the hamlet – the historic County Courthouse, Demarest Kill Park and County Offices. The county campus is an integral part of the community and integrated into

New City Hamlet Center Vision Plan

the hamlet. Unlike a typical suburban business park or office campus, the county campus is almost a seamless part of the neighborhood and downtown. Its location in the middle of the hamlet encourages walking and strengthens the Central Gateway. However, this location also presents challenges in transportation, parking,, expansion and growth needs. Through a continued campus planning process, the county will have a long-range plan for future structures, growth areas, park and connectivity amenities and a continuing dialogue with neighbors including the town government, residents and businesses in the vicinity.

Major roadways through the hamlet including North Main Street, New Hempstead Road, and New City – Congers Road are owned and maintained by Rockland County. It is important that the dialogue between the county, town and community continue to ensure that modifications to the roadway infrastructure are coordinated with the Vision Plan and the overall concept for the hamlet. In particular, the streetscape elements along the county campus and in front of the courthouse should be consistent with South Main Street designs and intersection alternatives considered for the Main Street and New City – Congers Road intersection that minimize adverse impacts to pedestrian connectivity. Recommended preliminary steps for the county include:

Short Term:

- Continue with New City Vision Plan implementation, participate in the streetscape program with the town;
- Include context sensitive design of New Hempstead Road improvements in the Central Gateway;
- Establish an enhanced pedestrian link between the County Campuses on New Hempstead Road, connecting the north and south sides in a safe manner with improved crossings and signaling;
- Establish enhanced links between the County Campus and Dutch Garden and Main Street;
- Enhance community activities and events like a Rockland County Fair.

Longer Term:

- Create a pedestrian mall with a fountain in front of the County Campus;
- Participate with Town to create parking management strategies and facilities capital plan;
- Investigate the option of an improved connection between the County Campuses with a pedestrian pathway which runs underneath New Hempstead Road;
- Continue campus planning and develop a formal campus master plan.

***Congers Lake Road Ad Hoc Committee Recommendations –
June 20, 2007***

Congers Lake Road Ad Hoc Committee
Gerard P. O'Rourke, 52 Trevor Lake Road, Congers NY 10920

June 20, 2007

Shirley J. Thormann
Chairwoman and
Members
Clarkstown Planning Board
10 Maple Ave
New City, NY 10956

Dear Mrs. Thormann & Members:

The Lake Road Ad Hoc Committee herewith respectfully submits our completed proposal for updating the Congers Overlay District regulations.

As interested Congers residents, we believe this assignment has afforded Congers with a forum for local input and we trust this will be helpful to the Board in updating the Overlay Plan. Thank you for providing us this opportunity.

In addition to submitting our recommended update for the town code, we wish to add the following comments we feel should also become an integral component of the update.

Background:

The committee utilized an exact copy of the current overlay obtained from the Town Code. We have lined out components we feel should be deleted, and inserted all additions and recommended changes in red on the enclosed copy.

Following the September 14, 2005 resolution of the Planning Board, this submittal covers only those areas with frontage on Lake Road from Kings Highway to the west side of Hemenway.

Areas not specifically located on Lake Road or without frontage on Lake Road were deleted from boundaries noted in the current code in order to comply with the area spelled out in this resolution.

Process followed:

Since beginning this review, our committee has met regularly to review all aspects of the regulations as currently existing.

Each Lake Road property owner was identified, invited, and many attended, a meeting arranged for property owners, to express their opinions and recommendations for their property, and to participate in an overall discussion of the future of the Lake Road area.

We met with Clarkstown Planning chairperson Shirley Thormann to review, in general terms, our assignment, current regulations, and to request copies of needed documents, which were promptly sent to us by the Planning Board.

Certain definitions were verified with the Clarkstown Building Dept.

The March 2007 quarterly meeting of the Congers Civic Assn was devoted specifically to the Overlay Plan and for the public to attend and voice their opinions. Lake Road property owners were also sent a letter notification of this meeting and invited to attend.

We would like to express our appreciation to the Planning Board staff, particularly Diane, who was most prompt and helpful in this process.

Highlights and General Discussion:

Congers "Down Home" atmosphere and actual layout does not lend itself to over-development or an inordinate number of new apartments, be they second floor additions to existing properties, renovated buildings, or new construction. Congers is not capable of accommodating the necessary parking required to accompany a large number of new apartment residents.

Further, our study indicates it may simply not be economically practical to envision entirely retail only on the first level along the length of the Overlay district.

Considering the proximity of Congers to the town and county courts, government offices in New City, and easy access to major thoroughfares, we added professional offices as a recommended use. This would bring daytime activity into Congers and provide increased business activity for merchants without the need for overnight parking required of apartments.

Some property owners expressed the opinion that first level residential should be considered, not just retail.

To address this, we have added an allowance for new construction of townhouses, and for the conversion of first level retail, to residential type, provided the owner makes structural changes to the existing building to bring it to a residential style, thus blending with overall plan for residential building types.

We agree with the current boundary lines, exempting the area from Kings Highway down to North and South Harrison Ave from the overlay, in order to preserve the residential nature of this area. This area includes a number of Older Victorian homes that has historically been free of commercialization.

Allowance for construction of three story buildings (anything in excess of 35 feet in height) was deleted. This is not desirable in Congers.

We discussed color schemes for renovations, or new construction and feel earth tones are most desirable overall. The recently completed St. Paul's building exemplifies this concept.

Additional attention is needed for Pedestrian walkways, improved crosswalks, enforced speed limits, and signage requiring vehicles to yield to pedestrians. Arrangement similar to Main St. Nyack is recommended.

Acquisition and demolition of the old garage site on Lake Road is recommended as a key to lessening the parking issues in the overlay district. By opening up this area, patrons of local businesses and professional offices could utilize the site during the day.

A property maintenance regulation requiring owner compliance coupled with strict enforcement requirements should be implemented for the overlay area.

Major Properties:

Travalini building:

Our group endorses the concept put forth by the owners for development of townhouse units in the rear open area of the property, however this must be accompanied with a guaranteed plan that incorporates improving and upgrading of the main building.

Beckerle Property:

The attributes and location of this property and its proximity to shops, bus lines, Congers Park, etc. certainly lends itself to the tentative redevelopment housing plan floated by the owner. Senior citizen housing and a provision for emergency volunteers are favorable possibilities here.

We feel the retail building should front on Lake Road with loading docks and customer pickup in the rear, not as indicated in their preliminary plan.

Other than the foregoing comments, due to lack of an official final plan being submitted, our committee is unable at this time to recommend based on the tentative plans presented.

Hemenway Property:

In our update of the overlay district we deleted this property being permitted to construct 3 story building in order for any future plan to align with the overall. The property is somewhat unique in that it has part fronting on state highway 303.

For several years it has been home to unsightly and disparate businesses. Redevelopment of this property with a more complimentary business such as a drive-in bank, medical offices, or perhaps a clinical or research laboratory building with second level professional offices is recommended.

Summary Comments:

In submitting these recommendations, it is our feeling that we have provided all parties an opportunity to express their opinions. In turn our committee has digested all suggestions and after discussion, we feel this submittal best represents the long term interests of the Hamlet of Congers.

As the update plan proceeds, with appropriate notification, our committee will be available to the Board to discuss this submittal.

Sincerely,

Gerry O'Rourke
Chairman Ad Hoc Committee

ARTICLE II Specific Hamlet Center Overlay Districts

§ 151-16. Congers Hamlet Center Overlay District. [Added 2-10-2004 by L.L. No. 1-2004]

- A. Boundaries. Congers Hamlet Center Overlay District includes those properties that are, at the time of the adoption of this section, zoned "LS, LIO, CS, R-10, R-15, with frontage on Lake Road, Burnside Avenue, or North Rockland Avenue and located within 450 feet of Congers Lake Road and within the area from the west sides of Sherman Avenue and Pleasant Street Hemenway (Long St.) north to the east sides of North and South Harrison Avenue. Congers Hamlet Center Overlay District also includes those properties that are, at the time of the adoption of this section, zoned "LIO" and located with frontage on Hemenway Avenue. (See Map of District in Subsection M herein.) The area from Kings Highway/Old Haverstraw Road to North and South Harrison Ave. is to remain intact to preserve existing Victorian style buildings.
- B. Incentive use, permitted pursuant to § 261-b of the Town Law. As an incentive to encourage revitalization within this district, one-bedroom apartments, and professional offices, shall be permitted over retail stores as well as first level professional offices. In addition construction of single family townhouses is permitted. This incentive is allowable by special permit of the Town Board and is subject to the requirements of §§ 290-15 and 290-32C(5). This incentive use is subject to additional regulations as follows:
- (1) Exterior renovations, approved by the Architecture and Landscape Commission, in an architectural style that will harmonize with the architectural features of the unique buildings within this district are required for any building to which an apartment or apartments shall be added under this incentive. All must conform to the overall plan for the Congers Overlay main street district.
 - (2) New construction in an architectural style, approved by the Architecture and Landscape Commission, which will harmonize with architectural features of the unique buildings within this district, shall be required for any new building that will have an apartment, or apartments, professional office facilities, or townhouses constructed under this incentive. All must conform to the overall plan for the Congers Overlay main street district.
 - (3) Balconies facing Lake Road, or on sides of building within view of Lake Road are not permitted. Balconies in rear permitted only with approval of planning board as part of overall review. ~~for any apartments created under this incentive shall be constructed to~~

~~give privacy to those using them as well as to shield those users and their personal effects (furniture, banners, etc.) from view of passersby. Exceptions to this requirement may be allowed by specific approval of the Architecture and Landscape Commission when there is convincing evidence to show that the exception will improve the appearance of the building.~~

- (4) Apartments created under this incentive shall be limited to one bedroom per apartment, with square footage limited to 1,000 sq. ft. maximum, and the certificate of occupancy shall be conditioned upon occupancy by no more than two individuals. Only the bedroom shall be used for sleeping purposes. No other habitable space shall be converted or used for sleeping purposes.
- (5) Existing parking between the building and the front lot line shall be relocated wherever possible; where not possible, parking shall be separated from the street by stone walls, opaque fencing, landscaped berms or hedges, no higher than 4 feet, as determined by the Planning Board as part of site plan review.
- (6) Nothing herein shall be construed to allow a new building to have a third story or an existing building to be allowed to build a third story, ~~except on properties zoned LIO at the time of the adoption of this section.~~ There is to be no exception or variances granted in this regard.
- (7) Property owners shall be required to give rental preference to Congers & Clarkstown residents for any apartment created under this incentive. Preference shall first be given to volunteer emergency personnel: (including Specifically members of the Congers volunteer fire departments and Congers-Valley Cottage ambulances corps) and then to other members of Clarkstown emergency volunteer groups, and to senior citizens. Any application for a certificate of occupancy for any apartment created under this incentive shall be accompanied by a declaration of covenant running with the land providing for the above preference. Such declaration shall be in a form approved by the Town Attorney and recorded with the Rockland County Clerk.

- C. Uses permitted by right. All LS (Local Shopping) uses are permitted throughout this district, except that drive-in restaurants are not permitted. Please refer to listing of recommendations for deletion.
- D. Uses permitted by special permit. All LS special permit uses are permitted in this district, except that the only ~~no~~ residential uses of any type ~~shall be added~~ allowable within the district ~~except~~ is for one-bedroom apartments, over retail stores, over professional offices, and newly constructed townhouses, as permitted as an incentive use. With approval of Planning Board, a first floor retail establishment conversion to residential is allowable only if the structure is converted to a residential style building conforming, in type, to building standards established in this regulation. Please also refer to listing of recommendations for deletion.
- E. Permitted general accessory uses. All LS)permitted general accessory uses are permitted in this district, except that no temporary sales offices are allowed. Please refer to listing of recommendations for deletion .
- F. Permitted accessory signs. In order to further identify the district as a unique setting, specific sign requirements
 - Types of signs. The following types of signs shall be permitted and all others excluded; with the exception of signs within the public right-of-way for directing traffic and providing information to the general public:
 - (a) Wood freestanding or monument signs: Wood freestanding signs that are painted or carved. Freestanding signs shall not exceed a total of twelve square feet inclusive of lettering, background and borders, and shall be no taller than six feet. Only one freestanding or monument sign shall be permitted per property. If more than one business is located on a single property, then all business names shall be combined on a single directory sign. Freestanding and monument

replace these
usually
permitted in
LS or LIO
zones.

(1) Town sign
regulations
apply. (chapter
243 & design
guidelines)

signs shall be permitted in the front yard, provided that the location of such sign does not interfere with traffic safety. Signs may also be parallel or at right angles to the building.

- (b) Wood panel or individual-lettered signs: Wood panel or individual lettered signs may be used on any elevation of the building and may be painted or carved or individually made. Such signs may not exceed a total of ten square feet for each business on each elevation, inclusive of lettering background and borders. If more than one business exists in one building, then only one such panel sign shall be permitted per business on any single elevation.
- (c) Directional signs for the convenience of the patrons or customers may be permitted, however these signs shall be no larger than necessary to serve the purpose for which they are intended, and colors and materials shall coordinate with the overall design of signs for the entire property.
- (d) Window painting. Where appropriate, painted window signs may be permitted; however, typeface will be limited to Times New Roman or similar typeface. Window sign will be hand lettered and shall not have a painted background. The space permitted for a window sign shall not exceed 25% of the total window area, as measured from the outer edges of the lettering.

- (2) Lighting. Lighting of signs shall be permitted by means of directional lighting from the base or the top of the sign. Internal illumination, fluorescent lighting or neon lighting is prohibited. All lighting shall not interfere with the comfort and safety of the general traffic and nearby residences. Discuss?
- (3) Color and design. A sign package for the entire site shall be approved in context of the design of the building. All applicants shall be required to submit plans for signage package so that the colors and design may be discussed in context with the design of the elevation of the building.

G. Required off-street parking. Parking requirements for this district shall be the same as for LS, except for

- (1) Retail and service stores and establishments, including professional offices, require at least one space per 300 gross square feet of gross floor area.
- (2) One-bedroom apartments require ~~at least one space per apartment.~~ two off-street spaces per apartment. Townhouse structures require two off street spaces per unit.

H. Required off-street loading berth requirements for this district shall be the same as in LS. , with restriction that they not be visible from Lake Road

I. Additional use regulations for this district shall be the same as in LS, except the Planning Board may:

- (1) Reduce the distance from driveways and parking to residential district zoning boundaries only if equivalent visual and sound protection can be provided to residentially zoned properties.
- (2) Allow, where no alternative is available, a driveway for access from the street to the side or rear of the property for parking or delivery access, with requirement that adjoining driveways require 25 feet buffer between them.

J. Bulk regulations for this district shall be the same as in LS, except:

construction ~~shall not~~ must be included and counted as part of the FAR regulations.

- (2) The area between the front lot line and the building line shall be landscaped.
- (3) Parking shall not be permitted between the front lot line and the building line for new construction.

K. Unique buildings. The Town Board designates the following buildings in this district as unique buildings. The illustrated buildings should be retained if possible and incorporated into site design for any new development. Modifications necessary to accommodate a new use will be permitted; however, it is the intention to require that all project plans retain original features of the buildings, including window type and configuration, front entries, storefronts (if applicable), and identifying decorative details, including those that provide a historical reference to the original use of the building.

- (1) Congers Station. This building is significant for its role in the development of transportation and the businesses it attracted to the hamlet. Retain original exterior sheathing, windows, doors, entry configuration, details that identify the station, chimneys, platform shelter shape, roofline, and building configuration.
- (2) Fire House. Retain exterior stucco sheathing, decorative contrasting feature under windowsill, window configuration, lettering on front of firehouse, garage doors and other entries, roofline.
- (3) Bourghol Building: early mixed-use commercial building. Although this building has been modified, the building is fairly intact and is a good example of a Colonial-Revival-style commercial building. Original features to retain include the original window configuration, storefront, roofline, wood sheathing, chimney features and door locations. Porch modifications should be made to emulate a colonial style, and should be made of wood. Sheathing on the front of the storefronts should be changed to match the rest of the building.
- (4) VonThaden Building (former Dickenman Building): commercial building. This building was recently damaged by fire. Features to be retained are the location of the windows and doors, original sheathing, corner entry, parapet line.
- (5) Travaglini (Last Chance Saloon) Building: Federal-style commercial building. Features to retain: original corner entry, window size, type, and configuration, exterior sheathing, and coping. Decorative horizontal accent above corner entry should be restored along the facade that faces Lake Road at the pedestrian level and should take into account the entire building instead of allowing modifications of individual storefronts. Large buildings such as these also benefit from a coordinated signage package to create uniformity across the facade.
- (6) Colett (Rick's Club American) Building: Colonial-revival-style commercial building. Features to retain: original features to retain include the original window configuration, storefront, roofline wood sheathing, chimney features and door locations.
- (7) Grande Centrale Restaurant Building: Colonial-style commercial building. Now serving

Re: Comments on Congers and Valley Cottage Overlay Districts

Dear Shirley:

Thank you very much for the opportunity to address the board and consultants on the overlay districts the other night. It is refreshing to be able to meet with the members in an informal atmosphere and let them know how things look from the applicant's perspective.

Per your request, we are enclosing an edited synopsis of the comments we made at the meeting, outlining some problems and suggestions. We hope this is helpful in considering modifications to make the process more "user friendly".

Should you have any questions, we would be happy to continue the discussion.

Sincerely,

Jay A. Greenwell, PLS

Workshop Meeting Date: 3/25/09

Synopsis:

Comments on Hamlet Center Overlay District:

- Objective was to provide incentives to property owners to encourage revitalization, encourage pedestrian activity, stimulate business, maintain historic and architecturally significant buildings and renovation.
- Incentive in the zoning is basically to promote the creation of one bedroom apartments over retail stores; the incentives include having the apartment not accrue to the floor area ratio of the building, reduction in the parking requirement from 1/200 sf to 1/300 sf, and adding one space per apartment
- The architectural elements discussed in the overlay districts are clear and well defined in the code, and the idea behind the overlay is very well intentioned but there are several drawbacks to the zoning elements as it was adopted.

Case Study:

- Sean Keenan's project on Lake Road ("SMK Lake Road") was a proposed 900 sf retail facility with an apartment above on a non-conforming lot of approximately 4200 sf.
 1. In May of 2004, we submitted plans for a small retail building on the lot on the south side of Lake Road, with a one bedroom apartment above. Variances were noted as required on the plan, for pre-existing small lot—lot area, front yard setback, rear yard buffer and parking spaces. During several TAC meetings, some procedural problems came to light: it was determined by the Town Attorney's Office that we were not allowed to request variances for a plan in the Overlay District, and secondly, when constructing an apartment over proposed retail, the floor area ratio was counted in the total—it was only when constructing apartments over existing retail that the incentive applied (that is—the apartment did not add to the floor area).
 2. So rather than move in a linear fashion...we had to withdraw the original submission (1/05) for the retail and apartment, then the project went to the Planning Board for Site Plan approval for a 900 sf retail facility without an apartment above (submitted 6/05, meeting 11/05), then to the ZBA for variances as needed (submitted 12/05, meeting 2/06), then back to the PB for final Site Plan approval (8/23/06), then to ALC and County Highway for

permitting and ultimately signature (1/7). Then we had to start over again, new SEQR submission (1/07) and back to the PB (2/07) for Amended final showing the apartment over the approved ("existing") retail, PB referred the matter to the TB for special permit for the overlay district to allow the apartment (TB meeting 7/07), back to Planning Board for a new final approval (10/07), and new final signature 12/07. This project took 3 years and 6 months, which is very onerous time line. ***It should be noted that this timeline was in spite of the fact that every board the applicant appeared in front of supported the project.***

3. This was a very convoluted approval process—involving two Planning Board applications and approvals. While the applicant's intentions were apparent, and the building was shown as two story from the beginning, it would be preferable if the applicant were allowed to present the entire project (including any variances needed) and proceed in a linear fashion. **We would recommend allowing modifications to the underlying zoning code by the Planning Board, or allow request for variances within the overlay district.**

Additional Comments:

1. **Suggest revision to the overlay to allow for the incentive apartment over proposed retail or proposed office, or any permitted use in the underlying zoning.** We did a project for Phil Scala in the Valley Cottage overlay, and had the problem that there was a veterinary office on the lower floor and Phil was considering adding apartments above on the second level. But the office use was not construed as meeting the requirement, and it was not allowed. It is our understanding that the Valley Cottage overlay has been subsequently amended to allow apartments over office area and we think this is a good idea.
2. Similarly, we are currently processing an application for Graziano and Bertolino—right across the street from Sean's project. We have submitted plans for TAC review to demolish the existing derelict buildings and construct a new facility, but this application has the same difficulty: once you are demolishing the existing structures, the use is not "existing retail" and therefore the floor area of the new dwelling units are counted as part of the FAR. Also, because variances are required, it would have to follow the same non-linear approval process.
3. **The reason that the issue of variances becomes so important, is that it seems like almost any application for the overlay incentive will involve variances. Most of the existing buildings are close to the street (or in fact within the DSL), with non complying yards, buffers, etc.**
4. There is another inconsistency in the code: the LS zoning requires a front yard of 25' from the DSL but provides that the front yard may be reduced to

the average of commercial buildings within 100' of either side of the lot. But many of the existing buildings are within the DSL (witness Bertolino), and the average would fall inside the DSL.

5. As a side issue: the County Planning Board is going to give a disapproval on almost every project in the Congers overlay zone, since most will require variances (witness the 1/19/06 County Planning Board review for SMK)—since the overlays fall on County Road...always going to need an over-ride.
6. **Suggest modifying the height requirement in the overlay district.** The height permitted is 15' plus 1' per foot of distance from the DSL. The thrust of the overlay, to enhance pedestrian activity and shopping, dictates that buildings be close to the front sidewalks. However, that will mean that virtually every structure will need a variance from the building height in order to construct the second floor apartments.

PARTNERSHIPS & CONNECTIONS: TOWN OF CLARKSTOWN COMMERCIAL CORRIDOR TRANSPORTATION & LAND USE STUDY

Final Report

1.0 INTRODUCTION

This report is presented to compile the work that Cambridge Systematics (CS) has completed to set Clarkstown on a course to improve its land use and transport system. It will lay out a vision for the city; prioritize transport system improvements; clarify the respective responsibilities of different stakeholders in implementing these initiatives.

Towns define themselves through creating housing and social connectivity, facilitating a vibrant economy, ensuring efficient mobility for all, assuring high quality open spaces and public services, as well as celebrating arts and culture. How towns address these factors reflect their attitudes toward the dignity and quality of life of its residents.

At its core, this report asks the following questions:

- How should the town of Clarkstown look, feel and function 20 years from now?
- What investments in transportation and land use planning will enable the town to achieve this vision?

1.1 Integration and Balance

Hudson Valley towns are becoming engines of innovation and economic growth. Employment opportunities and social services attract people from rural areas and other regions. To accommodate growing demand for residential and commercial space, urban boundaries are extending in an often uncoordinated manner.

Linkages between land use planning and transportation become apparent when looking at US cities and towns. Over the past 50 years, decentralized urban forms and uncoordinated land uses have created significant challenges for transport infrastructure, and people's basic mobility needs have gone unmet. We have seen residents become more and more dependent on private vehicles to fill the gap of mobility demand that is not met by other modes (public transit, walking, cycling, etc.).

Continuing the dependence on personal motor vehicles drives traffic congestion, degrades air quality, negatively impacts public health, and amplifies social segregation (based on income, age, or ability). These unintended consequences from over-reliance on a single mode of transportation lead to the demand for costly road expansions, which further induces additional vehicle usage and result in worsening the above impacts.

Urban land use patterns result from a combination of private and public decisions. An area's transport network is intimately woven into the existing demographic, economic, environmental,

social, and political conditions. Following a business as usual strategy, low-density developments and increase trip lengths will continue to favor a higher share of automobile trips.

The integrated land use and transportation planning offered in this report presents the town of Clarkstown with an effective system for managing travel demand and incentivizing development that is supportive to alternate transportation modes. Cambridge Systematics believes that compact development with a good mixture of social and economic functions can minimize unnecessary trips. Thus, land use not only shapes Clarkstown's buildings, but also determines the community's accessibility, mobility / energy consumption, and activity patterns (see below).

Figure 1-1: Cyclical relationship between Land Use and Transportation

Traditional transport planning often follows an approach known as “predict-and-provide.” Planners estimate future growth in the use of personal motor vehicles based on past trends and calculated the infrastructure requirements needed to accommodate this growth. Today, planners increasingly recognize that transport trends are far from inevitable - the infrastructural investment choices that a town makes have profound impacts on the travel behavior and quality of lives of its residents.

Properly balanced mixed land use planning to keep travel distances short within the city. Integrating land use and transport planning means striking a balance of mixed uses (residential, educational, employment, recreational, retail, and services, etc.) that recognizes the value of the spatial proximity, layout, and design of those uses. Considering the long term impacts of land use decisions on the natural and built environment, including transport systems and facilities, is critical to this integration and balance.

1.2 Demographic Impacts

Clarkstown's percentage of residents who are 65 years old or older is notably on the rise – they comprise 17 percent of the town's population . Clarkstown has the opportunity to assist residents in growing older with dignity and independence through at combination of public realm, transportation, and land use planning decisions. For example, alternative transportation modes,

such as walking and using public transit, are important for the mobility and health of seniors. It is equally important to support access to seniors by in home care attendants. Service providers also have an easier time providing higher quality services to senior and disabled residents in denser developments, because their commutes are less challenging. Enabling seniors to remain active in their own community is an essential task for Clarkstown, and land use policies that both enhance accessibility and encourage clustering of services and activities are necessary to complete it.

Cambridge Systematics' work and this report is presented to rebalance transportation investment priorities and support the integration between land use and transportation planning to better meet Clarkstown's future mobility needs.

2.0 METHODOLOGY

Cambridge Systematics undertook the following tasks as part an effort to rebalance transportation investment priorities an support integration between land use and transportation planning in Clarkstown:

- **Existing Conditions Analysis:** CS evaluated the existing zoning and land use conditions in Clarkstown. The evaluation included detailed analysis of the Clarkstown Town Code and used mapping tools to evaluate, parcel-by-parcel, the existing land uses and how they relate to existing zoning districts. The evaluation also included an examination of past zoning variances applied for and received, and where these were located townwide. The assessment identified key issues for three land use categories targeted in this study: multifamily residential, commercial retail, and commercial office and light industrial districts. To understand local needs of landowners and businesses along each corridor, a survey was conducted (in an interview format) to gather key information on infrastructure needs of landowners and businesses in the study area.
- **Corridor Visioning and Concept Development:** CS identified areas of opportunity and presented preliminary visions for land use regulations that meet the goals of the town while supporting local needs. CS presented elements of the preliminary vision to residents and business owners in the study area, to gather information for further development of the vision and appropriate zoning codes. From preliminary visions, corridor concepts were developed and then used to guide the development of supportive alternative zoning codes. CS presented Corridor Concepts to the Clarkstown Comprehensive Plan Steering Committee, the Multi-Board, and at public meetings for review and feedback.
- **Zoning Code Alternations:** These were proposed where current and predicted land uses in the Town do not confirm with the goals and strategies outlined in the long range Comprehensive Plan as well as in locations where alternations coincide with the approved corridor concepts. CS evaluated the potential for development and negative environmental effects related to recommended zoning changes through a build out analysis.

3.0 EXISTING CONDITIONS ANALYSIS

3.1 Comprehensive Plan Review

3.1.1 Goals and Objectives

The 2009 Town of Clarkstown Comprehensive Plan (Plan) both updates and moves beyond the previous Plans of 1966 and 1999; providing a wide-ranging report of existing conditions within the Town and a holistic framework for present and future land-use decision-making. The Plan follows the format of a Generic Environmental Impact Statement (GEIS), analyzing potential adverse impacts and proposing mitigating actions. The Plan has a vision of reconnecting the Town to its history while simultaneously “projecting” it toward a promising future.

The overall vision is woven through the seven interrelated goal areas – Economic Development; Environmental Resources; Health Safety and Welfare; Historic and Cultural Resources; Housing; Recreation, Parks, and Open Space; and Transportation. Each goal area features a set of overarching objectives and a series of specific, actionable objectives formulated by citizen subcommittees. The work of the subcommittees incorporated suggestions and feedback from a series of public meetings held across Clarkstown.

Below, each goal area is reviewed and accompanied by a brief discussion of more targeted objectives.

Economic Development

The Town identifies itself as a “business-friendly community,” and strives to maintain this status amid a changing economy. Clarkstown’s largest single economic sector is retail trade, followed closely by health care and social assistance. Smaller, but still significant economic sectors include accommodation and food services; professional, scientific, and technical services; and construction. The Town holds land suitable for business and industry, as well as an educated work force. The Clarkstown Economic Development Strategy highlights several industries that the Town may wish to target, including biotechnology, clean technology/alternative energy, educational services, financial services, medical devices, and professional and technical services.

Environmental Resources

The citizens of Clarkstown identified the Town’s great diversity of environmental resources as a key attractor of both residents and businesses. The Plan aims for a balanced approach to development, one which values the Town’s abundance of natural and aesthetic assets while achieving economic, housing, health/safety/welfare, and transportation objectives. The concept of environmental resources is multifaceted and includes sensitive lands (particularly ridgelines and farmland), water resources (sources, recharge, stormwater management, and wetlands), air

quality (monitoring and dust control), plants and animals (including open space acquisition to protect habitat), aesthetic resources (views and character), Critical Environmental Areas, energy (building standards), and quality of life issues (noise, dust, and odors).

Health, Safety and Welfare

The Plan describes a strong network of emergency services located within or proximate to the Town. Many of these services are provided by volunteers, especially the critical services of fire protection and ambulance corps. The Plan notes diminishing volunteer participation and establishes the objective of making life in Clarkstown more affordable for volunteer emergency services workers. Health, Safety, and Welfare is also closely linked to the transportation network, specifically bicycle and pedestrian mobility.

Historic and Cultural Resources

Clarkstown is rich in significant historic and cultural resources, a source of significant civic pride. Objectives in this Goal area emphasize maintaining an accurate inventory of significant sites, preventing the destruction of existing resources, improving upkeep and maintenance, and educating residents on the Town's historic and cultural heritage.

Housing

With incomes rising and vacant land for residential development becoming scarce, the Plan identifies three overarching housing objectives: create opportunities for more affordable housing, protect neighborhoods from inappropriate development, and promote green building practices.

Recreation, Parks, and Open Space

The Plan celebrates the evolution of a premier parks and recreation system in Clarkstown over the past 50 years, and sets out a number of specific projects which will further enhance recreational opportunities for residents. As a complementary strategy, the Town aims to continue the strategic acquisition of open space areas—particularly those which offer significant conservation, aesthetic, and historic value to the Town.

Transportation

With the roadway network increasingly strained in and around Clarkstown, the Plan focuses on reducing congestion and increasing safety on roadways while bolstering transit, bicycle, and pedestrian mobility. Transportation, as the Plan notes, is inextricably tied to residents' quality of life, and is fundamentally related to land use and development patterns.

3.1.2 Corridor-Related Goals

In recognition of the cross-cutting nature of several objectives related to corridor transportation and development, a re-categorization of the objectives was performed—allowing for a more comprehensive analysis (see Table 3.1, which also identifies the original goal area(s). These objectives collectively emphasize the corridors’ general suitability for greater commercial, industrial, and (in selected instances) residential density, as well as their potential role in facilitating more sustainable travel options (such as walking, biking, and public transit).

Table 3-1: Comprehensive Plan Goals Applicable to Corridor Study

Goals and Objectives Relevant to the Corridor	Original Goal Area
Apply zoning changes to create and expand commercial development in areas that are best served by the Town’s existing infrastructure	Economic Development
Develop zoning that encourages and protects the safety of pedestrian and bicycle traffic	Health/Safety/Welfare
Provide efficient travel between the Tappan Zee Bridge/I-287 corridor, Route 59 Corridor, and other parts of Clarkstown	Transportation
Add to the economic strength and quality of life in Clarkstown by coordinating with Tappan Zee Bridge reconstruction and other regional transportation initiatives	Transportation
Ensure that travel through Clarkstown enhances safety, lowering the number of vehicle crashes that occur in the area and minimizing conflict between travel modes	Transportation
Provide local public transportation services that promote sustainable travel options for Clarkstown residents, businesses, and visitors	Transportation
Provide for commuter transit services that are accessible, efficient, and safe	Transportation
Create a walking environment that is accessible, safe, and enjoyable	Transportation
Create a cycling environment that is accessible, safe, and enjoyable	Transportation
Develop Hamlet Centers with transportation options and connections	Transportation
Create diverse mixed-use development areas that allow for walking and biking and are well served by public transportation	Transportation
Permit apartments over businesses	Housing
Adopt zoning that requires a set aside of new units for workforce and volunteer housing	Housing
Plan for and develop additional subsidized affordable units for seniors	Housing
Expand initiatives to safeguard neighborhoods from inappropriately scaled development	Housing
Implement programs which require and/or encourage environmentally sound building design	Housing

Source: Partnerships and Connections, Town of Clarkstown Comprehensive Plan.

While the Town possesses diverse policy, planning, and financial mechanisms that could be brought to bear in order to help achieve these goals, this study focuses on the related tools of

zoning, land use laws and codes, and development controls. Although in several instances the appropriate deployment of these tools is obvious and directly relevant, other corridor goals are supported only indirectly by zoning:

- Apply zoning changes to create and expand commercial development in areas that are best served by the Town's existing infrastructure. Zoning for proper uses and densities is critical to enabling appropriately scaled development in infrastructure-rich locations, such as the corridors.
- Develop zoning that encourages and protects the safety of pedestrian and bicycle traffic. Zoning, while not explicitly geared to impact the safety of bicyclists and pedestrians, can influence parking configurations, sidewalks, curb cuts, lighting, plantings and (by controlling density) traffic volumes, all of which place a role in the safety of non-motorized modes.
- Provide efficient travel between the Tappan Zee Bridge/I-287 corridor, Route 59 Corridor, and other parts of Clarkstown. Key factors in ensuring efficient travel include sizing development to correspond with existing and planned infrastructure and transit service and permitting densities that support transit in selected nodes (ideally displacing single-occupant vehicle trips).
- Add to the economic strength and quality of life in Clarkstown by coordinating with Tappan Zee Bridge reconstruction and other regional transportation initiatives. Proper zoning is important in order to enable sufficient densities (of population and of commercial uses), a critical factor in the feasibility of new and enhanced transit and/or commuter services corresponding to major infrastructure improvements.
- Ensure that travel through Clarkstown enhances safety, lowering the number of vehicle crashes that occur in the area and minimizing conflict between travel modes. Appropriate zoning is crucial to limiting the SOV trip generation potential of new development and to allowing transit-supporting densities – both of which can lower traffic volumes. Parking, curb cuts, and sidewalks can also affect safety, both positively and negatively.
- Provide local public transportation services that promote sustainable travel options for Clarkstown residents, businesses, and visitors. Zoning must allow for densities and uses that generate sufficient activity to support transit service.
- Provide for commuter transit services that are accessible, efficient, and safe. Well-functioning commuter transit services help make Clarkstown an attractive place to live and work.
- Create a walking/cycling environment that is accessible, safe, and enjoyable. Parking, curb cuts, and sidewalk quality may be dictated by zoning and clustering origins and destinations

in order to enable reasonable walking or cycling trips can be achieved by allowing for appropriate densities and a mix of uses.

- Develop Hamlet Centers with transportation options and connections. Hamlet Centers with higher densities and greater non-motorized accessibility to transit will support a greater variety and higher quality of transportation options.
- Create diverse mixed-use development areas that allow for walking and biking and are well served by public transportation. Zoning for a mix of uses accessible by public transit – also known as transit-oriented development (TOD) – adjacent to commuter rail or bus stations increases accessibility to those resources. Dense, mixed-use zoning with high sidewalk and streetscape standards is more likely to create sustainable, safe neighborhoods.

3.1.3 Targeted Areas of Development

The Clarkstown Comprehensive Plan sets out general, geographically oriented guidance on targeted areas for development, as well as areas for conservation. Given the status of the study corridors as high-density, transportation-rich areas of commercial, industrial, and multifamily housing development, it makes sense that the Plan’s development recommendations, in particular, often reference these corridors. The targeted areas for development are identified below.

Table 3-2: Targeted Development Areas

Development Type	Location
Residential – Medium and High Density	<ul style="list-style-type: none"> • Hamlet Centers • New City Gardens
Hotel/Conference Center	<ul style="list-style-type: none"> • Near Palisades Center Mall, West Nyack
Office and Industrial Facilities	<ul style="list-style-type: none"> • Corporate Way, Valley Cottage • Brenner Drive, Congers
Mixed Use	<ul style="list-style-type: none"> • Main Street near Nanuet Mall, Nanuet • Tucker Avenue, New City (Hamlet Center) • Lake Road, Congers (Hamlet Center) • Squadron Boulevard, New City
Transit Oriented Development	<ul style="list-style-type: none"> • Near Palisades Center Mall, West Nyack
Mall Redevelopment	<ul style="list-style-type: none"> • Nanuet Mall, Nanuet

3.2 Existing Zoning Code Analysis

In order to gauge how current zoning and land uses in the study corridors are meeting community needs and the goals of the Clarkstown Comprehensive Plan, an assessment was conducted of current zoning and land-use designations. The goal of this exercise was to provide the context for analyzing existing and planned land uses in terms of their compatibility with the Comprehensive Plan goals and targeted development areas discussed above.

CS worked with the Clarkstown Planning Department staff to examine 18 zoning districts in the Town Code. These districts included only commercial, industrial, and medium- and high-density residential zones included in the study corridors (see Table 3.3). In addition to the Town Code, the Town provided Geographic Information System (GIS) data to review the zoning map and contextualize the zoning text analysis. The assessment also included analysis of parcel-level (that is, lot by lot) land uses in the same study area and how they related to the zoning text and map. Land-use activities were identified using GIS files provided by the Town, which identify each tax lot, or parcel, and its use. The data files provided approximate information which was then verified by visually inspecting each property. The Town also provided lists of zoning code variances and changes to the zoning code occurring between the years 2002 to 2010. Finally, planned development projects for the corridors were considered as part of the analysis. Other map data provided the context for GIS analysis, such as lakes and wetlands, roadways, impermeable surface coverage, and public park properties.

In general, the Town Code presents a use-based (Euclidian) zoning system that details what uses are permitted and uses that require special permits. The Code also includes parking requirements, design guidelines, and other land-use considerations. If a type of use is not expressly addressed, it is generally not permitted in the zoning district except through Town Board or Zoning Board review and approval. As Clarkstown has grown and industries have changed, not all uses are addressed and some uses have since changed names or are no longer commonly found in the Town. In addition, the Town has been exploring, through its Hamlet Centers, zoning regulations that include elements of form-based codes or regulations. Form-based codes direct the appearance of activities and structures in a district, rather than naming specific uses. Guiding specific intensities of use and building types (rather than activity types) in an area allows for flexible development that is expected to facilitate natural development of neighborhoods with mixed, compatible uses (residential, commercial, etc.), and less guesswork by the user to determine what kind of use is permitted in which areas.

There are 18 zoning districts described in Chapter 290 of the Clarkstown Town Code. For the current corridor study, as stated above, this section will discuss the 14 districts that cover the high-density residential, commercial, and industrial zones. In addition there are four “special districts” included. Special districts are used in select cases and by discretion of the Town. This

analysis organizes the districts into three main groups: medium- and high-density residential, commercial retail, and commercial office/light industrial. The special districts are described separately.

Table 3-3: Primary Zoning Districts Included in Corridor Study

Category	Category Description	Districts
Medium- and High-Density Residential	For individual, family, and multifamily dwelling, including both rented and owned units.	MF-1, MF-2, MF-3; RG-1, RG-2, R-10
Commercial Retail	Retail, office, and other administrative uses.	LS, CS, RS, MRS
Commercial Office/Light Industrial	Medium-intensity uses for office, goods production or processing, and storing of goods.	PO, LO, LIO, M
Special Districts and Permits	Regulatory packages used at the discretion of the Town to develop.	SR-304 Special Permit, Hamlet Centers, AAR, PED

3.2.1 Commercial Shopping Zones

The shopping districts in Clarkstown are arrayed by development intensity, with LS the lowest density use, followed by CS, RS, and finally MRS. Key issues related to the four shopping districts are noted below.

- Specific uses are added in each successively intense commercial-shopping district, from nine in the LS zone to 20 in the MRS district. The “retail” uses (see Table 3.4) are the most clearly delineated by intensity of use.
- As with all zoning in Clarkstown, the strict use-based system – as opposed to form-based or performance-based zoning – is somewhat limiting in scope. As diverse business types, market preferences (for example, for mixed uses) and construction technology change, use-based zoning can lag behind and require increasing numbers of variances and legislation changes. In addition, not all potential uses can be listed, and some use descriptions are unclear.

Table 3-4: Commercial – Shopping Zones Use Comparison

	Use	LS	CS	RS	MRS
Civic	Churches and similar places of worship, Sunday school buildings, parish houses and rectories.	P	P	P	P
	Public parks and playgrounds.	P	P	P	P
	Community centers, libraries, museums, art galleries and similar facilities, and ambulance stations.	P	P	P	P
	Social halls, meeting rooms, convention halls, and catering facilities, whether commercial or nonprofit facilities.				P
	Fire, police, and similar public buildings.	P	P	P	P
School	Schools, except nursery schools.	P	P	P	P
	Child day-care center.	TB	TB	TB	TB
Residential	Motels and hotels subject to § 290-17l.		TB	TB	TB
	Agency boarding homes, agency group homes, agency community residences, and residential care facilities for victims of domestic violence.	TB	TB		
	Senior citizen housing.		TB		
Retail	Retail: drug, dry goods/variety, food, hardware, stationery, tobacco, newsstands, pickup/delivery for cleaning, laundry, and shoe repair.	P	P	P	P
	Retail: banks, liquor, barbers, beauty parlors, tailoring, pets, photography, restaurants, ^c tearooms, taverns, outdoor cafes.	P	P	P	P
	Retail: car salesrooms, car supply, home appliance, jewelry, art, upholstery, commercial printing.		P	P	P
	Retail: frozen food lockers, grain and agricultural products, building materials, monuments, outdoor car sales.			P	P
Services	Funeral homes, subject to all the conditions of § 290-17P.	ZBA	ZBA	ZBA	
	Research, development, experimental and testing laboratories.				P
	Offices for professional, governmental, and business use.	P	P	P	P
	Animal hospitals.		P	P	P
Recreation	Theaters, except drive-in theaters.		TB ^a	TB ^{a,b}	P
	Bowling alleys and billiard parlors.		P	P	P
	Commercial recreation establishments (dance halls, driving ranges, mini-golf and skating rinks). ^d			P	P
	Carnivals and circuses. ^e	P	P	P	P
Manufacturing/ Industry	Light-manufacturing uses, such as dry-cleaning, rug cleaning and laundry plants, printing and publishing.			ZBA	ZBA
	Sandpits, gravel pits, removal of topsoil and landfill or excavation.		TB	TB	TB
Storage	Mini-warehouses.			TB	
	Wholesale sales or storage and warehouses.			P	P

	Use	LS	CS	RS	MRS
Transportation	Car wash.			TB	TB
	Automotive and machinery repair shops, and open automobile and trailer sales lots.			P	P
	Gasoline pumps with kiosk only, subject to § 290-17F.		TB		
	Gasoline filling stations subject to § 290-17G.			TB	TB
	Railroad passenger stations or bus stations subject to §290-17K.	TB	TB	TB	TB
	Bus terminals on lots of at least five acres or more and located on major or secondary roads.			TB	TB
	Railroad right-of-way, provided that all brush and cut timber are disposed of in accord with approved forestry practices.	TB	TB	TB	TB
Utilities / Miscellaneous	Public housing substations or pumping stations and telephone exchange.	ZBA	ZBA	ZBA	ZBA
	Public utility right-of-way, towers, and lines for the general welfare.	ZBA	ZBA	ZBA	ZBA
	Floodplain uses within areas designated on the Official Map (parking, access, recreation, signs).	ZBA	ZBA	ZBA	ZBA
	Outdoor selling area.				P
	Reservoirs on lots of three acres or more and water towers and water tanks.		TB	TB	TB

- a No theater shall be located within 500 feet of any residential district or within 1,000 feet of any church or school or similar place of education or worship, said measurement to be from property line to property line.
- b There shall be no more than two theaters, whether standard or mini, located on any single parcel of land.
- c Drive-in restaurants shall be located only along major roads as classified on the Official Map (See § 290-4.)
- d Amusement parks, rides, and other similar activities are prohibited.
- e Subject to § 290-17E and L.L. No. 4-1976. (Ch. 117) as amended by L.L. No. 2-1978.
- P Permitted as-of-right.
- ZBA Zoning Board of Appeals (special permits).
- TB Town Board (special permits).

- One category includes “social halls, meeting rooms, convention halls, and catering facilities,” only permitted in MRS zones. However, catering facilities can be found in non-MRS zones in Clarkstown, some as part of restaurants (e.g., Hilton Garden Inn, Rocco’s). “Community centers, libraries, museums” and “art galleries,” which have intensities of use similar to social halls, and often include meeting rooms, are permitted in all shopping zones. Bowling alleys and theaters are allowed in CS and RS zones, but “meeting rooms” are not. The site design (lot coverage, landscaping and aesthetics) and impact on the neighboring areas are similar.
- Research and development laboratories are permitted in the MRS zone (in addition to the office zones in the next section), without specifying what type of facility, equipment, or work this entails. The code is unclear as to how laboratories are compatible with regional shopping centers but not other types of use in the shopping category. In the office category,

R&D laboratories are permitted in zones with schools, playgrounds, restaurants, and professional or government offices.

- As in other categories, sand- and gravel pits are permitted by special permit although this use would significantly restrict future development. Reservoirs and other water storage are also allowed and could create similar difficulties for future development.
- Mini warehouses can receive special permits for the RS zone, while wholesale sales or storage/warehouse is permitted as-of-right in RS and MRS. The only difference appears to be that mini-warehouses are divided into spaces less than 500 square feet each (this conditional use is also found in the LIO and M zones).
- In general, the bulk table indicates a preference for greater separation of uses as intensity of use increases. However, some uses could be placed close together to increase convenience, aesthetics, and share common Town resources such as parking space. In particular the minimum lot sizes and setbacks are not conducive to creating visually cohesive, walkable neighborhoods.
- Bulk tables show little difference between zones. An example is the front yard requirement of the LS (25 feet) and CS (30 feet) districts. Another example is the minimum lot sizes for LS (8,000) and CS (10,000) districts; it is unclear how a minimum size is related to differences in permitted uses.

LS – Local Shopping

This district offers local shopping convenience goods and services to the surrounding residential areas of the town and is not meant to attract shoppers from other areas because of specialty items or services.

LS districts are situated primarily in Nyack, Valley Cottage, Congers, and Bardonia hamlets. Of the 128 LS parcels in Clarkstown, only 25 parcels on about 18 acres of this zone are located in the study corridors, along the southern portion of SR-304 and northern portion SR-303.

Use: The as-of-right uses in the LS district form the base uses for all subsequent shopping zones. The uses include churches, community centers, museums, public parks, schools, safety and security facilities, offices, variety retail, and service retail such as banks and restaurants.

The ZBA oversees special permits for utilities, public right-of-way and power lines, parking/signs/driveways in floodplain areas, and funeral homes. Permits for these types of uses are required for the three other shopping districts as well. The Town Board oversees special permits for rail and bus stations, rail ROW, child care, and supportive housing.

Bulk: The LS zone is designed to accommodate the smallest scale of retail in Clarkstown. The minimum lot size and yard frontage requires a lot at least 50-feet wide and 160-feet deep. The front yard requirement of 25 feet is only 5 feet less than is required in the CS district. Side yards are not required, allowing for attached buildings. The FAR of 0.5 (the maximum allowed in any shopping zone) on the minimum lot size limits a building to 50 feet by 80 feet (4,000 feet squared) and 40 feet high, or approximately three stories.

CS – Community Shopping

This district offers goods and services that are needed by a larger segment of the town, including items of a more special nature such as clothing, banks, and printing shops. This district does attract persons throughout the town but is not meant to be a major attraction to large numbers of shoppers from adjacent towns or counties.

The CS districts are found on the Town's three main commercial corridors, SR-59, SR-304, and SR-303 (in addition, nearly all parcels zoned CS are included in the study area for this report). The CS zones are located primarily in or near each of the Hamlet Centers in Clarkstown. There are 104 parcels on 84 acres that are zoned CS in the current study areas. This does not include the approximately 151 parcels on 118 acres in New City, abutting the SR-304 corridor, which are also zoned CS.

Use: The district allows for retail uses of a more moderate scale than the retail zones RS and MRS. The CS zone allows three additional uses as-of-right that are not included in the LS zone that may offer specialized services not readily available in other neighborhoods. These include appliance- and car-related retail often associated with large products and showrooms, animal hospitals, and bowling/billiard facilities.

Special permits available through the ZBA are the same as the LS district. Special permits through the Town Board are available for greater commercial and infrastructure intensity. In addition to those available in the LS district (supportive housing, rail station, railroad ROW, child care) used by special permit include water storage, quarry, senior housing, theaters (less than 500 feet from residential district), hotels, and gas stations (with kiosk only).

Bulk: In general the CS district allows for larger structures to accommodate the more intense uses outlined above. The minimum lot size and front yard requirements are approximately 20 percent greater than the LS zone, requiring at least a 10,000 square feet parcel with 60 feet of street frontage – a minimum lot size of 60 feet by 167 feet. Like the LS district, side yard requirements allow for attached building structures common in many downtown and mixed-use areas. This design is primarily used on Main Street in Nanuet, and in New City (not in the current study area).

RS – Regional Shopping

This district offers the full range of commercial shopping needs from convenience to shopping specialty items in a location that is on or immediately adjacent to major state highways, in order to handle shoppers from the surrounding region.

RS provides the most intense retail district before the relatively large jump to the MRS district. The stated aim is for a range of shopping needs in locations that are readily accessible to drivers on State highways, with an eye toward maintaining traffic flow. As such, the uses permitted as-of-right or through special permit are the most extensive of the shopping districts.

The majority of RS districts are located on the east and west sides of Clarkstown on SR-59 (Nanuet and Nyack) and along the northern portion of gW near Rockland Lake Golf Course. There are 214 parcels on a total of nearly 400 acres zoned for this district. There is a total of approximately 70 acres of building footprints in the RS districts.

Use: The RS district permits the same uses as the CS district, and adds four more categories: recreation/amusement establishments, car repair, large-scale retail such as building materials, and warehouse-type facilities. Beyond the CS district, the ZBA can issue special permits for light-manufacturing uses. The Town Board board can issue special permits for four use groups not in CS, including gas stations, large bus terminals, car washes, and mini-warehouses. Unlike CS, however, the Town Board may not issue permits for boarding homes, senior housing, nor kiosk-only gas stations.

Bulk: The minimum lot size for the RS district is 20,000 square feet, or 0.46 acres, twice the minimum of the CS district. The greater minimum width, front yard, rear yard, and side yards, particularly abutting residential districts, indicates the expected high-intensity commercial activity which may create nuisances for areas of less intensive use. The FAR of 0.5 (the max for all shopping zones) on the minimum lot size limits a building to two stories at 30 feet by 160 feet (9,600 square feet). Maximizing the allowable height to 55 feet, or approximately four stories, would require a building no larger than approximately 30 feet wide and 80 feet deep.

MRS – Major Regional Shopping

This district offers the full range of commercial shopping center services, including without limitation convenience, shopping specialty items, and department stores on a site consisting of at least 75 acres in one or more lots and in a location on or immediately adjacent to major highways, in order to serve shoppers from the surrounding region.

Only two MRS districts are located in Clarkstown, including the Palisades Center Mall on 100 acres (built in 1998) and the Nanuet Mall on approximately 50 acres. The Palisades Center Mall MRS district borders LIO and RS districts between I-287 and SR-59. The code was amended in 1999 to increase the minimum acreage for the MRS district from 30 to 75 acres. Malls located in

RS districts were automatically included in the MRS category, which included only Nanuet Mall. An informal examination for this analysis yielded no undeveloped group of parcels that would be able to meet the minimum lot size for MRS zoning.

Use: The MRS district offers the greatest number of commercial uses as-of-right, going beyond the RS district to include theaters, outdoor markets, convention centers, catering facilities, and research and development (R&D) laboratories. The ZBA may not allow permits for funeral homes in the MRS district, but may permit utility infrastructure, ROW and power lines, parking or recreation in floodplains, and light manufacturing uses. The Town Board is somewhat more constrained than the CS district, with supportive housing, senior housing, small gas stations, theaters, and mini-warehouses not applicable to this zone.

Bulk: The MRS zone has the largest minimum lot requirement by over 65 times the next largest zoning requirement (RS), requiring at least 75 acres. The lot width must be at least 1,300 feet or approximately one-quarter mile. Yard and buffers along neighboring residential districts are greater by 50 percent than along commercial districts. Where neighboring a residential district, the building height is limited to half the front yard width. FAR is 0.5 as with all other shopping districts.

Table 3-5: Commercial – Shopping Zone Bulk Comparison

Bulk	LS	CS	RS	MRS
Minimum				
Lot Size	8,000	10,000	20,000	1,306,000
Width	50	60	80	1,300
Front Yard ^a	25	30	40	40
Total Side Yard ^b	0–15	0–15	50	50
Side Yard – Commercial	0	0	25	25
Side Yard – Residential	25	25	37.5	37.5
Rear Yard – Commercial	25	50	50	50
Rear Yard – Residential	25	50	75	75
Side Buffer – Commercial	5	5	5	0
Side Buffer – Residential	10	10	10	0
Rear Buffer – Commercial	5	10	10	10
Rear Buffer – Residential	10	10	30	30
Maximum				
Height – Commercial neighbor	15+Front	“	“	“
Height – Residential neighbor	15+Front	“	“	15+0.5 Front
FAR	0.5	“	“	“

^a Front yards for LS and CS require a 10-foot buffer if front yard parking is used. RS and MRS districts require additional 15-foot and 20-foot buffers, respectively.

^b Side yards are designed to avoid the creation of alleyways, or narrow roadways, between buildings in commercial areas.

3.2.2 Commercial – Office Uses

These uses differentiate themselves from other commercial uses by omitting retail opportunities other than those associated with providing amenities to employees or tenants of a building or development. In this way the districts are more limited in applicability than the retail uses while also including manufacturing and light industrial uses not included in the shopping zones. Some key issues related to the four shopping districts are noted below.

- While the as-of-right uses in the PO, LO, LIO, and M districts progress in the number of uses allowed, increasing in intensity of use in order, the organization of uses is somewhat irregular. Professional offices and fire/police stations are permitted in all zones, while health clubs are permitted in all but the LO district. A similar irregular assignment is that family recreation and automotive repair are allowed only in LIO. Likewise, manufacturing (all) and contractor storage is allowed only in M. Visual inspection for this study, however, showed that in many cases machine and vehicle repair located in other districts could present safety and aesthetic issues on par with light manufacturing uses.
- There are three categories of cultural centers and social halls for LO, LIO and M districts although they appear to require similar forms of development and infrastructure use.
- The special permits from the ZBA for 10 use types can be organized successively, starting with accessory pharmacies permissible only in PO, to flood plain and utility uses allowed in all districts, to heavier manufacturing and storage uses in M. The Town Board oversees a greater number (21) of special permit types, ranging from senior housing (PO only), to warehouses (LO only), to quarries (M only). Interestingly, family recreation and child care centers are considered part of the LIO district alongside uses of greater intensity such as car washes, hazardous waste shipping, and manufacturing.
- Office uses specified for these districts, illustrated through use descriptions and guided by bulk requirements, limit most development to large-scale, suburban office park designs. This design is successful in many ways but does not contribute to reducing driving, as walking distances from the street – where public transit would likely stop – are often relatively far from the building entrances.
- Shared parking is not addressed for office uses, which currently are most often designed with landscaped barriers between neighboring, often compatible uses. The landscaping can act as barriers that increase driving in local areas.
- Given the variety of various commercial office and light industrial uses that exist and continue to evolve, these zone types are perhaps most suitable for the introduction of form-based zoning elements. These elements would be most appropriate where they encourage a

mix of retail, office, and possibly even residential uses, including opportunities for shared resources such as parking. Industrial uses, such as auto repair, manufacturing, and junkyards, will still need special consideration to protect the health, safety, and welfare of residents.

PO – Professional Office

This district provides areas for professional office services near the hamlet centers and local and community shopping areas with limited types of commercial sales and services. This district is often adjacent to residential areas and serves as a transitional district between commercial and residential areas.

The professional office district is structured to accommodate small scale, low-density commercial activity, office uses in particular. PO districts are distributed throughout Clarkstown and include relatively small parcels of less than one-acre, on average. Key PO zones related to the corridor study include:

- The Nanuet area, west of SR-304 near SR-59, has the greatest amount of land zoned PO, situated around an office park near the intersection with I-287, a bank south of SR-59 and a small collection of lots just north of the corridor at College Avenue.
- There is a pair of small PO districts on SR-304 between SR-59 and New City.
- In Valley Cottage and the Nyack area there are a few scattered small PO districts. Neighboring uses are largely low-density residential. Other neighboring districts include LIO, LS, CS, and the multifamily (MF) zones.

Use: The as-of-right uses unique to the PO district are golf courses or other private clubs and health clubs; each is also allowed in the LO district. Other as-of-right uses include house of worship, public parks, professional offices, and police and fire stations. The ZBA may approve a pharmacy as long as it is in a building having at least 12 medical professionals treating patients. All other as-of-right uses are also found in the shopping districts, including restaurants, places of worship, firehouses, and parks. Senior housing, permitted in most shopping districts, is permitted with Town Board approval. A defining feature may be the limited number of uses allowed even by special permit, which include fewer categories than any commercial or industrial district.

The special permits for PO also include variance types allowed in most zones, including floodplain uses, senior housing, and child care centers. Special permits are also available for and restaurants.

Bulk: Although many uses are similar to those of the commercial shopping districts for commercial-shopping districts, the minimum bulk requirements for PO are higher. At 30,000 square feet, the minimum lots size is about five times smaller than the next district of office uses

(LO). The minimum lot width is greater than all districts in the previous section, but smaller by half from the next largest office zone. Relatively large yard and buffer requirements, combined with the large minimum lots, makes this zone best suited for stand-alone suburban development, translating into very few if any significant increases in traffic or quality of life nuisances. In this way it is closely related to the LO zoning district, suited to low-density office park developments.

LO – Laboratory Office

This district is designed primarily to provide a restrictive district for a group of certain laboratory and office uses in a park-like development. The regulations of the district are intended to ensure not only the compatibility of the district uses with each other, but with adjacent districts.

The LO district is designed to accommodate what is typically known as an “office” or “executive park.” The zoning districts are located primarily along major roadways, in particular SR-303 and SR 59.

- The largest district is north of SR-59 (up to I-287) to the east of the Palisades Interstate Parkway. It includes 144 acres largely facing West Nyack Road and SR-59.
- The next largest is on the east side of SR-303 just north of SR-59 (east of the Tilcon Quarry).
- On the northernmost section of SR-304 there are small districts scattered near the intersection with US-9W. The largest parcel in these zones is approximately 50 acres; the average parcel size is approximately six acres, consistent with the large-lot size described below.

Use: The LO district includes the as-of-right uses allowed in the PO district, as well as research and development, carnivals and circuses, communications switching facilities, and convention halls.

Special permits are not allowed for accessory pharmacies as in the PO district, but the other PO ZBA special permit uses are the same for LO. Public utility right-of-way is included for this group. The Town Board oversees special permit for eight categories of use, notably including nursing homes and warehouses.

Bulk: While the use categories are arranged in order of intensity from PO to LO to LIO, in terms of bulk LO has the greatest minimum lot and yard requirements. Minimum lot size is nearly seven times that of the PO district. Lot width must be greater than 250 feet, or twice that of PO, and yard widths are approximately 100 to 180 percent greater.

LIO – Light Industrial Office

The purpose of the Limited Light Industrial Office District is to permit the development of selected industrial uses on land planned and suited to such uses but at the same time protecting the character of the surrounding residential areas or planned residential areas. Manufacturing operations are to be permitted only if they are incidental or accessory to the primary operation of the plant, or allowed by special permit of the Town Board. This district is planned and intended for industrial land uses characterized by low-land coverage, with large year-round landscaped setbacks for protection of residential areas, attractive building designs, and developing an industrial park-like setting.

The LIO district, offering higher intensity uses less appropriate for residential areas (manufacturing and product assembly, storage, car repair), accounts for a majority of the parcels included in this study; most of the LIO districts in Clarkstown fall within the current study area. The parcel data base lists 195 parcels in or largely within these districts, covering a total of approximately 683 acres (less approximately 42 acres used for parks).

- In Nanuet, an LIO zone is located to the north of the intersection of West Nyack Road and SR-304, encompassing about 100 acres and abutting I-287. This zone is near to an LIO district to the east of the SR-304 intersection with SR-59.
- In West Nyack two LIO districts are placed on either side of the MRS district (Palisades Center Mall), around the intersection of SR-59 and West Nyack Road, and on the west side of the SR-59/SR-303 interchange.
- In Valley Cottage, between SR-303 and the West Shore railway near Executive Boulevard, a LIO zone includes nearly 90 acres of land.
- The largest zone is located in Congers near the intersection of SR-303 and US-9W. Also known as a “technology corridor” this zone includes nearly 190 acres. The area also includes LO districts, some community shopping but is otherwise surrounded by park and residential zoning.

Use: The LIO district represents a significant shift to industrial uses in the Town code, advancing beyond the LO district to include greater commercial and industrial intensity that has greater potential to conflict with neighboring residential and small scale commercial activity. As-of-right uses in the LO district are disallowed, including golf courses, yacht clubs, religious facilities, and parks. Additional allowed uses beyond general office uses include semi-high-tech manufacturing activities (e.g., electrical production), industrial education, warehousing, car dealerships, newspaper printing, tennis clubs, and car repair.

Like LO, the ZBA for LIO districts may permit utility, railroad, sandpits, and floodplain uses, as well as child daycare centers. Unlike LO, special permits from the ZBA for restaurant uses are not

permitted in the LIO district. Also, the ZBA may permit utility power plants and substations. The Town Board oversees special permits for manufacturing uses, outdoor family recreation, gas stations and car washes, mini-warehouses, recycling facilities, and hazardous waste shipping.

Bulk: Like the LO and M districts, the LIO zones require relatively large lots for new developments, at 100,000 square feet (2.3 acres). Side and front yards minimums are reduced slightly from the LO district, although still greater than the PO district. This would result in greater lot coverage, although the FAR is still 0.40. In addition to buildings closer to lot lines, the space can also be used for equipment and vehicle storage, or similar outdoor activities. In general on the minimum lot size a two-story building of 150 feet by 130 feet would potentially meet the maximum bulk requirements.

M – Manufacturing

This district permits the full range of office, manufacturing, storage, and related uses, subject to performance standards and screening provisions, on sites which are adjacent to major regional roadways, causing a minimum of disruption to the residential activities of the community, while serving the economy of the town and region.

Two manufacturing districts are located within the study corridor, and two smaller districts are near but outside the SR-59 study corridor. Together the M districts cover approximately 520 acres and 68 parcels.

- The largest district, located in West Nyack to the north of I-287 and also south of SR-59 between SR-303 and the West Shore rail line, includes over 300 acres. Nearby or bordering uses include MRS, RS, LO, R-40, and R-160 (conservation). Both of these districts include quarries (gravel and sand) that are operated by Tilcon New York, Inc.
- North of Congers near the intersection of SR-303 and SR-304 is another M district covering approximately 150 acres. Other nearby land is zoned for low-density residential or open space conservation. US-9W connects the M district to the “technology corridor” less than one-mile away, and New City commercial districts are just over two miles south on SR-304.

Use: The manufacturing district is distinguished by a greater number of industrial uses allowed by special permit from either the ZBA or the Town Board. The manufacturing district allows two as-of-right uses not included in LIO: manufacturing uses and storage for construction contracting (for up to two years). While these uses can require considerable space and can involve activities disruptive to residential areas, two uses in LIO are not allowed in manufacturing districts as-of-right: family recreation and car repair shops. The ZBA can approve additional high-intensity uses not allowed in LIO, including concrete mixing, bulk fuel storage, dog kennels, and amusement parks. The Town Board may permit the same uses as in LIO plus quarries, incinerators, heliports, and trailer camps (residential).

Bulk: Minimum lot sizes are slightly less than the LIO district. The minimum lot size is over one-acre, or 60,000 square feet. Setbacks are less by approximately 40 percent. Based on tax lot recordings, actual parcel sizes for the M districts are larger, on average, than those in other districts in this section.

3.2.3 Residential Districts

Residential districts in this Corridor Study include any medium- or high-density residential district, including MF-1, MF-2, MF-3, RG-1, RG-2, and R-10. Key issues in the residential districts are listed below, followed by a summary of each medium-to-high-density residential district zoning text.

- Given that the R-10 zone is primarily located and intended to be near commercial areas, there is some overlap in use and bulk with the Hamlet Center zones.
- The differences in bulk guidelines between the RG-1, RG-2, and MF-3 districts are minimal (by approximately three one-bedroom apartments per acre) and have some overlap. The bulk guidelines also overlap with some provisions for the Hamlet Center Overlay districts.
- As the R-10 district is intended to encourage medium-density new or infill development, the minimum lot size (for example 50 feet by 200 feet), side and front yard requirements, as well as the relatively low FAR, may pose an impediment to desired density of neighborhood structures and integration with commercial districts or Hamlet Centers.
- The multifamily zones, in particular MF districts, allow for housing developments with only one entry or exit point for automobiles. The zoning text provides little guidance on the design of medium-density residential developments with the neighboring areas in a way that encourages safety, reduces automobile miles traveled, and access to modes other than the automobile. In addition, the bulk guidelines set the residential developments back off the main road with parking in front, creating a detached street environment with little safe pedestrian access.
- There are opportunities for shared parking spaces as well as parking circulation routes, given the proximity of the residential and complementary non-residential developments.
- Natural resource or industrial uses such as gravel pits are not allowed in MF, but are, by special permit, in the R-10, RG-1, and RG-2 districts. This could create the potential for neighboring uses that threaten the health, safety, and welfare of nearby residents.
- In MF and RG districts, the prohibition of low-intensity non-residential services can restrict the flexibility to meet market demands, should they arise, even though some non-residential uses may be complementary to the neighborhood residential uses. Examples include home offices and day care, which are currently excluded. These uses are allowed by special permit in R 10.
- Some uses such as nursing homes, agency boarding homes and senior housing are required to obtain a special permit in R-10, RG-1, and RG-2 zones, and are not addressed in MF

districts. It is unclear what performance-based issues are addressed through the Town Board permitting process.

- In RG-1 and RG-2, two-family residences are listed as both as-of-right and requiring special permit by the Town Board, creating some confusion.

Multifamily: MF-1, MF-2, MF-3

MF-1, MF-2, and MF-3 Zones are established in order to provide additional housing opportunities in attached housing developments. These zones are designed for areas which can provide local services necessary to support relatively intensive housing development and where such developments will be compatible with the existing scale of development. As such, these zones are intended to be located in the dense portions of the town's hamlets.

The multifamily districts are located in each of the study corridors except SR-59 East. The districts cover approximately 200 acres of property in Clarkstown. Parcels included in the districts typically contain a number of apartment buildings or attached townhouse-style structures. Key multifamily areas include:

Table 3-8: Clarkstown Multifamily Residential Developments

Corridor	Hamlet	Development Name
SR-59 West	Nanuet	Sussex at Gramercy Park
	Nanuet	Normandy Village
	Nanuet	Nanuet Train Station
SR-304	Bardonia	Village Green
	Bardonia	Monterrey Gardens
	Bardonia	I' Ambiance
	Bardonia	Braemar
SR-303	Valley Cottage	Burgundy Gardens
	Valley Cottage	Brookridge Condominiums
	Congers	Hidden Valley
	Congers	Cedar Grove Corners
US-9W	Valley Cottage	Cozzis (cabins)
	Congers	Northgate Commons
	Congers	Bridgewaters II
	Congers	Miller's Landing
	Congers	Long Clove Mews
	Congers	Mountain Shadows

Use: MF zones are unique in that they exclude single family detached residences, allowing only multifamily units, either rental or owned in cooperative or condominium structures. Also allowed as of right are religious facilities, public parks, and buildings for public safety services.

The special permits in the MF zones can be obtained for public utilities, floodplain uses, day-care facilities, and senior housing.

Bulk: The MF-1 district allows the largest units with a density ranging from 7.9 studios per acre to just four three-bedroom units per acre. The MF-3 district allows the most dense developments, ranging from 18.1 studios per acre to 12.1 three-bedroom units per acre. MF and RG zones require the same minimum lot size of just under one-acre. The minimum width and rear yard requirements are equal at 150 and 50 feet respectively. The MF front yard minimum is half of the RG district requirement at 25 feet, while the side yards must be greater than 50-feet wide (the RG side yard requirement is 30 feet). All buildings must be no greater than 35-feet tall.

Multifamily: RG-1, RG-2

The RG-1 district permits condominium and cooperative garden apartment developments at a relatively low-density for multifamily housing; it also provides for rental-type garden apartments by special permit of the Town Board. This district provides for widest range of housing types for new construction.

The RG-2 district permits all types of garden apartments at what is considered a medium density for multifamily housing; it also allows other housing types. As mapped, this district coincides almost entirely with existing or committed garden apartment developments.

Use: The RG-1 and RG-2 districts both allow single- and two-family detached homes, making them less restrictive than the MF districts for low-density residential uses. The two zones are differentiated by the ownership structures of multifamily housing allowed. Only condominium type garden apartments are allowed in the RG-1 district as of right, while rental or cooperative type garden apartments are allowed by special permit from the Town Board. The RG-2 district allows only rental or cooperative-type garden apartments, excluding condominium ownership structure.

Bulk: The minimum lot area is 40,000 square feet. The RG-1 district allows less residential density than the RG-2 district. The RG-1 district ranges from 17.4 studios per acre to 9.1 three-bedroom units per acre, placing it approximately between the MF-2 and MF-3 zones in terms of density. The RG-2 allows the smallest unit sizes of any multifamily residential zone, ranging from 21.8 studios per acre to 10.9 three-bedroom units per acre.

As in MF districts, RG zones require the same minimum lot size of just under one-acre. The minimum width and rear yard requirements are equal at 150 and 50 feet respectively. The RG

district front yard requirement is 50 feet, while the side yard requirement is only 30 feet. All buildings must be no greater than 35 feet.

High-Density Residential: R-10

The R-10 district permits the highest density of single-family detached housing and therefore is mapped close to the commercial facilities of the hamlet centers and for the most part reflects the existing residential character of the development.

Use: More types and intensities of use are allowed than other residential districts, though a key element is the restriction of residential units to detached single-family units and two-family townhomes or duplex units. The zone allows for neighborhood uses such as libraries, community centers, family day care, home offices (by special permit), and medical care that are not allowed in other dense residential zoning districts.

Bulk: The R-10 district allows for smaller scale lot sizes of approximately one-quarter acre. The yard requirements are nearly the same as the MF- and RG- districts, leading to fewer units per acre than other zones. Building heights per inch of setback are greater than other multifamily districts at 11 inches, and the FAR is half of the MF and RG zones, at 0.25.

Key Issues: 1) Given that this zone is primarily located and intended to be near commercial areas, the zone is likely to be redundant given the Hamlet Center districts recently drafted by the County. 2) If the R-10 district is to be used to encourage medium-density new or infill development, the minimum lot size (an example plan is 50 feet by 200 feet), side and front yard requirements, as well as the relatively low FAR, may pose an impediment to desired density of neighborhood structures and integration with less restrictive bulk requirements of commercial districts or Hamlet Centers.

3.2.4 Other Zoning Districts

Other zoning districts in Clarkstown include the Active Adult Residence zoning district, the SR-304 Special District, Hamlet Center Overlays, and the Planned Economic Development District (PED). The SR-304 Special District permit is requested by the Clarkstown Planning Board and applies to residential properties fronting SR-304. The Town Board oversees permits for the other three districts.

AAR – Active Adult Residence

The AAR Zone is a floating zone, unmapped at initial adoption, and created by amendment to the Town's Zoning Map by the Town Board.

Use: AAR must be proximate to public transportation, shopping, community, and commercial services. The district is not permitted in areas zoned R-160, R 80, R-40, MRS, RS, PED, or M, and if used over a non-residential parcel, the neighboring zones must also be eligible for the AAR overlay. All residents must be over the age of 55 unless certified as a caregiver to residents. No children (under 18 years old) are allowed to live in the zoned development.

Bulk: The minimum lot size is three acres, and consolidating individual parcels to meet this requirement is not allowed. The floating zone affords land owners the ability to increase density on the property above the limits set by the underlying zoning. For residential zones, the density may increase by 100 percent if 20 percent of units are affordable. For MF zones, the density may increase by 20 percent if 25 percent of the units are affordable. For commercial zones, the bulk requirements of the abutting residential parcel with the greatest shared border are used.

Maximum lot coverage is 75 percent, not including pervious pavers. The front lot line minimum is 300 feet. Buildings may not be higher than 45 feet, and a maximum of 50 units are allowed per building.

The total aggregate number of units allowable in AAR Zones established pursuant to this section shall be no more than 800, of which no more than 15 percent shall constitute three-bedroom units (restrictions can be appealed to the Town Board).

SR-304 Special Permit

The SR-304 Special Permit is located north of I-287 and south of New City on SR-304. It applies to residentially zoned lots that front the roadway. Applications are reviewed by the Town Board. The applications of the special permits, and the timeframe allowed are fairly limited.

Use: The uses allowed include professional and business offices that traditionally serve residential areas such as physicians, dentists, psychotherapists, physical therapists, counselors, attorneys, accountants, contractors, real estate, and insurance sales. In general the uses should not create a nuisance to residential uses, and accessory effects such as signs and parking are restricted. The permit only applies to pre-existing buildings.

Bulk: The permit does not change bulk regulations of the underlying district.

Hamlet Centers

The three Hamlet Center zoning overlays were created to allow for “downtown” or “town center” type uses in existing villages in New City, Congers, and Valley Cottage. The West Nyack Hamlet Center zoning is currently being developed. The provisions add limited mixed use and additional density (residential over retail), as well as architectural and site design requirements that create cohesiveness in neighborhood character, accessible and safe pedestrian experience, and limit vehicular conflicts. New construction must be approved by the Town Board and the Architecture and Landscape Commission (ALC); renovations must be approved by the ALC.

The New City Hamlet Center was based on a neighborhood visioning exercise to incorporate community comments and has the most extensive design restrictions and guidelines. The overlay district is currently being reconfigured with permanent zoning districts that better match the unique range of uses and architectural styles of the neighborhood. The four Hamlet Center zoning districts are being created in a way that can apply to other Hamlet Centers.

While the Hamlet Centers are not included in the current study areas the use and bulk provisions can provide a model for future changes in zoning districts along Clarkstown’s state corridors. Most applicable are regulations that allow for mixed uses, site design that can help reduce automobile trips, shared parking, shared parking access points, and safe and accessible pedestrian environment.

PED District

Planned Economic Development (PED) districts are overseen by the Town Board. Only land zoned LO, LIO, or M can be rezoned to PED. The land must include a minimum of 50 contiguous acres owned by one party or under joint ownership. The applicant must submit an overall master plan and meet the bulk regulations below. Clarkstown has only one PED district, which contains a Lowe's hardware store, a Costco wholesale retailer, and several office and warehouse buildings. The district is located north of Spring Valley Marketplace and the interchange between I-87 and SR-59 in Nanuet, along Overlook Boulevard east of New Clarkstown Road. There are no other requests for rezoning to PED on record by the Town Board.

Table 3-11: PED District Bulk Restrictions

Measure	Value
Maximum FAR for all structures	0.40
Maximum FAR for all commercial uses	0.10
Maximum FAR for retail uses	0.40
Maximum height for all structures	48 feet (approximately four stories)
Minimum buffer for district	100 feet
Parking	Allowed in buffer >50 feet from residence >20 feet from major/secondary road
Retail uses	
Minimum lot area	4 acres
Minimum lot width	220 feet
Minimum front yard	80 feet
Minimum side yard	60 feet (90 feet by residential district)
Minimum rear yard	50 feet

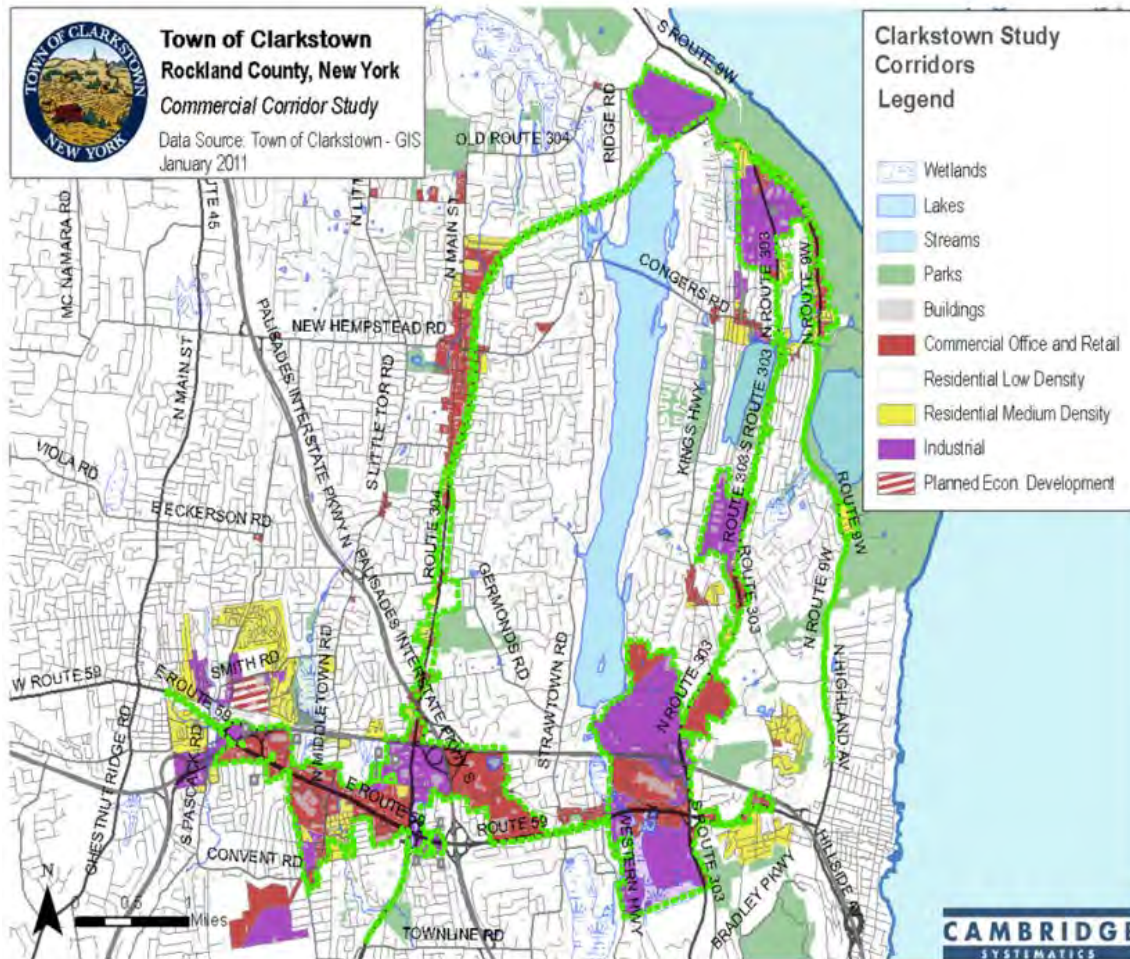

3.3 Existing Corridor Analysis

A region's transportation corridors have a great influence on the land use that develops around them, and vice versa. Thus, it was key to evaluate the existing conditions of the study corridors to ensure future land use of Clarkstown is in line with the needs of residents and businesses in the study area. The following section describes each of the study corridors in detail, including an analysis of the zoning types and geographic distribution as well as total land coverage and the number of parcels included under each land-use zone. The description also includes activity nodes that may be related to the consolidation of infrastructure use, such as parking. Parking area was determined from a GIS shapefile, created by Clarkstown, that denotes parking areas using satellite photographs of the Town from the year 2000.

Figure 3-1: Key Transportation Corridors

Figure 3-2: Project Study Area(L) and Key Transportation Corridors (R)

The following five development areas were chosen to maximize the impacts of harmonizing land use and transportation interventions: US-9W, SR- 303, SR-304, US-59E, and US-59W (including the Nanuet Hamlet Center).

3.3.1 U.S.-9W

Most of the parcels included in the US-9W corridor are located north of Rockland Lake (aka Lake Road or SR-80). An area zoned MF-1 is located just south of the lake (near George Street) contains 22 parcels and approximately 18 acres. To the north a mix of zones cover either side of the route. The most common zoning district is LIO, consistent with the “technology corridor” goal discussed in the Clarkstown Comprehensive Plan for this area. The northern portion also contains zoning districts for multifamily housing (MF-1, MF-2, MF-3). Three of the residential zones are clustered between Randi Lane to the north and Lake Road to the south and are interspersed with RS districts. The RS district continues north along the corridor until Foltim Way and the Mountain Shadow Town Homes which occupy the eastern side of the corridor for

approximately one-half-mile. The end of the corridor includes two separated LO districts, a parcel zoned MF-2 on the west side, and two parcels zoned RS.

The corridor has approximately 24 acres of parking lots, or 21 percent of the study area. The largest lots are located on parcels used for industrial/warehouse, car repair shops and other industrial office uses. Other parking surfaces are found between and along multifamily residential complexes.

Table 3-12: US-9W Zoning District Distribution

District	Number of Parcels	Acres Zoned in Tax Lots	Percent of Total Acres
LO	2	1	1%
MF-1	50	22	20%
MF-2	166	27	24%
MF-3	48	7	7%
RS	51	56	49%
Total	317	113	-

Note: Totals may not match due to rounding.

Parking

Key parking issues on US-9W include overflow parking on the roadway shoulder and lack of shared parking between neighboring office parks. The roadway shoulders are used by auto repair businesses clustered just north of Lakewood Drive in Congers. Based on informal counts of cars located in parking lots at different times of day, it appears that the cars are being stored pending repair work and are possibly moved onto the roadway during the day to make room for normal operations. Town of Clarkstown staff have also noted that parking on the roadway shoulder occurs on weekends near entrances to Rockland Lake State Park; using the Park lots costs eight dollars per vehicle.

Shared parking is evident along Foltim Way, which is essentially a road linking parking lots of the Long Clove Mews and Mountain Shadows Apartments multifamily housing developments. Other shared parking opportunities may exist south of Lakewood Drive in Congers (Frank J Tueck and Son, Pro Build, Belleville Landscaping) and in the auto repair area described above.

Activity Centers

As noted above, a key activity center is the auto repair cluster located just north of Lakewood Drive in Congers. Based on informal car counts, these businesses continue to draw customers and possibly benefit from nearby related to uses to access specialized skills and balance workloads. Rockland Lake State Park is very active on weekends and some evenings after work for recreational uses, creating moderate traffic at signalized access points. A group of light industrial and office structures are

located to the north near the intersection with SR-303 (Ashland industries, fireplaces plus, Aktina Corp.). The route also is home to several multifamily housing clusters, located just south of the intersection with SR-303 (Long Clove Mews, Mountain Shadows), south of Dr. Davies Road at Patrick's Place/Tuxedo Lane (Bridgewaters II, Miller's Landing), and an MF zone with detached homes south of Rockland Lake on Achison, Smith and High Streets.

Land-Use Zoning Comparison

Activities and uses in the US-9W corridor are a mix of light industrial, residential and offices. Industrial uses may abut residential areas, such as 126 North Route 9W, approximately 500 feet north of Lakewood Drive, where a home appears to have vehicles and vehicle parts stored in the side and rear yards.

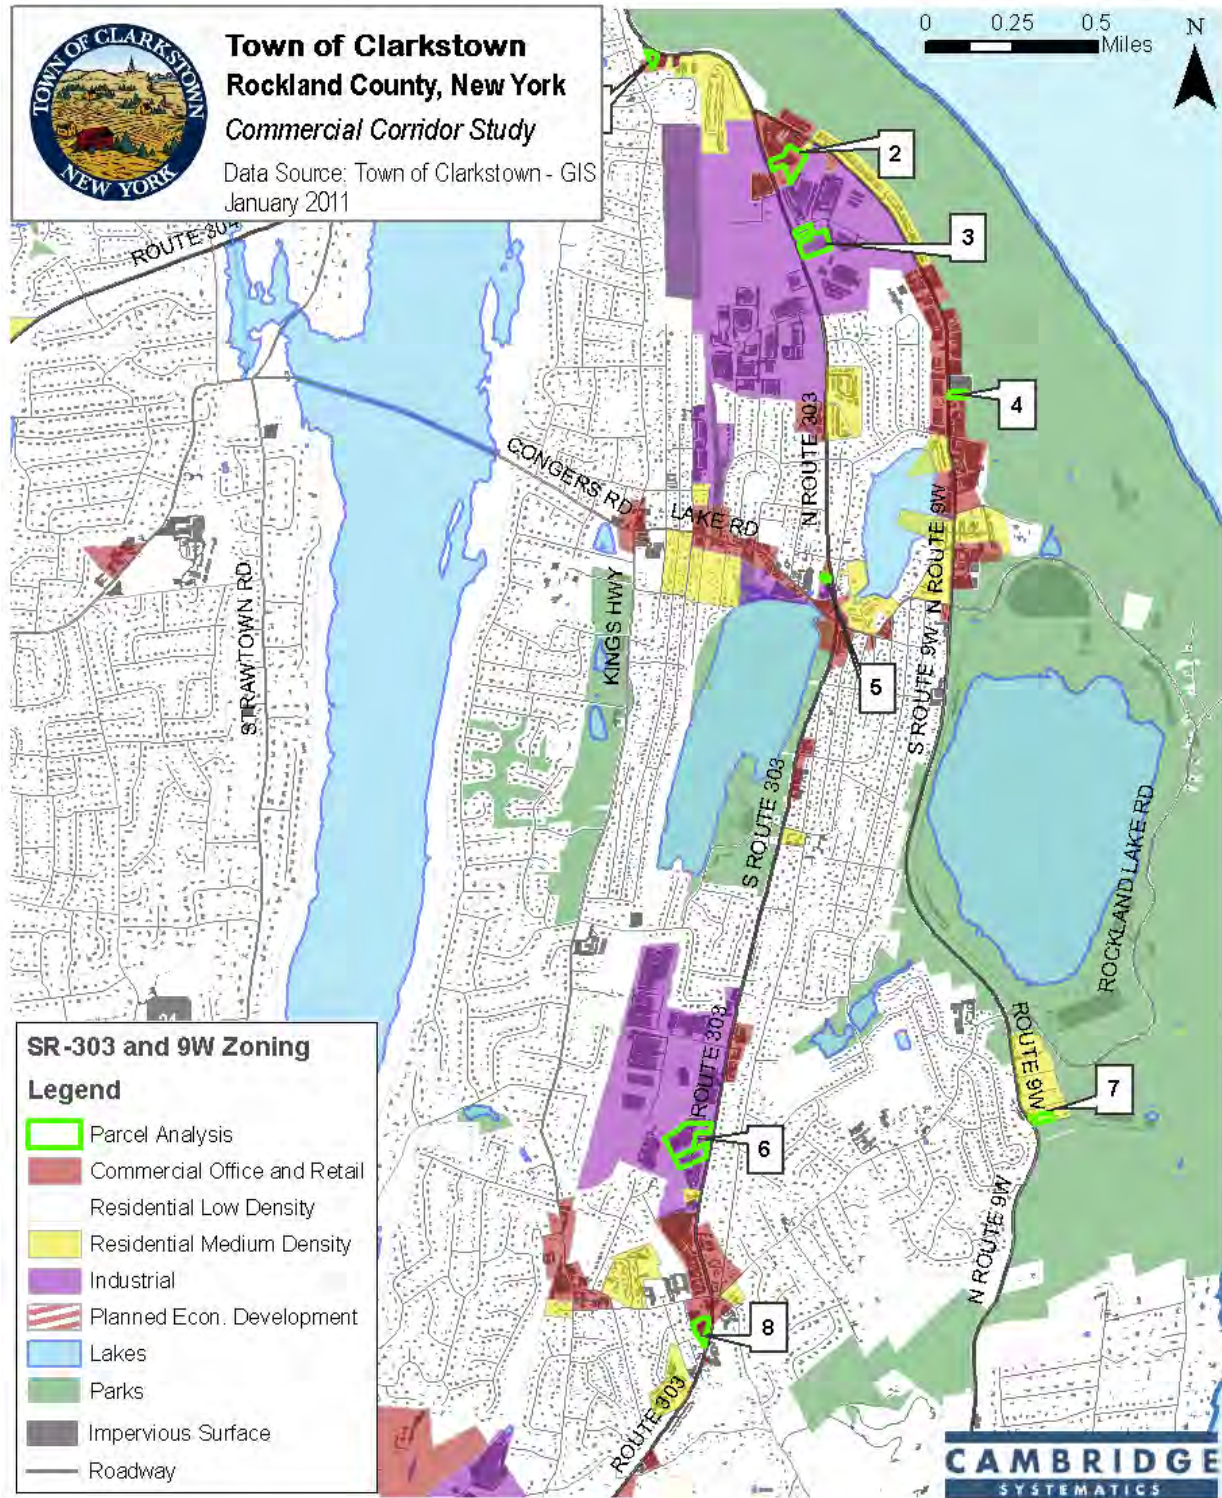

One lot north of this location (128 North Route 9W) contains a trucking office and warehouse-type facility located in an RS zone that covers this portion of the corridor (see #4 on map). Trucking facilities are not expressly noted in the zoning code, but visual inspection shows the use is a warehouse and / or professional office that is compatible with the area.

An R-160, or conservation zone, is located one parcel to the north (142 North Route 9W). The land-use activity is automobile and other vehicle repair and storage. This use is not permitted on lots zoned R-160 but is permitted in the RS district that surrounds this parcel.

South of Lake Road/ Rockland Lake Road is an MF-1 district with parcel-level land uses that is partially non-conforming with the zoning code (see #7 on map). Although details on the unit sizes was not available, the number of homes in the 1.3-acre northernmost parcel (757-771 Route 9W) appear to exceed the per-acre limit. One parcel – which was unmapped in the Town dataset – between 751 and 741 Route 9W, holds 12 units on approximately 1.2 acres. However, the small-scale residential use appears consistent with neighboring uses.

A key issue for this entire zone is access management and pedestrian pathways. The small driveways on a relatively narrow corner with abundant vegetation creates a safety concern for pedestrians, motorists, and residents. A bus stop is marked approximately one-quarter mile to the north, but has no sidewalk, lighting or shelter available.

Figure 3-3: Existing Zoning Map US-9W and SR-303 Corridors

3.3.2 SR-303

While the corridor spans from the intersection with US-9W to the SR-59 area, the non-residential study areas are located in two segments at either end of the corridor, with a few higher density zones distributed in the center section near Congers Lake. By acreage, over two-thirds of the area is zoned LIO, primarily on two groups of adjacent parcels. The next largest zone by acres is CS, with zones interspersed along the route on parcels with direct access to the corridor. One group is near the intersection with (New) Lake Road in Valley Cottage and others near the intersection with Executive Boulevard, SR-80, and Sherwood Road. The northern portion also has a RS zone near the intersection with US-9W.

Table 3-13: SR-303 Zoning District Distribution

District	Number of Parcels	Acres Zoned in Tax Lots	Percent of Total Acres
RS	2	4	1%
CS	27	37	9%
LS	7	8	2%
PO	9	7	2%
LIO	69	277	71%
LO	8	4	1%
MF-1	47	13	3%
MF-2	111	18	5%
MF-3	25	12	3%
RG-1	57	9	2%
AAR	3	1	0%
Total	371	396	-

Note: Totals may not match due to rounding.

Parking

This corridor includes approximately 73 acres of parking, or nearly 20 percent of the total acreage. The parking lots are distributed throughout the corridor, typically surrounding office and manufacturing uses that populate the northern and southern portions. There appears to be little to no shared parking areas. Given the suburban, separated position of buildings and parking along the SR-303 corridor, there are opportunities to consolidate driveways and create shared parking. However, given the similar nature of many retail and office facilities, and the lack of non-automobile transportation modes to these locations, reducing parking may be less feasible than other corridors.

Activity Centers

SR-303 is a major route for Clarkstown shopping and working, in addition to access to medium density residential neighborhoods. Auto repair shops such as the aptly named Route 303 Auto Repair attract many customers based on an informal parking survey and require a significant amount of land. Mini Malls (A&P Market and shops, Congers Mini Mall) attract customers throughout the day for a variety of retail activities. The intersection of CR-80/Lake Road is a key signalized traffic point, surrounded by multiple small-scale retail and office uses. Finally, large office parks are located on the northern end of the study corridor near Brenner Drive housing a range of office and light industrial activities, (Arc of Rockland, Technical Traffic Consultants, Naeva Geophysics, Intercos America) as well as at the midpoint of the corridor on Executive Drive, housing a variety of office and warehouse distribution services (Project Rainbow, Vinten Camera Equipment, Les Pooches Fragrances).

Land-Use Zoning Comparison

This corridor had four areas identified during the land-use and zoning analysis. One is a baseball field at Hemlock Drive, across from a multiuse professional office complex in an LIO zone (see #3 on Figure 3-3). While outdoor recreation is not expressly permitted, the use is consistent with indoor recreation facilities (tennis, health clubs) that are allowed as-of-right. It may have been approved through special permit as a floodplain use (“open recreation in landscaped areas”).

Another parcel is located near the intersection with gW and appears to be an outdoor storage and warehousing facility, located in an LS district (see #1 on Figure 3-3). The neighboring uses to the north are similar but are zoned RS, where wholesale sales and storage warehouses are permitted, as well as light manufacturing by special permit. To the south in an LIO district is the Hemlock Park office area, which allows warehousing and manufacturing as well. Across SR-303 in an LS zone is a small shopping center with miscellaneous retail and services.

Just north of the intersection with Lake Road/CR-80 and south of Fisher Road in Congers is a small two-story apartment building located in an area zoned LS (25 N Route 303; see #5 on Figure 3-3). While multifamily dwellings are not permitted in the Town Code, the neighboring uses do not suggest a conflict. The LS zone is bordered to the south by an LIO zone, becoming a CS zone nearer the intersection. To the north is low-density housing screened from the corridor. The LS zone currently has four parcels, each residential in form, one of which may be occupied by a low-density commercial business. The LIO district contains an automobile repair shop that does not appear to meet the design requirements provided in the Code regarding screening and rear-yard parking. The CS zone is primarily retail and food service with large parking and drive-through areas.

A group of parcels approximately one-half-mile from Lake Road in Valley Cottage were flagged during the analysis because the “trucking” activity is not specifically denoted in the zoning code for LIO (see #6 on Figure 3-3). While the northernmost parcel of this group appears to be warehousing – a permitted use – the house located on SR-303 (173 Route 303) appears to be a

commercial office – a permitted use – with outdoor vehicle storage and repair in the side and rear yards. This trucking/shipping related use may warrant further review to measure the effects on traffic from the small driveway, as well as quality of life and environmental issues arising from its location near a R-22 zone.

Approximately one-quarter-mile south of Lake Road in Valley Cottage near to the Valley Cottage Library is a parcel in a CS district with a construction supply warehouse and sales location (see #8 on map). Storage and warehousing is not permitted in CS districts, but the use appears to be compatible with the relatively undeveloped portion of the corridor and is of low intensity.

One lot to the south (46 Brookside Ave) on SR-303 is an automobile repair shop, located in an R-15 zone. Although this analysis didn't include low-density residential zones, this parcel is notably commercial/industrial in use. The business does not conform to design requirements of repair businesses in other zones (screening, parking in rear of lot).

3.3.3 SR-304

The SR-304 study corridor is made of two areas of development separated by approximately four miles of roadway. The south study area is a 1.8-mile segment located between the Palisades Interstate Parkway and the intersection with South Main Street leading near New City.¹ The second area is near the town border to the north of SR-304 and near its intersection with US-9W and Old Haverstraw Road.

The southern segment is characterized by medium density single-family residential zones that either match or transition to the low-density residential zoning that makes up the surrounding areas of the Town. The residential land along SR-304 in this area is part of the SR-304 Special Permit area described in section 3.1 above, allowing some commercial uses in residential zones. Approximately one-third of the land in this area abutting the highway is zoned for medium density single family housing R-22. Approximately one-fifth of the acreage is zoned for multifamily housing in five relatively large developments (some areas include multiple parcels assembled for development, reflected in the parcel count below). Only eight of the 85 parcels qualified for the special permit have used the provision.

The corridor includes two areas of LS zoning, one near the intersection with the Parkway and the other at the intersection with Germonds Road. PO zoning is also located along the Route, to the south near the southern corner of Germonds Park, a second near the LS district on Germonds Road, and on either side of SR-304 at the northern tip of the segment. The northern segment near 9W is zoned M and is surrounded by low-density residential districts (R-40, R-22, R-80, R-160), with nearby connections to the SR-303 and 9W corridors discussed below.

¹ The New City land use plan and Hamlet Center zoning code will be discussed under a succeeding report.

Table 3-14: SR-304 Zoning District Distribution

District	Number of Parcels	Acres Zoned in Tax Lots	Percent of Total Acres
LS	18	10	4%
M	10	155	57%
MF-1	31	4	1%
MF-2	2	2	1%
MF-3	4	19	7%
PO	18	14	5%
R-15	49	26	10%
R-22	33	40	15%
Total	165	269	-

Note: Totals may not match due to rounding.

Parking

Parking in this corridor covers the least amount of land and the lowest percentage of total land area in the corridor, at 26.84 acres and 10 percent respectively. The corridor is largely residential in nature in the southern portion, with parking use highest on commercially zoned property; multifamily uses have relatively modest parking coverage and additional open space requirements. There appears to be no shared parking in use.

Activity Centers

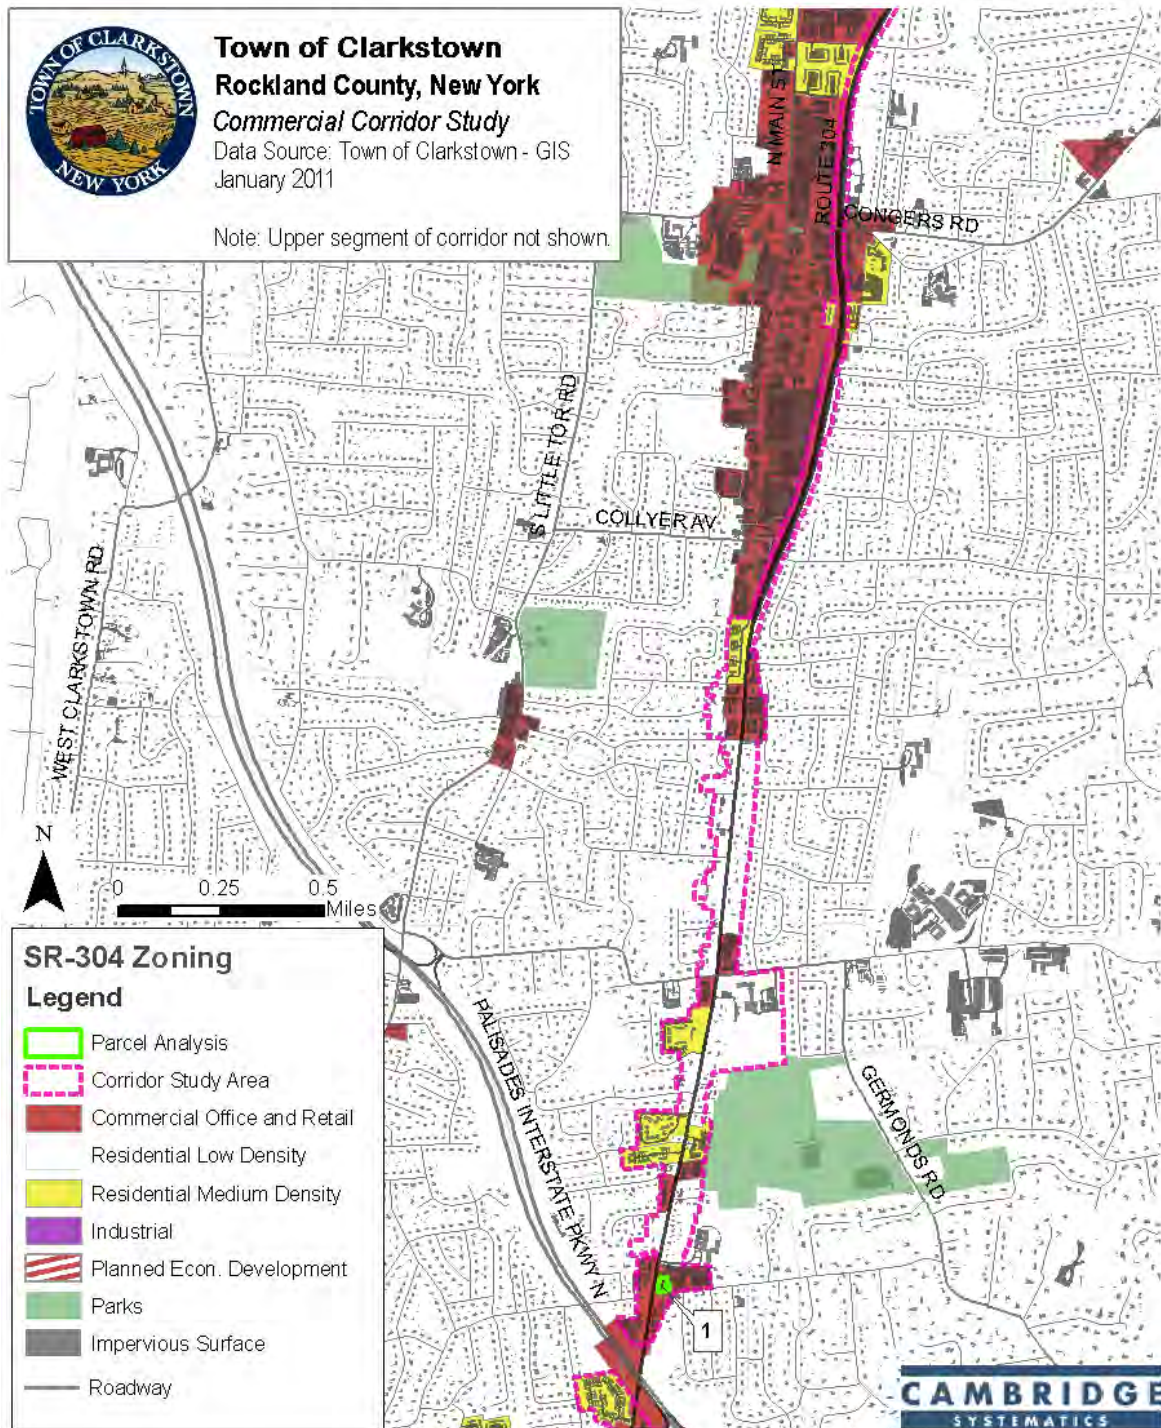

While a busy corridor, SR-304 has fewer direct commercial and high-density activity centers than other major roadways in Clarkstown. The intersection with Main Street – an access point to New City – is a key intersection throughout the day. Medical offices at Johnsons Lane just south of this intersection attract some day-time customers and employees. Germonds Road in Bardonia is a key intersection with SR-304, providing access to Albertus Magnus High School, a small retail area and a small office building. At the intersection with Bardonia Road, a diverse mix of small-scale office and retail facilities are located along each roadway, with some shared parking access points.

Land-Use Zoning Comparison

The SR-304 Corridor has two adjoining parcels that stood out in the zoning and land use analysis, located at the intersection with Bardonia Road in Bardonia (see #1 on Figure 3-4). The area is zoned LS. The corner lot is occupied by a gasoline service station that is not expressly permitted in this zone. The abutting lot to the east on Bardonia Road (17 Bardonia Road) appears to be occupied by a two story apartment building. Apartments are also not permitted in LS zones and do not appear to have complementary uses in the area. Given that neighboring parcels are occupied by office and retail uses, the residential use appears to be less in character with the area.

This corridor also has a special permit that allows low-intensity office uses in low-density residential zones located on SR-304 (see zoning description above). There are eight parcels that have commercial activities in R-15 zones on SR-304, and all appear to conform to the special district regulations and do not appear incompatible with the largely residential uses on this corridor.

Figure 3-4: Existing Zoning Map SR-304 Corridor

3.3.4 SR-59 East (West Nyack)

The eastern portion of the SR-59 study corridor is zoned primarily for industrial uses, 71 percent includes M, LIO, and LO zones. This share can be largely attributed to the quarry, which accounts for approximately one-third of the total acreage of industrial districts. The quarry is surrounded by manufacturing zones to the west and north, with a LO zone adjacent to the north and abutting SR-303 to the west. Industrial/manufacturing zones also cover land, approximately 85 acres, next to or near the Clarkstown Municipal Waste Facility located south of SR-59 between Western Highway and SR-303.

Zoning for commercial and shopping uses in this corridor is situated around SR-59, with a large share of the acreage attributable to the Palisades Center Mall (approximately 115 acres) and composed of an MRS district with RS district covering land on the north and south sides of SR-59. An RS zone also is located on the east side of SR-303 from SR-59 south to the Town border. Continuing east of SR-303 on SR-59 there are RS and CS zones with LO zones on the east and west sides.

Table 3-15: SR-59 East Zoning District Distribution

District	Number of Parcels	Acres Zoned in Tax Lots	Percent of Total Acres
CS	18	14	1%
RS	50	75	7%
MRS	7	101	10%
LIO	21	42	4%
LO	17	132	12%
M	58	689	65%
Total	171	1,052	-

Note: Totals may not match due to rounding.

Parking

Approximately 21 percent or 145 acres of the land included in the eastern SR-59 corridor is covered by parking lots. The majority of parking surrounds the Palisades Center Mall (61 acres), while other large lots are located in a manufacturing and warehouse area on the west side of the Town landfill (10 acres) as well as on otherwise vacant property on the east side of the landfill (9.6 acres). Parking areas and access to SR-59 near the Comfort Inn Suites, south of Palisades Center Mall, and in West Nyack appear to pose risks to driver and pedestrian safety that should be addressed.

Activity Centers

The major activity center in the east SR-59 corridor is the Palisades Center Mall at the intersection of SR-303. The Mall is located in the only MRS zone in the Town, allowing for intense commercial activity with a variety of retail uses, high-traffic and large-scale surface parking. A large quarry is located just north of the mall occupying slightly more acreage than the shopping center. South of the mall a manufacturing zone is occupied by the Clarkstown landfill, with light industrial and automotive uses on either side.

Land-Use Zoning Comparison

There were five parcels identified in this corridor during the land use and zoning analysis (illustrated in Figure 3-5).

There are three parcels located between SR-59 and Palisades Center Drive, just north of Cemetery Lane. The westernmost lot (see #1 on Figure 3-5) is located in an LIO zone. The past use, which is now out of date, was a bank; today the parcel is occupied by what appear to be light industrial construction storage or office uses. This is a permitted use in LIO, but the area is of note because the land uses appear to be unrelated to the major retail activity in Palisades Center Mall, the Shop Rite grocery store, and other businesses on SR-59.

In general it appears that the RS zone on the south side of SR-59, across from the Palisades Center Mall, serves more light industrial purposes than retail. The current uses of the RS district, however, do not impede general repair and warehousing uses in place. Of particular note is a parcel located behind the Dunkin Donuts restaurant on SR-59 (see #2 on Figure 3-5). This parcel is split by an M district and the current use appears to be related to the quarry and landfill to the south.

The Palisades Audi auto dealership – on SR-59 and Chestnut Street (see #3 on Figure 3-5) – is a permitted use for the CS district it is located in. However, the code states that installation of equipment, which appears to be done in the maintenance bays on the parcel, are not allowed on a parcel abutting a residential zone; the parcel abuts an R-10 zone to the south and east. Also, there are vehicles stored in a neighboring parking lot located in the R-10 district, which is not a permitted use.

J&J's automobile repair shop located on SR-59 and Mountainview Avenue (and a thruway exit 11) is not a permitted use for the LO district it is located in. There are few other active uses in this area that appear to be permitted only on LO zoned parcels. In addition, access management in this area appears to pose dangers for drivers and pedestrians.

3.3.5 SR-59 West (Nanuet / Nanuet Hamlet Center)

The western segment of SR-59 is zoned primarily for commercial uses. The zones in this corridor include Community Shopping (CS), light industrial office (LIO), laboratory office (LO), professional office (PO), regional shopping (RS), and multifamily residential (MF-1, MF-2), and single family residential (R-10, R-15, RG-2). The area is comprised of 98 acres with 297 tax lots. Of this, 46 percent is zoned for commercial uses, of which 95 percent is zoned for shopping uses. Just over 44 percent of the acreage is zoned for industrial office uses. The remaining 9 percent is zoned residential, primarily multifamily and medium-density housing.

The RS district is the most prevalent in this corridor, primarily in the areas surrounding and with direct transportation access to SR-59. Over four-fifths of the RS parcels in this corridor are located west of SR-304. There are two CS districts, one located south of SR-59 on North Middletown Road, also known as Main Street in Nanuet. This area is considered a “downtown” area made up of small businesses located on small lot sizes (0.08 to 1.8 acres), with the largest being the Stop & Shop grocery store located near the corner of North Middletown Road and SR-59 (7.3 acres). The second CS area is located north of I-87 on SR-304 and is made up of small lots housing and road-side retail with parking abutting the roadway.

Table 3-16: SR-59 West Zoning District Distribution

District	Number of Parcels	Acres Zoned in Tax Lots	Percent of Total Acres
CS	55	31	5%
RS	123	258	40%
PO	14	16	2%
LIO	68	142	22%
LO	16	142	22%
MF-1	3	4	1%
MF-3	4	32	5%
RG-2	5	22	3%
Total	288	647	-

Note: Totals may not match due to rounding.

Parking

Of the 647 acres included in the SR-59 West study area, approximately 273 acres, or 42 percent, are covered by parking lots. This area is the location for many mini-malls and other retail uses, and parking is widely distributed but in general accommodates high automobile use. Nanuet Mall has a major parking area, with a three-story parking structure near SR-59 and a large parking area in the rear. Spring Valley Marketplace and the Rockland Center also are large lots with potential shared use. High-parking capacity is visible north of SR-59 along SR-304 past the Interstate as well.

Activity Nodes

Although this is a busy corridor with many retail uses, there are three key activity areas evident on maps and through local knowledge: Nanuet Mall and Spring Valley Marketplace, downtown Nanuet, and the intersection of SR-59 and SR-304.

Nanuet Mall and the Marketplace are important as anchors for a larger and somewhat dispersed retail area comprised of mini-mall and free-standing retail structures. While the Mall itself is recognizable as large-scale retail, structures across SR-59 have smaller structures, some with multiple tenants. Smaller lots and one-story small structures extend west along the corridor to the Marketplace. Uses include fast food, household goods, and auto parts. Notable is the recent decline of Nanuet Mall and high-vacancy rate.

Downtown Nanuet includes approximately one-half-mile on South Middletown Road south of SR-59 and Nanuet Mall. The area is unique because of small one and two-story buildings housing a variety of neighborhood shopping and professional office land uses. The Nanuet train station is also located within one-half-mile of this road. The roadway and sidewalks were recently resurfaced and designed with attractive streetscape features. The roadway is relatively narrow with limited on-street parking.

Land-Use Zoning Comparison

The land-use and zoning analysis identified six parcels where surveyed land uses are not expressly allowed by the zoning codes.

One is the Teplitz, Inc. recycling facility or junkyard located at the corner of Demarest Mill and West Nyack Roads (See #5 on Figure 3-6). The facility, which includes a two-story office building on West Nyack Road, covers approximately 2.6 acres in a three-sided lot. The area is zoned LIO, which allows recycling facilities under special permit from the Town Board and compliant with 290-17R of the Town Code. The business typically has cars parked on the road shoulder. The unpaved lot may be allowed under code; however the location is near a busy commercial area that is attracting additional residential uses. The unpaved lot and stored material will likely present a health or safety hazard as Clarkstown's population increases, both to neighboring uses and due to limited sight from the facility's one driveway. The Town Highway Department maintenance and storage facility across Demarest Hill Road is screened, secure and presents comparatively little obstruction to neighboring development.

Approximately one-quarter-mile to the west, the Estes Express Lines trucking and distribution facility was also identified as a possible conflict with intended zoning uses (see #4 on Figure 3-6). The facility appears to be a warehouse or distribution center, which is allowed in the LIO district. The condition of the property – minimal screening from the road, partially paved surface and

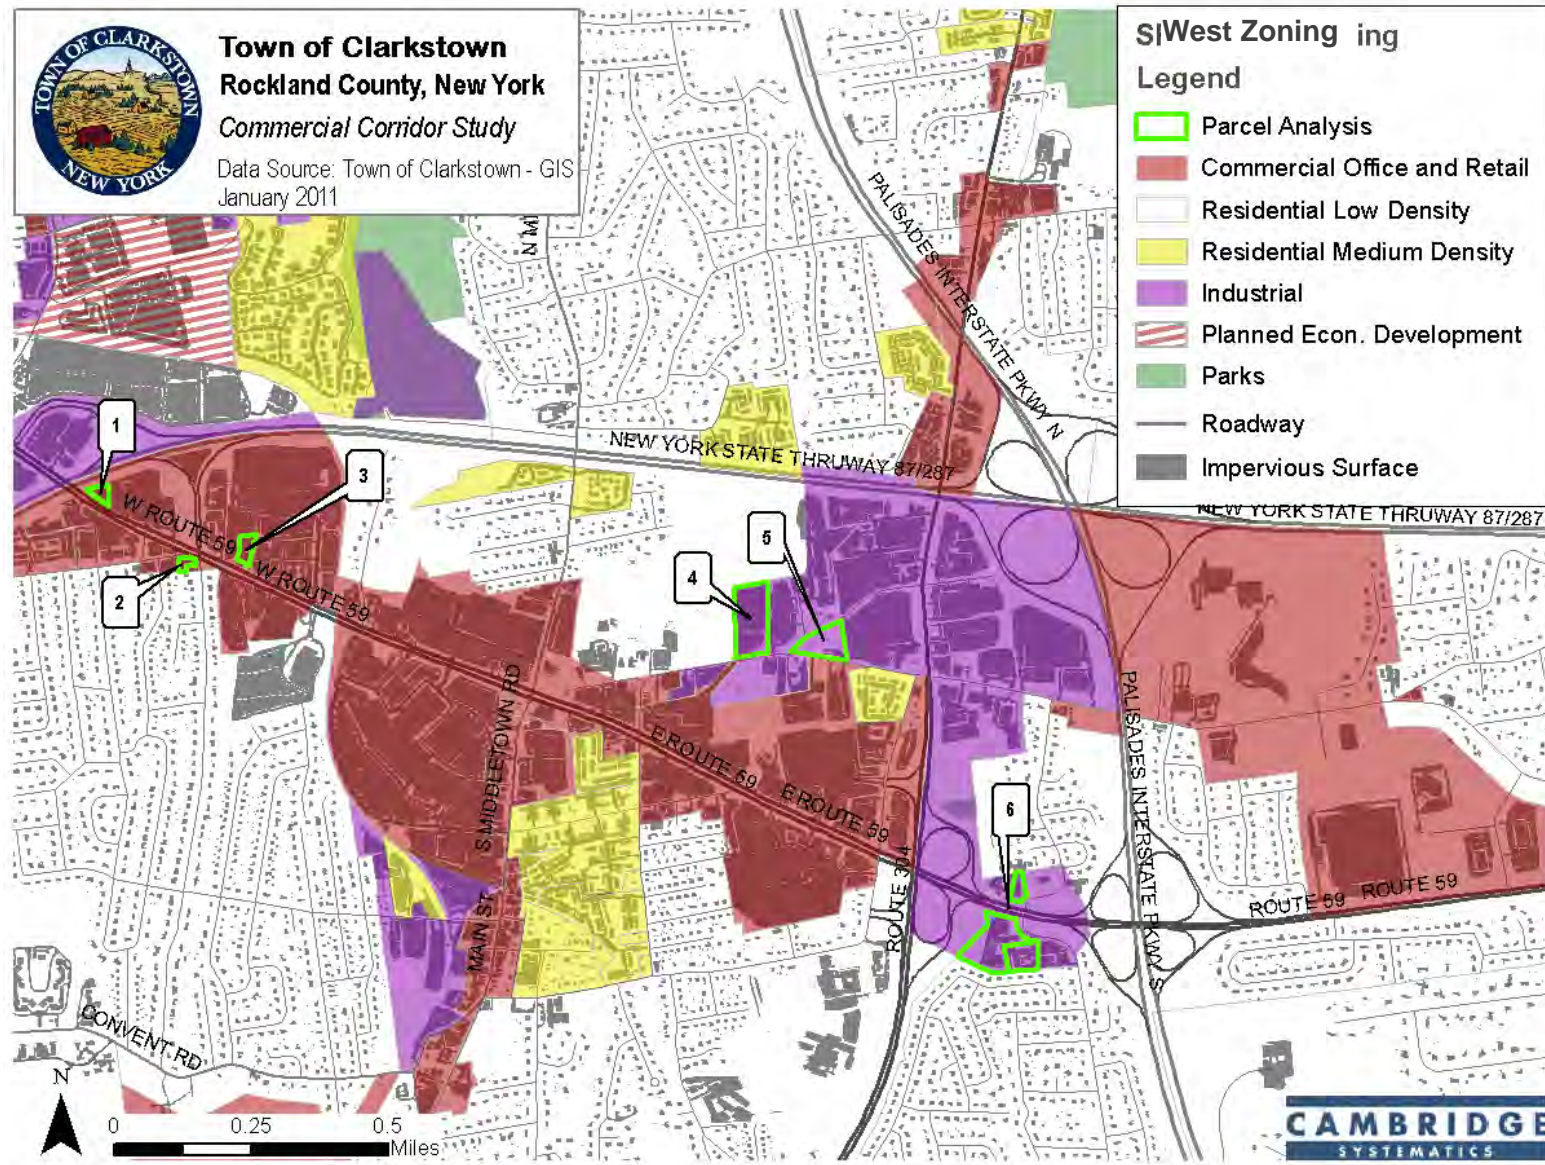

multiple stored vehicles – suggests other storage or repair related activities. Additionally, parking and/or opportunities with neighboring lots should be explored.

A Comfort Inn Hotel at 431 SR-59 (between SR-304 and PIP) is located in an LIO district where hotels or other commercial lodgings are not permitted (see #6 on map). No records of special permits or variances were provided at the time of this study. The hotel is separated from other uses, with low-density residential uses to the south. Across the street at 410 East SR-59 a seemingly vacant building is cataloged as a bank branch, in an area zoned LIO (across from Days Inn). Banks are not expressly permitted in LIO. Aside from use, the parcel also presents difficult access management issues due to the angle of Rose Road at SR-59, as well as the SR-304 interchange ramp just 300 feet to the west.

A small apartment building with approximately six units is located at One Grandview Avenue (see #2 on Figure 3-6). The structure is located in an RS zone, which does not expressly permit apartment residences. No permits or other variance information is on file for the parcel. At this relatively busy intersection the parcel is somewhat related to the low-density residential uses in the neighboring R-15 zone, but starkly mismatched to the medium-density hotel, retail and other services across SR-59, also zoned RS.

In the same zoned area, a Lucile Roberts gym is located at 240 West SR-59 (see #3 on Figure 3-6). Gyms and health clubs are not in the permitted uses for RS zones. However, gyms and health clubs today are typically compatible uses in retail centers such as the mall area it is located in. Health clubs are permitted in areas zoned PO and LIO. Also in the area, approximately one-quarter mile to the west (see #1 on Figure 3-6) car-rental appear to be operated on a lot in an RS district, where car rental is not expressly permitted.

Figure 3-6: SR-59 West Corridor

3.4 Park-N-Ride Facility Analysis

Park-N-Ride facilities are important to providing the residents of Clarkstown with public transportation resources that help reduce regional greenhouse emissions and vehicle miles traveled, lower gasoline expenditures for individuals, and improve mobility in the region. There are 13 Park-N-Ride lots in Clarkstown serving transit customers and commuters who carpool. While the lots are open to any customer, most facilities are used for trips outside of Clarkstown. All lots are maintained by Rockland County, with funding available from local, county and State sources. Visits to the lots in June 2010 indicated higher use in western Clarkstown, which includes the Exit 14 lots and the Nanuet Mall and Nanuet Rail station lots 1 and 2.

Table 3-17: Park-N-Ride Facility Catalog

Park-N-Ride Facility	Hamlet/Village	Parking Spaces	Utilization Snap-Shot
Exit 14 NYS Thruway North Lot	Nanuet	225	222
Exit 14 NYS Thruway West Lot	Nanuet	80	80
Exit 14 NYS Thruway East Lot	Nanuet	188	188

Exit 12 NYS Thruway Lot 1	West Nyack	230	36
Exit 12 NYS Thruway Lot 2	West Nyack	200	11
Lake Road at Kings Highway, Valley Cottage	Valley Cottage	75	19

Source/Note: Rockland County Department of Planning, Town of Clarkstown; Parking utilization is based on a.m. visit to the facilities between Mondays and Fridays in 2008/2009.

The following profiles provide details on existing conditions—including access provisions, amenities, and surrounding land-uses— for each of the Park-N-Ride lots in the Clarkstown area.. A pedestrian access area with a radius of ½ mile from the center point of each lot was used as the buffer distance to provide a picture of the surrounding land uses accessible to Park-N-Ride users.

3.4.1 Exit 14 NYS Thruway North Lot

Service:	Red & Tan 45E, 11A, 11C, 49, Coach USA Express, TZX, TOR 59, OWL, and Spring Valley Jitney
Destinations:	PABT, GWBT, Midtown Manhattan, Wall Street, White Plains, Tarrytown, Grand Central Terminal, Nyack, Spring Valley and Suffern

Location and Access

The directions and entrance signs to this lot are at the intersection of Forman Drive and SR-59 not clearly visible. The bus stop is adjacent to this facility and buses do not enter the facility. There is handicapped parking available in the lot, however, there is no marked or separated walkway for pedestrians in the facility

Land Use

The surrounding land-use is a mix of low and medium density residential land-use which accounts for a third of the half-mile buffer area. There are sizeable number of general business land uses along with industrial warehouses in the access area. Single family residential housing accounts for the single largest share of land use in the pedestrian access area, with 24% of the total area.

Issues

Entrance signage is not clearly visible from roadway.
No marked or separated walkway for pedestrians within parking lot.

Table 3-18: Exit 14 NYS Thruway North Lot – Summary Profile

Spaces	Utilization	ADA	Cost	Residential	Commercial	Industrial
225	99%	8	Free	25%	20%	10%

Figure 3-7: Exit 14 NYS Thruway North - Aerial

Figure 3-8: Exit 14 NYS Thruway North - Land Use Map

3.4.2 Exit 14 NYS Thruway West Lot

Service:	Red & Tan 45E, 11A, 11C, 49, Coach USA Express, TZX, TOR 59, OWL, and Spring Valley Jitney
Destinations:	PABT, GWBT, Midtown Manhattan, Wall Street, White Plains, Tarrytown, Grand Central Terminal, Nyack, Spring Valley and Suffern

Location and Access

The West Lot is located on the south side of SR-59 at New York State Thruway Exit 14. The West Lot is designed with landscaping and lighting. Access to transit and surround businesses is available across the street from the East lot, for which there is a signalized pedestrian crossing. Handicapped parking is available at this lot.

Land Use

The surrounding land use is a mix of low and medium density residential, which accounts for about one-third of the ½ mile buffer area. General and community businesses occupy 13% of the land area in the vicinity and industrial warehouses account for 11% of the area. There is a vacant parcel within walking distance of this lot, indicating that area may be available for the expansion or construction of new lots to accommodate excess demand. The surrounding land use mix is shown in Figure 3-10.

Issues

There are no observed issues with this lot.

Table 3-19: Exit 14 NYS Thruway West Lot – Summary Profile

Spaces	Utilization	ADA	Cost	Residential	Commercial	Industrial
80	100%	8	Free	N/A	13%	11%

Figure 3-9: Exit 14 NYS Thruway West - Aerial

Figure 3-10: Exit 14 NYS Thruway West - Land Use Map

3.4-3 Exit 14 NYS Thruway East Lot

Service:	Red & Tan 45E, 11A, 11C, 49, Coach USA Express, TZX, TOR 59, OWL, and Spring Valley Jitney
Destinations:	PABT, GWBT, Midtown Manhattan, Wall Street, White Plains, Tarrytown, Grand Central Terminal, Nyack, Spring Valley and Suffern

Location and Access

The Exit 14 East lot is located on the south side of SR-59 at New York State Thruway Exit 14. It is designed with landscaping and lighting. There is a bus shelter adjacent to the lot. Handicapped parking is available at this lot. There are currently no bike racks available in this lot.

Land Use

The surrounding land-use is very similar to the other two Exit 14 lots, given their close proximity. The land-use profile in the walk access vicinity has a sizeable residential component covering up to 42% of the area. There is a substantial presence of general and community businesses covering about 14% of the area and industrial warehouses accounting for 11% of the surrounding walk access area. However, access to businesses to the south entails crossing the NYS Thruway overpass along SR-59. There is vacant area in the walk access range of this lot indicating that area may be available for expansion or construction of new lots given the demand and utilization rates for all the three Exit 14 lots in the vicinity. The surrounding land-use mix is shown in Figure 3-12.

Issues

There are no observed issues with this lot.

Table 3-20: Exit 14 NYS Thruway East Lot – Summary Profile

3.4.4 Middletown Road & SR-59

Service:	TOR 59, Red & Tan Routes 46, 47, 20, 11A, and 11C, and Clarkstown Mini-Trans Route C
Destinations:	PABT, GWBT, Suffern, Spring Valley, and Nyack

Location and Access

The Middletown Road Park-N-Ride lot is located on the southwest corner of the SR-59 and Middletown Road intersection, across Middletown Road from Nanuet Mall and next to an Exxon gas station. The lot offers free parking and contains 25 parking spaces, 2 of which are handicapped accessible. The lot operates at approximately half capacity on a typical weekday. There is a gas station/convenience store nearby and the parking lot is illuminated at night. There are minimal signage for this lot and ADA accessibility is limited. Currently, the lane striping is worn away in the lot. There are no walkway paths to bus pick-up locations.

Land Use

Surrounding land use is a heterogeneous mix of residential, regional and community commercial space, along with public buildings and institutional space. 35% of the total walk access area within the ½ mile buffer distance is a mix of regional and community commercial space. Five percent of the area is occupied by institutional and quasi-public buildings, while at least six percent of the surrounding area is vacant. Basic amenities are available from a mini-mart located in the Exxon gas station adjacent to the lot.

Issues

No access from parking lot to bus pick-up location, besides traversing through shrubs (on dirt paths between plants) or by on the shoulder of parking lot ingress/egress along Middletown Road.

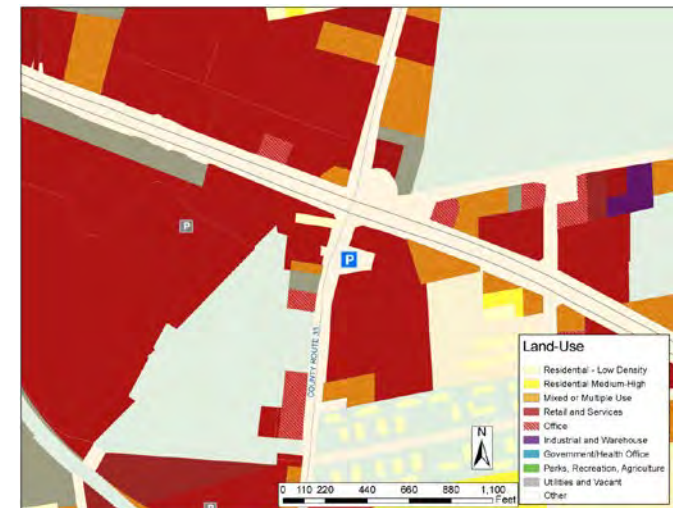

Table 3-21: Middletown Road & SR-59 Lot – Summary Profile

Spaces	Utilization	ADA	Cost	Residential	Commercial	Industrial

3.4-5 Smith Street & SR-59 Lot

Service:	TOR Route 59, Red & Tan Routes 47, 49, 20, and 11A, and Clarkstown Mini-Trans Routes A and E
Destinations:	PABT, White Plains, Suffern, Spring Valley, Nyack, and New City

Location and Access

The Smith Street Park-N-Ride lot is located on the north side of SR-59 between Smith Street and SR-304. No fees or permits are required to park in the facility's 286 parking spaces. Seven ADA spaces are available. Pedestrian access to this parking lot is limited due to the absence of marked crosswalks on Smith street or Rt. 59. Given the difficulty of traversing SR-59 it is virtually impossible to access commercial facilities located to the southwest of the Smith Street Park-N-Ride lot.

Land Use

Land use to the west is predominantly general business and commercial establishments, accounting for 31% of the surrounding area. Residential neighborhoods prevail to the east of Rt. 304. Vacant land and open space to the south of SR-59 across from the existing parking lot might be examined if there is a future need for expansion. There is a sizeable proportion of area covered by institutional and public establishments, occupying 11% of the walk access buffer. Industrial and warehousing facilities occupy 7% of the area.

Issues

Access is limited to the west of SR-304.
Adjacent vacant land might be available for expansion.

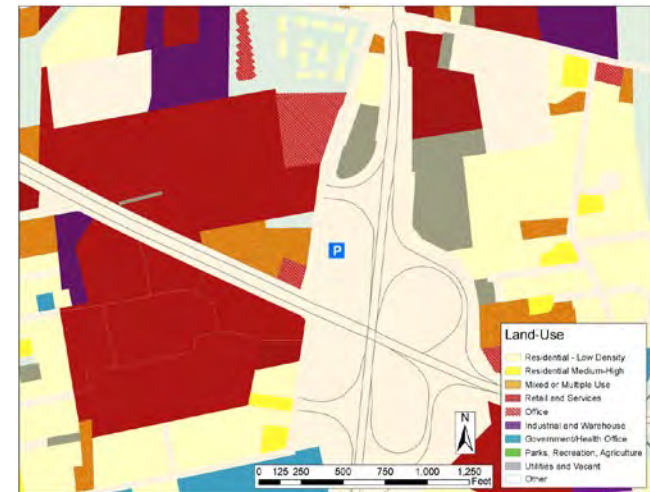

Table 3-22: Smith Street & SR-59 Lot – Summary Profile

Spaces	Utilization	ADA	Cost	Residential	Commercial	Industrial

3.4.6 Nanuet Rail Station Lot 1 (Clarkstown Lot)

Service:	Pascack Valley Line, Red and Tan routes 11A and 11C, and TOR routes 20, 46 and 47
Destinations:	Penn Station (via Secaucus), Hoboken, PABT, and GWBT

Location and Access

The Nanuet Metro North Railroad (MNR) Station Lot 1 is located on the south side of West Prospect Street near the intersection with South Middletown Road, on the west side of the rail station. Lot 1 has 332 spaces, including 12 handicapped-accessible parking spaces. No permits or fees are required but the residential permits are needed. The lots are close to stores, pay phones, a passenger shelter, newspapers, mailboxes, and lighting. Some guide signs are in disrepair and may hinder access. There are no bicycle racks and automobile access is restrained due to lack of circulation space.

Land Use

Given that the three parking lots are very close to each other, their land use profiles are similar. The existing land use is predominantly single family residential and multifamily residential covering over 50% of the area in walking distance. There are regional and community business centers near the lots, which make up to 35% of the area. A nominal share of the area (3%) is used for recreation activities. Providing pedestrian access to these locations will be instrumental in improving walkability and increasing non-motorized trips to these locations.

Issues

Constrained space makes parking maneuvers difficult.
Not clearly defined pedestrian pathways.
No bicycle racks.

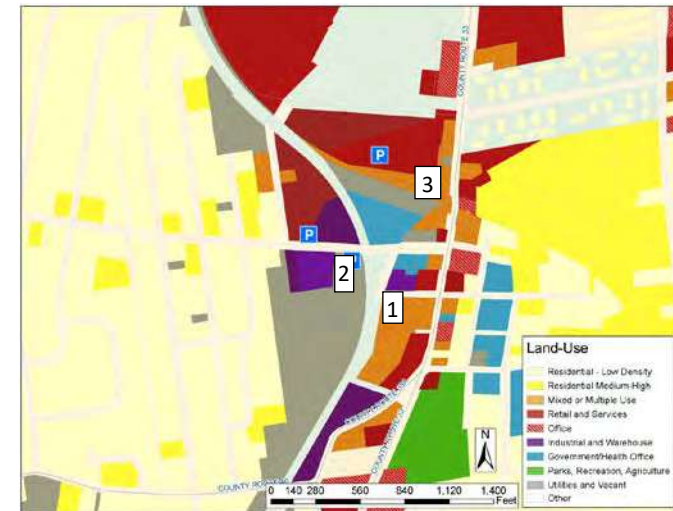

Table 3-23: Nanuet Rail Station Lot 1 (Clarkstown Lot) – Summary Profile

Spaces	Utilization	ADA	Cost	Residential	Commercial	Industrial
332	85%	TBD	Free	50%	35%	NA

Figure 3-17: Nanuet Rail Station Lot 1 - Aerial

3.4-7 Nanuet Rail Station Lot 2 (County Lot)

Service:	Pascack Valley Line, Red and Tan routes 11A and 11C, and TOR routes 20, 46 and 47
Destinations:	Penn Station (via Secaucus), Hoboken, PABT, and GWBT

Location and Access

The Nanuet MNR Rail Station Lot 2 is located on the north side of West Prospect Street near the intersection with South Middletown Road, to the northwest of the Metro North rail station. The lot has 229 spaces with 12 handicapped-accessible spaces. No fees or residential permits are required. As with Nanuet Rail Station Lot 1, the lot has access to stores, a pay phone, passenger shelter, newspapers, mailboxes, and lighting. Some guide signs are in disrepair and may hinder access. There are no bicycle racks and automobile access is restrained due to lack of circulation space. There is no signage to the train station platform for pedestrians from Lot 2, and the available path to the platform is poor.

Land Use

The land use profile is similar to the Nanuet Rail Station Lot 1. The existing land use is predominantly single family residential and multifamily residential covering over 50% of the area in walking distance. There are regional and community business centers near the lots, which make up to 35% of the area.. A nominal share of the area (3%) is used for recreation activities. Providing pedestrian access to these locations will be instrumental in improving walkability and improving non-motorized trips to these locations.

Issues

Pedestrian access along Prospect Street (no sidewalks).

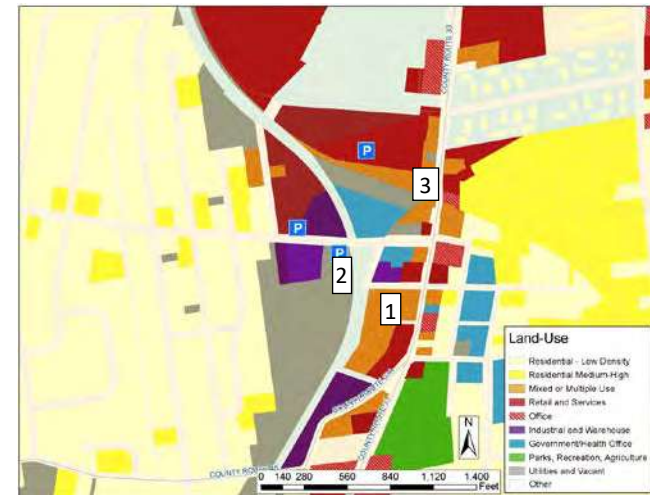

Table 3-24: Nanuet Rail Station Lot 2 (County Lot) – Summary Profile

Spaces	Utilization	ADA	Cost	Residential	Commercial	Industrial
229	60%	12	Free	50%	35%	NA

3.4.8 Nanuet Rail Station Lot 3 (County Lot)

Service:	Pascack Valley Line, Red and Tan routes 11A and 11C, and TOR routes 20, 46 and 47
Destinations:	Penn Station (via Secaucus), Hoboken, PABT, and GWBT

Location and Access

The Nanuet MNR Rail Station Lot 3 is located to the north of West Prospect Street behind the post office. The lot has 235 spaces. The lot is operated by LAZ Parking (www.rrparking.com) and not by the Town of Clarkstown. The fee for 16 hours (1 working day) is \$2.75 and for 24 hours the cost is \$4.50. Monthly and annual permits are also available. The lots have access to stores, a pay phone, passenger shelter, newspapers, mailboxes, and lighting.

Land Use

The land use profile is similar to the Nanuet Rail Station Lot 1. The existing land use is predominantly single family residential and multifamily residential covering over 50% of the area in walking distance. There are regional and community business centers near the lots, which make up to 35% of the area.. A nominal share of the area (3%) is used for recreation activities. Providing pedestrian access to these locations will be instrumental in improving walkability and improving non-motorized trips to these locations.

Issues

Competes with free parking provided at Lot 2, which may cause for under-utilization.

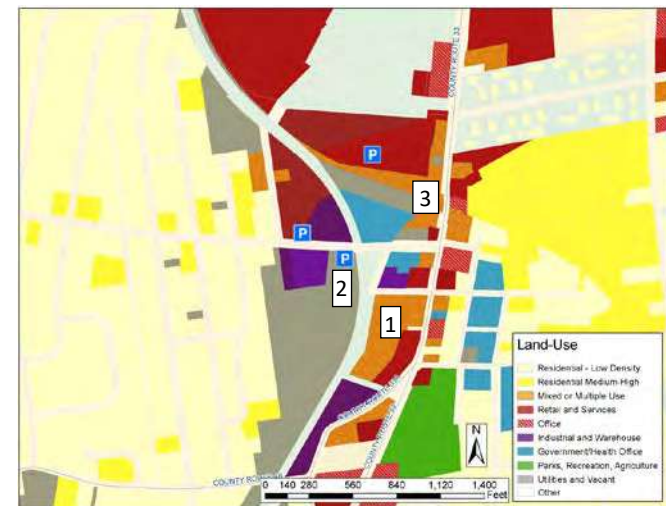

Table 3-25: Nanuet Rail Station Lot 3 (County Lot) – Summary Profile

Figure 3-22: Nanuet Rail Station Lot 3 - Land Use Map

3.4.9 North Middletown Road & PIP Lot

Service:	Carpool
Destinations:	NA

Location and Access

With 105 spaces, including three situated for handicapped access, the Park-N-Ride lot in Bardonia is located on the east side of North Middletown Road on the south side of the PIP. The lot has a passenger shelter, lighting, a telephone and newspaper boxes. This lot is not served directly by public transportation and is therefore used by carpool commuters only. Fees or permits are not required. This lot is surrounded by trees and most portions are not visible from adjacent locations. There are no pedestrian pathways for crossing Middletown Road at the entrance of the Park-N-Ride lot.

Land Use

The surrounding area is overwhelmingly single family residential land-use. Residential units covers about 75% of the total land area in the walk access vicinity around this lot. There is no other land-use prominent in terms of area in the vicinity other than public parks and open land which account for 16% of the area in the walk access area.

Issues

There are no outstanding issues with this lot.

Table 3-26: North Middletown Road & PIP Lot – Summary Profile

Spaces	Utilization	ADA	Cost	Residential	Commercial	Industrial
101	20%	3	Free	75%	NA	NA

Figure 3-23: North Middletown Road & PIP Lot - Aerial

3.4.10 Lake Road & Kings Highway Lot

Service:	Red & Tan lines 9, 9A and 9W, TOR route 91, and Mini-Trans bus A
Destinations:	GWBT, White Plains, Nyack, Spring Valley, and New City

Location and Access

Located on the north side of New Lake Road and east of Kings Highway In Valley Cottage, this Park-N-Ride lot has 75 spaces. There are retail stores located nearby and lights in the lot to provide evening safety.

Land Use

The surrounding land-use is a heterogeneous mix of various types of land-uses with residential establishments occupying about a third of the total area in the walk access vicinity. Office uses account for approximately five percent of the surrounding area, and business and commercial establishments make up about 18% of the area. Warehousing establishments account for 10% of the surrounding area land uses.

Issues

There are no outstanding issues with this lot.

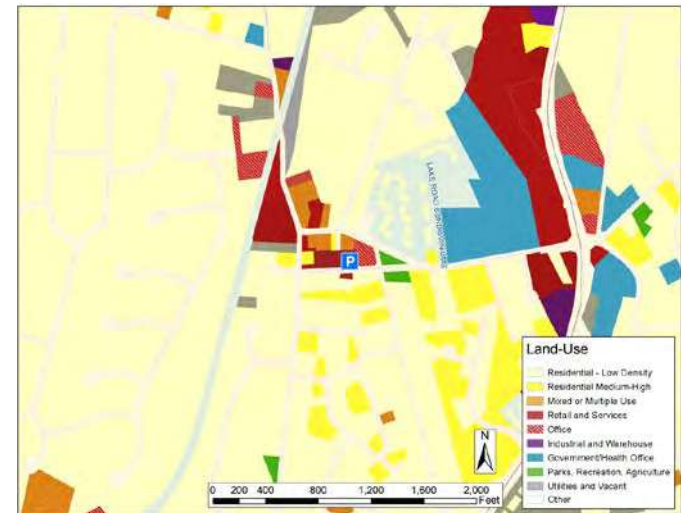

Table 3-27: Lake Road & Kings Highway Lot – Summary Profile

Spaces	Utilization	ADA	Cost	Residential	Commercial	Industrial

3.4.11 Exit 12 NYS Thruway Commuter Lot J

Service:	TBD
Destinations:	New York City, White Plains, Tarrytown, PABT, Nanuet Mall, Congers, Nyack, New City, Haverstraw, and Tappan

Location and Access

The Palisades Center Park-N-Ride Lot J is located adjacent to Palisades Center Mall in West Nyack near the intersection of I-287 and SR-303. It is Clarkstown's largest single Park-N-Ride facility. There are over 900 parking spaces available with 10 handicapped-accessible spaces. Spaces are also available for rideshare users (approximately 40 spaces) and pull-up lanes are used by "kiss-and-ride" commuters, or those who are being dropped off or picked up. There is a shelter available to cover waiting customers, with schedules and other information posted inside.

Land Use

The lot has limited non-motorized access, to the surrounding area. Users must drive to the Palisades Center Mall parking lot to shop. Most of the area around this lot is unbuilt open space and the Interstate blocks passage to the north. Residential use is limited compared to other lots in the Clarkstown area, accounting for only 13% of the total area in the walk access buffer. Though there is limited non-motorized access to surrounding land uses, the mix is dominated by industrial uses occupy 29% of the surrounding area (which includes the Tilcon quarry to the north across the Interstate). Commercial uses make up approximately one-third of the total area within walking distance of the lot.

Issues

Poor non-motorized access.

Limited access points.

Northern land uses blocked by I-287.

Table 3-28: Exit 12 NYS Thruway Commuter Lot J – Summary Profile

Spaces	Utilization	ADA	Cost	Residential	Commercial	Industrial
900	26%	10	Free	13%	32%	29%

Figure 3-27: Exit 12 NYS Thruway Commuter Lot J - Aerial

Figure 3-28: Exit 12 NYS Thruway Commuter Lot J - Land Use Map

3.4.12 Exit 12 NYS Thruway Commuter Lot 1

Service: TOR Routes 91, 92 and 97
Destinations: Port Authority Bus Terminal

Location and Access

Two parking lots complement the Palisades Center Mall Lot J Park-N-Ride. Lot 1 is located north of SR-59. There are no fees for parking in this lot. Lot 1 has 230 parking spaces available with four handicapped accessible spaces. The lot is used by carpool passengers and is also a stop by the Red and Tan 9W. Access to this facility is from SR-303.

Land Use

Non-motorized access to nearby land-uses is limited and unsafe where possible due to the location on SR-303 near the related on-ramps and lack of pedestrian markings and infrastructure. There is motorized access to the Palisades Center Mall across SR-303 which accounts for over 25% of area in the area. Over 20% of the area surrounding this lot is open or vacant space. Residential uses are located to the east and south, but are cut off from direct access to the lot by site design.

Issues

No pedestrian access.
 Limited automobile and bus access point.
 Proximity to residential neighborhoods.

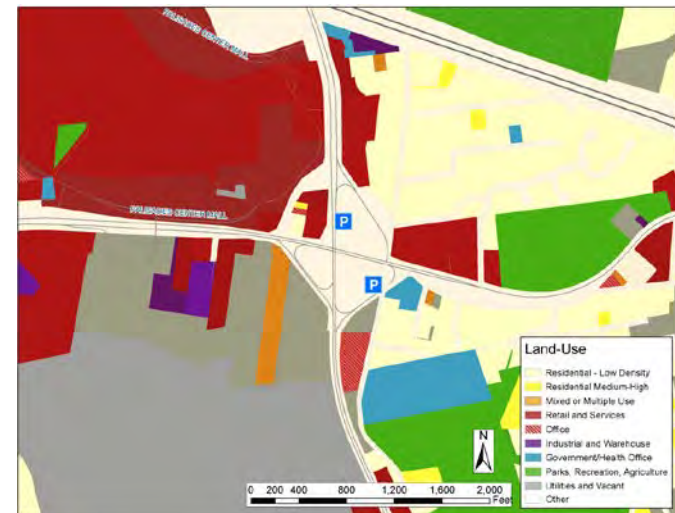

Table 3-29: Exit 12 NYS Thruway Commuter Lot 1 – Summary Profile

Spaces	Utilization	ADA	Cost	Residential	Commercial	Industrial
230	16%	4	Free	30%	35%	NA

Figure 3-29: Exit 12 NYS Thruway Commuter Lot 1 - Aerial

Figure 3-30: Exit 12 NYS Thruway Commuter Lot 1 Land Use Map

3.4.13 Exit 12 NYS Thruway Commuter Lot 2

Service:	TOR Routes 91, 92 and 97
Destinations:	Port Authority Bus Terminal

Location and Access

Lot 2 is located south of SR-59 and east of SR-303. There are no fees or residential permits required for parking in this lot. Lot 2 has 200 spaces, 10 of which are handicapped accessible. Available transit services include TOR Routes 91, 92 and 97. The spaces are also used by carpool passengers. Access to these facilities is from the southeast on/off-ramp between SR-59 and SR-303.

Land Use

Access to nearby commercial land uses is limited for non-motorized modes due to the location of the Park-N-Ride lots between ramps of Rt. 59 and Rt. 303. There is a high incidence of vacant land and open space – over 20% of the area surrounding this lots.

Issues

No pedestrian infrastructure.
 Limited motorized access.
 Limited transit service.
 Proximity to residential neighborhoods.

4.0 CORRIDOR VISIONING AND CONCEPT DEVELOPMENT

This section introduces the alternative zoning code strategies. It begins with the reason for developing these strategies, namely the connection to town goals in the CTP. It then introduces the methodology that included research on other town codes, national best practices for parking and access management, and road and access design standards on suburban commercial corridors. The methodology also includes the three levels of zoning changes considered, including changing text in existing districts, district boundaries and creating new districts. Next, we present a neighborhood-level analysis of existing conditions to look at opportunities, then present zoning strategies to get the opportunities, including tables of the use and bulk requirements and how they relate to other districts.

Methodology

To develop strategic concepts for Clarkstown's corridors, CS utilized the following structure:

1. **The Comprehensive Plan:** Build from the vision and goals presented in 2009's Clarkstown Comprehensive Plan
2. **Public Outreach:**
 - Conduct a survey of business owners in the study area to gather neighborhood-level information regarding commercial transportation corridors (including Building and Land Infrastructure, Transportation Infrastructure, Parking, Land Use and Zoning, and Administrative Requirements)
 - Identify areas of opportunity and present preliminary visions for land use regulations that meet the goals of the town while supporting local needs
 - Present elements of the preliminary vision to residents and business owners in the study area, to gather information for further development of the vision and appropriate zoning codes.
3. **Proposed Vision:**
 - Propose draft zoning district regulations and locations (boundaries) that will lead to development that supports the neighborhood-level vision and goals
 - Evaluate the potential for development and negative environmental effects related to recommended changes to the zoning code
4. **Proposed Concepts:** For each corridor, present detailed land use and transportation concepts for approval that are based on best practices in urban/suburban development, feedback from community members and business owners, and the town of Clarkstown's unique characteristics.

The next section describes the methodology steps in greater detail.

The Comprehensive Plan

The 2009 Town of Clarkstown Comprehensive Plan (Plan) both updated and moved beyond the previous Plans of 1966 and 1999; providing a wide-ranging report of existing conditions within the Town and a framework for present and future land-use decision-making. The Plan followed the format of a Generic Environmental Impact Statement (GEIS), analyzing potential adverse impacts and proposing mitigating actions.

The Town vision was woven through the seven interrelated goal areas – Economic Development; Environmental Resources; Health Safety and Welfare; Historic and Cultural Resources; Housing; Recreation, Parks, and Open Space; and Transportation. Each goal area featured a set of overarching objectives and a series of specific, actionable objectives formulated by citizen subcommittees. The work of the subcommittees incorporated suggestions and feedback from a series of public meetings held across Clarkstown.

The technical analysis focused on the town-wide goals most relevant to the interaction between transportation and land use. The purpose of identifying the goals was to guide the development and analysis of the myriad of possible changes in the zoning code which would:

- Ensure future development and growth are appropriate and coincide with community needs and activities
- Provide an opportunity for flexible and creative zoning that addresses the operation of modern businesses and protects land owners
- Make sound decisions on transportation infrastructure improvements along State corridors that reduce vehicle miles traveled, mitigate congestion, improve access management, and support the accessibility and use of all modes of transportation
- Ensure appropriate environmental stewardship
- Maintain the economic prosperity and mobility needs of a critical community asset

Public Outreach

To begin outreach efforts, a brief survey was developed to assist analysts in leading conversations with Clarkstown's local landowners and business tenants. A survey guide was developed as a tool only, and conversations covered a range of topics not always expected at the beginning.

The survey guide covered basic information about the business type, then inquired about the respondent's perspective regarding transportation, safety, land use and general plans for the future. The survey asked the following questions:

- Business name
- Contact name
- Job title / position
- Type of business
- Number of years in location
- Other Clarkstown locations
- Size – employees
- Size – square feet
- Own, rent or lease
- Business hours/ days
- Average number of customers per week
- Number of parking spaces for staff and customers
- Do you have any issues accessing location by car, walking or transit?
- Does your firm offer commuting benefits or “travel demand management” strategies for employees such as ridesharing, transit subsidy, or transit fare
- Do you consider your location safe?
- Do you consider your business compatible with other activity along gW / SR-303 / SR-304 / SR-59?
- Is space currently enough? Plans to expand or move?
- Do you have any experience with building, or other permits from the Town? Please explain.
- Does your business have a shipping and receiving area?
- How often is it in use? When?
- Does your business store vehicles, equipment or other materials outdoors? Indoors?
- Do you have any infrastructure needs regarding deliveries?
- Do you have any other things to share regarding land use and infrastructure along the gW / SR-303 / SR-304 / SR-59 corridor?

The next step of the outreach process was to engage directly with the general public. CS staff led extensive community engagement efforts with Clarkstown stakeholders to better understand the local context and perspectives. Efforts included public meetings, business owners and landowner forums, special board meetings, and walk about group audits.

For this step of outreach, findings from the landowner and local business surveys were shared with the public. Stakeholders examined differences between existing corridor zoning, transportation infrastructure that was provided and the community needs that were expressed.

Proposed Vision

CS presents this section to identify key land use and transportation ideas that arose during the various public outreach meetings. The valuable input gathered at these meetings was used to identify key areas of opportunity that were packaged together into proposed visions for each corridor. They represent higher-level corridor and zoning planning strategies.

Once developed, these vision statements were presented back to the public at later outreach meetings. The additional feedback was incorporated into the next section: Proposed Concepts.

Proposed Corridor Concept

It is important to repeat the mantra that information gathered through public outreach sessions formed the core of CS recommendations for land use and transportation changes in Clarkstown. The proposed corridor concepts were a direct result of the extensive dialogue between city officials, landowners, business tenants, and community members. Concepts were detailed transportation and land use interventions based on the high-level corridor concepts earlier developed. These in turn drove the development of final recommendations to be discussed in Section 5.

CS (in consultation with the Town Planning Department Staff and Town Attorney) developed corridor concepts for all of the corridors that were studied. CS also identified access management, pedestrian / bicycle infrastructure and parking changes which should be implemented on a town-wide basis.

4.1 US-9W

4.1.1 Public Outreach

For the US-9W corridor, CS distributed mailings to approximately 65 businesses and/or landowners (including Kennelly's Grille House, Green Tree Inn, Raintree Motel, Holiday Court Motel, and Congers Auto Spa).

Building and Land Infrastructure

Most businesses had no comments and noted no issues with property-based infrastructure for their business. The Railside Mixed Martial Arts studio owner discussed plans to expand in the near future, and noted that space had consistently been available in the building they occupied.

The owner of Wildman's noted that people visiting Rockland Lake State Park often park in front of the business in the shoulder of US-9W. While some walk along the highway to the park entrance, others have cut the fence separating the Wildman's property from the Rockland Lake golf course and entered there.

The land surrounding Greg's Auto Body and Wildman's Service Center shops is flooded each year during high rains and snow melt, as the sewer pipes discharge near the property and pools at the front of the buildings. The Town mitigated the flooding somewhat but the water is reportedly still an occasional hazard and inconvenience.

Transportation Infrastructure

Transportation issues for participating businesses on US-9W were primarily concerned with high vehicle speeds on the highway and related concerns of using driveways into and out of parking lots. The speed limit on most of US-9W in Clarkstown is 55 miles per hour, and a number of corners and slopes limit vision of motorists on and entering the highway. The owner of Country Carpet noted that while he has not observed any crashes, staff and customers have noted they can be surprised by oncoming vehicles as they use the driveway. The owner of Cargus International said that while the area was generally very safe, the most dangerous element was entering and exiting the highway, and the owner of Congers Auto Spa observed that speeds near their location often appear to be faster than the posted speed limit. In addition, the Congers Auto Spa occasionally have customers queued up onto US-9W as they wait for service.

Truck access was limited for some respondents, particularly for those with trailers. The owner of Wildman's said he had one or two trucks annually that back into the parking lot off of the highway, requiring someone to slow or stop traffic on US-9W as the truck maneuvers. For the other respondents, however, trucks are able to enter and turn completely around in the available parking area. No other respondents considered backing in off of the highway to be a impediment to traffic nor a safety issue.

Pedestrians on the highway caused some concern for respondents. Particularly on weekends, visitors to Rockland State Park will park on the road shoulder and walk to the park entrance. In addition, the owner of Greg's noted that residents in condominiums on US-9W also walk along the road shoulder. While no reported collisions with pedestrians were cited, the perceived safety issue arises from the presence of pedestrians on shoulders narrowed by parking cars, while traffic travels at speeds of 55 miles per hour or more. The corridor is also used by bicyclists from around the region due to the light traffic and wide shoulder. Respondents noted no concerns with bicycle traffic and business activities on US-9W.

Parking

As noted above, respondents in the US-9W corridor reported ample parking for customers, staff and deliveries. One respondent, Wildman's reported having one or two trucks each year large enough to require backing in off of the highway. However, access to and from business' parking lots was a concern for three survey respondents. The 55 mile per hour speed limit, slopes and turns reduce visibility to and from some lots. Three respondents noted that access to US-9W had led to few crashes. One noted that more crashes were caused by vehicles parked on the side of

the road. The owner of Town and Country noted that the wide shoulder has served as an (unmarked) turning lane for right-turning vehicles.

A key parking issue in the US-9W corridor was reported to be that visitors to Rockland Lake State Park use the relatively wide highway shoulder to park their vehicles. This was suggested to be due to the parking fee in the official park parking lot². Roadway parking was reported to reduce shoulder width for pedestrians and cyclists, reduce visibility for motorists and occasionally encroach on business driveways. The owner of Wildman's reported up to 30 cars parked on the highway shoulder.

Land Use and Zoning

At the time of the survey, all respondents noted that the slowing of the economy had been evident in a slowing of new business at their firms, and was possibly reflected along the corridor by the number of locations available for rent, lease or sale. This had not reportedly affected the businesses that responded to a great extent. Of the respondents, only one reported any conflict between their business activities and surrounding land uses. Bliss Tire & Rubber Distributors said some residential neighbors to the west had complained of work-related noises were a nuisance. An independent firm conducted a noise study, however, and found noise levels did not exceed Town restrictions. A neighboring business, Cargus International, did not report direct conflicts with residential neighbors, but did note that strategic planning for land uses was important to minimize conflicts between different intensities of use. The owners of the Green Inn Hotel Bliss Rubber and Wildman's noted that greater numbers of residential uses were being developed in the corridor.

All businesses, including this one, expressed satisfaction with their business location due to the good highway access to other parts of Clarkstown and neighboring cities (for delivery, customers and employees), proximity to related commercial services and competitive prices for land and facilities. The owner of Bliss Tire & Rubber was considering moving or closing their business due to decreased sales and high municipal expenses.

Administrative Requirements

When asked about dealings with the Town of Clarkstown, four of the respondents reported no significant interactions related to their business. Three respondents reported that taxes and other fees were higher than in neighboring towns. The owner of the Green Inn noted that Westchester and Orange Counties in New York had consistently lower taxes. The owner of Wildman's noted that property taxes increased approximately \$6,000 since 1994. Some cost

² The parking fee in Rockland Lake State Park was \$8.00 at the time of the survey.

increases, such as the fire inspection required at Bliss Rubber, appeared to have been raised arbitrarily and combined with other costs, even small increases can be onerous.

Four respondents noted that administrative requirements placed restrictions on improving their business. Rainside Mixed Martial Arts attempted to put up new signs for their business, but the number of revisions and graphical simulations required by the Town were cost-prohibitive. Bliss Rubber also wanted a new sign, but the owner decided that the sign requirements would not improve visibility given the speed and geography of the existing roadway. The Green Inn owner considered expansion and upgrade of their facilities, including the building, parking lot and curb cuts. However, the process became too time consuming, as the property was grandfathered in to the current zoning code and required special permitting. As the owner also leases the property under La Tristina and a neighboring automobile shop, he was disappointed that improvements could not be made to these properties either. The owner stated that he decided to invest in other businesses outside Clarkstown with less onerous administrative processes and costs.

Key Issues

Respondents along the US-9W corridor identified the need to address issues associated with safety and flooding as main priorities. Safety issues along the US-9W corridor have can be attributed to the on street parking by Rockland Lake State Park visitors decision. According to businesses and landowners surveyed, this on street parking has created safety issues for pedestrians, bicyclists, and motorist on weekends. Additionally, despite the Town's actions to mitigate flooding along the corridor, survey respondents are still experiencing flooding during the winter and spring seasons. US-9W respondents also reported that there are limited to no work or shopping trips by pedestrian, bicycle, or transit.

The lengthy and costly review and approval process is a major impediment to improvements and investments by businesses and landowners in all five corridors in the study area. There is a lack of desire by both landowners and businesses to expand or develop their properties given this impediment.

Meetings

The following table summarizes key outreach activities and meetings related to US-9W.

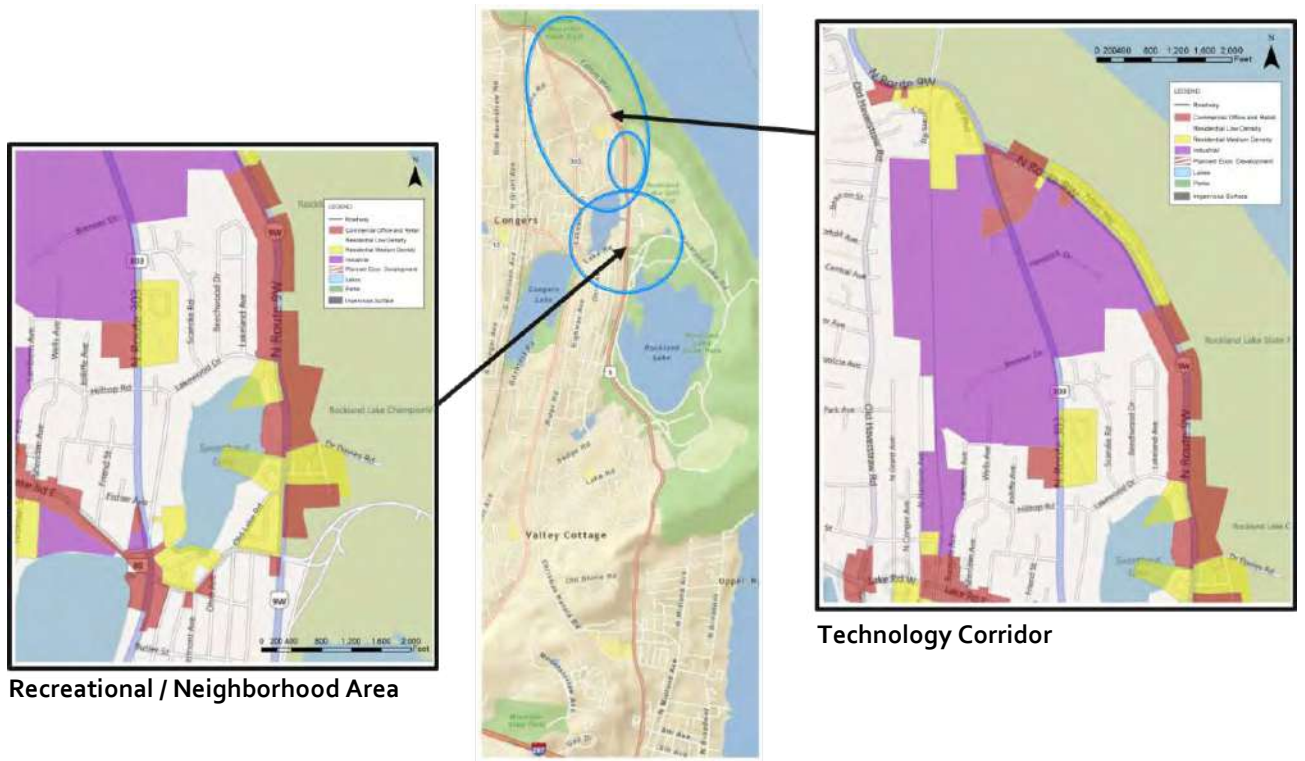

Table 4-1: US-9W Public Engagement / Meeting Summary

Date	Subject	Audience
May 27, 2011	Existing Conditions Review	Special Board Meeting
October 25, 2011	Existing Conditions Report & Project Update Meeting	Town Board Workshop
November 15, 2011	US-9W Existing Conditions & Visioning	Community Engagement Meeting
February 3, 2012	US-9W Corridor Concept Workshop	Special Board Meeting
April 26, 2012	US-9W & SR-303 (Congers Area) Corridor Concept	Congers Corporate Corridor Business Leader Luncheon
June 28, 2012	Proposed NS Zoning District Workshop	Special Board Meeting
August 24, 2012	NS Zoning Proposal	Special Board Meeting
August 28, 2012	Proposed CO/COS Zoning District Workshop	Special Board Meeting
September 4, 2012	US-9W Corridor Concepts Review and NS Zoning Proposal	Town Board Meeting
December 14, 2012	Proposed CO/COS Zoning District Workshop	Special Board Meeting
March 19, 2013	US-9W & SR-303 Corridor Concept	Bert's Road Businesses
January 31, 2014	CO/COS Zoning Proposal	Special Board Meeting
April 1, 2014	CO/COS Zoning Proposal	Town Board Meeting

4.1.2 Proposed Vision

The vision for the US-9W corridor consists of two primary components, a Technology corridor running from the intersection with SR-303 to Dr. Davies Road, and Residential / Recreational area adjacent to Congers Lake Road.

Figure 4-1: US-9W Proposed Vision Areas

US-9W Technology Corridor

Vision:

Identifiable area where research & technology-related firms and industries agglomerate to share business support resources, services, and infrastructure. Zoning and land uses should support the physical and logistical needs to successfully attract these types of companies.

Figure 4-2: US-9W Technology Corridor

Elements:

- Currently operating in corridor
- Target communications, data storage and management, medical devices, pharmaceuticals, cosmetics
- Use branding and signage to market area
- Reduced parking requirements and shared parking opportunities
- Incidental commercial activities as of right on individual parcels
- Enhanced pedestrian facilities and design

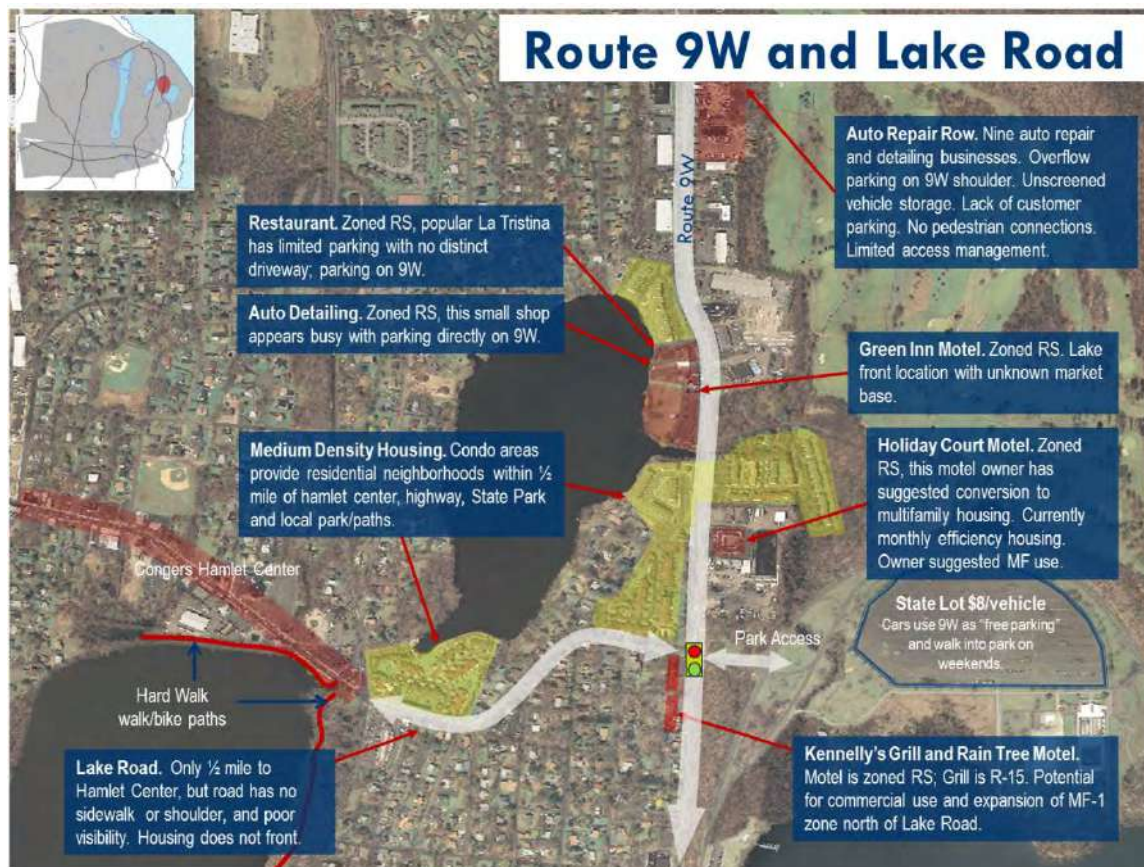

- Improved power, water and tele-communications infrastructure
- Offer programs or incentives to accelerate the successful development of entrepreneurial companies and start-ups
- Mixture of different zoning districts; but uses and scale are similar
- Lacks a sense of cohesion
- Access management
- Opportunity exists to maximize underutilized parcels

US-9W & Congers Lake Road Recreational / Neighborhood Area

Vision:

Location along US-9W based in the residential and recreational nature of the area, but also supports opportunities such as live-work or mixed use developments and/or local retail and commercial activities that service the neighborhood and the leisure activities associated with Rockland State Park.

Figure 4-3: US-9W Recreational / Neighborhood Area

Elements:

- Area within ½ mile of intersection with Congers-Lake Road
- Strong multifamily housing infrastructure and complimentary uses
- Support access to State Park, Congers, Congers Lake, and Swarthort Lake
- Create flexible live-work and small scale mixed use
- Enhance pedestrian and bicycle facilities to improve safety and help reduce cross-town automobile trips
- Encourage small-scale commercial use such as small retail or dining
- Support transit services and infrastructure

4.1.3 Proposed Corridor Concepts

CS (in consultation with the Town Planning Department Staff and Town Attorney) developed the following three corridor concepts for US-9W.

US-9W Corridor Concept:

Commercial corridor that:

- Maintains and expands the recreational atmosphere and residential offerings adjacent to Rockland State Park, with particular focus near the intersection of Route 9W and Lake Road
- Offers enhanced pedestrian/bicycle facilities with targeted improvements to improve non-vehicular linkages with the Hamlet of Congers
- Targets commercial development to the north, with a focus on providing opportunities and advancing research & technology-related firms and industries
- Continues to support existing commercial activities in the near future, but encourages future development to support neighboring uses and character of Route 9W

Route 9W: Research and Technology Area**Concept:**

Research & technology firms share business support resources, services, and infrastructure. Zoning and land uses support the physical and logistical needs to attract firms.

- Attract high wage and high employment business types to locate facilities near intersection with SR-303

- Communications (technology), data storage, data management, medical devices, pharmaceuticals, cosmetics and research and design sectors
- Administrative processes that allow businesses to grow through lower costs
- Includes good access to employees, partners and customers in the region
- Support Clarkstown residents by attracting high-quality employment with shorter commute times for residents

Observed Issues:

- Mixture of different zoning districts; but uses and scale are similar
- Lacks a sense of cohesion
- Access management
- Opportunity exists to maximize underutilized parcels

Zoning Strategy:

Create Commercial Office Support (COS) zoning district that:

- Highlights technology uses as of right
- Allows for small scale retail & service uses
- Manages shared parking and access management
- Allows other light industrial & commercial uses

Impacted Zones:

- PO, LO, LIO, LS, RS

Considerations:

- Clarifies uses for future development (marketing to technology sector)
- May include pedestrian oriented site planning requirements
- May include developer incentives

US-9W: Auto Repair Row Area

Concept:

An area of the gW Corridor that supports current auto related uses, but offers opportunities for future development that are in concert with the neighboring land uses that support the technology emphasis to the north, and residential or recreational uses to the south.

- Continuation of historical uses of auto repair and detailing shops in immediate future
- Some shared benefits (specialized skills, storage, overflow)
- Encourage future development to support neighboring uses and character of US-gW Corridor
- Shared parking to reduce illegal parking on US-gW
- Opportunities to encourage improvements to private facilities

Observed Issues:

- RS zoning allows for commercial intensities that are out of scale and context with the Route gW corridor
- Opportunity to align neighboring land uses and corridor character
- Current RS uses are attributed to the road safety issues
- Opportunities to improve access management

Zoning Strategy:

- Continue Commercial Office Support (COS) zoning district south of the US-gW and SR-303 intersection

Impacted Zones:

- RS

Considerations:

- Clarifies uses for future development
- Aligns neighboring land uses
- Establishes an appropriate commercial intensities
- Incorporates site planning and other incentives
- May include pedestrian oriented site planning requirements

- May put existing uses into non-conformity

US-9W and Congers Lake Road Neighborhood Area Concept

Concept:

Location along US-9W based in the residential and recreational nature of the area, but also supports opportunities such as live-work or mixed use developments and/or local retail and commercial activities that service the neighborhood and the leisure activities associated with Rockland State Park.

- Area within ½ mile of intersection with Congers-Lake Road
- Strong multifamily housing infrastructure and complimentary uses
- Support access to State Park, Congers, Congers Lake, and Swarthort Lake
- Create flexible live-work and small scale mixed use
- Enhance pedestrian and bicycle facilities to improve safety and help reduce cross-town automobile trips
- Encourage small-scale commercial use such as small retail or dining
- Support transit services and infrastructure

Observed Issues:

- RS zoning allows for commercial intensities that are out of scale and context with the Route 9W corridor
- RS uses are located in this area to accommodate the pre-existing motel uses
- Existing commercial uses (motels) do not service or accommodate the local neighborhood community and/or recreational land uses
- Opportunity exists for land owners to improve uses

Zoning Strategy:

Create a new zoning district titled Neighborhood Shopping that:

- Facilitates appropriately scaled commercial development on commercially zoned properties
- Similar in use and bulk to the Local Shopping (LS) district

- Has unique characteristics –such as the ability to integrate mixed-use or multifamily housing elements

Impacted Zones:

- RS

Considerations:

- Aligns neighboring land uses
- Establishes an appropriate commercial intensities
- Flexibility in allowable uses and their implementation

4.2 SR-303

4.2.1 Public Outreach

For the SR-303 corridor, CS distributed mailings to approximately 51 businesses and/or landowners (including Valley Cottage Library, Rockland Masonry & Landscape, Cefola's Clarkstown Auto Lube, and ARC of Rockland).

Building and Land Infrastructure

Only three proprietors noted issues with their land-based infrastructure on SR-303. At Star Kay White, which encompasses three separate buildings, one building was not designed for larger-sized (53 and 70 foot) trucks to navigate the parking lot. This makes it difficult for trucks to make deliveries behind the building due to lack of space for turns.

A restaurant owner not in the formal study area reported intermittent (every 3-5 years) flooding of the building due to a State-operated run-off pipe, causing significant property damage.

Staff at the Valley Cottage Library stated they have ten staff parking spots and 47 visitor parking spots, with ½ of those spots being bioswales, which have design features that collect water to be absorbed into the soil rather than creating run-off to Town sewers. In addition, Library staff noted that their location provides little to no transit, walking or bicycling access, and places greater need on automobile parking.

Transportation Infrastructure

Some businesses surveyed on SR-303 mentioned traffic congestion as a key local concern, especially during peak hours. Three key intersections reported to have high levels of congestion include Hemlock Road, Haverstraw Road and the “five points” intersection at Lake Road (with SR-303, Ridge Road and Christian Herald Road). One owner of an automobile repair business

noted that congestion occurs at the five points intersection in part due to a poorly-timed traffic light.

Some respondents were concerned about the safety of turns in and out of their business parking lots – particularly with left turns – due to high traffic and limited visibility. A manager at Capital One Bank noted the left turn into their parking lot is dangerous due to heavy traffic. A manager at Star Kay White stated that when turning left from the industrial park, it is difficult to see southbound traffic due to roadside vegetation. A staff member at the Valley Cottage Library noted long delays for vehicles turning left out of the parking lot.

Three respondents noted their concern with high travel speeds near their locations. A manager at Star Kay White stated that although the posted speed limit is 45, drivers begin to accelerate well before the 55 mile per hour zone located just past their location. The posted speed limit by Valley Cottage Animal Hospital was reported to be 45 miles per hour, but one veterinarian noted that cars typically travel at speeds closer to 65 miles per hour. The owner of Honda-a-Medic stated there had been a number of crashes on SR-303, including those resulting in fatalities. The office manager at Comprehensive Eye Care stated she has seen many crashes near their location.

A select number of respondents in the Lakeridge Plaza were concerned that a lane divider may be constructed on SR-303, as it could limit northbound access to their businesses.

The owner of Spirit Town Wines and Liquors suggested transit could be improved on SR-303, as it seldom operates according to the posted schedule. A consultant at a transportation consulting firm on SR-303 stated there are five employees who commute to work via bus, though they have noted limited service hours and slow travel speeds.

Parking

The majority of the businesses surveyed on SR-303 noted sufficient parking available for staff and customers. Three respondents have experienced parking constraints, with one respondent expecting a future lack parking availability. Parking at ARC Rockland is limited for employees, especially in the winter. Star Kay White is at capacity for employee parking. There is some concern at Comprehensive Eye Care that a youth recreation facility located in the office park will limit parking availability for office tenants and customers during typical working hours. The Valley Cottage Library has explored an expansion of their parking lot, and noted that their location, somewhat removed from activity centers, limits non-automobile access.

Four of the businesses surveyed reported loading bays or loading docks located at the rear of the buildings. ARC Rockland has four loading bays, with trucks arriving three to four times per week between 9 a.m. and 3:30 p.m. Star Kay White has loading docks at three buildings. Naeva Geophysics has a loading bay used approximately once a month.

Land Use and Zoning

The regional economy was also a key concern on the SR-303 corridor. At least two respondents, however, had plans to or had already expanded their business facilities. The Plant Manager at Star Kay White was operating at capacity in regards to building area and planned to expand or move to a new location within five years. The owner of Cefola's Clarkstown Auto Lube is planning to expand, and viewed their property as "underused." The Valley Cottage Library had requested a permit from the Town to expand their parking lot for visitors and staff. The Valley College Animal Hospital underwent an expansion of their office approximately five years ago, with no further plans to expand in the next five years.

Three respondents reported lack of walking and biking accessibility on SR-303. The owner of Honda-A-Medic stated that SR-303 is a busy highway without sidewalks and believed it is too dangerous to walk or ride bicycles on. A consultant at Naeva Geophysics noted it is very dangerous to walk near their office since there are no sidewalks. The office manager at Comprehensive Eye Care noted the lack of sidewalks outside of the office park. The office manager also stated that pedestrians walking on SR-303 must walk on the shoulder, which is narrow and dangerous to walk on.

The owner of Rick's Club American restaurant noted that customers who live close can walk to the restaurant, and that a new walking trail around Congers Lake may be attracting a small number of new customers.

Administrative Requirements

Several respondents reported high taxes a hindrance to their businesses. At least two owners noted that high taxes contribute to poor profit performance even as costs for supplies, land and facilities continue to rise, suggesting downsizing, moving and closing a business was expected in the near future.

Three businesses on SR-303 noted difficulties obtaining permit approval through the Town Board. One respondent stated that both the Planning Board and the Zoning Board of Appeals placed restrictions on business growth and created unnecessary requirements that create considerable costs for small businesses. One respondent noted they expanded their building's infrastructure recently and would not expand again because the permitting process was too costly. The respondent said it is much easier to get approval to expand in other nearby towns, based on experience with other business locations. Another business owner tried to build an accessory facility, but was denied a permit for it more than once despite potential market demand, and noted that zoning and permits are unnecessarily restrictive.

Key Issues

Respondents in the SR-303 and SR-304 corridor shared similar sentiments about taxes, under-utilized properties, and safety along the corridor. Respondents found the taxes in Clarkstown to be disproportionately higher than taxes in neighboring towns. Respondents felt the vacant and under-utilized properties are diminishing the value of properties in the entire corridor.

Respondents noted that traffic congestion is especially bad near business locations, especially during AM and PM rush hours – intersection of Lake Road, Christian Herald Road, and Route 303.

SR-303 respondents noted challenges making trips that should only require a short distance, or minimal travel time (such as getting lunch). First, poor or nonexistent sidewalk infrastructure created a dangerous environment for pedestrians. Second, limited restaurant and food alternatives near business locations required additional vehicular trips, which they felt contributed to the above mentioned congestion.

Similar to respondents from all other corridors, SR-303 respondents found the lengthy and costly review and approval process is major impediment to improvements and investments by businesses and landowners. There is a lack of desire by both landowners and businesses to expand or develop their properties given this impediment.

Respondents from all five corridors cited the high number of driveways and curb cuts, as well as excessive vehicular speeds as the main driver of safety issues in their corridors.

Meetings

The following table summarizes key outreach activities and meetings related to SR-303.

Table 4-2: SR-303 Public Engagement / Meeting Summary

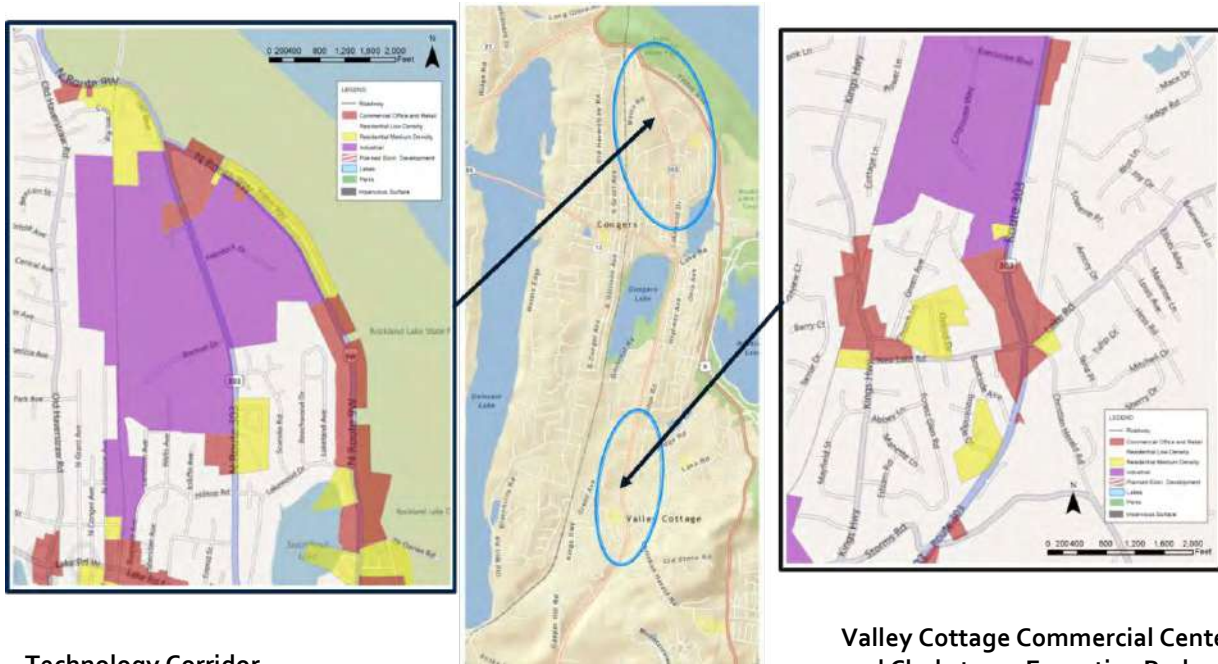

Date	Subject	Audience
May 27, 2011	Existing Conditions Review	Special Board Meeting
October 25, 2011	Existing Conditions Report & Project Update Meeting	Town Board Workshop
November 21, 2011	SR-303 & SR-304 Existing Conditions & Visioning	Community Engagement Meeting
February 10, 2012	US-303 & 304 Corridor Concept Workshop	Special Board Meeting
April 26, 2012	US-9W & SR-303 (Congers Area) Corridor Concept	Congers Corporate Corridor Business Leader Luncheon
August 28, 2012	Proposed CO/COS Zoning District Workshop	Special Board Meeting
September 4, 2012	SR-303 Corridor Concepts Review and NS Zoning Proposal	Town Board Workshop
November 30, 2012	SR-303 (Valley Cottage Area) Corridor Concept Review	Valley Cottage Business Leader Luncheon

December 14, 2012	Proposed CO/COS Zoning District Workshop	Special Board Meeting
January 14, 2013	SR-303 Corridor Concept Meeting	Community Engagement Meeting
March 19, 2013	US-gW & SR-303 Corridor Concept	Bert's Road Businesses
January 31, 2014	CO/COS Zoning Proposal	Special Board Meeting
April 1, 2014	CO/COS Zoning Proposal	Town Board Meeting

4.2.2 Proposed Vision

The vision for the SR-303 corridor consists of three primary components, a Technology corridor running from the intersection with US-gW to Stratford Arms Condos, and improvements for the Clarkstown Executive Park and Valley Cottage Commercial Center.

Figure 4-4: SR-303 Proposed Vision Areas

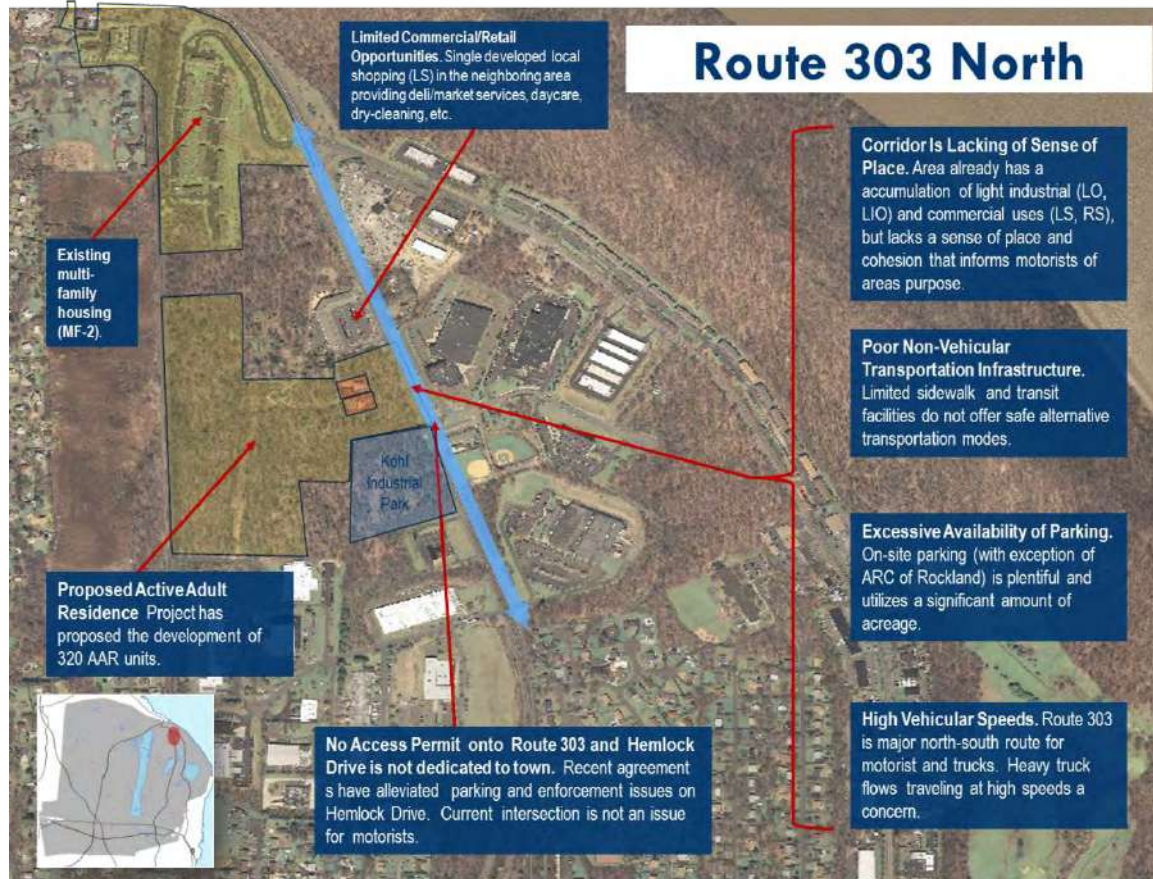

SR-303 Technology Corridor

Vision:

Identifiable area where research & technology-related firms and industries agglomerate to share business support resources, services, and infrastructure. Zoning and land uses should support the physical and logistical needs to successfully attract these types of companies.

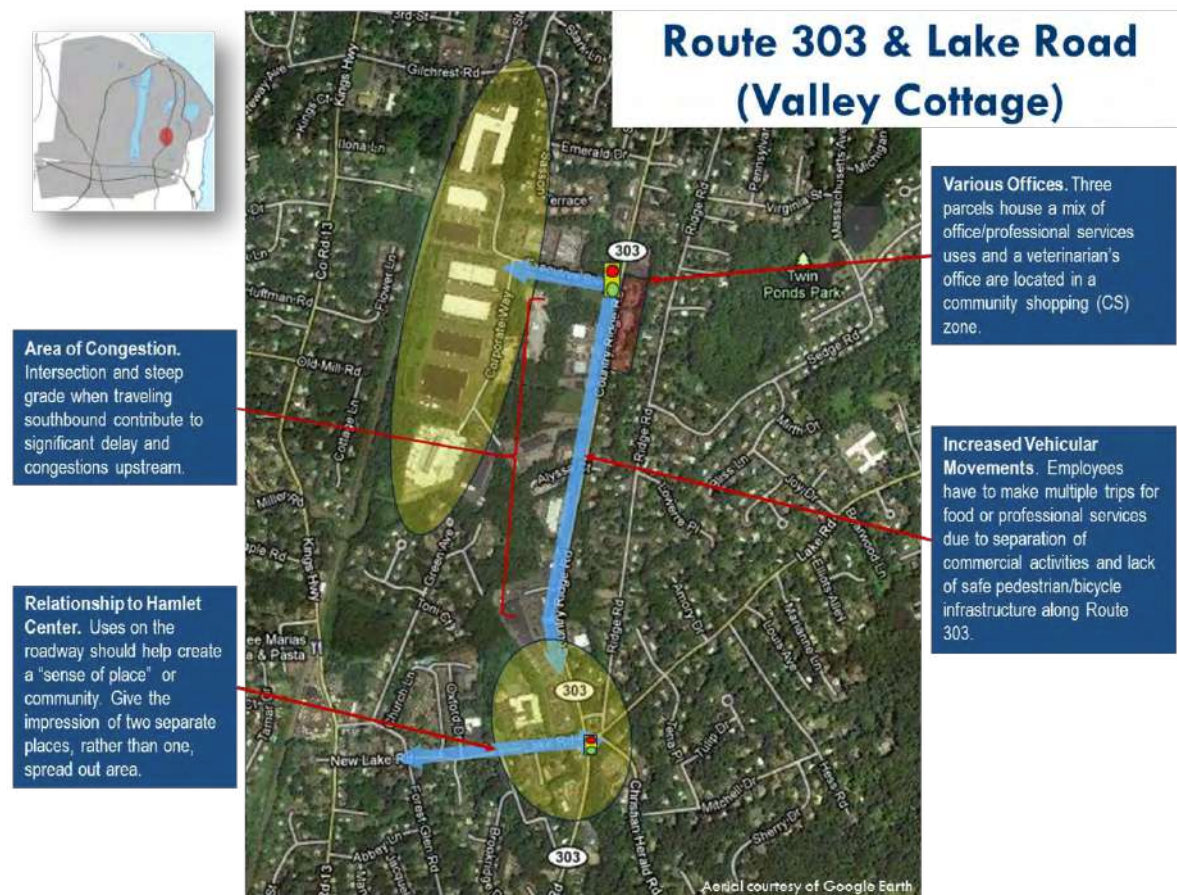

Figure 4-5: SR-303 Technology Corridor Vision

**Elements:**

- Currently operating in corridor
- Target communications, data storage and management, medical devices, pharmaceuticals, cosmetics
- Use branding and signage to market area
- Reduced parking requirements and shared parking opportunities
- Incidental commercial activities as of right on individual parcels
- Enhanced pedestrian facilities and design
- Improved power, water and tele-communications infrastructure
- Offer programs or incentives to accelerate the successful development of entrepreneurial companies and start-ups

- Mixture of different zoning districts; but uses and scale are similar:
 - Lacking sense of cohesion
 - Access management
 - Opportunity exists to maximize underutilized parcels

Figure 4-6: SR-303 Clarkstown Executive Park and Valley Cottage Commercial Area Vision

Clarkstown Executive Park

Vision:

Branded facility continues to support warehousing, light industrial, and office park related firms. Zoning and land uses continue to support the physical and logistical needs of existing firms, and provide opportunities for incidental commercial uses that are accessible by walking modes for office park tenants.

Elements:

- Currently operating on Route 303
- Offer shared parking, opportunities for reduced parking requirements in order to maximize efficient utilization of land
- Provide opportunities for a greater mix of incidental commercial activities as of right such as small eateries, gyms or healthcare facilities, daycare
- Require enhanced pedestrian facilities and design guidelines
- Allow for conversion of residential uses along Route 303 to professional office or limited commercial

Valley Cottage Commercial Center

Vision:

Area focused on supporting community retail and commercial uses for the local and surrounding neighborhoods, with limited opportunities for mixed use development. Additionally, land uses and transportation improvements should be implemented in a manner to further transit services, as well as improve the relationship between and support that advancement of the with the Valley Cottage Hamlet Center.

Elements:

- Continue and support development of existing commercial and retail land uses
- Improve geometrics and signalization at intersection of Route 303 – Lake Road – Christian Herald Road
- Enhanced gateway treatments
- Provide safe pedestrian crossing and street access to encourage local walking along Route 303
- Allow for conversion of residential uses along Route 303 to professional office (PO) or limited commercial activities
- Provide design incentives to orient buildings to street, provide pedestrian walkways through parking areas, and reduce paved areas
- Encourage enhancement of transit services and infrastructure

4.2.3 Proposed Corridor Concepts

CS (in consultation with the Town Planning Department Staff and Town Attorney) developed the following three corridor concepts for SR-303.

Route 303 Corridor Concept

Commercial corridor that:

- Remains as the primary north-south vehicular corridor.
- Maintains multiple commercial activity centers of varying scale and use:
 - Northern area near intersection of US-9W
 - Clarkstown Executive Park
 - Lake Road/Route 303 Shopping District
- Promotes professional office, retail, and commercial uses for development and growth in targeted areas
- Allows for inclusion of small-scale retail uses in commercial office parks to encourage walking for incidental uses
- Offers enhanced pedestrian/bicycle facilities to improve pedestrian safety and non-vehicular linkages with the Hamlets of Congers and Valley Cottage
- Acts as a “gateway” to the Hamlet of Valley Cottage

Route 303: Research and Technology Area

Concept:

Research & technology firms share business support resources, services, and infrastructure. Zoning and land uses support the physical and logistical needs to attract firms.

- Attract high wage and high employment business types to locate facilities near intersection with US-9W
- Communications (technology), data storage, data management, medical devices, pharmaceuticals, cosmetics and research and design sectors
- Administrative processes that allow businesses to grow through lower costs
- Includes good access to employees, partners and customers in the region

- Support Clarkstown residents by attracting high-quality employment with shorter commute times for residents

Observed Issues:

- Mixture of different zoning districts; but uses and scale are similar
- Lacks a sense of cohesion
- Access management
- Opportunity exists to maximize underutilized parcels

Zoning Strategy:

Update zoning to create Commercial Office (CO) zoning district that:

- Highlights technology uses as of right
- Allows for small scale retail & service uses
- Manages shared parking and access management
- Allows other light industrial & commercial uses

Impacted Zones:

- PO, LO, LIO, LS, RS

Considerations:

- Clarifies uses for future development (marketing to technology sector)
- May include pedestrian oriented site planning requirements
- May include developer incentives

Option 1: CO

- Apply to LIO and neighboring LO, RS, LS districts for uniformity
- Would require broadly-based district requirements to incorporate supporting uses

Option 2: CO with supplemental COS zoning

- Apply Scale surrounding uses with PPS to allow retail/service use and at existing bulk requirements

Route 303: Clarkstown Executive Park & Valley Cottage Commercial Center

Concept:

Support existing office parks located on SR-303 in Clarkstown, which house important commercial and light-industrial activities such as offices, light manufacturing facilities, packaging and delivery facilities, and other warehouse-type uses.

- Accessibility and transportation safety benefits by locating similar uses together, minimizing driveway frequency
- Reduce a variety of automobile trips by allowing the developed areas to include small-scale retail, dining and other consumer service facilities to serve the employees working at these locations
- Reduce motorized trips from and to business parks, supporting safe and convenient pedestrian trips
- Support Clarkstown residents by attracting high-quality employment with shorter commute times for residents

Issues:

- Mixture of different zoning districts; but uses and scale are similar
- Access management & safety concerns
- Opportunity exists to maximize underutilized parcels

Option 1: CO

- Apply to LIO and neighboring CS, PO
- Would require broadly-based district requirements to incorporate supporting uses

Option 2: CO with supplemental COS zoning

- Apply to LIO and neighboring CS, PO
- Scaled down PPS to allow targeted supporting uses and updated bulk requirements

- Could leave LIO, as PPS would provide accessible commercial opportunity

Option 3: CO and COS Districts; NS Application to existing PO and R-15 (fire house and school)

- Apply to LIO and neighboring CS, PO
- Scaled down PPS to allow targeted supporting uses and updated bulk requirements
- Could leave LIO, as PPS would provide accessible commercial opportunity
- Opportunity to create a 303 special permit that would allow for the conversion of existing R-15 to PO (similar to Route 304 Special Permit)

4.3 SR-304

4.3.1 Public Outreach

For the SR-304 corridor, CS distributed mailings to approximately 30 businesses and/or landowners (including Hard Wok, MHC Realty Corp II, Jan and Niles Davies, and Tilcon Minerals, Inc.).

Building and Land Infrastructure

There were no issues noted with building and land infrastructure in the SR-304 corridor.

Transportation Infrastructure

Access management and high travel speeds were also a concern to respondents on this corridor. In particular, left-hand turns into and out of parking areas have been perceived as dangerous due to both observed high travel speeds and past crashes.

Parking

Parking constraints are similar as on the SR-303 corridor. Mini-malls provide ample parking, due to the large number of spaces. One office tenant noted being at full capacity. This coincided with the observation that the location is not accessible by transit or walking.

Land Use and Zoning

There were no issues noted with zoning and land use in the SR-304 corridor.

Administrative Requirements

There were no issues noted with administrative requirements in the SR-304 corridor.

Key Issues

Respondents in the SR-304 found the taxes in Clarkstown to be disproportionately higher than taxes in neighboring towns. Respondents felt the vacant and under-utilized properties are diminishing the value of properties in the entire corridor.

Respondents along the SR-304 corridor expressed their need to convert their residential properties to professional offices were adequately fulfilled with the SR-304 special permit.

Similar to respondents from all other corridors, SR-304 respondents found the lengthy and costly review and approval process is major impediment to improvements and investments by businesses and landowners. There is a lack of desire by both landowners and businesses to expand or develop their properties given this impediment.

Respondents from all five corridors cited the high number of driveways and curb cuts, as well as excessive vehicular speeds as the main driver of safety issues in their corridors.

Meetings

The following table summarizes key outreach activities and meetings related to SR-304.

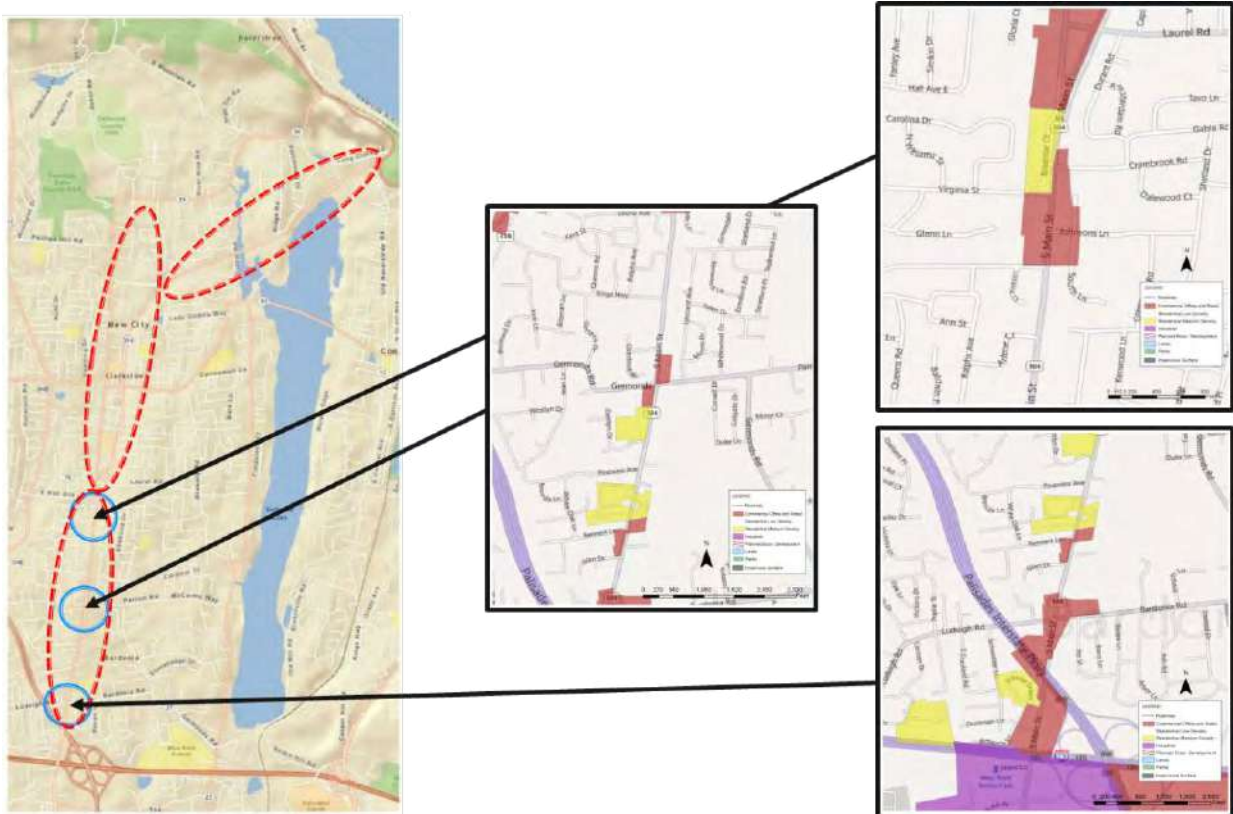

Table 4-3: SR-304 Public Engagement / Meeting Summary

Date	Subject	Audience
May 27, 2011	Existing Conditions Review	Special Board Meeting
October 25, 2011	Existing Conditions Report & Project Update Meeting	Town Board Workshop
November 21, 2011	SR-303 & SR-304 Existing Conditions & Visioning	Community Engagement Meeting
February 10, 2012	US-303 & 304 Corridor Concept Workshop	Special Board Meeting
June 28, 2012	Proposed NS Zoning District Workshop	Special Board Meeting
August 24, 2012	NS Zoning Proposal	Special Board Meeting
September 4, 2012	SR-304 Corridor Concepts Review and NS Zoning Proposal	Town Board Meeting

4.3.2 Proposed Vision

The vision for the SR-304 corridor consists of three primary components, Neighborhood Activity Places located at Johnsons Lane, Germonds Ave, and Ludvig/Bardonia Road.

Figure 4-7: SR-304 Proposed Vision Areas

SR-304 Neighborhood Activity Place

Vision:

Targeted location at a major nexus along a commercial corridor that houses limited neighborhood shopping and services as a transit access location. Commercial activities are designed to service local surrounding neighborhoods of multifamily and single family homes through enhanced pedestrian and bicycle facilities on a daily basis.

Figure 4-8: Radial Distance Between Potential Activity Places Along SR-304

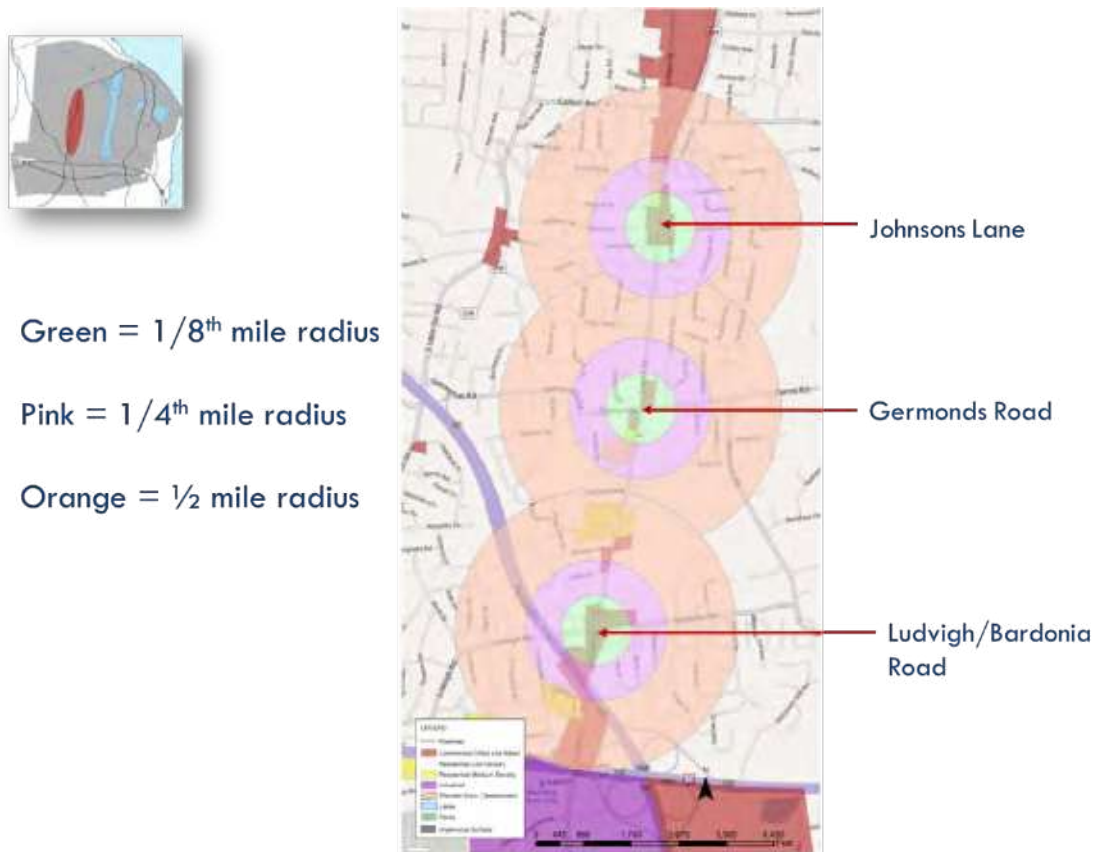

Figure 4-9: Johnsons Lane Activity Place

Figure 4-10: Germonds Road Activity Place

Figure 4-11: Germonds Road Activity Place

**Elements:**

- Commercial activities that do not compete with commercial uses targeted in New City Hamlet Center
- Support commercial/retail uses for the local neighborhood
- Appropriately scaled new development near multifamily and single-family residential development
- Incentives to orient buildings to street, provide pedestrian walkways through parking, and reduce paved areas and driveways through shared parking
- Provide safe pedestrian crossing and street access to encourage local walking
- Encourage enhancement of transit services and infrastructure

4.3.3 Proposed Corridor Concepts

CS (in consultation with the Town Planning Department Staff and Town Attorney) developed the following three corridor concepts for SR-304.

Route 304 Corridor Concept

Commercial corridor that:

- Maintains residential character
- Focuses commercial activities within Neighborhood Activity Places
- Encourages limited small scale retail for neighborhood use
- Maintains design characteristics that are consistent with neighborhood character
- Encourages walkability, and incorporates design elements from Hamlet Centers
- Supports identity as lower intensity gateway to New City Hamlet Center
- Supports neighboring land use with walking environment that is safe and accessible for customers
- Provides safe and accessible access to public transit to local residents

Route 304: Neighborhood Activity Place - Germonds Road & Route 304

Concept:

Targeted location at a major nexus along a commercial corridor that houses limited neighborhood shopping and services as a transit access location. Commercial activities are designed to service local surrounding neighborhoods of multifamily and single family homes through enhanced pedestrian and bicycle facilities on a daily basis.

- Support commercial/retail uses for the local neighborhood
- Opportunity to expand multifamily house choices
- Appropriately scaled new development near multifamily and single-family residential development
- Incentives to orient buildings to street, provide pedestrian walkways through parking, and reduce paved areas and driveways through shared parking
- Provide safe pedestrian crossing and street access to encourage local walking

- Encourage enhancement of transit services and infrastructure

Observed Issues:

- PO zoning requires lot size and setbacks out of scale and context with the SR-304 corridor
- Physical character and site design of existing uses
- Opportunities for commercial uses to support local demand
- Opportunity exists for land owners to improve uses

Zoning Strategy:

Create a new zoning district titled Neighborhood Shopping.

- Facilitates appropriately scaled commercial development on commercially zoned properties
- Similar in use and bulk to the Local Shopping (LS) district
- Has unique characteristics –such as the ability to integrate mixed-use or multifamily housing elements

Impacted Zones:

- LS, PO, R-22

Considerations:

- Aligns neighboring land uses
- Establishes an appropriate commercial intensities
- Flexibility in allowable uses and their implementation

Option 1:

- Rezone current LS, PO and portion of R-15 district (on school property) to NS, allowing for small scale commercial development
- Opportunity for multifamily residential use by special permit to complement existing MF district

Option 2:

- Add multifamily housing district north of the intersection with Germonds Road
- Rezone current LS and PO zones to NS, allowing for smaller scale development and multifamily residential use by special permit

Option 3:

- Rezone current LS, PO and portion of R-15 district (on school property to NS, allowing for small scale commercial development
- Opportunity for multifamily residential use by special permit to complement existing MF district

Route 304: Neighborhood Activity Place - Ludvigh/Bardonia Road & Route 304

Concept:

Targeted location at a major nexus along a commercial corridor that houses limited neighborhood shopping and services as a transit access location. Commercial activities are designed to service local surrounding neighborhoods of multifamily and single family homes through enhanced pedestrian and bicycle facilities on a daily basis.

- Support commercial/retail uses for the local neighborhood
- Opportunity to expand multifamily house choices
- Appropriately scaled new development near multifamily and single-family residential development
- Incentives to orient buildings to street, provide pedestrian walkways through parking, and reduce paved areas and driveways through shared parking
- Provide safe pedestrian crossing and street access to encourage local walking
- Encourage enhancement of transit services and infrastructure

Observed Issues:

- Physical character and site design of existing uses
- Opportunity exists for land owners to improve uses
- Opportunities for commercial uses to support local demand

Zoning Strategy:

Create a new zoning district titled Neighborhood Shopping

- Facilitates appropriately scaled commercial development on commercially zoned properties
- Similar in use and bulk to the Local Shopping (LS) district
- Has unique characteristics –such as the ability to integrate mixed-use or multifamily housing elements

Impacted Zones:

- LS, MF-2

Considerations:

- Aligns neighboring land uses
- Establishes an appropriate commercial intensities
- Flexibility in allowable uses and their implementation

Option 1:

- Rezone east side of 304 from LS to NS. Allow small scale future redevelopment to complement low intensity uses near school and residences
- NS would also allow for possible multifamily uses

4.4 SR-59 East (West Nyack)**4.4.1 Public Outreach***Building and Land Infrastructure*

For the SR-59 East corridor, CS Distributed mailings to 42 businesses and/or landowners (including Tilcon Minerals, Nyack Kitchens, Key Bank, Rockland Diagnostics, Romantic Depot, and land owners of the old Journal News building and old state troopers barracks parcels.

Transportation Infrastructure

Respondents felt the corridor's current transportation infrastructure meets most vehicular business needs. However, issues cited by respondents included coordination among signalized intersections as problematic. AM/PM peak congestion, and excessive truck traffic. Respondents

also noted excessive speeding with lack of enforcement in the corridor as well as limited sidewalk infrastructure creating a dangerous environment for pedestrians.

Respondents noted access to places of employment via public transportation is limited. Often employees must receive vehicle transfers between employment centers and bus stops.

Respondents requested additional bus stops near places of employment/

Parking

Respondents felt the corridor's current parking was adequate and met most business needs.

Land Use and Zoning

The SR-59 East corridor is identified as a major commercial/retail area within Clarkstown.

Respondents claimed existing land uses are not the best use for the SR-59 East corridor. They desire more retail shopping such as specialty retail establishments that complement Palisades Mall retail establishments as well as general service retail establishments (for day-to-day retail shopping) in close proximity to employment centers.

Administrative Requirements

When asked about dealings with the Town of Clarkstown, most respondents reported no significant interactions related to their business. However, several respondents reported high taxes as a hindrance to their businesses.

Key Issues

Key issues in the SR-59 East corridor include:

- Existing zoning does not correspond with current market demands and existing commercial activities within the area
- Limited specialty and general retail services near business locations, which requires additional vehicular trips
- Traffic congestion and excessive truck traffic during AM and PM rush hours
- Poor sidewalk infrastructure and dangerous environment for pedestrians
- Limited access to places of employment via public transportation

Similar to respondents from all other corridors, SR-59 East respondents found the lengthy and costly review and approval process is major impediment to improvements and investments by businesses and landowners. There is a lack of desire by both landowners and businesses to expand or develop their properties given this impediment.

Respondents from all five corridors cited the high number of driveways and curb cuts, as well as excessive vehicular speeds as the main driver of safety issues in their corridors.

Meetings

The following table summarizes key outreach activities and meetings related to SR-59 East.

Table 4-4: SR-59 East (West Nyack) Public Engagement / Meeting Summary

Date	Subject	Audience
May 27, 2011	Existing Conditions Review	Special Board Meeting
October 25, 2011	Existing Conditions Report & Project Update Meeting	Town Board Workshop
November 21, 2011	SR-303 & SR-304 Existing Conditions & Visioning	Community Engagement Meeting
December 10, 2012	SR-59 East (West Nyack) Corridor Concept Workshop	Business Leaders Meeting
January 14, 2013	SR-59 East (West Nyack) Corridor Concept Meeting	Community Engagement Meeting
January 25, 2013	SR-59 East (West Nyack) Corridor Concept Review & Proposed Map Change Workshop	Special Board Meeting
February 6, 2013	SR-59 East (West Nyack) Proposed Map Changes	Town Board Meeting

4.4.2 Proposed Vision

Vision:

Route 59 East (West Nyack) will remain a major commercial corridor and a nexus for retail activities and commercial uses. The corridor should provide an inviting environment for travelers of all modes; with a focus on enhancing bicycle and pedestrian facilities to create a safer and more pleasing environment. The corridor will also provide enhanced connectivity among shopping centers as well as improved signal light timing to improve congestion and mobility.

Elements:

- Remains an area of significant retail/commercial activity
- Remains major access point to the Thruway and highway network, and should support enhancing multi-modal transportation alternatives
- Promotes repurposing underutilized or vacant properties to supportive retail and commercial uses

- Supports improving/enhancing traffic control devices (where as needed) and effectively managing ingress/egress onto commercial corridors
- Supports enhanced pedestrian/bicycle facilities to improve pedestrian safety and non-vehicular linkages

4.4.3 Proposed Concept

CS (in consultation with the Town Planning Department Staff and Town Attorney) developed the following corridor concept for SR-59 (West Nyack).

Concept:

Major regional commercial activity center servicing a broad and diverse range of commercial and retail uses. Leverage proximity to regional transportation corridors and major employment center to improve transit accessibility and mode choice.

- Support commercial/retail uses for the region
- Opportunity to expand access to multi-modal transportation
- Encourage enhancement of transit services and infrastructure to support non-vehicular access to employment centers
- Provide safe pedestrian crossing and clearly defined pathways to encourage walking between commercial uses

Observed Issues:

- RS district boundaries create split-zoned lots
- Existing LIO zoning does not correspond with current land uses
- Limited specialty and general retail services near business locations, which requires additional vehicular trips
- Poor sidewalk infrastructure and dangerous environment for pedestrians
- Opportunities for commercial uses to support local demand
- Opportunities exists to improve buffering and screening between commercial and residential uses

Zoning Strategy:

- Adjust RS district boundary to match parcel boundaries along Route 59 and Route 303
- Rezone parcels currently zoned LIO that are part of the Palisades Mall complex to corresponding MRS zoning
- Rezone LIO districts along Route 303 to RS district to correspond with area context and market demands
- Examine opportunities to enhance qualitative aspects of RS buffering
- Improved screening to reduces noise, supports community character and aesthetic qualities
- Qualitative elements of buffers may include:
 - Height, width of landscaping
 - Materials (e.g. berms, trees, shrubs, fences, pavers)
 - Landscaping specific to neighboring residential uses
 - Landscaping specific to parking areas

Impacted Zones:

- RS, LIO, MRS

Considerations:

- Aligns existing commercial uses with appropriate commercial zoning district
- Addresses desire for additional specialty retail establishments that complement Palisades Mall
- Provides opportunities to improve existing land uses to greatest and best use
- Provides opportunities to enhance general service retail establishments (for day-to-day retail shopping) within close proximity to employment centers

4.5 SR-59 West (Nanuet)

The development of an overall vision for the SR-59 West (Nanuet) corridor was highly community focused and iterative, with a purpose to educate the public about existing community conditions related to zoning and transportation infrastructure.

4.5.1 Public Outreach

SR-59 West (Nanuet) public outreach was comprised of two primary efforts:

- A business and landowner survey distributed via mail and via telephone
- A series of public meetings

Mailings were distributed to 113 businesses and landowners. Surveys were completed both via mail and over the phone. Survey topics covered issues involving land use and infrastructure along the 59W corridor as well as current trends. Surveys were completed with businesses and landowners including: Petco, Rockland Hyundai, Target, Rockland Bakery, Toy Wiz, T.J. Maxx, Michaels, Bryn Mawr TV, Leader Carpet, All Transmissions, and Nanuet Animal Hospital. Findings collected from the survey effort focused on traffic congestion, lack of parking, unsafe pedestrian crossings, and power outages.

Building and Land Infrastructure

Changes and suggestions to change the town achieve its vision for SR-59 West (Nanuet) corridor included design standards for two to three-story buildings. Participants prioritized infrastructure that would facilitate access to public transit services. They sought to establish the corridor as an easily accessible and frequented destination for residents, visitors, and businesses.

Transportation Infrastructure

CS facilitated public meetings provided participants opportunities to share concerns related to corridor conditions. Participants noted traffic congestion and an unsafe environment for pedestrians and bicyclists key concerns. Enhancements to signage (along Forman Drive and Grandview Avenue), as well as a signal light timing were suggested improvements. Participants emphasized a lack of connectivity between shopping centers along the entire SR-59 West (Nanuet) corridor. On College Avenue in particular, closing off retail entrances, reducing traffic lights, and creating pedestrian connections between shopping centers was suggested. Other issues raised at the meetings included the lack of aesthetic appeal across the corridor, improving safety measures for pedestrians, reducing illegal left turns near Smith Street, and increasing available parking at Demarest Mill Road and SR-304.

Traffic congestion was primarily attributed to the high number of entrances to retail establishments, a large amount of commerce along the corridor, and a minimal number of

shared boundaries between retail establishments. Commercial establishments along the corridor are widely varied and include big box retail stores such as Michaels and T.J. Maxx, strip malls such as Rockland Plaza and Spring Valley Marketplace, and retail establishments on single lots such as ToyWiz.

Parking

Participants focused on the construction of shared parking and multi-story parking structures instead of surface lots. Additional parking availability was sought for Rockland Plaza and Spring Valley Marketplace, as well as at Demarest Mill Road and SR-304. Improving parking availability through pricing was another favored suggestion – specifically managing the entire stock of municipal parking (or specific areas where perceived parking shortages are the highest), and adjusting hourly rates dynamically based on peak demand (employing a type of “surge pricing”).

Land Use and Zoning

In order to achieve a full vision for the corridor, participants suggested rezoning Light Industrial Office (LIO) areas to reflect current uses, establishing design standards to help create a unique identity, re-greening of the corridor, zoning line adjustments and increased “mixed-use” zoning that allows smaller-scale retail and residential components. Participants expressed concern that older shopping areas may not meet future needs of the corridor due to zoning restrictions.

Administrative Requirements

Participants in the SR-59 West (Nanuet) discussions did not make specific suggestions related to administrative requirements.

Key Issues

Several key issues were raised at the meetings which need to be addressed to realize the vision of the corridor including the following:

- Congestion during peak hours
- Lacking a sense of place
- Too many curb cuts
- Aesthetic conflict between older strip malls and newer big box retailers
- Inadequate bicycle and pedestrian accessibility and safety
- Lack of green space
- Sprawl inducing zoning

- Overabundance of traffic lights

Meetings

The following table summarizes key outreach activities and meetings related to SR-59 West (Nanuet).

Table 4-5: SR-59 West (Nanuet)Public Engagement / Meeting Summary

Date	Subject	Audience
May 27, 2011	Existing Conditions Review	Special Board Meeting
October 25, 2011	Existing Conditions Report & Project Update Meeting	Town Board Workshop
May 9, 2013	SR-59 West (Nanuet) and Nanuet Hamlet Center Charrette	Community Engagement Meeting
May 18, 2013	SR-59 West (Nanuet) and Nanuet Hamlet Center Charrette	Community Engagement Meeting
July 25, 2013	SR-59 West (Nanuet) and Nanuet Hamlet Center Charrette & Walkabout	Nanuet Civic Association & Community Engagement Meeting
September 19, 2013	SR-59 West (Nanuet) and Nanuet Hamlet Center Charrette	Nanuet High School Student Outreach
November 20, 2013	SR-59 West (Nanuet) and Nanuet Hamlet Center Vision and Corridor Concept Proposal	Community Engagement Meeting
January 31, 2014	SR-59 West (Nanuet) Corridor Concept and Proposed Zoning Workshop	Special Board Meeting
April 1, 2014	SR-59 West (Nanuet) Zoning Map Changes Proposal	Town Board Workshop

Clarkstown representatives and the CS team presented a proposed vision (based on initial community inputs) for the SR-59 West (Nanuet) corridor to the community feedback on November 20, 2013.

4.5.2 Proposed Vision

Vision

Route 59 West (Nanuet) will be a commercial corridor that provides an inviting environment for travelers of all modes. The corridor will include a tree-lined median and enhanced bicycle and pedestrian facilities to create a safer and more pleasing environment. The corridor will also provide enhanced connectivity among shopping centers as well as improved signal light timing to improve congestion and mobility.

The following two figures present the current conditions at the intersection of SR-59 and Middletown Road in Nanuet and a proposed visions in the form of artistic rendering.

Figure 4-12: SR-59 and Middletown Road (Southbound) – Existing Conditions

Figure 4-13: SR-59 and Middletown Road (Southbound) – Proposed Vision

Elements

The following elements anchor the vision of this corridor as seen from example photographs below:

- Greening of Corridor - the potential for a SR-59 West (Nanuet) as a green corridor with extensively landscaped pedestrian / bicycle greenways and medians. Landscaping not only provides a visually pleasing environment for the traveler, it also provides much needed safety buffer from vehicles and shade from the sun to encourage pedestrian activity.
- Enhanced Bicycle and Pedestrian Facilities - SR-59 West (Nanuet) could benefit from improved bicycle and pedestrian infrastructure. Separate protected bicycle lanes, and

bicycle parking at key destinations (including public transit stops) are proven techniques to encourage new cyclists. High quality treatment for pedestrian infrastructure, including high-visibility striping, raised / table-top crossings and intersections, signage noting pedestrian priority, and pedestrian count-down signals all encourage pedestrian activity by promoting safe access.

- Improved Connectivity - potential urban design and street treatments to improve multi-modal connectivity between parcels. Along with simply following the vehicle prioritized road network, an alternative grid for pedestrian and bicycle use is often necessary to connect adjacent parcels and provide safe, convenient spaces for circulation and socializing. An overabundance of vehicle parking lots does not make a pleasant or safe walking environment. Thus, the SR-59 West (Nanuet) corridor would benefit from protected connections between pedestrian infrastructure (greenways, sidewalks, etc.) and building entrances.

4.5.3 Proposed Corridor Concepts

CS (in consultation with the Town Planning Department Staff and Town Attorney) developed the following corridor concept for SR-59 West (Nanuet).

Concept:

The outreach results described above reflect an overall desire for a green corridor that considers the needs of various modes and prioritizes the creation of a welcoming built environment with a variety of commercial and retail uses. Issues such as congestion and zoning code restrictions will need to be considered and continually addressed as officials begin to update the land use regulations and zoning codes along the corridor.

To achieve the overarching vision for the corridor, it is important for the town to analyze the information gathered through these outreach efforts and establish what is reasonable, realistic, and effective given the conditions of the community.

Observed Issues:

The following issues need to be addressed as the corridor deals with continued growth and future development:

- Traffic – Existing traffic congestion on SR-59 and vehicular movements associated with the Shops at Nanuet
- Signal Light Timing – Need for retiming of lights along corridor to ease congestion
- Zoning Code Restrictions – Older shopping areas may not meet future needs of the corridor

- Urban Design Guidelines – Improved guidance to ensure consistency in built environment. This will ensure that the desired level of pedestrian access is maintained across the corridor. For SR-59W, this can create parking facilities that do not create barriers for pedestrian and bicycle activity
- Pedestrian and Bicycle Infrastructure – Consistent implementation of these infrastructures is necessary. Connections between key destinations must be identified, then these networks must be prioritized

Zoning Strategy:

To achieve the SR-59W vision, a number of modifications to the built environment and existing land use code will need to be implemented. Various zoning opportunities exist that can help create opportunities better suited to the current character of the area as well as the desired goals of increasing transit use, connectivity, and accessibility for all modes. In particular, changing current Light Industrial Use (LIO) zoning to Regional Shopping (RS) will help to further establish the region as a commercial and retail destination.

Impacted Zones:

- PO, PED, LIO, R-15, R-22, and RS

Considerations:

Accessibility, connectivity, and safety were all noted concerns gathered through outreach. Enhancing transit options and non-motorized traveler safety can both ease auto congestion and create a safer environment for bicyclists and pedestrians. Notably, enhancing transit connectivity and accessibility to and from the Rockland Plaza, Spring Valley Marketplace, and the Shops at Nanuet will help mobility throughout the region and help alleviate parking concerns in these places.

Unsafe pedestrian conditions were noted at Old Turnpike Road (Co. Road 52) and Route 59 as well as at Kemmer Lane and Convent Road. Enhancing and adding sidewalks to Convent Road and improving sidewalks and signal light timing, crossing signals, reducing curb cuts (especially along College Avenue), as well as providing street trees, street furniture, separated bike lanes, and extension of boulevard trees can all help to enhance the safety for pedestrians and motorists alike.

While all of these enhancements will help encourage alternative modes of transportation, providing adequate parking for motorists is still important to creating an accessible and welcoming destination. Enhancing parking opportunities along DeMarest Mill Road and Route 304 is an area of particular note.

Lastly, in an effort to create design standards that help the corridor achieve a unique and attractive feel as a destination, establishing signage requirements and formal design standards

for businesses and landowners is important. Forman Drive and Grandview Avenue are two areas noted as in particular need of signage standards.

4.6 Nanuet Hamlet Center

The development of an overall vision for the Nanuet Hamlet Center was highly community focused and iterative, with a purpose to educate the public about existing community conditions related to zoning and transportation infrastructure.

4.6.1 Public Outreach

A business and landowner survey was also conducted by sending introductory mailings to 113 businesses and landowners in the area. The purpose of this was to seek cooperation in advance of a series of phone calls that aimed at gathering information to help build on the vision established in the Town of Clarkstown's Comprehensive plan as it related to land use, zoning, transportation and overall quality of life in Clarkstown.

Primary areas of concern included traffic congestion, lack of parking, unsafe pedestrian crossings, and power outages. Traffic congestion can be attributed to: numerous entrances to retail establishments, large amount of commerce along the corridor (big box retail such as Michaels and T.J. Maxx, strip mall development- Rockland Plaza, Spring Valley Marketplace, Smaller retail establishments on single lots- i.e. ToyWiz), and minimal number of shared boundaries between retail establishments.

Building and Land Infrastructure

The following issues were noted regarding land-based infrastructure:

- Create "Downtown Nanuet" – promote shops and restaurants to attract visitors and residents. Create theater district, farmers' markets, etc. Introduce new public spaces and parks
- "Town feel" lacking – hamlet needs landscaping, preservation, and building renovation
- Town center to have a two- to three- story building scale, design standards for signage and other accents such as window treatments were all mentioned as potential ideas
- Building setbacks be reduced and that "mom and pop" style restaurants and stores be encouraged

Transportation Infrastructure

Traffic congestion is a challenge that needs to be addressed as the town and the corridor experience continued growth and development – especially around the train station and typically attributed to numerous entrances to retail establishments along the corridor.

Drivers are not acknowledging pedestrian crosswalks at intersections causing unsafe conditions for pedestrians, particularly at the intersection of Old Turnpike Road (Co. Road 52) and Route 59.

Among the suggested changes include developing signage requirements, creating a welcome sign at South Middletown Road and Route 59, and improving traffic flow. There is scope for improving pedestrian connections between Main street and the train station.

Parking

Lack of parking in close proximity to retail destinations of shoppers (Rockland Plaza, Spring Valley Marketplace, and within the Nanuet Hamlet Center) and at other key locations was cited frequently during the outreach.

Outreach participants suggested shifting parking to the rear of buildings, creating angular parking, encouraging renovation and beautification of businesses, increasing green space, and enhancing accessibility for bicycles and pedestrians as means to solve parking issues. They also suggested developing signage requirements, creating a welcome sign at South Middletown Road and Route 59, and improving traffic flow. Eliminating parking along Main Street and allowing for mixed-use development were also suggested. Creating a shuttle bus was also suggested for solving parking issues.

Land Use and Zoning

A variety of opportunities exist to update the towns zoning code that can help attract new businesses, beautify existing buildings, and increasing connectivity and accessibility for all travelers.

Various zoning changes can be made that will help create opportunities better suited for the community and future development of the Hamlet Center. For example, applying transit supportive zoning to current light industrial office (LIO) parcels will help facilitate denser development that consists of mixed housing and mixed-use development and encourage alternative modes of transportation. Converting solely commercial zones to mixed-use will also help to achieve this. This will help ease congestion for motorists by providing competitive alternatives and will help create a safer and more accessible environment for transit uses, bicyclists, and pedestrians.

Figure 4-14: Existing Zoning Code Restricts Re-Development of Grandfathered Parcels

Administrative Requirements

Participants in the Nanuet Hamlet Center discussions did not make specific suggestions related to administrative requirements.

Key Issues

The following key issues need to be addressed as the corridor deals with continued growth and future development:

- Zoning code restrictions – absence of mixed-use zoning
- Existing light industrial office (LIO) zoning
- Architectural continuity and signage – lack of uniform design standards
- Congestion and multimodal needs – traffic flow around train station. Balancing needs of motorists with those of bicyclists and pedestrians

Issues involving land use and infrastructure within the Hamlet Center as well as current trends were also included as survey topics. During meetings, parking, improving pedestrian friendliness of the corridor, and improving drainage were also raised as key issues.

Meetings

The following table summarizes key outreach activities and meetings related to Nanuet Hamlet Center.

Table 4-6: Nanuet Hamlet Center Public Engagement / Meeting Summary

Date	Subject	Audience
May 27, 2011	Existing Conditions Review	Special Board Meeting
October 25, 2011	Existing Conditions Report & Project Update Meeting	Town Board Workshop
May 9, 2013	SR-59 West (Nanuet) and Nanuet Hamlet Center Charrette	Community Engagement Meeting
May 18, 2013	SR-59 West (Nanuet) and Nanuet Hamlet Center Charrette	Community Engagement Meeting
July 25, 2013	SR-59 West (Nanuet) and Nanuet Hamlet Center Charrette & Walkabout	Nanuet Civic Association & Community Engagement Meeting

INSERT	INSERT	INSERT

4.6.2 Proposed Vision

The proposed vision for the Nanuet Hamlet Center was presented to the community of Clarkstown for feedback on November 20, 2013 by the town and representatives from the CS team.

Vision:

Nanuet Hamlet Center will be a hamlet center with a small town feel, focused on the development and vibrancy of its downtown. The center will focus on quality dining and entertainment, as well as communal greenspace all defined by specific design standards. The center will provide a multimodal environment providing safety and accessibility for bicycles and pedestrians and will continue to advocate for uses important to current residents including housing for seniors and young professionals.”

The following four figures present the current conditions within the Nanuet Hamlet Center and proposed visions in the form of artistic renderings.

Figure 4-15: Nanuet Hamlet Center (East of Nanuet Train Station) – Existing Conditions

Figure 4-16: Nanuet Hamlet Center (East of Nanuet Train Station) – Proposed Vision

Figure 4-17: Nanuet Hamlet Center (Main Street – Middletown Road) – Existing Conditions

Figure 4-18: Nanuet Hamlet Center (Main Street – Middletown Road) – Proposed Vision

Elements:

The following bullets highlight the elements that anchor Nanuet Hamlet Center vision. The included figures illustrate the “Main Street Style” that is common with many small towns in the region. Sidewalks are wide and there are no setback, buffer, or parking requirements to create a barrier for pedestrian activity. Buildings are all mixed-use, with the second floor including residential or commercial space. Dwelling unit densities are relatively high. Design guidelines can ensure that signage is clear, creates and building frontages are consistently transparent with ample windows that provide easy visual access to shop contents. Unique street furniture (such as town square clocks) and programming (concerts, art fairs and farmers markets) make this main street a place to be, not just a place to park your car.

- Main Street

Figure 4-26: Transit Oriented Development – Park Ridge, NJ

Figure 4-27: Example of Higher Density Mixed-Use Housing – Princeton, NJ

4.6.3 Proposed Corridor Concepts

CS (in consultation with the Town Planning Department Staff and Town Attorney) developed the following corridor concept for the Nanuet Hamlet Center.

Concept:

In order to achieve the vision set forth in the Comprehensive Plan and developed during outreach efforts, a number of changes to the built environment and transportation infrastructure will need to be implemented.

Encouraging the beautification of the Hamlet Center through design standards and requirements will encourage continued development in a manner consistent with the proposed vision.

Encouraging transit supportive uses as well as design standards for new, mixed-use developments will ensure the aesthetics of the community as well as quality dining, arts, and entertainment establishments will attract future residents. Applying signage requirements to businesses and placing a welcome sign at South Middletown Road and SR-59 West could help create a cohesive community within the Hamlet Center and establish a unique identity and town feel.

Observed Issues:

The following issues were identified and will need to be addressed for realizing the vision:

- “Town feel” lacking – hamlet needs landscaping, preservation, and building renovation
- Commercial signage outdated
- Senior and affordable housing is limited
- Parking shortage in key locations
- Excessive road speed
- Traffic congestion
- Mix of incompatible uses
- Mix of existing commercial businesses

Zoning Strategy:

A variety of opportunities exist to update the town’s zoning code that can help attract new businesses, beautify existing buildings, and increase connectivity and accessibility for all travelers.

Various zoning changes can be made that will help create opportunities better-suited for the community and future development of the Hamlet Center. For example, applying transit supportive zoning to current light industrial office (LIO) parcels will help facilitate denser development that consists of mixed housing and mixed-use development and encourages alternative modes of transportation. Converting solely commercial zones to mixed-use will also help to achieve this. This will help ease congestion for motorists by providing competitive alternatives and will help create a safer and more accessible environment for transit uses, bicyclists, and pedestrians.

Impacted Zones:

- CS, LIO, R-10, R-15, and RS

Considerations:

The following considerations need to be made as the town continues to plan for future development and growth of the corridor:

- Design standards and building renovation – develop consistent architectural design standards
- Train station connectivity and accessibility – improve pedestrian connections between Main St. and the train station
- Create “Downtown Nanuet” – promote shops and restaurants to attract visitors and residents. Create theater district, farmers’ markets, etc. Introduce new public spaces and parks
- Transit Oriented Development – catalyst for redevelopment and investment, mixed use development, 2 and 3 story buildings, variety of housing choices

5.0 FINDINGS AND RECOMMENDATIONS

In the final section, we present a set of concrete transportation improvement projects. These projects represent a culmination of the many months of collaboration with Clarkstown's planning professionals, business and landowners, and residents. Through this process, recommendations have been evaluated and prioritized on their ability to meet the goals and objectives of Clarkstown's Comprehensive Plan, as well as facilitate improved public health, safety and welfare.

As CS discussed earlier in this report, land use zoning directly impacts how transportation infrastructure performs, and which modes of travel are prioritized. An improved integration of land use and transportation planning can help us manage the demand for transportation (such as reduce the need for roadway expansion and additional parking spaces) and maintain the quality of our communities.

Through the components of this section, CS sets the context for and provides detailed descriptions of specific transportation improvements required for each of the development corridors:

- **Linking Community Vision with Planning Strategies:** Visions can often be accomplished in multiple ways, each with different economic and social costs. This component includes a discussion of the range of general techniques to achieve corridor visions through transportation and land use planning
- **Recommended Zoning Changes / Map Changes:** This component lists specific adjustments to Clarkstown's existing zoning codes and maps to support the full range of benefits that are possible through transportation infrastructure / planning investments
- **Proposed Zoning Build Out Analyses:** Each change in use may result in a potential increase (or decrease) in the amount of area that can be built and the number of off-street parking spaces that are required. This component identifies potential development outcomes (in the form of changes in buildable floorspace and required parking) for Clarkstown based on proposed zoning and map changes to a specific set of parcels
- **Local Law:** This component references specific changes to Clarkstown's local law that reflect the proposed zoning and map adjustments
- **Transportation Recommendations:** While a range of transportation solutions can be pursued to address each community vision, CS presents a concrete set of recommendations that are informed by the town's unique characteristics and by the agency's expertise. This

component includes details of transportation infrastructure and service planning required to meet the community's vision for Clarkstown's development

Following the recommendations, we present adjustments to existing land use codes and new zoning districts (including Neighborhood Shopping, Regional Shopping, Commercial Office, etc.) that have been adopted through CS's extensive engagements with the town of Clarkstown.

5.1 US-9W

This section will briefly review the components of each corridor's vision and describe in general transportation planning techniques that can be harnessed to bring the vision to life.

5.1.1 Linking Community Vision with Planning Strategies

The US-9W corridor analyzed runs between the crossing with SR-303 in the North and Congers Lake Road in the South. This section features between 40 and 50 foot ROW, and is configured with a single 12 foot lane in each direction and the remaining space used for paved shoulders (fluctuating between 5 feet and 15 feet on each side).

Key concepts for the US-9W corridor include a technology corridor and a neighborhood development / commercial area. While the existing zoning and transportation infrastructure support a mix of light industrial, residential and office uses, there is a distinct need for small-scale commercial activity and increased local connectivity. Stakeholders identified the significant lack of pedestrian infrastructure and access to public transit as key impediments to local development along the corridor.

To support the US-9W vision the mix of uses along the corridor must be adjusted to cultivate the growth of supportive businesses such as restaurants, markets and supply shops. These new businesses must be connected via a transportation network that doesn't require the use of an automobile. A high quality pedestrian environment that is safely connected to local amenities, and a similar network of protected bicycle facilities are both necessary to ensure that the demand for travel by automobile is limited. Residents report that there are limited to no work or shopping trips by pedestrian, bicycle, or transit. Therefore, an important conceptual metric for this type of development could be an increased number of short distance trips, or an increased mode share for walking and cycling.

The US-9W corridor is interspersed with residential uses. Per the corridor visions, it is important that these types of uses are seamlessly integrated into the new mix of commercial and office uses. Recreation areas adjacent to Congers Lake are particularly attractive for the region's hikers and bicyclists. Connecting the local residents to this regional amenity is likely to positively impact residential values, but more importantly it will attract professionals who seek both easy access to

recreation and jobs. Adjustments in land use regulations to allow a greater density of dwelling units will allow small-scale residential use to thrive and complement neighboring commercial and industrial uses. Clarkstown's reputation for high quality recreation opportunities is a key driver of development (and traffic), investing in multimodal access and local connections to these resources will help manage sustainable growth. Parking is an important amenity, but priority should be given to access by other modes, and parcels that are well connected by public transit and pedestrian facilities should have parking minimums relaxed.

It is important that all development is harmonized with natural systems. Area flooding is a big concern for residents and business owners alike. Zoning must be harnessed to prohibit development in areas where the flood risk is greatest. Built environment regulations must also provide incentives for construction techniques that utilize permeable surfaces and allow for a safe recharge of storm water runoff.

5.1.2 Recommended Zoning Changes / Map Changes

Cambridge Systematics used a geographic information system to identify parcels in the modified districts proposed for the US-9W corridor. The size and land use of each parcel was available from data provided by the Town.

Zoning Changes

The proposed concepts for US-9W include a technology corridor – the Congers Corporate Corridor – that is a shared concept with the SR-303 corridor. A neighborhood development area along US-9W adjacent to Congers Lake is also proposed. Creating commercial office (CO) and commercial office support (COS) districts, and reducing allowed areas of Light Industrial Office (LIO) establish an appropriate land use mix to facilitate the growth of the technology corridor. The neighborhood development area is supported by inserting Neighborhood Shopping (NS) districts that give residential areas access to localized commercial and employment activities.

Map Changes

CS recommends the Town of Clarkstown change the existing zoning along the US-9W corridor to the following configurations:

- For the Congers Corporate Corridor, 28 Commercial Office (CO) and 55 Commercial Office Support (COS) parcels are proposed (See to replace those that are currently LIO and Regional Shopping (RS). Please note that the configuration also includes adjacent parcels on the Northern stretch of SR-303
- For the Congers Lake Neighborhood development area, 11 Neighborhood Shopping (NS) parcels are proposed to replace those that are currently designated RS, Medium-density residential (R-15), and Low-density residential (R-80)

Figure 5-1: US-9W (Congers) – Existing Zoning Map

Figure 5-2: US-9W (Congers) – Proposed CO District and COS District Zoning Map

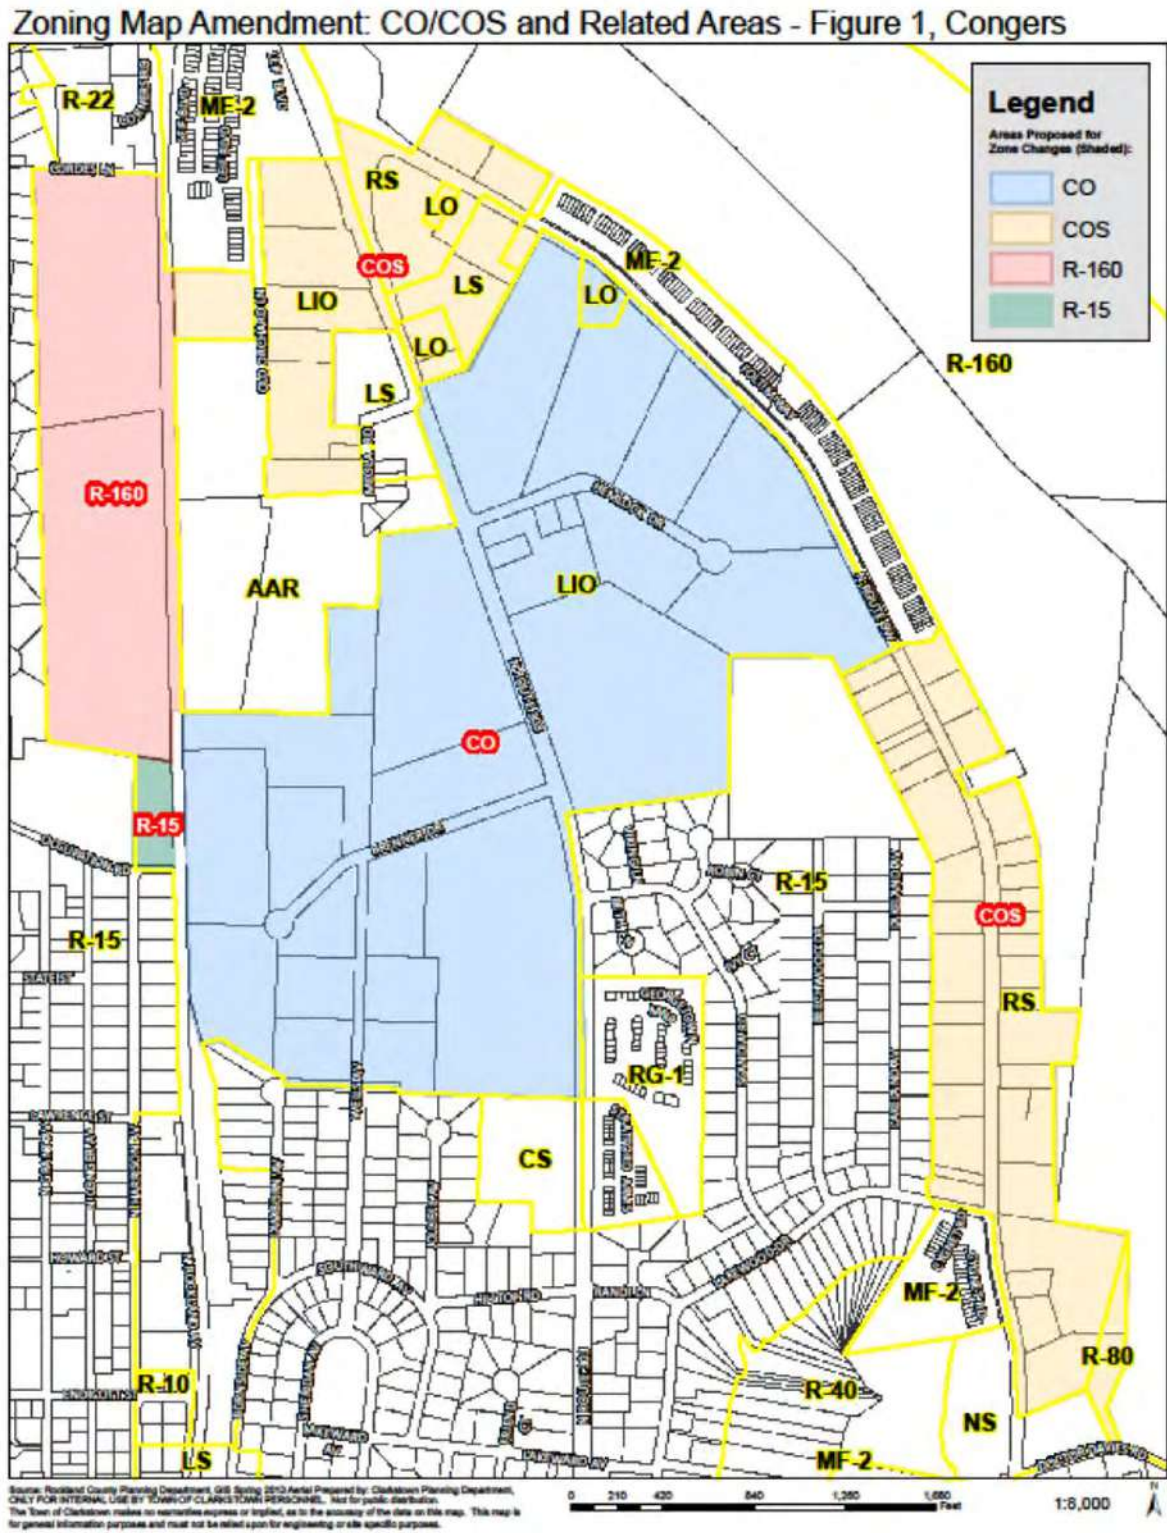

Figure 5-3: US- 9W (Lake Road) – Existing Zoning Map

5.1.3 Proposed Zoning Build Out Analyses

CS prepared estimates of maximum residential and commercial development for the proposed changes. The estimates assumed that land is fully developed under both existing zoning and the new zoning districts. CS incorporated data from the Clarkstown zoning code regarding bulk requirements into the analysis, including: yards (setbacks), buffers (non-buildable area), parking spaces, parking area.

Build Out Analyses

The following steps were used to calculate parcel-level development potential for CO, COS and NS districts:

1. Calculate allowable building size by subtracting required buffer and yard (setback) area
2. Calculate gross floor area by FAR
3. Calculate parking area based on parking requirement and parking space size assumption
4. Calculate building footprint assuming two-story building height
5. Sum building footprint and parking area and compare lot coverage to lot coverage maximum
6. Adjust developed area to meet lot coverage requirement
7. Calculate adjusted floor area, parking, setback and buffer areas

Congers Corporate Corridor

CS analysis indicates that for the Congers Corporate Corridor (combining parcels on both US-9W and SR-303), the proposed CO zoning district would allow for a total floor area of 2,508,600 square feet. The proposed COS zoning district would allow for a total floor area of 1,350,000 square feet. Combined, these districts would create an additional 30,700 square feet of floor area, and would require an additional 100 additional parking spaces, as compared to existing zoning.

Table 5-1: Change in Congers Area Developable Land Under Maximum Development Scenario by District

Zoning	Number of parcels	Parcel area	Floor area	Parking spaces	Parking area
Existing Districts					
LIO	34	6,908,200	2,763,200	9,200	2,774,700
LO	4	120,700	48,300	200	52,200
LS	2	194,300	90,600	300	90,900
R160	40	1,938,600	879,000	3,000	910,200
RS	1	20,000	8,000	-	9,900

Zoning	Number of parcels	Parcel area	Floor area	Parking spaces	Parking area
MF	2	50,000	11,500	-	13,800
R-15	83	9,231,800	3,800,600	12,700	3,851,700
<i>Subtotal existing zoning</i>	34	6,908,200	2,763,200	9,200	2,774,700
District Changes					
CO	28	6,271,400	2,508,600	8,400	2,520,600
COS	55	2,960,400	1,350,000	4,600	1,390,800
CS	-	-	-	-	-
<i>Subtotal proposed zoning</i>	83	9,231,800	3,858,600	13,000	3,911,400
Change in development area:			30,700	100	30,600

An important feature of the CO / COS zoning is that it allows for limited commercial retail in an office setting. The following table summarizes the increase in retail development.

Table 5-2: Change in Congers Potential Retail Development

District	<i>Amount of retail in square feet</i>		
	Existing	Related	Unrelated
LS	90,600		
RS	879,000		
CO		123,000	77,700
COS		337,600	337,200
<i>Total</i>	<i>969,600</i>	<i>460,500</i>	<i>415,200</i>

Note: This assumes 25 % of existing industrially-zoned land adds retail, and 50 % of existing commercially zoned land remains retail under CO and COS zoning.

Congers Lake Development Area

For the Congers Lake development area, the proposed NS zoning district allows for two possible land use scenarios (Commercial Only, Mixed Use ground floor / Residential upper floor):

- Commercial Only Scenario - allowed for 313,800 square feet of total floor area, which required 624 additional parking spaces (187,200 square feet) as compared to existing zoning
- Mixed Use Scenario - assumed two floors of development with commercial space occupying the first floor and residential use on the first floor. This scenario allowed a total commercial area of 163,700 square feet, a total residential area of 150,100 square feet and required 486 additional parking spaces (145,600 square feet) as compared to existing zoning

Table 5-3: Estimated Maximum Development Potential in Proposed NS along US-9W Corridor

Scenario	Measure	US-9W
Existing	Number of parcels	11
	Total area all parcels	628,000
	Total building floor area	87,600
Commercial	Total commercial floor area	313,800
	Total parking area	187,200
Mixed Use	Total commercial floor area	163,700
	Total residential floor area	150,100
	Total floor area	313,800
	Total dwelling units	158
	Total parking area	145,600

Note: All area in square feet. Figures rounded for clarity.

Please see Appendix A for the complete build-out analysis for all NS and CO, and COS parcels.

Please see Appendix A for the bulk requirements for the CO, COS, and NS districts.

Dwelling Unit Analysis

For the US-9W corridor, additional Dwelling Units (DU) were only created if the new NS zoning district followed the Mixed Use scenario. First, the maximum number of residential units were estimated given the available residential area, and then a maximum number of 1-bedroom units per acre (11.3) and a dwelling unit size of 1,000 square feet were assumed. This effectively limited multi-family residential development to a FAR of 0.25. Changing the size of the dwelling units by including 2- or 3-bedroom units, or by simply changing the size of the units will therefore affect the overall FAR. FAR was found in only one case to limit the amount of residential development; the more constraining factor was the dwelling units per acre. Thus, with the mixed-use scenario and maximum DU density in place, it is estimated that a potential of 158 DUs (occupying 150,100 square feet) will be added with the NS zoning changes.

5.1.4 Local Law

The final local law that was adopted can be found in Appendix A.

5.1.5 Transportation Recommendations

The following summarizes potential transportation projects for the US-9W corridor.

US-9W Bicycle and Pedestrian Improvements – Demand for pedestrian and bicycle facilities links existing recreational centers that would benefit from planning and implementation. The section of US-9W adjacent to the proposed Congers Corporate Corridor (SR-303 crossing to Lakewood Drive), and the proposed Congers Lake Neighborhood Development Area (Lakewood Drive to Lake Road) should be thoroughly examined.

Figure 5-5: Congers Bike Shop Located on Lake Road Between US-9W and SR-303

Public Transit / Mobility Management Improvements – Enhanced public transportation services (coordinated transit services, high quality bus stops, etc.) near the Congers Corporate Corridor employment centers, as well as improved connections to other key destinations for housing, retail, education, healthcare, and civic institutions.

5.2 SR-303

This section will briefly review the components of each corridor's vision and describe in general transportation planning techniques that can be harnessed to bring the vision to life.

5.2.1 Linking Community Vision with Planning Strategies

SR-303 (or County Ridge Road) is a key route for regional north / south vehicular movement. The section analyzed runs between the crossing of US-9W in the North and Valley Cottage Hamlet in the South. Similar to US-9W, the SR-303 corridor features between 40 and 50 foot ROW, and is configured with a single 12 foot lane in each direction and the remaining space used for paved shoulders (fluctuating between 5 feet and 15 feet on each side). At some intersections, the paved shoulder width is reduced to allow a 12 foot center Left-turn lane, or a painted median.

SR-303 provides Clarkstown residents many opportunities for shopping and working, and access to medium density residential neighborhoods. The corridor's parcels are currently zoned Light Industrial and Office (LIO comprises 71% of the corridor's total acres), with interspersed Multifamily Residential uses (13% of the total acres), and Community Shopping (9% of the total acres).

Key visions for the SR-303 corridor include a technology corridor and two commercial development areas. Proposals emphasize supporting local business development, and encourage the inclusion of small-scale retail uses. Decreasing parking requirements, encouraging shared parking, and allowing the conversion of residential buildings into small-scale professional office and commercial buildings will help maximize the use of corridor land. Providing a greater mix of commercial activities along the corridor is a good technique for reducing the demand for trips by car; however, changing the mix of activities will only support reduced demand if other transport options are convenient and safe.

Public stakeholders and businesses alike identified the corridor's missing access to public transit, pedestrian or bicycling networks as a liability to future development. The corridor is very dangerous for pedestrians to circulate near key destinations as there is no dedicated infrastructure for them and the roadway's shoulder is too narrow. While a nearby walking trail offers connections to recreation areas, incidental access to adjacent commercial and residential areas is missing. Safe vehicular access to local businesses is also a concern, as regional traffic on SR-303 travels at high speeds. A strong network of infrastructure for human-powered transportation (including controlled intersections with pedestrian signals) can safely connect key destinations.

The utility of the corridor to move regional traffic north and south is great for the SR-303 corridor, but there can be balance to regional and local needs. Participants noted that fatal crashes have occurred as customers or employees exit or enter the roadway. Improvements in roadway and junction design along the corridor, including landscaping, traffic calming and parallel parking provision can create complete streets where moving people is prioritized over moving vehicles. For example, utilizing a multi-way boulevard may help balance the competing needs of users and improve local connections and public transit access.

An important strategy is to develop a set of townwide design guidelines to consistently orient development towards multimodal transportation, ensure a high quality pedestrian environment,

and reduce the creation of unnecessary paved areas. Stakeholders noted that the corridor lacks “a cohesive sense of place” and that there are no connections between the valley cottage hamlet center and the Clarkstown executive park. Developing a Clarkstown street design guideline will help ensure consistent facilities that will knit together these pieces of urban fabric and guide consistent placemaking and wayfinding signage for hamlet centers. Similar to the vision-strategy linkages for US-9W, SR-303 has experienced intermittent flooding that resulted in significant property damage. A Clarkstown design guideline can make sure that flood plains, estuaries, and other important natural systems are not ignored, and guide the implementation of transportation infrastructure that is sensitive to the needs of stormwater runoff / rainwater recharge.

5.2.2 Recommended Zoning Changes/Map Changes

Cambridge Systematics used a geographic information system to identify parcels in the modified districts proposed for the SR-303 corridor. The size and land use of each parcel was available from data provided by the Town.

Zoning Changes

The proposed concepts for SR-303 include the Congers Corporate Corridor (technology corridor) and a neighborhood development area (Combined Clarkstown Executive Park and Valley Cottage Hamlet Center). Creating commercial office (CO) and commercial office support (COS) districts, and reducing allowed areas of Light Industrial Office (LIO) establish an appropriate land use mix to facilitate the growth of the technology corridor.

Map Changes

CS recommends the Town of Clarkstown change the existing zoning along the SR-303 corridor to the following configurations.

- For the Congers Corporate Corridor, 28 Commercial Office (CO) and 55 Commercial Office Support (COS) parcels are proposed (See **Error! Reference source not found.**) to replace those that are currently LIO, Local Shopping (LS), and Laboratory Office (LO). Please note that the configuration includes adjacent parcels on the Northern stretch of US-9W.
- For the Valley Cottage / Executive Park neighborhood development Area, 31 Commercial Office (CO), 13 Commercial Office Support (COS), and 1 Community Shopping (CS) parcels are proposed (See **Error! Reference source not found.**) to replace those that are currently LIO, CS, Multifamily (MF), and Professional Office (PO).

Figure 5-6: SR-303 (Congers) – Existing Zoning Map

Figure 5-7: SR-303 (Congers) – Proposed CO District and COS District Zoning Map

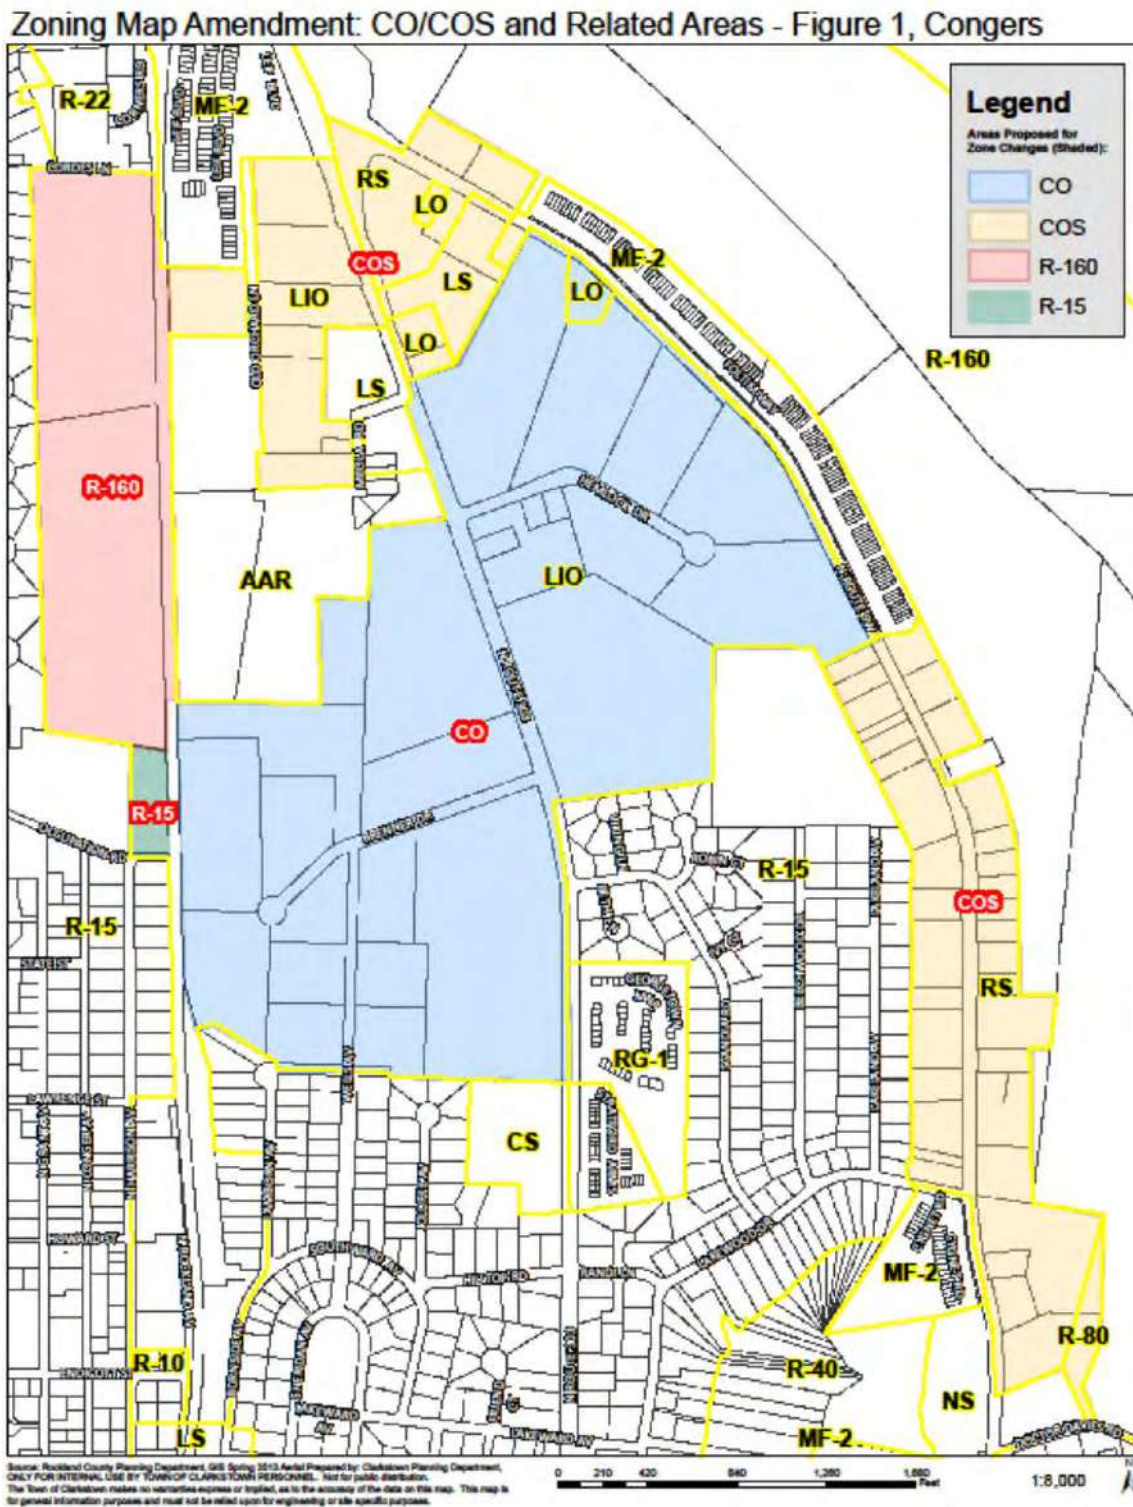

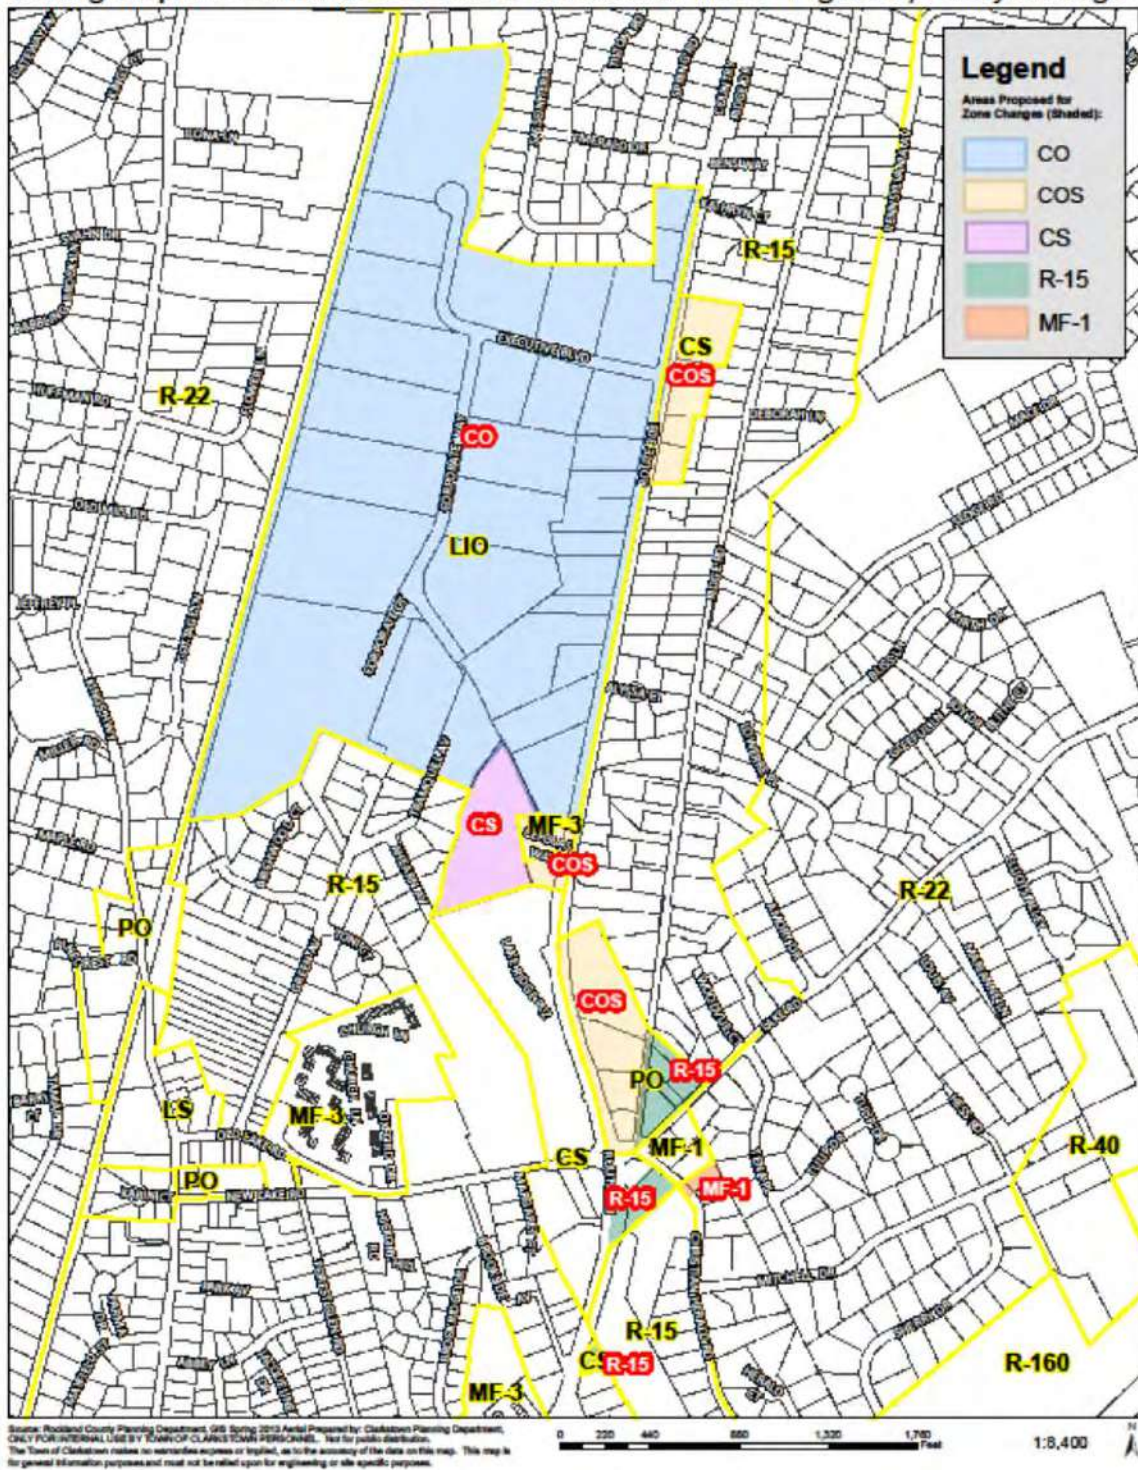

Figure 5-8: SR-303 (Valley Cottage) – Existing Zoning Map

Figure 5-9: SR-303 (Valley Cottage) – Proposed CO District and COS District Zoning Map

Zoning Map Amendment: CO/COS and Related Areas - Figure 2, Valley Cottage

5.2.3 Proposed Zoning Build Out Analyses

CS prepared estimates of maximum residential and commercial development for the proposed changes. The estimates assumed that land is fully developed under both existing zoning and the new zoning districts. CS incorporated data from the Clarkstown zoning code regarding bulk requirements into the analysis, including: yards (setbacks), buffers (non-buildable area), parking spaces, parking area.

Build Out Analyses

The following steps were used to calculate parcel-level development potential for CO, COS and CS districts.

1. Calculate allowable building size by subtracting required buffer and yard (setback) area
2. Calculate gross floor area by FAR
3. Calculate parking area based on parking requirement and parking space size assumption
4. Calculate building footprint assuming two-story building height
5. Sum building footprint and parking area and compare lot coverage to lot coverage maximum
6. Adjust developed area to meet lot coverage requirement
7. Calculate adjusted floor area, parking, setback and buffer areas

Congers Corporate Corridor

CS analysis indicates that for the Congers Corporate Corridor (combining parcels on both SR-303 and US-9W), the proposed CO zoning district would allow for a total floor area of 2,508,600 square feet. The proposed COS zoning district would allow for a total floor area of 1,350,000 square feet. Combined, these districts would create an additional 30,700 square feet of floor area, and would require an additional 100 additional parking spaces, as compared to existing zoning.

Table 5-4: Change in Congers Area Developable Land Under Maximum Development Scenario by District

Zoning	Number of parcels	Parcel area	Floor area	Parking spaces	Parking area
Existing Districts					
LIO	34	6,908,200	2,763,200	9,200	2,774,700
LO	4	120,700	48,300	200	52,200
LS	2	194,300	90,600	300	90,900
R160	40	1,938,600	879,000	3,000	910,200
RS	1	20,000	8,000	-	9,900

Zoning	Number of parcels	Parcel area	Floor area	Parking spaces	Parking area
MF	2	50,000	11,500	-	13,800
<i>Subtotal existing zoning</i>	83	9,231,800	3,800,600	12,700	3,851,700
District Changes					
CO	28	6,271,400	2,508,600	8,400	2,520,600
COS	55	2,960,400	1,350,000	4,600	1,390,800
<i>Subtotal proposed zoning</i>	83	9,231,800	3,858,600	13,000	3,911,400
Change in development area:			30,700	100	30,600

An important feature of the CO / COS zoning is that it allows for limited commercial retail in an office setting. The following table summarizes the increase in retail development.

Table 5-5: Change in Congers Potential Retail Development

District	Amount of retail in square feet		
	Existing	Related	Unrelated
LS	90,600		
RS	879,000		
CO		123,000	77,700
COS		337,600	337,200
<i>Total</i>	<i>969,600</i>	<i>460,500</i>	<i>415,200</i>

Note: This assumes 25 percent of existing industrially-zoned land adds retail, and 50 percent of existing commercially zoned land remains retail under CO and COS zoning.

Valley Cottage / Clarkstown Executive Park Neighborhood Development Area

CS analysis indicates that for the Valley Cottage / Clarkstown Executive Park Neighborhood Development Area, the proposed CO zoning district would allow for a total floor area of 1,979,400 square feet. The proposed COS zoning district would allow for a total floor area of 238,600 square feet. The proposed CS zoning district would allow for a total floor area of 108,000 square feet. Combined, these districts would create an additional 30,700 square feet of floor area, and would require an additional 100 additional parking spaces, as compared to existing zoning.

Table 5-6: Change in Valley Cottage Developable Land Under Maximum Development Scenario by Zoning District

Zoning	Number of parcels	Parcel area	Floor area	Parking spaces	Parking area
Existing Districts					
CS	4	184,300	84,200	300	86,400
LIO	32	5,183,800	2,073,500	6,900	2,079,600
PO	8	302,300	120,900	400	128,700
MF	1	41,600	16,700	60	16,800
Subtotal existing zoning	45	5,712,000	2,295,300	7,700	2,311,500
District Changes					
CO	31	4,948,600	1,979,400	6,600	1,983,300
COS	13	528,200	238,600	800	248,700
CS	1	235,200	108,000	400	110,100
Subtotal proposed zoning	45	5,712,000	2,326,000	7,800	2,342,100
Change in development area:			30,700	100	30,600

The following table summarizes the increase in potential retail development per the limited commercial retail allowable by CO / COS zoning.

Table 5-7: Change in Valley Cottage Potential Retail Development

District	Amount of retail in square feet		
	Existing	Related	Unrelated
CS	84,200		
CO		150,200	93,000
COS		86,700	86,700
Total	84,200	236,000	179,700

Note: Assumes 25 percent of existing industrially-zoned land adds retail, and 50 percent of existing commercially zoned land remains retail under CO and COS zoning.

Please see Appendix A for the complete buildout analysis for all CS and CO, and COS parcels.

Please see Appendix A for the bulk requirements for the CS, CO, and COS districts.

Dwelling Unit Analysis

The proposed changes to SR-303 did not require a dwelling unit analysis.

5.2.4 Local Law

The final local law that was adopted can be found Appendix A.

5.2.5 Transportation Recommendations

The following summarizes potential transportation projects for the SR-303 corridor.

SR-303 Corridor Roadway Analysis and Signal Optimization Project – Vehicle traffic along SR-303 is often constricted at peak periods due to high demand for north-south vehicular and freight movements from employment centers. While the typical single 12 foot lane in each direction configuration is adjusted to include a left-hand turning lane at key intersections (such as the entrance to the Clarkstown Executive Park, Cefolas Way, Valley Cottage Hamlet, etc.) problem points exist that may benefit from close examination and fine tuning. Coordinating various signals to meet demand patterns at different times of the day, or reconfiguring the lane widths or ROW may yield improved performance. Key intersections for primary examination would include SR-303 and Executive Boulevard and SR-303 and Lake Road.

Figure 5-10: SR-303 Looking Southbound Towards Lake Road Intersection

SR-303 & Lake Road Intersection Improvement Study – The Lake Road connection between US-9W and SR-303 at Rockland Lake / Hook Mountain State Park experiences high demand for vehicular and freight traffic and is often congested. Alternative roadway geometry, intersection configurations, and/or signal configurations should be analyzed. Additionally, roadway geometrics (climbing lanes) south of the SR-303 and Lake Road intersection could be examined to understand the potential to maximize southbound throughput.

Figure 5-11: Intersection of SR-303 and Lake Road (Southbound)

Figure 5-12: Intersection of Lake Road and SR-303 (Westbound)

CR-80 Bicycle Facility Suitability Assessment and Conceptual Plan Development Study –

Both the Clarkstown Comprehensive Transportation Plan and comments collected from the public identified CR-80 as a high priority location in its list of prioritized bicycle facility projects, in particular the eastern section of CR-80 between New City and Congers. This area received a high priority because a bicycle path along this route would link two Hamlet Centers, provide a safe bicycle route over the Freedom Causeway, which spans Lake DeForest, and improve east-west mobility and circulation for non-motorized transportation within the Town.

Figure 5-13: Eastbound on CR-80 (Congers Road) Near Prides Crossing

Figure 5-14: View Eastbound on the Freedom Causeway

5.3 SR-304

This section will briefly review the components of each corridor's vision and describe in general transportation planning techniques that can be harnessed to bring the vision to life.

5.3.1 Linking Community Vision with Planning Strategies

Key concepts for the SR-304 corridor include small-scale retail and limited commercial activity, high quality pedestrian and bicycle access, and safe and accessible public transit services. The existing zoning in this corridor allows primarily for Manufacturing (M) which accounts for 57% of the total acres. SR-304 also includes Residential (38% of the total acres), and limited Local Shopping (LS) and Professional Office (PO). Commercial and retail activities are clustered at two intersections.

The community's vision for the SR-304 corridor include Neighborhood Activity Places at three nodes: Johnsons Lane, Germonds Road and Ludvigh / Bardonia Road. The vision is that these three nodes will support residential and commercial activities via improved public transit, bicycle and pedestrian services and infrastructure. Public meeting participants indicated that multiple challenges exist to meeting this vision: a lack of transit, bicycle and pedestrian infrastructure. Excessive vehicular travel speeds and pedestrian conflicts, problematic zoning, and poor building orientation also were noted to negatively impact goals.

The town of Clarkstown can improve public transit, bicycle and pedestrian infrastructure by creating an integrated network. Reducing automobile travel speeds and pedestrian conflicts is possible using traffic calming measures with integrated pedestrian and cyclist safety measures. Zoning uses can support the community's vision by improving housing and commercial activity in these three nodes. Clarkstown can incentivize buildings to orient towards the street, which will improve the town's character and residents' quality of life.

Supportive zoning changes will help SR-304 maintain its residential character while creating nodes for commercial and small-scale retail activities so that a wide variety of destinations are easily accessible. Zoning can ensure that as these nodes develop, that urban design characteristics are consistent with the existing neighborhood character and that low-cost, low-impact transport modes are prioritized.

Unlike the US-9W and SR-303 Corridors, which have greater proximity to bodies of water, SR-304 does not have the same considerations of access to these recreational assets. Thus, pedestrian and bicycle networks should prioritize access to local parks and open spaces as well as key employment, commercial and residential destinations.

5.3.2 Recommended Zoning Changes / Map Changes

Cambridge Systematics used a geographic information system to identify parcels in the modified districts proposed for the SR-304 corridor. The size and land use of each parcel was available from data provided by the Town.

Zoning Changes

The proposed concepts for SR-304 include three neighborhood activity places. Creating Neighborhood Shopping (NS) districts, and reducing allowed areas of LS and PO to establish an appropriate land use mix to facilitate the residential and commercial growth at these nodes.

Map Changes

CS recommends the Town of Clarkstown change the existing zoning along the SR-304 corridor to the following configurations.

- For the Germonds Road neighborhood activity place two parcels of NS should replace one parcel of LS and one parcel of PO

Figure 5-15: SR-304 (Germonds Road) – Existing Zoning Map

Figure 5-16: SR-304 (Germonds Road) – Proposed NS District Zoning Map

5.3.3 Proposed Zoning Build Out Analyses

CS prepared estimates of maximum residential and commercial development for the proposed changes. The estimates assumed that land is fully developed under both existing zoning and the new zoning districts. CS incorporated data from the Clarkstown zoning code regarding bulk requirements into the analysis, including: yards (setbacks), buffers (non-buildable area), parking spaces, parking area.

Build Out Analyses

The proposed NS district for SR-304 followed a commercial only scenario. Therefore, no additional residential development is expected following the changes.

Neighborhood Activity Places

For three SR-304 Neighborhood Activity Places, the proposed NS zoning district will be utilized following the Commercial Only Scenario (not the for mixed-use commercial and residential scenario). This scenario allowed for 110,000 square feet of total floor area, which required 217 additional parking spaces (65,000 square feet) as compared to existing zoning.

Table 5-8: Estimated Maximum Development Potential in Proposed NS along SR-304 Corridor

Scenario	Measure	SR-304
Existing	Number of parcels	6
	Total area all parcels	219,200
	Total building floor area	21,100
Commercial	Total commercial floor area	110,000
	Total parking area	65,000
Mixed Use	Total commercial floor area	109,600
	Total residential floor area	0
	Total floor area	109,600
	Total dwelling units	0
	Total parking area	65,800

Note: All area in square feet. Figures rounded for clarity.

Please see Appendix A for the complete buildout analysis for all NS parcels.

Please see Appendix A for the bulk requirements for the NS districts.

Dwelling Unit Analysis

The proposed SR-304 corridor changes create no additional DUs.

5.3.4 Local Law

The final local law that was adopted can be found Appendix A.

5.3.5 Transportation Recommendations

The following summarizes potential transportation projects for the SR-304 corridor.

SR-304 North Pedestrian / Bicycle Infrastructure Feasibility Analysis – The Town should examine opportunities to enhance bicycle and pedestrian infrastructure from the intersection of CR-80 and SR-304 in New City to the intersection of US-9W and SR-304 in Congers.

SR-304 Corridor Roadway Analysis and Signal Optimization Project – Vehicle traffic along SR-304 is often constricted at peak periods due to high demand for north-south vehicular and freight movements from employment centers. While the typical single 12 foot lane in each direction configuration is adjusted to include a left-hand turning lane at key intersections problem points exist that may benefit from close examination and fine tuning. Coordinating various signals to meet demand patterns at different times of the day, or reconfiguring the lane widths or ROW may yield improved performance. Key intersections for primary examination would include crossings with CR-80, Johnsons Lane, Germonds Road, and Ludvigh / Bardonia Road. Any adjustments should take into account impacts on pedestrian and bicycle traffic.

Figure 5-17: Southbound View on SR-304 at Germonds Road

5.4 SR-59 East (West Nyack)

This section will briefly review the components of each corridor's vision and describe in general transportation planning techniques that can be harnessed to bring the vision to life.

5.4.1 Linking Community Vision with Planning Strategies

The Eastern portion of SR-59 runs parallel to I-87 / I-287 between the crossings of SR-303 and SR-304. The corridor consists of an 82 foot wide ROW that is configured to support two 12 foot lanes and an 8 foot shoulder in each direction, separated by an 18 foot median. The corridor is zoning primarily for industrial uses (M, LIO and LO districts account for 82 % of total acreage). Commercial and Shopping uses comprise the remainder of acreage (CS, RS, MRS combine for 18 %). The major activity center on the corridor is the Palisades Center Mall at the SR-303 crossing.

The vision for the corridor includes increasing the level of retail / commercial activity, enhancing multi-modal alternatives access to highway network, and encouraging specialty retail development on underutilized or vacant properties. Public outreach meeting participants were also concerned about excessive freight traffic and vehicle speeds. They noted that public transit access to employment centers was infrequent and required complicated transferring. Infrastructure and facilities to support access to key corridor destinations by walking and bicycling is nonexistent which results in unsafe and inconvenient journeys for people who travel by these modes.

To improve access for pedestrians and bicyclists along the corridor, it is necessary to implement high-quality infrastructure such as wide sidewalks, protected bicycle lanes, pedestrian crossing signals, and prioritized pedestrian signal timing. Pedestrian and bicycle networks should seek to prioritize safe access to public transit for key destinations (employment and commerce centers).

Signalized intersections can help reduce frictions experienced when vehicles are accessing and exiting corridor businesses. Traffic calming techniques can create more space for pedestrians, bicyclists and public transit infrastructure, while simultaneously reducing roadway speeds.

Transport supportive zoning could include rezoning the LIO districts adjacent to SR- 303 to RS district to better match market demands and area context. Zoning and urban design guidelines can improve building and parcel frontages to encourage increased pedestrian activity. Specific landscaping treatments can also be utilized to manage interfaces between competing / incompatible uses (such as requiring berms, fences or trees to create a visual and sonic screening between industrial and shopping uses). Reduced parking minimums and "green parking" treatment requirements can manage travel demand and support pedestrian access.

5.4.2 Recommended Zoning Changes / Map Changes

Cambridge Systematics used a geographic information system to identify parcels in the modified districts proposed for the SR-59 EAST (WEST NYACK) corridor. The size and land use of each parcel was available from data provided by the Town.

Zoning Changes

To support the proposed visions for SR-59 East (increasing the level of retail / commercial activity, utilizing underutilized properties for specialty retail, and enhancing multi-modal alternatives) CS recommends creating new, and adjusting existing MRS and RS districts, through reducing allowed areas of LIO, M and R-15.

CS also recommends that the Clarkstown Town Code be updated to improve the Regional Shopping (RS) zoning district. Improvements would include the addition of specific landscaping requirements in required buffer areas, and the addition of a development bonus schedule for storm water runoff mitigation.

Map Changes

CS proposes the following modifications to the existing zoning:

- Converting various Light Industrial Office (LIO) and Regional Shopping (RS) zoned properties to Major Regional Shopping (MRS)
- Changing various Light Industrial Office (LIO), Manufacturing (M), and Medium Density Single Family Residential (R-15) zoned properties to Regional Shopping (RS)
- Shifting various Regional Shopping (RS) zoned properties to Manufacturing (M)

Figure 5-22: SR-59 East (West Nyack) – Proposed R-15 District Zoning Map

Figure 5-23: SR-59 East (West Nyack) – Proposed R-22 District Zoning Map

Figure 5-24: SR-59 East (West Nyack) – Proposed M District Zoning Map

5.4.3 Proposed Zoning Build Out Analyses

CS prepared estimates of maximum residential and commercial development for the proposed changes. The estimates assumed that land is fully developed under both existing zoning and the new zoning districts. They are intended to assist community members in understanding the possible effects of the proposed zoning district on public and environmental resources. CS incorporated data from the Clarkstown zoning code regarding bulk requirements into the analysis, including: yards (setbacks), buffers (non-buildable area), parking spaces, parking area.

Build Out Analyses

The following steps were used to calculate parcel-level development potential for NS districts.

1. Calculate allowable building size by subtracting required buffer and yard (setback) area
2. Calculate gross floor area by FAR
3. Calculate parking area based on parking requirement and parking space size assumption
4. Calculate building footprint assuming two-story building height
5. Sum building footprint and parking area and compare lot coverage to lot coverage maximum
6. Adjust developed area to meet lot coverage requirement
7. Calculate adjusted floor area, parking, setback and buffer areas

It is important to note that the SR-59 East analysis applies only to properties that change zoning based on adjustments to the Regional Shopping (RS) district. Changes to the Major Regional Shopping (MRS) district include the addition of properties that are currently in use by the Palisades Center Mall and therefore not available for development. Changes to properties affecting the MRS district are therefore excluded from the build out analysis.

For the SR-59 East corridor, the proposed zoning map changes result in the addition of developable floor area and parking area, as compared to current zoning map. The changes would result in approximately 124,000 square feet more building floor area than current zoning boundaries, due to increases in available development in the RS district.

The proposed zoning boundaries would allow approximately 52,000 square feet more in building footprint than the current zoning map, that would require approximately 1,240 additional parking spaces (372,000 square feet in parking area).

Table 5-9: Change in Developable Land Under Maximum Development Scenario by Zoning District along SR-59 East Corridor

Change in developable:	Net	Zoning District			
		RS	LIO	R-15	M
Land Area	-	682,700	-533,400	-326,000	176,600
Floor Area	124,000	286,700	-143,800	-75,000	56,200
Building Footprint	52,200	143,300	-81,700	-37,500	28,100
Parking Area	372,300	429,000	-85,800	-4,200	33,300

Note: All area in square feet. Figures rounded for clarity.

Please see Appendix A for the complete buildout analysis for all MRS and RS parcels.

Please see Appendix A for the bulk requirements for the MRS and RS districts.

Dwelling Unit Analysis

The proposed changes to SR-59 East (West Nyack) did not require a dwelling unit analysis.

5.4.4 Local Law

The final local law that was adopted can be found Appendix A.

5.4.5 Transportation Recommendations

Mountainview Avenue / Tappan Zee Bridge Construction Impacts - SR-59 serves as an important interface to the regional and national highway system. The connection between US-59 and Mountainview Ave / Waldron Ave has a high demand for private and commercial vehicle traffic and as a result is often congested. The Intersection and adjacent corridor should be reviewed to determine the impacts Tappan Zee Bridge construction is having on the local community and identify optimal configurations for once construction is completed.

Figure 5-25: Queuing Traffic on SR-59 Eastbound Approach to Mountainview Avenue

SR-59 East (West Nyack) Sidewalk Infrastructure Improvements – the limited pedestrian environment along SR-59 in West Nyack is in poor condition and is fragmented, often times requiring pedestrians to walk dangerously along the shoulder (as observed in Figure 5-26). The Town should work with New York State DOT to improve pedestrian environment within West Nyack. Outreach activities reported that this is increasingly problematic and the growth of additional commercial activities (supporting regional retail centers or providing services to the local community) will only exacerbate the problem in the future.

Figure 5-26: Existing Pedestrian Infrastructure on SR-59 East (West Nyack) (Eastbound)

5.5 SR-59 West (Nanuet)

This section will briefly review the components of each corridor's vision and describe in general transportation planning techniques that can be harnessed to bring the vision to life.

5.5.1 Linking Community Vision with Planning Strategies

Running parallel to I-87 / I-287, the western segment of SR-59 sees an annual average daily traffic (AADT) in both directions of 40,651 vehicles (The highest AADT of all the corridors studied). From curb to curb the general roadway section spans 100 feet and is configured with three 12 foot lanes in each direction and a 20 foot tree-lined median. SR-59 West (Nanuet) is a commercial corridor that primarily consists of shopping, other retail uses and parking. 46 % of the acreage is zoned for commercial uses (95 % RS / five % CS), approximately 44 % is zoned LIO, and the remaining 9 % is zoned primarily multifamily residential but also includes medium-density single family units (MF-1, MF-2, R-10, R-15, and RG-2). The corridor's key activity areas include the Nanuet Mall, Spring Valley Marketplace, and the intersection of SR-59 and SR-304.

Key community visions include strengthening the commercial corridor, augmenting access for other transportation modes besides personal vehicles, enhancing public transit service, and extending the landscaping to create a green corridor with a tree-lined boulevard and a network of small parks. Participants in outreach meetings identified improved accessibility, connectivity, and safety as important factors to supporting their vision.

Congestion relief and increased safety are possible when communities actively engage in travel demand management efforts, such as limiting vehicular capacity through road diets and lane-width reductions. Traffic calming techniques can create more space for pedestrians, bicyclists and public transit infrastructure, while simultaneously reducing roadway speeds. By reducing roadway capacity (for example reducing SR-59 West (Nanuet) to two lanes in each direction), regional traffic will adjust and shift to other available resources such as I-287.

To improve access for pedestrians and bicyclists along the corridor, it is necessary to implement high-quality infrastructure such as wide sidewalks, protected bicycle lanes, pedestrian crossing signals and prioritized signal timing, and reduced vehicle interruptions to pedestrian path of travel (curb cuts). To encourage more pedestrian and bicycle trips, zoning and urban design guidelines can be harnessed to create incentives for reducing parking requirements, eliminating front buffer/yard requirements to ensure buildings consistently engage pedestrians, and support small-scale retail development to reduce the demand for longer (automobile dependent) trips.

Because the SR-59 West (Nanuet) corridor is dominated by automobile use, it is especially impacted by surface parking lots (42% of the corridor's entire acreage is covered by parking lots). Urban design guidelines can create green and pedestrian-friendly parking in requiring landscaping

and protected pedestrian access to buildings instead of asking pedestrians to walk through busy lots to access entrances. Transitioning necessary vehicle parking into shared pedestrian spaces can increase safety and provide community benefits through creating a cohesive identity / placemaking and increasing open spaces for recreation (when they are not in use for vehicle storage).

5.5.2 Recommended Zoning Changes / Map Changes

Cambridge Systematics used a geographic information system to identify parcels in the modified districts proposed for the SR-59 West (Nanuet) corridor. The size and land use of each parcel was available from data provided by the Town.

Zoning Changes

CS recommends that the zoning for parcels adjacent to SR-59 West (Nanuet) be modified to better support the community's visions for the corridor. Adjusting the boundaries of LIO, Planned Economic Development (PED), PO, R-15 and RS districts, and reducing R-22 will support the types of development that are in line with the vision goals (including: increasing commercial activity, improving safety and convenience for pedestrian mobility, and augmenting natural features and landscaping to ensure a more pleasing environment).

Map Changes

CS recommends that the Town of Clarkstown change the existing zoning adjacent to SR-59 through the following changes (11 parcels total):

- Extend LIO district to include one parcel on I-87 / I-287 that was previously zoned PED
- Extend PED district to include one additional parcel along Smith Road at Overlook Boulevard that was previously zoned LIO
- Shift RS and R-15 boundaries and create three new parcels of PO on Grandview Ave at SR-59
- Extend R-15 district along SR-304 South of SR-59 crossing to include one parcel that was previously zoned R-22
- Shifting R-15 district boundaries to include one parcel along West Nyack Road at North Middleton Road that was previously zoned RS
- Shift RS district boundaries to include two parcels along College Ave at SR-59 that were previously zoned PO
- Shift PO district boundaries to include one parcel along West Nyack Road that was previously zoned RS

Route 59 West - NYS Thruway 87/287 - Light Industrial Office (LIO)

5.5.3 Proposed Zoning Build Out Analyses

CS prepared estimates of maximum residential and commercial development for the proposed changes. The estimates assumed that land is fully developed under both existing zoning and the new zoning districts. CS incorporated data from the Clarkstown zoning code regarding bulk requirements into the analysis, including: yards (setbacks), buffers (non-buildable area), parking spaces, parking area.

Build Out Analyses

The following steps were used to calculate parcel-level development potential for NS districts.

1. Calculate allowable building size by subtracting required buffer and yard (setback) area
2. Calculate gross floor area by FAR
3. Calculate parking area based on parking requirement and parking space size assumption
4. Calculate building footprint assuming two-story building height
5. Sum building footprint and parking area and compare lot coverage to lot coverage maximum
6. Adjust developed area to meet lot coverage requirement
7. Calculate adjusted floor area, parking, setback and buffer areas

For the SR-59 West (Nanuet) corridor, the proposed changes in LIO, PED, PO, R-15 and RS districts may result in the following:

- Additional 38,910 square feet of PED buildable floor area
- Additional 14,124 square feet of PO buildable floor area
- Additional 15,305 square feet of LIO buildable floor area
- Decrease of 46,029 RS buildable floor area
- Decrease of 9,242 square feet of residential floor area (including R-15 & R-22)
- 95 additional parking spaces will be required to accommodate these changes (28,500 square feet of parking area) when compared to what current zoning allows.

Table 5-10: Change in Developable Land Under Maximum Development Scenario by Zoning District along the SR-59 West (Nanuet) corridor

Zoning District	Number of parcels	Parcel area	Floor area	Parking spaces	Parking area
LIO	1	97,275	38,910	130	39,000

PO	2	17,922	8,017	55	16,500
R-15	3	168,180	36,889	6	1,800
R-22	1	454,751	90,950	2	600
RS	4	102,732	50,895	341	102,300
<i>Subtotal existing zoning</i>	11	840,860	225,662	534	160,200
PROPOSED					
LIO	1	135,650	54,260	181	54,300
PED	1	97,275	38,910	260	78,000
PO	5	74,372	22,141	150	45,000
R-15	2	515,641	118,597	4	1,200
RS	2	17,921	4,866	34	10,200
<i>Subtotal proposed zoning</i>	11	840,859	238,774	629	188,700
Change in area:			13,112	95	28,500

Note: All area in square feet. Figures rounded for clarity.

Please see Appendix A for the complete buildout analysis for all LIO, PED, PO, R-15, and RS parcels.

Please see Appendix A for the bulk requirements for the LIO, PED, PO, R-15, and RS districts.

Dwelling Unit Analysis

The proposed changes to SR-59 West (Nanuet) did not require a dwelling unit analysis.

5.5.4 Local Law

The final local law that was adopted can be found Appendix A.

5.5.5 Transportation Recommendations

SR-59 West (Nanuet) Complete Street Analysis – The demand for local accessibility exists near employment centers that would benefit from planning and implementing high-quality pedestrian and bicycle facilities. SR-59's potential as a landscaped boulevard / complete street should be analyzed and expanded beyond what currently exists. Additionally, specific design guidance must be given to meet the community's vision of a "green corridor" and opportunities to re-green or integrate the natural landscape back into community environment should be explored. Lastly, the current pedestrian environment between the Shops at Nanuet and Rockland Plaza are adequate, but connect the commercial facilities and foster a welcoming environment.

Figure 5-38: SR-59 (Westbound) at Entrance to Rockland Plaza

Figure 5-39: Dirt Pedestrian Pathways Between Rockland Plaza and the Shops of Nanuet

SR-59 & Middletown Road / CR-33 Intersection Analysis – The connection between SR-59 and North / South Middletown at the Shops at Nanuet experiences high demand for vehicle and pedestrian traffic and is often congested. Corridor geometry and intersection configurations

should be analyzed so that efficient vehicle movements do not come at the expense of other road users. Any adjustments should be made to improve the physical safety and aesthetics of the pedestrian and cycling environment.

Figure 5-40: Intersection of Middletown Road and SR-59 (Northbound)

SR-59 Parking Management and Demand Analysis – The large amounts of parking provided along SR-59 pose a great challenge to accessing employment and retail opportunities via other modes besides vehicles. Parking demand and existing conditions along the corridor should be analyzed. Determining the relationship between parking provision and parking demand is necessary to find efficiencies where parking resources can be shared, and space can be reallocated to support pedestrian access and small-scale retail immediately adjacent to the corridor.

SR-59 Bus Rapid Transit (BRT) Feasibility Analysis – Clarkstown residents would greatly benefit from access to high-quality regional rapid transit service. The SR-59 corridor is a likely corridor for Bus Rapid Transit (BRT) facilitated by the New York State Thruway Authority's New Tappan Zee Bridge Project, current and future changes in mode choice, and in support of new transit supportive zoning. Thus, a configuration of the corridor to support the highest quality BRT

service (2014 - ITDP Gold Standard BRT³) should be developed. This analysis should be shaped by public input, and ultimately be utilized by Clarkstown and Rockland County.

Figure 5-41: Current Transport of Rockland (TOR) Bus Stop

Greenway Network / Protected Pedestrian and Bicycle Paths Feasibility Analysis – Demand for pedestrian and bicycle facilities exists to link recreational centers that would benefit from planning and implementation. The section of CR-33 connecting Demarest Kill County Park (New City), Cropsey Farm Open Space, Link Elementary School, and other key destinations should be assessed for separated pedestrian / bicycle greenways. Additionally, opportunities to connect to regional pedestrian / bicycle facilities should be examined.

5.6 Nanuet Hamlet Center

This section will briefly review the components of each corridor's vision and describe in general transportation planning techniques that can be harnessed to bring the vision to life.

5.6.1 Linking Community Vision with Planning Strategies

The Nanuet Hamlet Center corridor is located on North Middletown Road (also known as Main Street in Nanuet / CR-33) running about ½ Mile South of SR-59 West (Nanuet) to Church Street. On average the corridor ROW (door to door) is 54 feet, and is configured to include an 11 foot

³ About the 2014 BRT Standard

<https://www.itdp.org/library/standards-and-guides/the-bus-rapid-transit-standard/about-the-brt-standard/>

lane, 8 feet of parallel parking, and an 8 foot sidewalk in each direction. The corridor is primarily zoned CS and RS; however, due to the age of the parcels and that hamlet center retail activity is primarily small businesses (often with second floor residences) that are located on small lot sizes (0.08 to 1.8 acres) very little acreage is utilized for parking. It is important to note that most of the buildings would not be approved if they were constructed under existing zoning requirements.

The corridor is unique amongst Clarkstown's typical urban form because of the high concentration of small one and two-story buildings which support a variety of neighborhood shopping and professional office land uses. It is the only hamlet with access to a train station and increased options for commuters. Corridor buildings are situated close to the street (minimal setbacks / buffers). The small block sizes facilitate pedestrian access, as does the presence of high quality pedestrian infrastructure. The roadway and sidewalks were recently resurfaced and designed with attractive streetscape features.

The corridor vision as developed through community meetings includes the following goals: retain urban nature and small town feel; focus development efforts on ensuring vibrancy of its core, establish quality destinations (dining, arts entertainment, urban greenspace, etc.), and prioritize safe and convenient access to key destinations for bicycles, pedestrians and public transit. The ideal hamlet center developments will not displace current residents and be inclusive of housing and opportunities for seniors and young professionals.

Community members were concerned that the hamlet center was lacking cohesion and a "town feel." They also felt that limited senior and affordable housing created a challenge to the corridor's demographic visions. Regardless of the narrow roadway and parallel parking, members felt that road speeds were excessive. Finally, they noted that the existing zoning requirements and current mix of uses (Especially LIO adjacent to the hamlet center and train station) were serious impediments to achieving the community vision.

The Nanuet hamlet center has good bones to build on, but needs support with zoning and infrastructure. Specifically, traffic calming, raised pedestrian crossings, intersection signals, and reduced speed limits can be utilized to manage vehicle speeds and increase the perception of safe movement for pedestrians. Hamlet Center specific zoning can limit parking and support the development of high density mixed-use buildings within a 10 minute walking distance to the train station. Park and Ride facilities are important, but should be managed in such a way that they do not impact station access for pedestrians. Adjacent parking resources (such as the huge unused lots of parking at the Shops at Nanuet) can be coordinated and managed so that parking is within a short-five minute walk away from the train station and key hamlet center destinations.

The Town of Clarkstown interventions through the development and implementation of consistent urban design standards can help the corridor achieve a unique and attractive feel as a destination and support improved wayfinding and signage. For successful hamlet center

development, Town intervention must be closely coordinated with local businesses (through a strong business improvement district for example). A cohesive set of urban design and development guidelines are necessary to encourage infill development within hamlets, and promote shops and restaurants to attract visitors and residents. Zoning adjustments and business supported programming can create a theatre district, farmers markets, as well as introduce new parks and green spaces. Existing small-scale parks (such as the Rose Garden, or rail ROW adjacent plots) can be connected through greenways to support protected bicycle and pedestrian linkages to the hamlet center.

To create and maintain an urban center, it is important to strengthen and protect connections between main street and the train station. A firm strategy of Transit Oriented Development (TOD) is recommended to accomplish this. TOD has been a demonstrated technique for catalyzing redevelopment and investment in town centers across the country. Infill development within the hamlet center should be encouraged so that a consistent density and town feel is maintained.

5.6.2 Recommended Zoning Changes / Map Changes

Cambridge Systematics used a geographic information system to identify parcels in the modified districts proposed for the Nanuet Hamlet Center corridor. The size and land use of each parcel was available from data provided by the Town.

Zoning Changes

To support the Nanuet Hamlet Center vision, the Town of Clarkstown must modify existing parcels and add zoning districts that include Community Shopping (CS), Hamlet Commercial (HC), Light Industrial Office (LIO), Medium High Density Residence - 10,000 square feet (R-10) and Regional Shopping (RS).

Map Changes

CS recommends that the Town of Clarkstown change the existing zoning adjacent to the Nanuet Hamlet Center through the following changes (51 parcels total):

- Rezone various CS, R-10, and RS parcels along South Middletown Road to Hamlet Commercial (HC)
- Shift various CS parcels along South Middletown Road to RS
- Shift various CS parcels along Demarest Avenue to R-10
- Adjust RG-2 boundaries to include parcels that were previously coded CS
- Change parcel immediately adjacent to Nanuet Train Station from LIO to RS

Figure 5-42: Nanuet Hamlet Center – Existing Zoning Map

Figure 5-43: Nanuet Hamlet Center – Proposed HC District Zoning Map

Route 59 West - Nanuet Hamlet Center - Hamlet Commercial (HC)

Figure 5-44: Nanuet Hamlet Center – Proposed R-10 District Zoning Map

Figure 5-45: Nanuet Hamlet Center – Proposed RG-2 District Zoning Map

Route 59 West - Nanuet Hamlet Center - General Residence, Medium Density (RG-2)

5.6.3 Proposed Zoning Build Out Analyses

CS prepared estimates of maximum residential and commercial development for the proposed changes. The estimates assumed that land is fully developed under both existing zoning and the new zoning districts. CS incorporated data from the Clarkstown zoning code regarding bulk requirements into the analysis, including: yards (setbacks), buffers (non-buildable area), parking spaces, parking area.

Build Out Analyses

The following steps were used to calculate parcel-level development potential for HC districts:

1. Calculate allowable building size by subtracting required buffer and yard (setback) area
2. Calculate gross floor area by FAR
3. Calculate parking area based on parking requirement and parking space size assumption
4. Calculate building footprint assuming two-story building height
5. Sum building footprint and parking area and compare lot coverage to lot coverage maximum
6. Adjust developed area to meet lot coverage requirement
7. Calculate adjusted floor area, parking, setback and buffer areas

For the Nanuet Hamlet Center corridor, the proposed changes in CS, LIO, R-10, R-15 and RS districts, and the creation of RG-2 and HC districts may result in the following:

- Additional 361,157 square feet of HC buildable floor area
- Additional 4,856 square feet of residential floor area (including R-15 & R-22)
- Additional 14,124 square feet of PO buildable floor area
- Decrease of 303,850 CS buildable floor area
- Decrease of 68,674 square feet of LIO buildable floor area

When compared to what is currently required by the Clarkstown zoning, the required parking spaces will be reduced by 938 to reflect these changes. In theory, 281,400 square feet of space that was currently required for parking will become available for development; however, most of the built parcels along the Nanuet Hamlet Center do not meet current requirements for parking⁴.

⁴ Moving forward, it is important to reflect on how parking requirements have significant consequences to Clarkstown's built form and aesthetics as well as its accessibility for alternative modes of transportation (such as public transit, walking or bicycling).

Table 5-11: Change in Developable Land Under Maximum Development Scenario by Zoning District

Zoning District	Number of parcels	Parcel area	Floor area	Parking spaces	Parking area
CS	41	921,144	303,850	2098	629,400
LIO	2	145,575	68,674	230	69,000
R-10	1	36,506	8,396	2	600
R-15	1	10,960	804	2	600
RS	6	40,914	18,578	126	37,800
<i>Subtotal existing zoning</i>	51	1,155,099	400,302	2,458	737,400
PROPOSED					
HC	42	722,314	361,157	701*	362,700
RG-2	1	5,556	1,278	2	600
R-10	5	51,110	12,778	10	3,000
RS	3	376,119	120,854	807	242,100
<i>Subtotal proposed zoning</i>	51	1,155,099	496,068	1,520	456,000
Change in area:			95,765	(938)	(281,400)

Note: All area in square feet. Figures rounded for clarity.

Dwelling Unit Analysis

For the Nanuet Hamlet Center, the maximum number of dwelling units was calculated using the following methodology:

1. Determine buildable floor space for each HC parcel given maximum height of 2 stories

$$\text{Build Area by FAR} = (\text{Parcel Area sqft}) * 0.5$$

$$\text{Residential Floor Area for 2 story building} = \frac{\text{Build Area by FAR}}{2} \quad (\text{per } \textbf{Error! Reference source not found.})$$

$$\text{Commercial Floor Area for 2 story building} = \frac{\text{Build Area by FAR}}{2} \quad (\text{per } \textbf{Error! Reference source not found.})$$

Table 5-12: Parcels, Lot Size, and Buildable Area (1 and 2 stories)

Parcels	Parcel Acreage (sqft)	Build Area by FAR (sqft)	Floor Area for 2nd Floor (sqft)
42	722,314	361,157	180,579

2. Develop potential configuration of small (700 sqft) and large (1200 sqft) DUs per each parcel, ensuring that total number of HC DUs is split evenly between the two (i.e., Potential large DUs = Potential small DUs).

$$\text{Potential large DUs} = \frac{\text{Residential Floor Area for 2 story building}}{1200 \text{ sqft per DU}}$$

$$\text{Potential small DUs} = \frac{\text{Remaining Residential Floor Area for 2 story building}}{700 \text{ sqft per DU}}$$

3. Determine Total Potential DU per parcel

$$\text{Total Potential DU} = \text{Potential small DUs} + \text{Potential large DUs}$$

For Nanuet Hamlet, the following totals for Maximum DU types and Potential DU were estimated given the required large DU to small DU split.

Table 5-13: Potential and Maximum DUs

Max Dus small unit (700 sqft)	Max Dus large unit (1200 sqft)	Max Dus 50/50 blend of units (700 sqft and 1200 sqft)
238	133	180

4. Check DU density per acre against maximum (8 DU / acre) for each parcel

$$\text{DU Density per acre} = \frac{\text{Total Potential DUs}}{\left(\frac{\text{Parcel lot area}}{43,560 \text{ sqft per acre}} \right)}$$

IF *DU Density per acre* > 8 DU per acre,

THEN determine maximum allowed DU and substitute it for Total Potential DU:

$$\text{Maximum allowed DU} = 8 * \left(\frac{\text{Parcel lot area}}{43,560 \text{ sqft per acre}} \right)$$

For Nanuet Hamlet, 10 parcels did not have lot sizes that would allow residential development (i.e., with 1 DU, their DU density was greater than 8 DU / acre). Therefore only 32 parcels were carried through the remaining process steps.

5. For each parcel determine the required amount of parking area for a 2 story building with commercial on the ground floor and DUs on the second floor.

$$\begin{aligned} &\text{Required Commercial Parking Area} \\ &= \left(\frac{\text{Commercial Floor Area}}{300 \text{ sqft per space}} \right) * 300 \text{ sqft per space} \end{aligned}$$

$$\begin{aligned} &\text{Required Residential Parking Area} \\ &= (\text{Total Potential DU or Max allowed DU} * 1 \text{ space per DU}) \\ &\quad * 300 \text{ sqft per space} \end{aligned}$$

$$\text{Total Parking Area} = \text{Required Commercial Parking Area} + \text{Required Residential Parking Area}$$

6. Verify that required parking and developed area will fit in parcel lot.

IF Total Parking Area + Commercial Floor Area > Parcel lot area,

THEN reduce Commercial Floor Area & Residential Floor Area and recalculate Potential DUs and parking requirements until Total Parking Area + Commercial Floor Area < Parcel lot area.

For the Nanuet Hamlet HC district, all of the parcels fit the required amounts of parking and maximum developable area without adjustment.

Table 5-14: Required Parking

Required Parking Area Commercial (sqft)	Required Parking Area Residential (sqft)	Total Parking Area (sqft)	Total Number of Required Parking Spaces
180,600	29,700	210,300	701

7. Once the required parking and developed area will fit within the parcel lot, total the DUs for each parcel using Total Potential DU or Max allowed DU. This is the maximum DU for the set of parcels.

Table 5-15: Allowable DUs

Parcels	DUs at Max Allowable Density	Possible small units	Possible large units
32	99	49	50

Thus, the maximum DU for the selected HC parcels in Nanuet Hamlet Center is 99 (**Error! Reference source not found.**).

5.6.4 Local Law

The final local law that was adopted can be found Appendix A.

5.6.5 Transportation Recommendations

The following summarizes potential transportation projects for the Nanuet Hamlet Center corridor.

Nanuet Pedestrian / Bicycle Infrastructure Network Analysis – With the exception of the Hamlet Center, this infrastructure is missing (or substandard) across most Nanuet’s streets. To complete this analysis the following tasks are recommended:

- An inventory of Nanuet’s pedestrian and bicycle infrastructure should be completed, and the quality of the available facilities should be objectively measured (sidewalk widths, unobstructed surface, etc.).
- Key destinations such as activity centers, marketplaces, schools, parks, and civic institutions should be identified (Lake Nanuet Park, Public Library, High View Cemetery, Nanuet Hamlet Center, etc.).
- Pedestrian / bicycle network should be explored that augments / replaces existing assets and provides safe and convenient access.

Hamlet Center Traffic Calming Analysis – In the Hamlet Center there is a high demand for local access and a sentiment that vehicles are traveling too fast as they navigate through the Center. Opportunities for traffic calming across the Center should be explored to reduce vehicle speeds and increase safety for pedestrians and bicyclists.

Nanuet Hamlet Center Parking Management Feasibility Analysis – The coordination of parking resources provided for the Hamlet Center poses creates a perception of a shortage of parking opportunities. Parking demand and existing conditions and supply of parking in the Hamlet Center should be analyzed. understanding the relationship between parking provision and parking demand is essential to develop a strategy to manage the available parking and allow for the Hamlet Center’s development.

Nanuet Train Station Enhancement Analysis – Having access to a historic regional rail connection is a tremendous asset for the Hamlet Center. To maximize the benefits that the station yields to Clarkstown residents and businesses, enhancements in terms of facilities and location should be explored.

5.7 New Zoning Districts / Adjustments to Existing Zoning Districts

Throughout the project three new zoning districts were created and applied across the corridors. The following summarizes the purpose and intent of these districts. Detailed information on use

and bulk regulations, parking requirements, and other details regarding each new zoning district can be found in the adopted local laws located in the Appendix.

5.7.1 Neighborhood Shopping (NS) District

Purpose

The purpose of the Neighborhood Shopping District is to provide for areas of small commercial and mixed-use development in a suburban neighborhood center or small “hamlet center support” setting along major transportation corridors. The primary use is intended to be small commercial (retail) and professional activities, with opportunities for mixed use multifamily residential uses.

District development standards promote attractive development, an open street appearance, and compatibility with adjacent residential areas. Development is intended to compliment the aesthetics of the neighborhood. Parking is intended to be placed behind or to the side of principal buildings.

Intent

The NS District is intended to:

- Support commercial/retail uses for local neighborhood hubs on major transportation corridors
- Maintain appropriately scaled development near residential developments adjacent to major transportation corridors
- Compliment design guidelines on major transportation corridors to orient buildings to street, provide pedestrian walkways through parking, and reduce paved areas and driveways through shared parking
- Support safe pedestrian access to a diverse range of activities including public transportation services
- Expand accessible multifamily housing choices in Clarkstown

5.7.2 Commercial Office (CO) District

Purpose

The purpose of the Commercial Office (CO) district is to provide for “office park” or “executive park” areas of commercial mixed-use in campus-like settings on major transportation corridors. The primary use is intended to be offices for a variety of commercial, research and similar activities. Light industrial uses, such as technology research that operates enclosed in office-like settings and are generally compatible with commercial office uses are encouraged and allowed.

Intent

The CO district is intended to:

- Ensure that the appearance and function of development is integrated with and compliments surrounding neighborhoods
- Concentrate a variety of commercial services that serve the surrounding community and support local job creation
- Encourage a variety of commercial and light industrial uses and provide flexible infrastructure to accommodate changing market needs
- Ensure that development is of high quality and supports pedestrian travel and interest through use of varied forms, materials, details and colors, especially at the ground floor
- Create compact and pedestrian-oriented environments that encourage pedestrian access and use of public transportation

CO districts are intended to be accessed primarily by employees, business visitors and customers. The district should provide context-sensitive pedestrian facilities, and site plans that facilitate non-motorized connections between developments within the office development area, as well as between neighboring developments. This district should also provide access and space for public transportation services with nearby stops (existing or planned).

Conditional upon a Planning Board Special Permit, the CO district allows for related and unrelated retail uses that complement the character and scale of the area. The purpose of incorporating retail uses is to reduce the number of automobile trips in the area and support local business activity. Incorporating retail venues providing services to local employees (e.g. food, common retail goods or informal meeting space) as well as a safe and accessible pedestrian environment can help reduce automobile trips by providing services within walking distance of employment centers. The retail uses can also support local business by providing flexible use of facilities.

5.7.3 Commercial Office Support (COS) District

Purpose

The Commercial Office Support (COS) district provides commercial and retail land uses that support the CO district's "office park" setting on major transportation corridors. The primary use is intended to be a variety of commercial office, research and other similar activities. Light industrial uses, such as technology research that operate in an office-like setting and are compatible with commercial office uses are generally allowed. The COS district permits retail

uses that complement the character and scale of the area while serving employees working within approximately one-half mile of the location.

Intent

The COS District is intended to:

- Encourage commercial mixed-use and medium-density commercial office development, conversion and reuse of aging and underutilized areas, and more efficient use of land at key development areas with access to major transportation corridors
- Ensure that the appearance and function of development is integrated with and complements surrounding neighborhoods
- Create compact and pedestrian-oriented environments that encourage pedestrian access and use of public transportation
- Ensure that development is of high quality and provides pedestrian scale and interest through use of varied forms, materials, details and colors, especially at the ground floor
- Concentrate a variety of commercial services that serve the surrounding community and support local job creation

The COS district is intended to provide related services to employees and customers in nearby CO districts. The COS district is similar in use to the CO district, but generally allows for smaller-scale development to accommodate smaller lot sizes. The district requires context-sensitive pedestrian facilities, and site plans that facilitate non-motorized connections to developments within office parks, and other neighboring compatible developments. The COS district should provide access and space for public transportation services.

The COS District permits limited retail uses that complement the character and scale of the area while serving employees working within approximately one-half mile of the district. The purpose of incorporating retail uses is to reduce the number of automobile trips needed for incidental needs for local employees such as food, common retail goods or informal meeting space. The retail uses should not generate significant automobile or heavy truck traffic. Retail uses are not intended to comprise a majority of the parcels in an office-park setting, nor the majority of available square footage in multi-use buildings.

Prepared By

This document was developed by the Clarkstown NYRCR Planning Committee as part of the NY Rising Community Reconstruction (NYRCR) Program within the Governor's Office of Storm Recovery. The NYRCR Program is supported by NYS Homes and Community Renewal and NYS Department of State. The document was prepared by the following consulting firms: AKRF, Inc.; MJ Engineering and Land Surveying, P.C.; Nagle, Tatich, Cranston LLC d/b/a Elan.3.Consulting (E.3); Sasaki Associates; Arch Street Communications, Inc.; and CDM Smith.

Foreword

Introduction

In the span of approximately one year, beginning in August 2011, the State of New York experienced three extreme weather events. Hurricane Irene, Tropical Storm Lee, and Superstorm Sandy wreaked havoc on the lives of New Yorkers and their communities. These tragic disasters signaled that New Yorkers are living in a new reality defined by rising sea levels and extreme weather events that will occur with increased frequency and power. They also signaled that we need to rebuild our communities in a way that will mitigate against future risks and build increased resilience.

To meet these pressing needs, Governor Andrew M. Cuomo led the charge to develop an innovative, community-driven planning program on a scale unprecedented and with resources unparalleled. The NY Rising Community Reconstruction (NYRCR) Program empowers the State's most impacted communities with the technical expertise needed to develop thorough and implementable reconstruction plans to build physically, socially, and economically resilient and sustainable communities.

Program Overview

The NYRCR Program, announced by Governor Cuomo in April of 2013, is a more than \$650 million planning and implementation process established to provide rebuilding and resiliency assistance to communities severely damaged by Hurricane Irene, Tropical Storm Lee, and Superstorm Sandy. Drawing on lessons learned from past recovery efforts, the NYRCR Program is a unique combination of bottom-up community participation and State-provided technical expertise. This powerful combination recognizes not only that community members are best positioned to assess the needs and opportunities of the places

where they live and work, but also that decisions are best made when they are grounded in rigorous analysis and informed by the latest innovative solutions.

One hundred and two storm-affected localities across the State were originally designated to participate in the NYRCR Program. The State has allocated each locality between \$3 million and \$25 million to implement eligible projects identified in the NYRCR Plan. The funding for these projects is provided through the U.S. Department of Housing and Urban Development (HUD) Community Development Block Grant – Disaster Recovery (CDBG-DR) program¹.

Forty-five NYRCR Communities, each comprising one or more of the 102 localities, were created and led by a NYRCR Planning Committee composed of local residents, business owners, and civic leaders. Members of the Planning Committees were identified in consultation with established local leaders, community organizations, and in some cases municipalities. The NYRCR Program sets a new standard for community participation in recovery and resiliency planning, with community members leading the planning process. Across the State, more than 500 New Yorkers represent their communities by serving on Planning Committees. More than 400 Planning Committee Meetings have been held, during which Planning Committee members worked with the State's NYRCR Program team to develop community reconstruction plans and identify opportunities to make their communities more resilient. All meetings were open to the public. An additional 125-plus Public Engagement Events attracted thousands of community members, who provided feedback on the NYRCR planning process and proposals. The NYRCR Program's outreach has included communities that are

1. Five of the 102 localities in the program—Niagara, Herkimer, Oneida, Madison, and Montgomery Counties—are not funded through the CDBG-DR program.

traditionally underrepresented, such as immigrant populations and students. All planning materials are posted on the NYRCR Program's website (www.stormrecovery.ny.gov/nyrcr), providing several ways for community members and the public to submit feedback on materials in progress.

Throughout the planning process, Planning Committees were supported by staff from the Governor's Office of Storm Recovery (GOSR), planners from New York State (NYS) Department of State (DOS) and NYS Department of Transportation (DOT), and consultants from world-class planning firms that specialize in engineering, flood mitigation solutions, green infrastructure, and more.

With the January 2014 announcement of the NYRCR Program's expansion to include 22 new localities, the program comprises over 2.7 million New Yorkers and covers nearly 6,500 square miles, which is equivalent to 14% of the overall State population and 12% of the State's overall geography.

The NYRCR Program does not end with this NYRCR Plan. Governor Cuomo has allocated over \$650 million of funding to the program for implementing projects identified in the NYRCR Plans. NYRCR Communities are also eligible for additional funds through the program's NY Rising to the Top Competition, which evaluates NYRCR Communities across eight categories, including best use of technology in the planning process, best approach to resilient economic growth, and best use of green infrastructure to bolster resilience. The winning NYRCR Community in each category will be allocated an additional \$3 million of implementation funding. The NYRCR Program is also working with both private and public institutions to identify existing funding sources and create new funding opportunities where none existed before.

The NYRCR Program has successfully coordinated with State and Federal agencies to help guide the development of feasible projects. The program has leveraged the Regional Economic Development Council's State Agency Review Teams (SARTs),

comprised of representatives from dozens of State agencies and authorities, for feedback on projects proposed by NYRCR Communities. The SARTs review projects with an eye toward regulatory and permitting needs, policy objectives, and preexisting agency funding sources. The NYRCR Program is continuing to work with the SARTs to streamline the permitting process and ensure shovels are in the ground as quickly as possible.

On the pages that follow, you will see the results of months of thoughtful, diligent work by NYRCR Planning Committees, passionately committed to realizing brighter, more resilient futures for their communities.

The NYRCR Plan

This NYRCR Plan is an important step toward rebuilding a more resilient community. Each NYRCR Planning Committee began the planning process by defining the scope of its planning area, assessing storm damage, and identifying critical issues. Next, the Planning Committee inventoried critical assets in the community and assessed the assets' exposure to risk. On the basis of this work, the Planning Committee described recovery and resiliency needs and identified opportunities. The Planning Committee then developed a series of comprehensive reconstruction and resiliency strategies, and identified projects and implementation actions to help fulfill those strategies.

The projects and actions set forth in this NYRCR Plan are divided into three categories. The order in which the projects and actions are listed in this NYRCR Plan does not necessarily indicate the NYRCR Community's prioritization of these projects and actions. Proposed Projects are projects proposed for funding through a NYRCR Community's allocation of CDBG-DR funding. Featured Projects are projects and actions that the Planning Committee has identified as important resiliency recommendations and has analyzed in depth, but has not proposed for funding through the NYRCR Program. Additional Resiliency Recommendations are projects and actions that the

Planning Committee would like to highlight and that are not categorized as Proposed Projects or Featured Projects. The Proposed Projects and Featured Projects found in this NYRCR Plan were voted for inclusion by official voting members of the Planning Committee. Those voting members with conflicts of interest recused themselves from voting on any affected projects, as required by the NYRCR Ethics Handbook and Code of Conduct.

NYRCR Ulster Communities are eligible for up to \$30 million in CDBG-DR implementation funds².

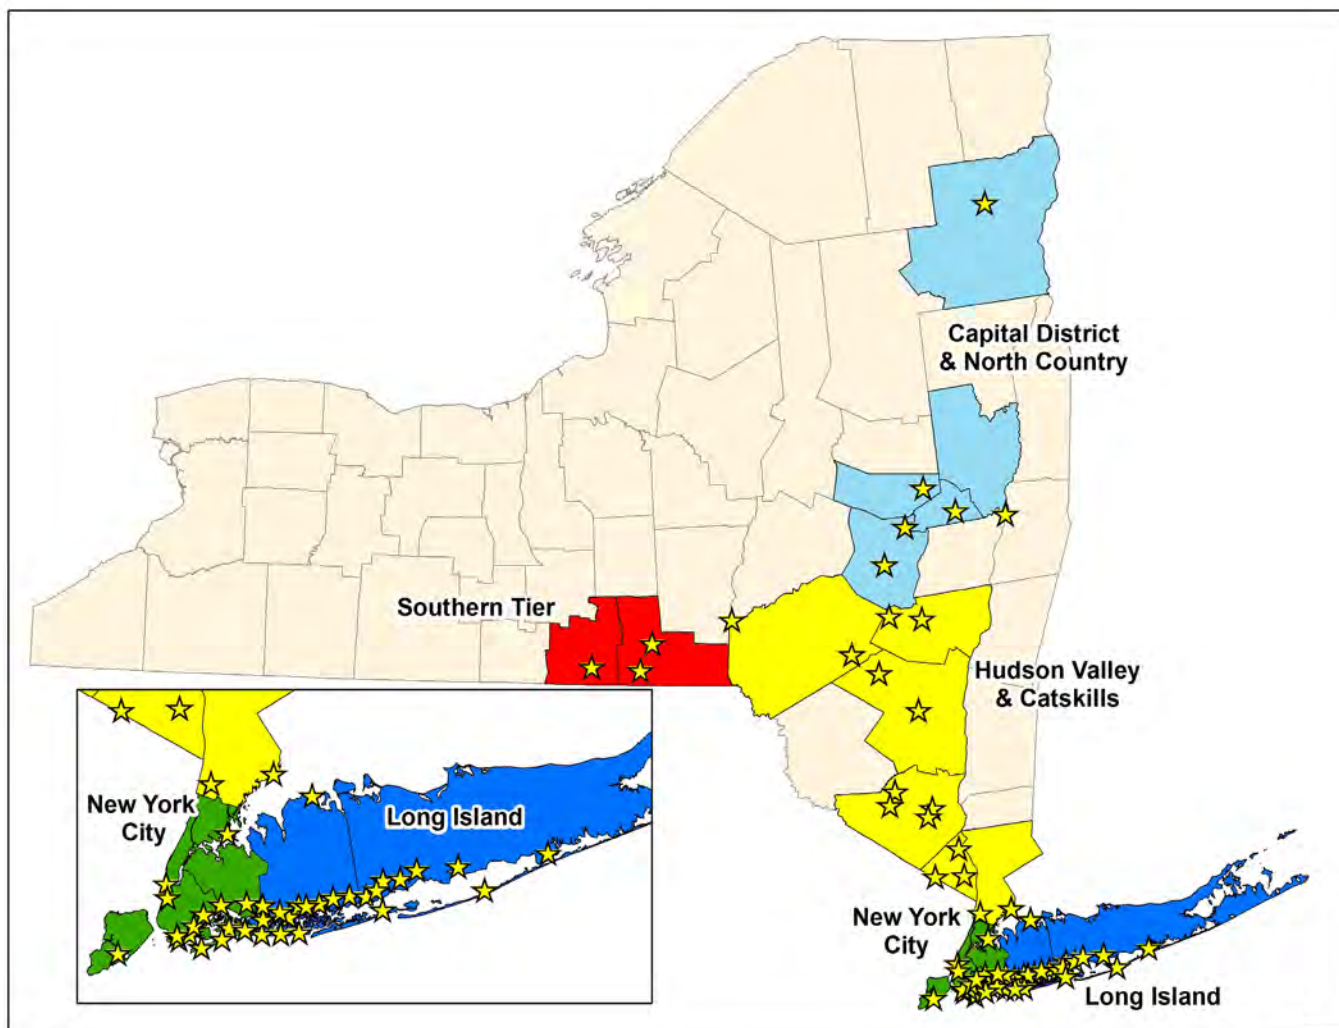

While developing projects for inclusion in this NYRCR Plan, Planning Committees took into account cost estimates, cost-benefit analyses, the effectiveness of each project in reducing risk to populations and critical assets, feasibility, and community support. Planning Committees also considered the potential likelihood that a project or action would be eligible for CDBG-DR funding. Projects and actions implemented with this source of Federal funding must fall into a Federally-designated eligible activity category, fulfill a national objective (meeting an urgent need, removing slums and blight, or benefiting low to moderate income individuals), and have a tie to the natural disaster to which the funding is linked. These are among the factors that the Governor's Office of Storm Recovery will consider, in consultation with local municipalities and nonprofit organizations, when determining which projects and actions are best positioned for implementation.

The total cost of Proposed Projects in this NYRCR Plan exceeds the NYRCR Community's CDBG-DR allocation to allow for flexibility if some Proposed Projects cannot be implemented due to environmental review, HUD eligibility, technical feasibility, or other factors. Implementation of the projects and actions

found in this NYRCR Plan are subject to applicable Federal, State, and local laws and regulations, including the Americans with Disabilities Act (ADA). Inclusion of a project or action in this NYRCR Plan does not guarantee that a particular project or action will be eligible for CDBG-DR funding or that it will be implemented. The Governor's Office of Storm Recovery will actively seek to match projects with funding sources.

In the months and years to follow, many of the projects and actions outlined in this NYRCR Plan will become a reality helping New York not only to rebuild, but also to build back better.

2. The following localities' allocations comprise the NYRCR Community's total allocation: Village of Ellenville - \$3 million; Town of New Paltz - \$3 million; Village of New Paltz - \$3 million, Town of Olive - \$3 million, Town of Rochester - \$3 million, Town of Rosendale - \$3 million, Town of Saugerties - \$3 million, Village of Saugerties - \$3 million, Town of Wawarsing - \$3 million, Town of Woodstock \$3 million.

Note: map includes those NYRCR Communities funded through the CDBG-DR program, including the NYRCR Communities announced in January 2014.

Clarkstown NYRCR Executive Summary

I. Overview

The NY Rising Community Reconstruction (NYRCR) Program was established by New York Governor Andrew M. Cuomo to provide rebuilding and revitalization assistance to communities damaged by Superstorm Sandy, Hurricane Irene, and Tropical Storm Lee. The goal of the program is to rebuild from these storms and to increase communities' physical, economic, and social resilience to future storm events. The NYRCR Program provides an opportunity for residents, business owners and community leaders to actively participate in planning for a stronger future. The NYRCR Program empowers communities to prepare locally driven recovery plans to identify innovative reconstruction and resiliency projects and other actions to allow each community not only to survive, but also to thrive in an era when natural risks will become increasingly common.

The Clarkstown NYRCR Plan was developed during six months of community stakeholder engagement. The NYRCR Plan reflects Clarkstown's vision and goals, honoring its unique qualities and assets for building a safer, more resilient and sustainable future.

a. Community Location and Allocation Amount

The Town of Clarkstown is 41-square miles located approximately 25 miles northwest and a one-hour drive from New York City. The Town comprises eight hamlets: Bardonia, Central Nyack, West Nyack, Congers, Nanuet, New City, Rockland Lake, and Valley Cottage, as well as the Village of Upper Nyack and a portion of the Villages of Nyack and Spring Valley. The majority of the Town is within the Upper

Hackensack River watershed. As of the 2010 census, the Town's population was just under 85,000 residents.

The Town of Clarkstown is eligible for up to \$3 million in Community Development Block Grant – Disaster Recovery (CDBG-DR) funding through the NYRCR Program.

b. Scope of Planning Area

The Clarkstown NYRCR planning area is coterminous with the municipal boundaries and includes all eight hamlets. Although some Clarkstown neighborhoods were not directly impacted by flooding or wind damage, these areas contain important recovery and resiliency assets and serve as resources for resilient reconstruction.

c. Summary of Storm Impacts

Both Hurricane Irene (August 28, 2011), and Superstorm Sandy (October 29, 2012) resulted in widespread flooding, wind damage and prolonged power outages throughout Clarkstown.

The torrential rains, strong winds, and heavy downpour from Hurricane Irene caused extensive flooding, uprooted trees, and downed power lines, resulting in widespread and protracted road closures. Many homes and businesses were flooded up to six feet in their basements. Clarkstown Supervisor Alexander Gromack declared a local State of Emergency that lasted five days, ordering 1,400 homes in West Nyack to evacuate because of potential flooding by the Lake DeForest reservoir.

Following Superstorm Sandy, a State of Emergency was declared at both the County and local level. Although the flooding was less severe than during Hurricane Irene, strong winds with gusts up to 60 to 70 mph brought down trees and power lines, causing severe power outages and damaging buildings and infrastructure.

The physical damage to roads, homes and Town infrastructure, caused by Superstorm Sandy and Hurricane Irene, combined with the economic impacts of displaced and closed businesses continue to affect Clarkstown today. The Town continues to recover as they plan to build back better to become more resilient to both extreme storm events, and also the more frequent high intensity short duration storms.

d. Summary of Critical Issues

Since 1999, 10 serious flooding events have impacted the residents and businesses, roads, critical infrastructure systems, and natural resources throughout the Town. It is important to note that it is not only the named storm events that impact the Town, but also flash flooding that accompanies summer storms, the spring thaw, and power outages that occur during high wind events.

The key critical issues facing Clarkstown include:

- ▶ Emergency Service Provider Access;
- ▶ Flooding in Residential Neighborhoods;
- ▶ Interruptions to Town Services and Facilities;
- ▶ Repeated Flooding of Businesses;
- ▶ Road Closures; and
- ▶ Widespread and Prolonged Power Outages.

II. Community-Driven Process

The NYRCR Program is fundamentally a grassroots initiative. Initial project recommendations were generated by the Clarkstown NYRCR Planning Committee (Committee), which comprises elected officials, community leaders, residents, and business owners who came together to discuss how to help their Town recover from and become more resilient to future storms. The Committee met approximately ten times—every other week from June 2014 through November 2014.

All of the material presented in the Clarkstown NYRCR Plan has been developed collaboratively. The NYRCR Program provided the Community with a unique opportunity to participate in a bottom-up/community-driven planning effort to shape the communities' more resilient future.

EIGHT STEPS TOWARD RESILIENCY:

- ▶ Organize for Action;
- ▶ Inventory Assets;
- ▶ Determine Needs and Opportunities;
- ▶ Prepare and Present Concept Plan;
- ▶ Conduct Risk Assessment;
- ▶ Engage in Regional Planning Process;
- ▶ Develop Strategies for Investment & Action; and
- ▶ Deliver Final NYRCR Plan.

a. Community Vision and Goals

Clarkstown NYRCR Vision

Clarkstown, the economic hub and Rockland County seat, is a safe, centrally located, diverse, and resilient Town. The community is a geographic crossroads between New York City, New Jersey, and the rest of New York State. The Town enjoys access to multi-modal transportation options, diverse housing choices, a variety of small and large commercial venues, and robust educational, recreational, and cultural facilities in a bicycle and pedestrian friendly environment.

Clarkstown values and will continue to protect its natural resources including the Palisades Ridgeline, Hackensack, and Hudson Rivers, wetland systems, and stream corridors that together provide significant benefits to the community including environmental and water quality protection, flood mitigation, recreational opportunities, and preservation of community character.

Our vision is to embrace and enhance the many strengths of our Town while planning for a more resilient community so that we may build back better from future disasters.

The following goals were developed to help the Community realize the vision:

- ▶ Augment emergency services including providing back-up power during storm events;
- ▶ Build closer working relationships and coordination with the States of New York and New Jersey to address flooding issues associated with the Hackensack River;
- ▶ Continue to balance commercial, industrial and residential development with the preservation of open space and agricultural lands;
- ▶ Enhance infrastructure and stormwater systems where needed;

- ▶ Enhance multi-modal opportunities including safe bicycle and pedestrian facilities;
- ▶ Preserve the unique community fabric made up of rural, suburban, and urban settings; and
- ▶ Protect natural resources including the Hackensack and Hudson Rivers, wetland systems, stream corridors, and Clarkstown's lakes.

b. Summary of Public Outreach

Three Public Engagement Events were held throughout the six month planning process, with a fourth to be conducted after the final NYRCR Plans are complete on January 15, 2015. These events provided the opportunity for Clarkstown residents to learn about the NYRCR Program, assets, and projects, and provide input to help develop community-driven plans for a more resilient future. The format of the Public Engagement Events varied throughout the process, but generally included PowerPoint presentations, display boards and mapping, workgroups, and discussion with maps and markers, survey sheets, and photo booths.

Materials were circulated to the Committee and posted to a dedicated Clarkstown webpage on the NYRCR Program website. Committee Members also shared project information with their community by posting relevant materials to the Town's website, leaving materials in the various Town libraries and other community facilities, posting information throughout the Town, reaching out to friends and neighbors through email and conversation, and attending municipal meetings and community functions to report on their NYRCR Plan progress. In addition, the Committee utilized social media, emailing via the Town's direct email system, and also sent flyers home with students enrolled in Town summer camps and schools.

III. Final Plan as Blueprint for Implementation

a. Needs and Risks Underpin Projects

The Clarkstown NYRCR Planning Committee understands where the Town is vulnerable, where the critical assets are located, and what the risks are to those assets. To address their specific vulnerabilities, a comprehensive needs and opportunities analysis was prepared through a combination of research, analysis, Committee and community feedback. A sample of the needs and the opportunities identified to address those needs is presented below:

NEEDS:

- ▶ Protection of businesses and commercial centers subject to repetitive flooding from future storm damage;
- ▶ Backup power supply for and installation of permanent generators at key facilities;
- ▶ Protection of single family and multi-family residential neighborhoods from flooding;
- ▶ Upgrades to stormwater management infrastructure and improvement of drainage systems;
- ▶ Protection of open space assets for recreation and tourism, and as a means to assist with stormwater management; and
- ▶ Development balanced with open space preservation.

OPPORTUNITIES:

- ▶ Evaluate options and various technologies to alleviate flooding conditions to commercial centers;
- ▶ Locate and evaluate the vulnerability of health and social service facilities, including access to medicine;
- ▶ Investigate and pinpoint causes of neighborhood flooding (i.e., stormwater systems, stream alignment, watershed development, location in mapped floodplain, etc.) and develop plans for flood mitigation;
- ▶ Inventory stormwater management infrastructure including age and condition of facilities and continue to prioritize and identify funding sources for maintenance and/or replacement;
- ▶ Determine impacts on recreational assets from flooding and evaluate protection measures to protect from future flood events; and
- ▶ Evaluate local regulations to ensure a proper balance is maintained between new development and open space protection.

b. Strategies

The strategies developed in the NYRCR Plan consider emergency, disaster recovery, long-term resiliency, and economic development needs that either remain unmet or can be fortified. They represent statements of action that address how to best fortify community assets, capitalize on opportunities, resolve critical issues, and meet short-, medium-, and long-term goals. The projects developed throughout the planning process are a path to executing the strategies and realizing the vision the community has for the Town of Clarkstown. Although not every strategy presented in the NYRCR Plan has a specific corresponding project, the strategies remain important guides to developing additional resiliency measures to help strengthen the future of the community.

Clarkstown NYRCR Strategies

- ▶ Develop initiatives and financial assistance programs to better protect residents, businesses, and commercial centers from future storm damage and to allow them to recover more quickly;
- ▶ Ensure access to and improve resiliency of critical health and social service facilities and safe havens during and after storm events;
- ▶ Improve regional coordination with neighboring communities and local and state agencies for watershed management to better mitigate flooding and plan for future disasters;
- ▶ Improve stormwater management infrastructure and drainage systems using green infrastructure practices where possible and cost-effective;
- ▶ Preserve open spaces and restore natural resources to better support flood mitigation;
- ▶ Promote resilience and flood management best practices through land-use planning, policy, and regulation;
- ▶ Provide education, outreach and implementation assistance regarding pre-storm preparedness (including proper maintenance of waterbodies and stormwater runoff mitigation on private properties), storm protection procedures and post-storm recovery initiatives to protect from future flooding; and
- ▶ Restore and protect critical infrastructure and transportation assets.

c. Projects are the Path to Executing the Strategies

Proposed Projects are proposed for funding through a community's allocation of CDBG-DR funding.

Featured Projects are innovative projects where an initial study or discrete first phase of the project is proposed for CDBG-DR funding or other identified funding; and regulatory reforms and other programs that do not involve capital expenditures.

Additional Resiliency Recommendations are resiliency projects and actions that the Committee would like to highlight and are not categorized as Proposed or Featured Projects.

The strategies presented in Table A, and the Proposed or Featured Projects to implement them, specifically address the stated needs and transform opportunities into action items. The Proposed and Featured Projects are not presented in any particular order of priority.

Table A
Proposed and Featured Projects

Strategy	Project Name	Project Category
Improve stormwater management infrastructure and drainage systems using green infrastructure practices where possible and cost-effective	Cranford Drive Drainage Improvements	Proposed Project
	Drainage Improvements to the Demarest Kill Stream	Proposed Project
	Drainage Improvements to the Nauraushaun Brook Basin	Proposed Project
	South Mountain Road Drainage Improvements	Proposed Project
	Cul-de-sac Island Reconstruction	Featured Project
	Jeffrey Place Drainage Improvements	Featured Project
	Pineview Road Storm Drainage Improvements	Featured Project
Preserve open spaces and restore natural resources to better support flood mitigation	Implementation of Post-Residential Buyout Program Measures for Flood Protection	Featured Project
Promote resilience and flood management best practices through land-use planning, policy, and regulation	Digital Inventory of Stormwater Management Infrastructure	Featured Project
	Tree Maintenance Program	Featured Project
Restore and protect critical infrastructure and transportation assets	Fredric Street Drainage Improvements	Proposed Project
	Old Haverstraw Road Drainage Improvements	Proposed Project

2014 NY RISING COMMUNITY RECONSTRUCTION PLAN NYRCR CLARKSTOWN

Section I Community Overview

Geography

In addition to being ranked nationally as one of the 100 Best Places to Live by Money Magazine, the Town of Clarkstown is also one of the Safest Places to Live in the United States¹. Clarkstown is a 41-square-mile town located approximately 25 miles northwest from New York City. The Clarkstown NY Rising Community Reconstruction (NYRCR) Community (Community) is bordered to the east by the Hudson River and the Village of Upper Nyack, which is incorporated within the Town, to the south by the Town of Orangetown, to the west by the Town of Ramapo, and to the north by the Town of Haverstraw.

The Town of Clarkstown was recently placed as the No. 1 Place to Live for ‘Booming Suburbs’ in New York State by Coldwell Banker Real Estate.²

The Town comprises eight hamlets: Bardonia, Central Nyack, West Nyack, Congers, Nanuet, New City, Rockland Lake, and Valley Cottage, as well as the Village of Upper Nyack and a portion of the Villages of Nyack and Spring Valley. High Tor State Park sits along the Town’s northern border, and Rockland Lake State Park sits along the Town’s Hudson River border. Both of these parks are owned by the Palisades Interstate Park Commission.

The New York State (NYS) Thruway, County Route 80 and NYS Route 59 are the primary east-west corridors providing access to Clarkstown. The Palisades Interstate Parkway and NYS Routes 9W, 303, and 304 provide north-south access.

The majority of the Town is within the Upper Hackensack River watershed. The Hackensack River, and its tributaries and related streams, wind through the center of the Town and through Lake DeForest, a reservoir formed by impounding the Hackensack River.

Congers Lake (Jennifer Tesker)

The Lake DeForest reservoir, owned by United Water New York, serves Rockland County as a public drinking water source. Other key water bodies within the Town include: Rockland, Swartout and Congers Lakes, and Lake Lucille. The Hackensack River, Naurashaun Brook and Pascack Brook flow through the Town, ultimately discharging into Newark Bay.

Residential and commercial neighborhoods, key roadways south of Lake DeForest in West Nyack, and the neighborhood between Congers Lake and Lake DeForest, are subject to the most intense repeated flooding. Lowland areas along the Demarest Kill and Naurashaun Brook, to the west of Lake DeForest, also experience chronic flooding. In addition, the far western portion of the Town is located within the Pascack Brook watershed, which is a tributary to the Hackensack River. The far southwestern portion of the Town, in the hamlet of Nanuet, suffers from flooding along the Pascack Brook during storm events.

History

Clarkstown was incorporated in 1791 after separating from the Town of Haverstraw. While early European settlement began in a primarily agrarian land use pattern, by the mid-18th century Clarkstown was an economic center. Dating back to the late 18th century, Clarkstown was the County seat, resulting in the early creation of one of the Town's hamlets, New City, developed with two hotels and a post office. In the late 18th and early 19th century, gristmills, sawmills, and quarries were the Town's main industries. Knickerbocker Ice Company, the largest in New York State at that time, was founded in the Town and exported ice from Rockland Lake, primarily to New York City.

The hamlets of Nanuet, West Nyack, Congers, and Bardonia owe their creation to important transportation improvements in the area. Built in 1828, the Nyack Turnpike connected the Village of Suffern to the Village of Nyack and the Hudson River. Along that route, West Nyack, at the crossroads of many streams, burgeoned

with mills fed by the waters. In 1841, the Erie Railroad was completed, helping to spur the development of Nanuet. Finally, Congers was settled after the creation of the West Shore Railroad, originally a commuter line, which is now a major freight hauling line in the Northeast.

Later in the 20th century, new transportation improvements spurred further growth within the Town and forever changed the Town from one that was still quite rural and agrarian, to one that was primarily residential. In 1958, the Palisades Interstate Parkway, a major north south artery, was completed. However, it was the opening of the Tappan Zee Bridge in 1955 that was the real catalyst for growth. Between 1950 and 1960, the Town's population doubled to more than 33,000 people, and then nearly doubled again by 1970 to 61,000 people.

Demographics

Today, Clarkstown has approximately 84,504 residents and a median age of 42.9. The racial makeup of the Town is: 74.8% White, 9.4 % Black or African American, 10.5% Asian, 0.1% American Indian or Alaska Native, 3.6 % from other races, and 1.6 % from two or more races. Hispanic or Latinos of any race comprise 12.1% of the population.³

Clarkstown's economy consists of a mix of sectors from warehousing to professional services. The Town's several hamlets are well served by local and regional retail. Along NYS Route 59, a major east-west thoroughfare through Rockland, The Shops at Nanuet mall and Palisades Center mall, together with several other large big-box retail outlets, draw thousands of shoppers to the region. According to the most recent data (2007) together with the smaller stores in the hamlet centers, the retail sector employs more than 8,500 people in Clarkstown, by far the largest source of employment. The health-care sector is the second largest sector, employing more than 6,500 people. Hotels and restaurants employ slightly more than

3,000 people, and professional services employ approximately 2,100 people.⁴ Approximately 47.7% of Clarkstown residents work outside of Rockland County, including many who commute to New York City.⁵

Housing

As noted in the *Town of Clarkstown Comprehensive Plan* (2009), “the majority of the Town’s land is developed as residential.”⁶ Of the Town’s 30,162 housing units, 96.4% are occupied with only 3.6% identified as vacant. Approximately 80% of housing units are owner occupied, with the remaining 20% indicated as rental properties. Nearly 70% of Clarkstown’s housing stock is single-family detached houses. Approximately 4% of the Town’s housing units are in structures of 10 or more units. Clarkstown has a high home ownership rate at 80%.⁷

A. Geographic Scope

Defining the geographic scope for Clarkstown NYRCR was the key first step in the planning process. The NYRCR Planning Committee (Committee) was encouraged to define the geographic scope of their NYRCR Plan to include:

- ▶ Vulnerable areas where assets are most at risk;
- ▶ Focus areas for future development or redevelopment;
- ▶ Focus areas where development or redevelopment would be prohibited; and
- ▶ Focus areas where additional economic investment will help the Town’s financial resiliency.

“Assets are likely to be most at risk due to future storms in the extreme, high and moderate risk areas of the community. But reviewing current and previous storm damage may indicate that other areas should be included [in the geographic scope].”

Guidance for New York Rising Community Reconstruction Plans, A Planning Toolkit for CR Planning Committees

Although there are areas in Clarkstown that were not directly impacted by flooding or wind damage, these areas contain important recovery and resiliency assets. The Committee determined that impacts from flooding, wind, stormwater, downed trees, and utility outages were widespread enough to merit including all of the Town’s hamlets within the scope of the planning area. Some areas within the Town sustained substantial damage, while some suffered minimal disruption highlighting their potential for hosting recovery services, shelters, and other important community resources. Locating these types of facilities in less damage-prone areas could help the Town recover more effectively and quickly from future storm events. In addition, the NYRCR Plan presents needs, opportunities, strategies and projects that would benefit the whole Town. The Committee agreed that boundaries of the geographic scope would be coterminous with the municipal boundaries and the asset inventory and risk assessment would focus on areas repeatedly impacted by destructive flooding. Figure I-1 presents the geographic scope developed by the Committee and endorsed by the broader Clarkstown community at the first Public Engagement Event. More information about public outreach can be found in Section V.C, “Public Engagement Process.”

October 2014

B. Description of Storm Damage

On August 28, 2011, Hurricane Irene made landfall in New York State, hitting Rockland County and the Town of Clarkstown with full force, bringing with it torrential rains and strong winds. The heavy downpour caused the Hackensack River and its many tributaries to rise above their banks, flowing into their natural floodplains, and inundating the surrounding areas. Soils were already saturated in advance of the storm, which exacerbated flooding from the heavy rains.

In advance of the storm, on August 26 2011, a County-wide state of emergency was declared, urging residents to stay off roads and prepare for power losses.⁸ Clarkstown Supervisor Alexander Gromack declared a local State of Emergency that lasted five days. In West Nyack, the Town ordered residents in 1,400 homes to evacuate during the Hurricane because of potential flooding of the Lake DeForest reservoir.⁹ Many residents took shelter at Rockland Community College and Nyack High School, which were run by the County. When large groups of people are temporarily displaced from their homes, the Town of Clarkstown, in partnership with the Red Cross may respond by opening and operating a shelter for several days. A designated Red Cross shelter can provide trained personnel, overnight accommodations, meals, medical, mental health, and security services from trained personnel.

To supplement these County/Red Cross shelters, during and after Hurricane Irene, local Town officials opened the Street Community Center in New City and the Congers Community Center as reception centers for residents.¹⁰ Reception centers are designated by the Town and provide coordinated assistance and information, and serve as warming and cooling centers to Clarkstown residents. The reception centers are generally open for a few days during and after extreme events. Both the Street Community Center in New City and the Congers Community Center reception centers were well used by Clarkstown residents following Hurricane Irene.

Flooding in the West Nyack Post Office Parking Lot, Hurricane Irene, August 28, 2011 (Michael Gach)

Heavy rains from the Hurricane led to flooding that damaged homes, businesses and infrastructure throughout the Town while aggressive winds uprooted trees, blocking roadways and causing power outages. The storm most directly impacted areas in the Town that were either low-lying or close to waterways.

In West Nyack, the hamlet located directly below or south of Lake DeForest, the flooding extended to the 500-year flood zone, affecting homes, businesses, and transit corridors. Many neighborhoods in the area experienced devastating inundation, with homes along Klein Avenue accumulating up to six feet of water in their basements. The lower level and parking lots at Plastic Craft Productions, a local business located at the corner of West Nyack Road and Fulton Drive, flooded due to the heavy rains and back-up from the Hackensack River, up to six feet in certain areas.

A few blocks west, a small commercial strip was inundated, causing it to close for weeks. Water accumulated with such force and speed in front of the West Nyack Post Office that it fully blocked access to the building and forced road closures. The Post Office was forced to relocate, reopening a full eight months

after Hurricane Irene. The Hackensack River also caused widespread flooding that forced the north bound side of the NYS Thruway to close for half a day, impeding a major regional transportation corridor and thousands of motorists.

*Flooding along West Nyack Road, Hurricane Irene, August 28, 2011
(Michael Gach)*

Further west, in the Hamlet of Nanuet, the Nau-
raushaun Brook flowed into its floodplain, which led to
water accumulations along Route 59, effectively
blocking access to one of the Town's major business
hubs. Other neighboring streams and tributaries
flowed into their floodplains, damaging homes along
Convent Road and the surrounding residential areas.
The Pascack Brook crested three feet above flood
stage, flowing into its floodplains, which directly
caused flooding of roads and the basements of resi-
dents at the New Holland Village condominium
complex. Water accumulated six feet in many homes,
causing a wide range of damage to electrical and
structural building components.

The northern portion of Town suffered during Hurri-
cane Irene as well. The Demarest Kill rose above its
banks and flowed into its floodplains throughout many

residential areas. The flooding became so intense
along Cypress Street and Cranford Drive that resi-
dents navigated in a rowboat.¹¹ Many road closures
occurred in this area due to flood waters overwhelm-
ing culverts and bridges, including along Squadron
Boulevard, Mill Creek Road, and Old Route 304.

Damage from Hurricane Irene also impacted Clark-
stown's Hudson River shoreline along the Longtrail in
Hook Mountain State Park. The Longtrail, which con-
nects Rockland Lake to the Hudson River, sustained
significant erosion on the river side of the trail; and
much of the damage remains uncorrected.

Although the storm damage from Hurricane Irene
most impaired the Hamlets of West Nyack, Nanuet,
and New City, the direct and indirect impacts from the
Hurricane were felt throughout the entire Town. Clark-
stown Supervisor Alexander Gromack ordered that all
business throughout the Town close.¹² Such business
closures left residents without access to basic goods
and services for three days. The flooding that damaged
roads, bridges, and culverts was exacerbated by the
accumulation of natural and man-made debris. This
provided a challenge to emergency service workers
while also preventing through-travel for residents. The
heavy winds uprooted trees, damaged utility lines,
and caused power outages that lasted for days fol-
lowing the storm. The high velocity currents, often
carrying debris, also damaged the stream banks along
many waterways in the Town, causing long-term
stream bank erosion.

Although Clarkstown suffered minimal damage from
winds gusts produced by Tropical Storm Lee, the
community was extremely hard hit, on October 29,
2012, when Superstorm Sandy approached the
Hudson Valley at full speed. States of Emergency
were declared at both the County and local level.
Although the flooding was less severe than during
Hurricane Irene, strong winds with gusts up to 60 to
70 mph brought down trees and power lines, causing
severe power outages and damaging buildings and
infrastructure. Gable Road residences in New City lost
power for eight days. Following the storm, Clarkstown

Supervisor Gromack estimated that Superstorm Sandy would cost the Town approximately \$1 million for cleanup and repair.¹³ Clarkstown mobilized many employees from the departments of Maintenance, Recreation and Parks, and Highway to clear roadways and restore power but they were delayed until Orange & Rockland Utilities Inc. (O&R) ensured that power lines were not live.⁷ All Rockland County school districts were closed for a week because of dangerous road conditions caused by uprooted trees and fallen power lines.

During and after Superstorm Sandy, significant erosion occurred along Clarkstown's Hudson River shoreline. The Nyack Beach State Park parking lot and portions of the hiking/walking trail connecting Nyack Beach to Hook Mountain State Park sustained significant damage. In addition, large sections of a retaining wall washed away. The Palisades Interstate Park Commission (PIPC) has been working to reconstruct and restore the retaining wall, and significant construction has taken place to address the damage in Nyack Beach.

Although Hurricane Irene and Superstorm Sandy presented the most significant challenges in recent years, Clarkstown is regularly affected by high intensity, short duration storms and flooding events. For example, the front parking lot of Plastic Craft Productions Corporation has significantly flooded seven times between 1999 and 2014, while the back parking lot, that faces the Hackensack River, floods every spring. High impact, short-term rainfall events have been occurring more frequently, highlighting the exposure of various areas in the Town to repeated flooding. This is due to a variety of factors including Town topography, development within the floodplain, frequent storm events due to climate change, overwhelmed drainage systems, ageing infrastructure, and stream bank erosion.

Hurricane Irene and Superstorm Sandy exposed much vulnerability in the Town of Clarkstown. Storms bring challenges that extend beyond the direct physical damage to roads, bridges, homes, and essential

infrastructure, threatening economic vitality, emergency recovery efforts, and the health and well-being of Clarkstown residents. Following every storm event, Clarkstown has retrenched and reevaluated, making substantial financial and policy commitments to recovery and resiliency so that they may build back better from future disasters.

Uprooted Tree Damages Home during Superstorm Sandy, October 29, 2012 (John Eshoo)

C. Critical Issues

The vast majority of storm-related flooding in Clarkstown comes from the Hackensack River and its many tributaries rising above their banks, flowing into their natural floodplains and inundating the surrounding areas. As presented in Figure I-2, fortunately Clarkstown was not impacted by Hudson River storm surges from Hurricane Irene or Superstorm Sandy to the extent that can be seen in areas to the north and northeast.

In addition to widespread riverine flooding caused by Superstorm Sandy and Hurricane Irene, it is important to recognize that Clarkstown has experienced numerous flood events in its recent history impacting residents, businesses, and public infrastructure. Several Clarkstown neighborhoods are impacted with a high frequency, and are considered areas of extreme risk by the Committee.

Since 1999, 10 serious flooding events have impacted the residents and businesses, roads, critical infrastructure systems, and natural resources throughout the Town of Clarkstown. Flooding from these unnamed storm events, as described below, underscores the need for additional resiliency measures throughout the Town.

In 1997, 4-5 inches of torrential rain fell during a 3-hour period causing streams and brooks to overflow.¹⁴ This storm resulted in widespread street flooding in West Nyack and Nanuet. Remnants of tropical storm Allison in June 2001 produced rainfall at up to three inches per hour causing flash flooding in small streams and street flooding. Several roads were closed and several houses were evacuated near Valley Cottage.

In 1999 Hurricane/Tropical Storm Floyd brought torrential record rainfall, which caused serious widespread neighborhood, small stream, and river flooding throughout the community. Damage included the breach of the Lake Hyenga Dam which resulted in a surge of water into the Pascack Brook and the evacuation of 60 residents. The Lake Hyenga Dam has not been rebuilt. The storm also caused overtopping of the Lake Lucille Dam and heavy erosion forming a large gully and pavement buckling of the road over the dam. Additional damages included road closures, culvert collapses, and significant property damage in the Village of Upper Nyack. Rockland County was declared a disaster area under Disaster Declaration DR-1296.

West Nyack experienced heavy rain in July 2002 that produced 2-4 inches within one hour.¹ The roof drain at the Palisades Center Mall overflowed as a result and caused stores to flood, walls to collapse, and the evacuation of the mall. In August 2002, torrential rain caused street flooding in West Nyack. Parts of West Nyack flood almost annually.

In September 2004, torrential rainfall and flashing flooding occurred as a result of Hurricane Frances.¹ The Hackensack River overflowed and flooded into its natural floodplain during this event and resulted in the closures of NYS Route 59 and NYS Route 303.¹

Additionally, several people were rescued from homes and cars.

Clarkstown was impacted by thunderstorms and torrential rainfall in August 2008.¹ This led to flash flooding leaving Rockland Lake Road in Valley Cottage impassable. Also in August 2008, another high intensity storm caused flash flooding resulting in the closure of the intersection of Middletown Road and Atlantic Avenue and other roadways throughout Nanuet.

The widespread flooding and wind damage caused by Hurricane Irene, Superstorm Sandy, to a lesser extent by Tropical Storm Lee, and by frequent high-intensity short duration storms reveal Clarkstown's vulnerabilities and also provide the opportunity to examine key factors impacting recovery and resiliency.

While the Town has implemented a number of initiatives to reduce the occurrence and severity of flooding within its borders, and continues to aggressively pursue funding to complete additional drainage projects, the need for additional resiliency measures persists.

“Drainage and flooding were two of the most frequently raised issues during the hamlet meetings...”

Partnerships and Connections, *The Town of Clarkstown Comprehensive Plan (2009)*

These critical issues affect the Town's ability to withstand the impact of various storms and also its ability to recover from the storms. The Committee, with input from residents, identified the following list of critical issues which are further described below:

- ▶ Emergency Service Provider Access;
- ▶ Flooding in Residential Neighborhoods;
- ▶ Interruptions to Town Services and Facilities;
- ▶ Repeated Flooding of Businesses;
- ▶ Road Closures; and
- ▶ Widespread and Prolonged Power Outages.

Emergency Service Provider Access

During and after Superstorm Sandy and Hurricane Irene, widespread road closures resulted in the isolation of many residents, in particular vulnerable populations, including seniors. When residents who require additional support are inaccessible to emergency vehicles and services, the situation can quickly become dire. The Town of Clarkstown Police Department maintains an Access and Functional Needs Registry of people with limited mobility or special needs to be able to better assist them in emergency situations. However, when roadway access is cut-off, providing this assistance becomes increasingly complex. Some areas within the Town were only accessible by boat revealing the need to secure safe passage by emergency service providers.

Residents who attended the first Public Engagement Event held on July 30, 2014, identified the need for additional information regarding locations of shelters and emergency supply stations in various neighborhoods throughout the Town. The Town of Clarkstown provides Reception Centers, all of which were recently equipped with transfer switches and are currently being outfitted with large capacity generators using funding previously awarded to the Town through the Hazard Mitigation Grant Program (HMGP). Three of the four Town Reception Centers also include kitchens and shower facilities. A wider distribution of this information or mapping of these resources would provide residents with information on safe and secure facilities that are available to them during an emergency.

Flooding in Residential Neighborhoods

Historically, homes and businesses have developed along waterways due to opportunities for commerce and the resources offered by streams and lakes. Throughout the Town, homes and in some cases entire neighborhoods are located in flood prone areas, and are subject to repetitive flooding, not only during extreme storm events, but also during high intensity, short duration storms and the spring thaw. The high

water table and underground streams throughout the Town coupled with power outages that shut down sump pumps cause water to not only sheet over land, but also to come up from underneath homes.

Flooding in West Nyack, August 27, 2011 (Mark Brecher)

Residences located within the floodplain are particularly vulnerable, highlighting a need for housing retrofit programs, and homeowner assistance to rehabilitate structures and protect their residences from future flooding. Some residents who have expressed interest in selling their homes have faced challenges due to declining home values. Others noted the potential to investigate relocating entire neighborhoods outside the floodplain but within the same community to retain the tax base. However, undeveloped and dry land is scarce within the Town of Clarkstown, making this an unlikely solution. Repeated claims to flood insurance providers have led to expensive premiums and decreasing refunds, and denial of service. Financing programs for elevating homes to minimize damage and restricting future development of homes to areas outside of the floodplain and flood zone are critical to the long-term resiliency of the community.

Interruptions to Town Services and Facilities

Although not necessarily located in vulnerable areas, many critical facilities were impacted due to inundation of access roads, and power failures due to downed trees and power lines. Following Hurricane Irene, the West Nyack Post Office was closed for eight months. Although the Clarkstown Police Department was equipped with a generator, it failed, forcing the emergency service providers to relocate their base of operations to Pomona. Subsequently the Town applied for, and was awarded through the Hazard Mitigation Grant Program, funding for permanent diesel and natural gas-powered generators.

Stormwater management infrastructure including culverts, drainage conveyance systems and roads were inundated, flooding entire areas of Town. The Town's Drainage Task Force maintains a prioritized list of infrastructure upgrade and replacement projects, which are implemented as funding becomes available through grants, and as allocated through the Town's Budget. However, significant additional resources are required to implement necessary improvements. Infrastructure repairs and enhancements are often the largest investments a community will make after a disaster. Rebuilding infrastructure in a manner that is more resilient is key to ensuring long term durability.

Repeated Flooding of Businesses

The Shops at Nanuet mall, the Palisades Center mall, and many large big-box retail and service outlets along the Route 59 corridor contribute significantly to the economy. Local retailers, restaurants, office, manufacturing, and service providers, which employ more than 30% of Clarkstown residents, are scattered throughout the hamlet centers. When businesses are inundated by floodwaters, or forced to close due to power outages, the impact to the local economy is profound.

In the wake of Hurricane Irene, West Nyack experienced significant flooding resulting in widespread and prolonged business closures. Although structural improvements along Route 59 were recently completed and the road was raised, the project did not include flood improvement initiatives and as result, still floods during periods of heavy rains. Businesses that are subject to repetitive flooding find it more and more difficult and expensive to repair and rebuild. Insurance coverage becomes exponentially more expensive with every claim that is filed, and in some cases refunds are denied. These challenges can eventually overwhelm local business and service providers, resulting in closure, relocation to other communities and in some cases property abandonment.

For residents, the loss of access to basic goods and services including food, pharmaceuticals, gas for generators, and banking cripples the economy inhibiting recovery efforts. Because roadways are impassable for extended periods due to flooding, downed trees and power lines, residents are unable to access basic needs within their own neighborhoods, but also cannot travel to adjacent communities to procure critical necessities.

There is a clear need to better protect Clarkstown's businesses and downtown centers from future flood events. Critical recovery needs include: stormwater management and flood protection infrastructure, during and immediately following storm events, business assistance in the form of grants and loans, equipment needs, facility relocation, and secondary/back-up power sources.

Road Closures

Roadway damage and the inability of residents or emergency service providers to travel unimpeded through the Town and the County is a huge obstacle to post-storm recovery efforts in Clarkstown. Prolonged road closures compromise the ability of emergency service providers to reach residents in need, and from accessing critical resources.

Water Flooding West Nyack Road after Hurricane Irene, August 28, 2011 (Michael Gach)

Flooding Near the Train Tracks during Hurricane Irene, August 27, 2011 (Mark Brecher)

Chronic flooding of Route 59, the closure of the north-bound lane of the NYS Thruway and the literally hundreds of other roads that were impassable due to inundation, downed trees, and power lines creates short-term havoc, medium-term disruption, and long-term economic impacts.

The Clarkstown NYRCR Planning Committee identified impassable roads, regardless of the cause, as a

critical issue requiring focused attention. Residents at the Public Engagement Event noted that the recently completed streetscape improvements around the government center in New City significantly improved the walkability of the area and recommended that similar pedestrian and bicycle friendly initiatives be implemented throughout the Town.

Widespread and Prolonged Power Outages

Widespread and prolonged power outages impact the operation of the entire community, including businesses, residences, and emergency services. Operating without power severely constrains Town facilities and inhibits recovery efforts. In addition, the economic impact of the loss of perishable goods can be devastating and is frequently not covered by insurance. So while the damage isn't necessarily physical, the impact can be enormous, especially to small businesses.

Since 1975, all new construction in Clarkstown requires burial of power lines. However, transmission and residential overhead power lines run through older areas of the Town. High winds from frequent summer thunderstorms damage large, mature trees in areas including, for example, along Havermill Road off New Hempstead Road, resulting in disruptions to power twice per month, on average. Following Superstorm Sandy, the Clarkstown Police Station and Town Hall were without power for eight days, forcing the relocation of the emergency communications operations to Pomona. The Town has since addressed this vulnerability with the installation of permanent generators at both locations.

In the past, widespread power outages that required attention from both utility providers (to secure live power lines) and Town emergency services workers (to remove downed trees and secure safe passage), were slow to be addressed due to disjointed and uncoordinated response efforts. Following the widespread power outages caused by Superstorm Sandy, the Town of Clarkstown recognized the need for an organized response plan coordinated with

representatives from O&R. To address that need, the Town prepared a response protocol, whereby an O&R representative remains in the Emergency Operations Center (EOC) in Clarkstown and Town Highway Department personnel are paired with an O&R representative to coordinate power line work and tree removal. Dispatching these key personnel in teams of two improves efficiency and eliminates the waiting game that inhibited recovery efforts in the past.

Additional measures need to be identified to address this critical issue including: the provision of generators, consideration of alternative energy sources and systematic tree maintenance protocols to ensure the health of the trees.

D. Community Vision

Clarkstown, the economic hub and Rockland County seat, is a safe, centrally-located, diverse and resilient Town. The community is a geographic crossroads between New York City, New Jersey, and the rest of New York State. The Town enjoys access to multi-modal transportation options, diverse housing choices, a variety of small and large commercial venues, and robust educational, recreational, and cultural facilities in a bicycle and pedestrian-friendly environment.

Clarkstown values and will continue to protect its natural resources including the Palisades Ridgeline, Hackensack and Hudson Rivers, wetland systems, and stream corridors that together provide significant benefits to the community including environmental and water quality protection, flood mitigation, recreational opportunities, and preservation of community character.

Our vision is to embrace and enhance the many strengths of our Town while planning for a more resilient community so that we may build back better from future disasters.

The Clarkstown NYRCR vision statement was developed by the Committee with input from the community. The vision statement relies heavily on Committee Members' familiarity with Clarkstown, the needs of the community relative to the NYRCR geographic scope, and previous planning efforts. A draft of the vision statement was shared with the public at the first Public Engagement Event; feedback from that meeting was incorporated in the final vision statement. More information about public outreach can be found in Section V.C, "Public Engagement Process."

"One Word to Describe Clarkstown" – Supervisor Gromack, July 30, 2014 (Arch Street Communications)

Through the visioning process, the Committee and the public worked to identify, assess, and conceptualize local and regional opportunities for Clarkstown. There was general agreement that the vision statement needed to not only describe the Town of the future, but also needed to identify specific ways to attain that vision. Hence, the Committee and the public prepared goals to help Clarkstown achieve their vision and build back better from future storm events. These goals were developed to address education, emergency preparedness, resilience, partnerships, and natural resource protection.

Vision and Goals Board from Public Engagement Event 1, July 30, 2014 (Elizabeth Matamoros)

To realize the vision, Clarkstown NYRCR has developed the following goals:

- ▶ Augment emergency services including providing power during storm events;
- ▶ Build closer working relationships with the States of New York and New Jersey to address flooding issues associated with the Hackensack River;
- ▶ Continue to balance commercial, industrial and residential development with the preservation of open space and agricultural lands;
- ▶ Enhance infrastructure and stormwater systems where needed;
- ▶ Enhance multi-modal opportunities including safe bicycle and pedestrian facilities;
- ▶ Preserve the unique community fabric made up of rural, suburban, and urban settings; and
- ▶ Protect natural resources including the Hackensack and Hudson Rivers, wetland systems, stream corridors, and Clarkstown's lakes.

E. Relationship to Regional Plans

The storms and resulting damage from Hurricane Irene, Tropical Storm Lee, and Superstorm Sandy highlighted the need for coordinated planning initiatives and policies that can significantly contribute to long-term regional resilience. Many regional planning efforts have been undertaken both before and after the storms in the Mid-Hudson Region and in Rockland County. In 2013, the *Mid-Hudson Regional Sustainability Plan*¹⁵ was released, presenting short-, mid-, and long-term goals and strategic sustainability priorities for the region's development. The Mid-Hudson Regional Economic Development Council also released a *5-Year Strategic Plan*¹⁶ in 2011, which presented specific goals for the regional economy. In addition, Rockland County developed *Rockland Tomorrow: Rockland County Comprehensive Plan*¹⁷ in 2011 and a *Hazard Mitigation Plan*¹⁸ in 2010.

These regional planning efforts provide the foundation for the NYRCR planning process by identifying critical goals and in some cases specific programs and projects slated for future implementation. Although Committee Members were tasked with representing the interests of Clarkstown, they became increasingly aware of the importance of planning in a regional context. Community Members know the value of creating strategies that are consistent with and supportive of regional goals, including planning for the effects of severe storms and flooding. Many of the regional planning documents, including *Rockland Tomorrow: Rockland County Comprehensive Plan* (2011)¹⁷ and the *Mid-Hudson Regional Sustainability Plan* (2013)¹⁵, identified the need for focused coordination and cooperation among communities to achieve their goals. This sentiment is echoed by the Committee and their willingness to work toward the common goal of mitigating future flood damage and creating a more stable and climate resilient local and regional economy.

The Clarkstown NYRCR Planning Committee selected policies, projects, and programs that addressed critical needs essential to long-term resilience. Some of these initiatives may have been previously identified in completed plans, but had not yet been implemented.

Table I-1 presents all of the local and regional planning documents and resources that were considered. These documents were reviewed for information and data pertaining to the NYRCR planning process and to assist in the identification of goals, needs, opportunities, and potential projects and strategies that could be implemented to help Clarkstown build back better. Regional goals from the plans that have been incorporated into the NYRCR Plan are listed along with a brief description of how the NYRCR Plan relates to or builds upon the regional plans. The findings are summarized in Table I-1.

The goal of this comprehensive document review was to avoid duplication of existing planning studies, recognize gaps, and assess the potential synergies between local and regional needs and opportunities. In doing so, the Committee considered how the NYRCR Plan would support and incorporate regional goals and perspectives.

Key shared local and regional challenges identified by the existing plan review included:

- ▶ Lack of effective planning for the effects of climate change, including severe storms and flooding, which result in costly damage to infrastructure, life, and health;
- ▶ Lack of available funding restricts County, State, and Federal agencies responsible for infrastructure maintenance, repair, and reconstruction from implementing long-term plans;
- ▶ Lack of sufficient coordination and cooperation between municipalities and various Local, State, and Federal agencies to decrease vulnerability and increase resilience; and
- ▶ Need for additional upgrades and repair of infrastructure to address areas of chronic flooding, reduce roadway and culvert repair costs and limit road closures.

The development of actions, strategies and projects through the NYRCR planning process support many of the goals set forth in the various previously completed local and regional plans.

Table I-1: Local and Regional Plans

Plan	Author	Date	Relevance	Key Components for NYRCR Process
Local Plans				
Town of Clarkstown Stormwater Management Program Plan	Town of Clarkstown	2004	Outlines goals for protecting water quality and managing water quantity of stormwater runoff in the Town.	Map of major streams and waterways, list of impaired water bodies. Comprehensive public outreach and education program.
Environmental Resource Assessment – Town of Clarkstown	Ecological & Geospatial Services	2008	Inventory of natural resources and outline of conservation efforts for watersheds, forests, and landscapes in the Town.	Habitat and land use data and maps, soil inventory, description of stresses due to stormwater flows. Goals for wetland buffers and invasive species plans.

Table I-1: Local and Regional Plans (cont'd)

Town of Clarkstown Economic Development Strategy	Economic Development Strategy Advisory Committee with assistance from Saratoga Associates	2008	Extensive analysis of existing business and identification of potential areas for expansion. Analysis of potential growth for both commercial and residential sectors looking at land use and development opportunities.	Demographic data and trends, expansion plan for water supply in the Town, current capacity of sewer/ utilities, mapping of land use and areas for proposed development
Town of Clarkstown Recreation & Parks Master Plan	Clarkstown Parks Board & Recreation Commission with assistance from C.T. Male Associates, P.C.	2008	Created to provide planning, programming and implementation to develop and expand upon Clarkstown's extensive parks and recreational facilities and services. Intended to augment Comprehensive Plan	Demographic data and trends, parks and recreation inventory, community preferences and priorities regarding parks and recreation, Goal/ Recommendation for adequate drainage in parks
Town of Clarkstown Comprehensive Plan	Town of Clarkstown	2009	Establishes community vision and goals for long-term growth and development in the Town, focusing on economic development, environmental resources, health, safety and welfare, historic and cultural resources, housing, recreation, parks & open space, transportation.	Community vision; background data; goals and objectives for each subject area; implementation methods and actions
Clarkstown Comprehensive Transportation Plan Final Report	Town of Clarkstown Planning Department with assistance from Cambridge Systematics, Inc.	2009	Overview of existing roads and transportation programs, and identification of target areas for expansion and improvement. Includes extensive bicycle and pedestrian study.	Roadway design must plan for stormwater with paving and catch basins to address runoff. Alternative deicing strategies to protect water quality. Need to publicize emergency evacuation routes. Prioritizes bicycle and pedestrian facilities development.
Clarkstown Police Department Annual Report	Clarkstown Police Department	2013	Statistical inventory and narrative detailing organization of, and activities and actions by the Clarkstown Police Department.	Description of response teams and points of contact for emergency events.
Clarkstown Comprehensive Emergency Management Plan	Town of Clarkstown	2014	Provides comprehensive emergency operations plan for coordinating emergency response and recovery before and during disasters and minimizing their impact.	Detailed management responsibilities and operating procedures for each coordinator before and during emergency and disaster events, including use of the Incident Command System (ICS); centralized direction of requests for assistance to the County and the State; information on the functioning of the Command Center and Emergency Operations Center; detailed information on hazard mitigation and recovery procedures; details and Q+A on declaring a State of Emergency.

Table I-1: Local and Regional Plans (cont'd)

Plan	Author	Date	Relevance	Key Components for NYRCR Process
Regional Plans				
Rockland County Hazard Mitigation Plan	Rockland County Office of Fire and Emergency Services with assistance from URS	2010	Extensive analysis of hazards that threaten the County and ways to reduce future damages associated with these hazards.	Demographic data; examples of ideas for outreach activities; inventory of hazards and risks including flooding/storm surge, dam failures, earthquakes, wildfires; summary of FEMA Flood data; National Flood Insurance Program (NFIP) Policy and Claim info; mapping of repetitive loss clusters; summary of historical flood events; inventory of critical and emergency facilities, historical and cultural resources; annual loss estimates for each hazard; land use and development trends questionnaire; regulatory capabilities/resources; list of prioritized actions.
Mid-Hudson Regional Economic Development Council Strategic Plan	Mid-Hudson Region Economic Development Council	2011	Regional economic development strategy and vision for the Mid-Hudson Region that illustrates regional trends, goals, and strategies for desirable growth in the region.	Regional context, goals, aspirations; no discussion of impacts of flooding or storm resiliency; no specific discussion of Clarkstown.
Rockland Tomorrow: County Comprehensive Plan	Rockland County Technical Advisory Committee with assistance from BFJ Planning	2011	County-wide trends and priorities with a focus on development, the economy, and conservation. Includes list of County recommendations and implementation.	Description of Clarkstown land use, mapping of open space, historic resources, community and emergency resources. Identification of watershed areas, surface water issues and regulated streams, Geographic Information System (GIS) data, flood hazards.
Draft Hudson River Estuary Habitat Restoration Plan	Hudson River Estuary Program	2013	General strategies for restoring habitat in the lower Hudson River with description of habitat types along the river.	Description of habitat types along river; does not describe specific projects or locations; no specific discussion of Clarkstown.
Mid-Hudson Regional Sustainability Plan	Mid-Hudson Planning Consortium with assistance from Ecology and Environment, Inc.	2013	Provides a vision for sustainable development that builds on the Region's resources with the goal of promoting economic development, environmental sustainability and enhancing quality of life. Developed strategies, objectives and priority initiatives to achieve the vision.	Regional context, goals, initiatives; very limited discussion of flooding/natural hazards; no specific discussion of Clarkstown.
Scenic Hudson Sea Level Rise Mapper	Scenic Hudson	2013	Interactive mapper that provides floodplain and inundation data in combination with local assets, hazardous materials sites, wetlands and submerged aquatic vegetation habitats.	Data can be used in Hudson shoreline assessments.

2014 NY RISING COMMUNITY RECONSTRUCTION PLAN NYRCR CLARKSTOWN

Section II Assessment of Risk and Needs

A. Description of Community Assets and Assessment of Risk

i. Description of Community Assets

An important component of the NY Rising Community Reconstruction (NYRCR) process is to assess the risk posed to community assets and systems that have been affected by past flood events or may be impacted by future storms. This evaluation assists in the development of projects and strategies that mitigate risk and make the community more resilient.

The first step in the risk assessment process is to inventory and map assets and system components that provide essential community functions and are proximate to known flood risk areas. Community assets and systems may consist of places, services, groups, or infrastructure networks, and can be categorized into five Asset Classes related to their role in the community, which are as follows:

- ▶ Economic;
- ▶ Health and Social Services;
- ▶ Housing;
- ▶ Infrastructure Systems; and
- ▶ Natural and Cultural Resources.

The Clarkstown NYRCR Community (Community) asset inventory was developed by compiling existing digital datasets from multiple municipal, State, and Federal agencies. These asset datasets were cross-referenced and supplemented with aerial imagery and address locators, and collated into an asset inventory listing. To streamline the inventory, assets were grouped together if they served the same community function, were located close to one another, or had

similar site characteristics. For example, neighborhood businesses could be grouped into a downtown center, or single-family homes into a neighborhood. Asset systems were inventoried by enumerating the principal points and components of those systems, such as treatment plants in the wastewater conveyance system and substations in the electric transmission system.

Information was added for each asset, including address, geographic coordinates, risk area, asset class and subcategory, community value, critical facility designation, and whether the asset served socially vulnerable populations, including children, the elderly, and low-income community members. The complete asset inventory can be found in Table V-4 in Section V.D, “Community Asset Inventory.” Addresses and geographic coordinates pinpoint the location of assets for mapping, and once mapped allow for risk area identification. Assets were grouped into five larger classes: economic, health and social services, housing, infrastructure, and natural and cultural resources. They were further categorized into subcategories such as “Large Business” and “Single Family Residence.” The Clarkstown NYRCR Planning Committee (Committee) initially identified the overall importance of each asset to the Clarkstown Community. In addition, the Federal Emergency Management Agency (FEMA) critical facility designations identified assets considered essential to recovery following a flood or storm event. Assets that provide services for socially vulnerable populations were also identified as they are particularly important both before and following a storm. In addition, spatial analysis was used to capture landscape attributes, or features of the landscape around that asset that could either mitigate or exacerbate the impacts of flooding and erosion to an asset.

A two-tiered asset inventory methodology was developed and utilized to ensure collection of a comprehensive inventory. The first tier of the methodology involved culling existing digital datasets and the second tier used local knowledge to refine the list of assets. The preliminary asset inventory and mapping was reviewed by the Town Planning and Geographic Information System (GIS) Departments, the Committee for refinement and by community residents at Public Engagement Events to gain their input and capitalize on their intrinsic understanding of their community. The dataset analysis supplemented the work of the Committee by identifying assets that may have been hidden in plain sight—i.e., assets vital to the Community’s health and resilience that go unnoticed on a day-to-day basis. These assets only become obvious when they fail, such as small roadway bridges and smaller government service offices. In addition, assets that may have not been captured in the existing digital datasets or for which digital data did not exist were enumerated by the community at public meetings. The full asset inventory is shown in Figure II-1. Figures II-3 to II-6 show the assets located in each hamlet and organized by Recovery Support Function (RSF).

The six NYRCR Recovery Support Functions were established by President Obama in 2011 through the National Disaster Recovery Framework (NDRF). The objective of the Recovery Support Functions is to facilitate the identification, coordination and delivery of Federal assistance needed to supplement recovery resources and efforts by local, State, Tribal and Territorial governments, as well as private and nonprofit sectors. Each RSF is further defined in Section II.B, “Assessment of Needs and Opportunities.”

The RSFs were designed to “support local governments by facilitating problem solving, improving access to resources and by fostering coordination among State and Federal agencies, nongovernmental partners and stakeholders.”¹⁹

Community Value Scoring

As part of the asset inventory process, a Community Value was assigned to the assets. Committee Members participated in an exercise assigning Community Values of High, Medium or Low to asset sub-categories. Committee Members were asked to give special attention to assets whose loss or impairment would compromise critical facilities or any essential cultural, social, economic, or environmental functions of the Community. Community value for each asset is listed in Section V.D, “Community Asset Inventory.”

General criteria for High, Medium, and Low Community Values were defined by the Committee as follows:

- ▶ **High:** Asset(s) that are so significant in the support of that community’s day-to-day function that the loss of that asset or extended lack of functioning would create severe impacts to the community’s long-term health and well-being or result in the loss of life or injury to residents, employees or visitors.
- ▶ **Medium:** Asset(s) that are important to the functioning of that community’s day-to-day life and that the loss of that asset or extended lack of functioning would cause hardship to the community’s well-being but whose function could be replaced or duplicated in a mid-term time frame without significant burden to a community’s long-term health.
- ▶ **Low:** Asset(s) that play a role in the functioning of a community’s day-to-day life, but whose loss could be managed and overcome within a community without substantial impact to that community’s functioning. Can be started, replaced or temporarily duplicated in a short-term time frame with limited burden to a community’s long-term health.

The Committee Members’ responses were then compiled; the value receiving the most member votes was then assigned to all assets within that subcategory. A summary of the results from the exercise are shown in Table II-1.

Risk Area Identification

In addition to the asset inventory, maps were also produced to illustrate the geographic distribution of risk areas across Clarkstown. These maps focused the asset inventory on those areas at risk. Risk areas in riverine inland communities such as Clarkstown are synonymous with the floodplains delineated by FEMA. Preliminary FEMA data was utilized for this study because it represented the most-current and best-available flood-zone modeling for the planning area. The Risk Areas are defined as follows:

- ▶ **Extreme Risk Area:** The most frequently flooded areas are typically found in the 10-year floodplains, which encompass the Extreme Risk Area. In Clarkstown, the 10-year floodplain had not been digitally modeled by FEMA. Input from members of the Committee and the community as to which places have been repetitively inundated and damaged by flooding was used to approximately identify the Extreme Risk Areas within the Town. These areas include portions of the floodplain repeatedly impacted by past storms in the hardest-hit areas of the Community.
- ▶ **High Risk Area:** The 100-year floodplains encompass the High Risk Area, and are subject to a 1.0% chance of flooding in any given year. These flood-zones had been digitally mapped by FEMA in Clarkstown, and can be found throughout the communities along major rivers, streams, and water bodies. High Risk Areas are the most prevalent of the risk zones in the Clarkstown planning area.
- ▶ **Moderate Risk Area:** The 500-year floodplains encompass the Moderate Risk Area, and are subject to a 0.2% chance of flooding in any given year. These flood-zones had also been digitally mapped by FEMA in Clarkstown, and are typically found on the fringes of High Risk Areas.

The community assets were analyzed to identify the risk areas they may be exposed to, and are summarized by RSF as follows. Figure II-2 illustrates the Town of Clarkstown Risk Areas.

Table II-1: Asset Subcategory and Community Value

Asset Subcategory	Community Value
Homes and Facilities for Vulnerable Populations*	High
Fire, Police, Emergency Facilities	High
Hospitals	High
Storm Sewer Infrastructure	High
Sanitary Sewer Infrastructure	High
Electric and Gas Infrastructure	High
Communications Infrastructure (Internet, Cellular, Telephone, Cable)	High
Major Roads	High
Government Buildings	Medium
Housing	Medium
Town Department of Public Works	Medium
Business Areas (other than Downtown Business)	Medium

Economic Assets

Assets in the Economic category include downtown centers, business clusters, major employers, industrial and manufacturing centers, and tourism destinations.

Protecting and enhancing the downtown centers and commercial areas from flood impacts is important to the economic health of the Town. There are no economic assets considered FEMA Critical Facilities. Twenty-nine assets are

located in the extreme risk areas including seven large business areas, seven industrial/manufacturing facilities, and 15 small businesses.

Figures II-1 through II-6 illustrate the risk areas and assets, in detail, found within the Clarkstown Planning Area. Tables II-2 lists the Economic assets, organized by Asset Subcategories and by Risk Area from Extreme to Low. The complete community asset inventory, which includes addresses of asset locations, can be found in Table V-4 in Section V.D, “Community Asset Inventory.”

Health and Social Services Assets

Health and Social Services assets include fire protection, police services, hospitals, and emergency operations facilities. Other community assets include administrative and education amenities,

which serve a variety of public functions, from health treatment facilities to general purpose shelters in public schools, reception centers, post offices, and Town Office Buildings. During a storm event, these facilities may potentially serve as critical disaster response and recovery centers, the identification of which is essential to future disaster management and preparedness. Fourteen assets are located in extreme

risk areas including a senior care facility, a day-care facility, two ambulance services, an existing and proposed fire station, three post offices, two health centers and two schools. Almost all of the Health and Social Services assets inventoried are classified as FEMA Critical Facilities with the exception of post offices and some administrative services offices. Figures II-1 to II-6 illustrate the risk areas and assets, in detail, found within the Clarkstown Planning Area. Table II-3 lists the Health and Social Services assets, organized by Asset Subcategories and by Risk Area from Extreme to Low. The complete community asset inventory, which includes addresses of asset locations, can be found in Table V-4 in Section V.D, "Community Asset Inventory."

Housing Assets

A significant number of residential assets within the Town are at risk of future flooding. These assets include single-family and multi-family neighborhoods. Assets in extreme risk areas include an affordable housing area, 10 multi-family residences, two senior housing facilities, a supportive housing facility, and 49 clusters of single-family homes. Affordable, senior and supportive housing assets are considered FEMA Critical Facilities.

Figures II-1 to II-6 illustrate the risk areas and assets, in detail, found within the Clarkstown Planning Area. Table II-4 lists the Housing assets, organized by Asset Subcategories and by Risk Area from Extreme to Low.

Infrastructure Systems Assets

Assets in this category include transportation infrastructure, transportation-related facilities and utilities. Utilities include public water supply, stormwater and wastewater systems, power supply, and telecommunications; the distribution and operational networks of which are dispersed throughout the Town. The distributed nature of these systems throughout the extreme, high, and moderate risk areas makes the assessment of risk to the overall systems difficult to categorize. In general, when a principal component of a system is located in a risk area, it can make the entire system vulnerable. Therefore, it is more useful to assess the risk to components of the system, such as specific plants, pump stations, substations, and other key facilities that are critical to the functioning of the overall network. Past storms have impacted infrastructure systems in Clarkstown, causing power outages, road washouts, and flooding that hindered travel within the Town for residents and emergency service providers.

Twenty-eight assets are located in an extreme risk area as follows: a power supply center, a telecommunications facility, four bridges or underpasses, four commuter parking lots and a commuter rail station, six roads or intersections, a culvert, four flood control

Infrastructure Asset: Lake Deforest Dam (Elizabeth Matamoros)

parcels, two pump stations, and four water supply facilities. Principal components of the wastewater, water supply, and power supply networks inventoried are considered FEMA Critical Facilities, such as sewage treatment plants, water resources, telecommunications facilities, and electric substations.

Figures II-1 to II-6 illustrate the risk areas and assets, in detail, found within the Clarkstown Planning Area. Table II-5 lists the Infrastructure Systems assets, organized by Asset Subcategories and by Risk Area from Extreme to Low. The complete community asset inventory, which includes addresses of asset locations, can be found in Table V-4 in Section V.D, “Community Asset Inventory.”

Natural and Cultural Resources Assets

Natural and Cultural Resources include natural habitats, wetlands and marshes, recreation facilities, parks, open space, religious establishments, libraries, museums, historic landmarks, and performing arts venues. Hurricane Irene, Tropical Storm Lee, Superstorm Sandy and the frequent high intensity, short duration storm events have impacted multiple recreational, cultural, and historic assets in Clarkstown's natural and built environment. Nine natural and cultural resources within the Town are in extreme risk areas: four religious facilities, a library, and four parks including a pool.

Many of the waterbodies and waterways of Clarkstown have historically been, and continue to be, a natural and recreational resource. However, these same

waters cause flooding damage to infrastructure, businesses and residences. These resources are therefore not themselves at risk by virtue of their location in a risk area—however, protecting their health may be critical to the protection of other nearby assets. Of the Natural and Cultural Resource Assets inventoried, five are FEMA Critical Facilities: the Central Nyack Community Center, Congers Community Center, Palisades Center Mall Community Room, Pascack Community Center, and Street Community Center.

Figures II-1 to II-6 illustrate the risk areas and assets, in detail, found within the Clarkstown Planning Area. Table II-6 lists the Natural and Cultural Resources assets, organized by Asset Subcategories and by Risk Area from Extreme to Low. The complete community asset inventory, which includes addresses of asset locations, can be found in Table V-4 in Section V.D, "Community Asset Inventory."

ii. Assessment of Risk to Assets and Systems

In order to mitigate flood risk associated with local water resources and improve community resiliency, the causes and magnitude of that risk must first be understood. The risk assessment process seeks to identify and analyze the degree of risk to assets and systems throughout Clarkstown by applying a standardized risk assessment procedure to each. In the Town of Clarkstown, flooding is associated with an extensive network of water bodies and waterways, the largest being the Hudson River, which flows along the length of the Town's eastern boundary. Lake Deforest is a 5.6-billion-gallon reservoir with a north-south orientation in the central part of the Town. The reservoir, which is owned and operated by United Water New York, was created by impounding the Hackensack River to supply water to Rockland County and northern New Jersey. Other major water bodies in the Town that contribute to both flood risk and flood control include Congers Lake, Swartout Lake, Rockland Lake, and Lake Lucille.

Flood risk areas are predominantly located south of the Lake Deforest dam and along waterways in the Town, including primarily the Hackensack River and Pascack Brook and their tributaries. The concentrated location of assets within areas that are highly exposed to flooding, results in high and severe risk scores for many of the community's important assets. The highest concentration of identified assets in Clarkstown is in West Nyack, south of the Lake Deforest dam in the residential areas of Klein Avenue and Jeffery Court and commercial areas near NYS Route 59 and W Nyack Road. This area includes homes along Klein Avenue, the Orange and Rockland Operating Center, transportation, water supply and communications infrastructure, many businesses and other residential neighborhoods. There are also clusters of assets in western Nanuet along the Pascack Brook, in Congers between Congers and Swartout Lakes and near the Congers Lake Memorial Park, and in northern New City between Route 304 and Old Route 304 as well as surrounding Lake Lucille. These

locations of concentrated development correspond closely to the identified flood risk areas within the community.

Preliminary risk assessment results indicate that the majority of Clarkstown assets located within flood risk areas are at high risk, with the remainder at extreme and moderate risk. Four of the assets evaluated in the preliminary risk assessment had a severe risk score and include three residential areas and one infrastructure asset. Assets at high risk are represented in all six Recovery Support Functions, with the most being housing and infrastructure assets. This is likely due to the fact that many neighborhoods and road networks are in close proximity to the Lake Deforest dam, Hackensack River, and Pascack Brook. There are also 20 economic assets at high risk, primarily businesses and retail centers, as well as nine health and social services, almost all of which are FEMA critical facilities, and nine natural and cultural resources. There are assets in each Recovery Support Function that are at moderate risk as well.

Risk Assessment

The standardized risk assessment process strives to not only identify assets that were damaged during past storms, but also to identify assets that may be at risk of damage from future storms. For many Clarkstown residents, especially those directly affected by past storms, specific areas of flood risk within the Town may appear to be obvious. While experiences during past storms reasonably indicate areas most susceptible to flooding, they are not necessarily a good predictor of the level of impacts or the type of damage that may result from future storms. Furthermore, the relative degree of risk to one neighborhood or building as compared to another is not always readily apparent. The risk assessment tool developed by the NYRCR Program and the New York State Department of State (NYS DOS) enables quantification and comparison of the identified levels of risk to different community assets. Improved understanding of the severity and distribution of risk to assets

throughout the community facilitates more effective resiliency and recovery planning.

Based on information from the asset inventory, flood hazard maps and qualitative exposure assessments, the risk assessment tool enables the calculation of hazard, exposure, and vulnerability scores. These factors are further defined below.

- ▶ **Hazard Score:** Hazard represents the likelihood and magnitude of future storm event impacts. Typically, an asset located in an Extreme risk area experiences hazards with greater frequency and intensity than assets in a High or Moderate risk area. The Hazard Score directly corresponds to the 100-year and 500-year storm events.
- ▶ **Exposure:** Exposure characterizes the moderating effect of local topographic and protective features. If assets are more exposed (e.g., situated in low-lying floodplains), they are more likely to suffer storm effects than similar assets located at a higher elevation. The landscape attributes captured during the asset inventory are quantified and summed in the Risk Assessment Tool to produce an Exposure Score.
- ▶ **Vulnerability:** Vulnerability expresses the level of impairment or consequences that assets may experience from a storm event. If an asset recovers quickly with limited interruption in service it has low vulnerability, while extended service loss or permanently reduced capacity would be synonymous with high vulnerability. Input from Committee Members at Public Engagement Events was utilized to identify the Vulnerabilities of assets and systems across the Town.

This information is further combined into one quantitative risk score. The risk score is calculated by multiplying the hazard score, exposure score, and vulnerability score:

Hazard Score x Exposure Score x Vulnerability Score = Risk Score

The derived risk scores help to quantify the associated risk to each asset in detail and can be used to illustrate and examine the distribution and types of assets least resilient to flooding.

As defined in the risk assessment tool, the flood risk of an asset is a product of its exposure to flood sources, its vulnerability during flood events, and the level of hazard associated with a given flood event. Each of these factors were determined through discussion with the Clarkstown NYRCR Planning Committee, the public and local officials, analysis of local, regional, and national datasets, and examination of maps, aerial imagery, and site imagery.

The first step in applying the risk assessment tool is to calculate “unmitigated” risk scores, which represent the risk to assets and systems in their current condition, without proposed mitigation projects in place.

In an effort to focus on those Clarkstown assets that are most at risk, unmitigated risk scores were prepared for assets identified on the asset inventory that are located within the 100-year flood zone and extreme risk areas, otherwise identified as areas subject to repeated flooding.

The unmitigated risk scores present a profile of the current risk to assets identified in Clarkstown. Analysis of these results provides insight into the factors driving flood risk in Clarkstown and what strategies could be most effective in improving the long-term resiliency of assets.

Unmitigated Risk Score Results

In total, 208 assets located within extreme and high flood risk areas were identified and evaluated in the unmitigated risk assessment. These assets were generally concentrated in West Nyack south of the Lake Deforest dam, western Nanuet near the Pascack Brook, and other smaller clusters throughout the Town, including in Congers between Congers Lake and Swartout Lake. Of these assets, 4 scored in the extreme risk category and 132 scored in the high risk

category, while the remaining 72 scored in the moderate risk category. This outcome is not unexpected, as only those assets located in high and extreme risk areas were considered for risk assessment. The unmitigated risk score results are presented in Table II-7 by Recovery Support Function and by Risk Score Level from Severe to Moderate. Risk level scores are indicated by the following shading:

Risk Score Level
Severe
High
Moderate

The complete community asset inventory, which includes addresses of asset locations, can be found in Table V-4 in Section V.D, “Community Asset Inventory.”

The geographic distribution of high risk assets is generally uniform across the riverine sections of Clarkstown. This is consistent with observations of historic flood events, as the Lake Deforest outlet and extensive stream and tributary network have caused significant flooding and damage to surrounding assets.

Key infrastructure systems in the community are at severe and high risk. The Centenary pumping station is at severe risk while the Nanuet sewer pumping station is at high risk. Given the interconnected nature of the wastewater system, if one component of the system fails, the rest of the system is at increased risk of failure as well. Clarkstown's drinking water system is also at risk with many drinking water wells, treatment plants and intakes receiving a high risk score. All of these assets are considered FEMA critical facilities which communities and residents rely on for daily activities.

Transportation infrastructure systems in Clarkstown serve a critical function not only within the community, but in the broader regional transportation network as well. Numerous bridges and underpasses, a commuter parking lot and roadways providing access to neighborhoods and throughout the Town are at high risk. The power supply system, including the Orange and Rockland West Nyack Operating Center and a Verizon facility, is at a high risk as well. Loss of power can negatively affect the safety and health of residents while also hindering communication capacities.

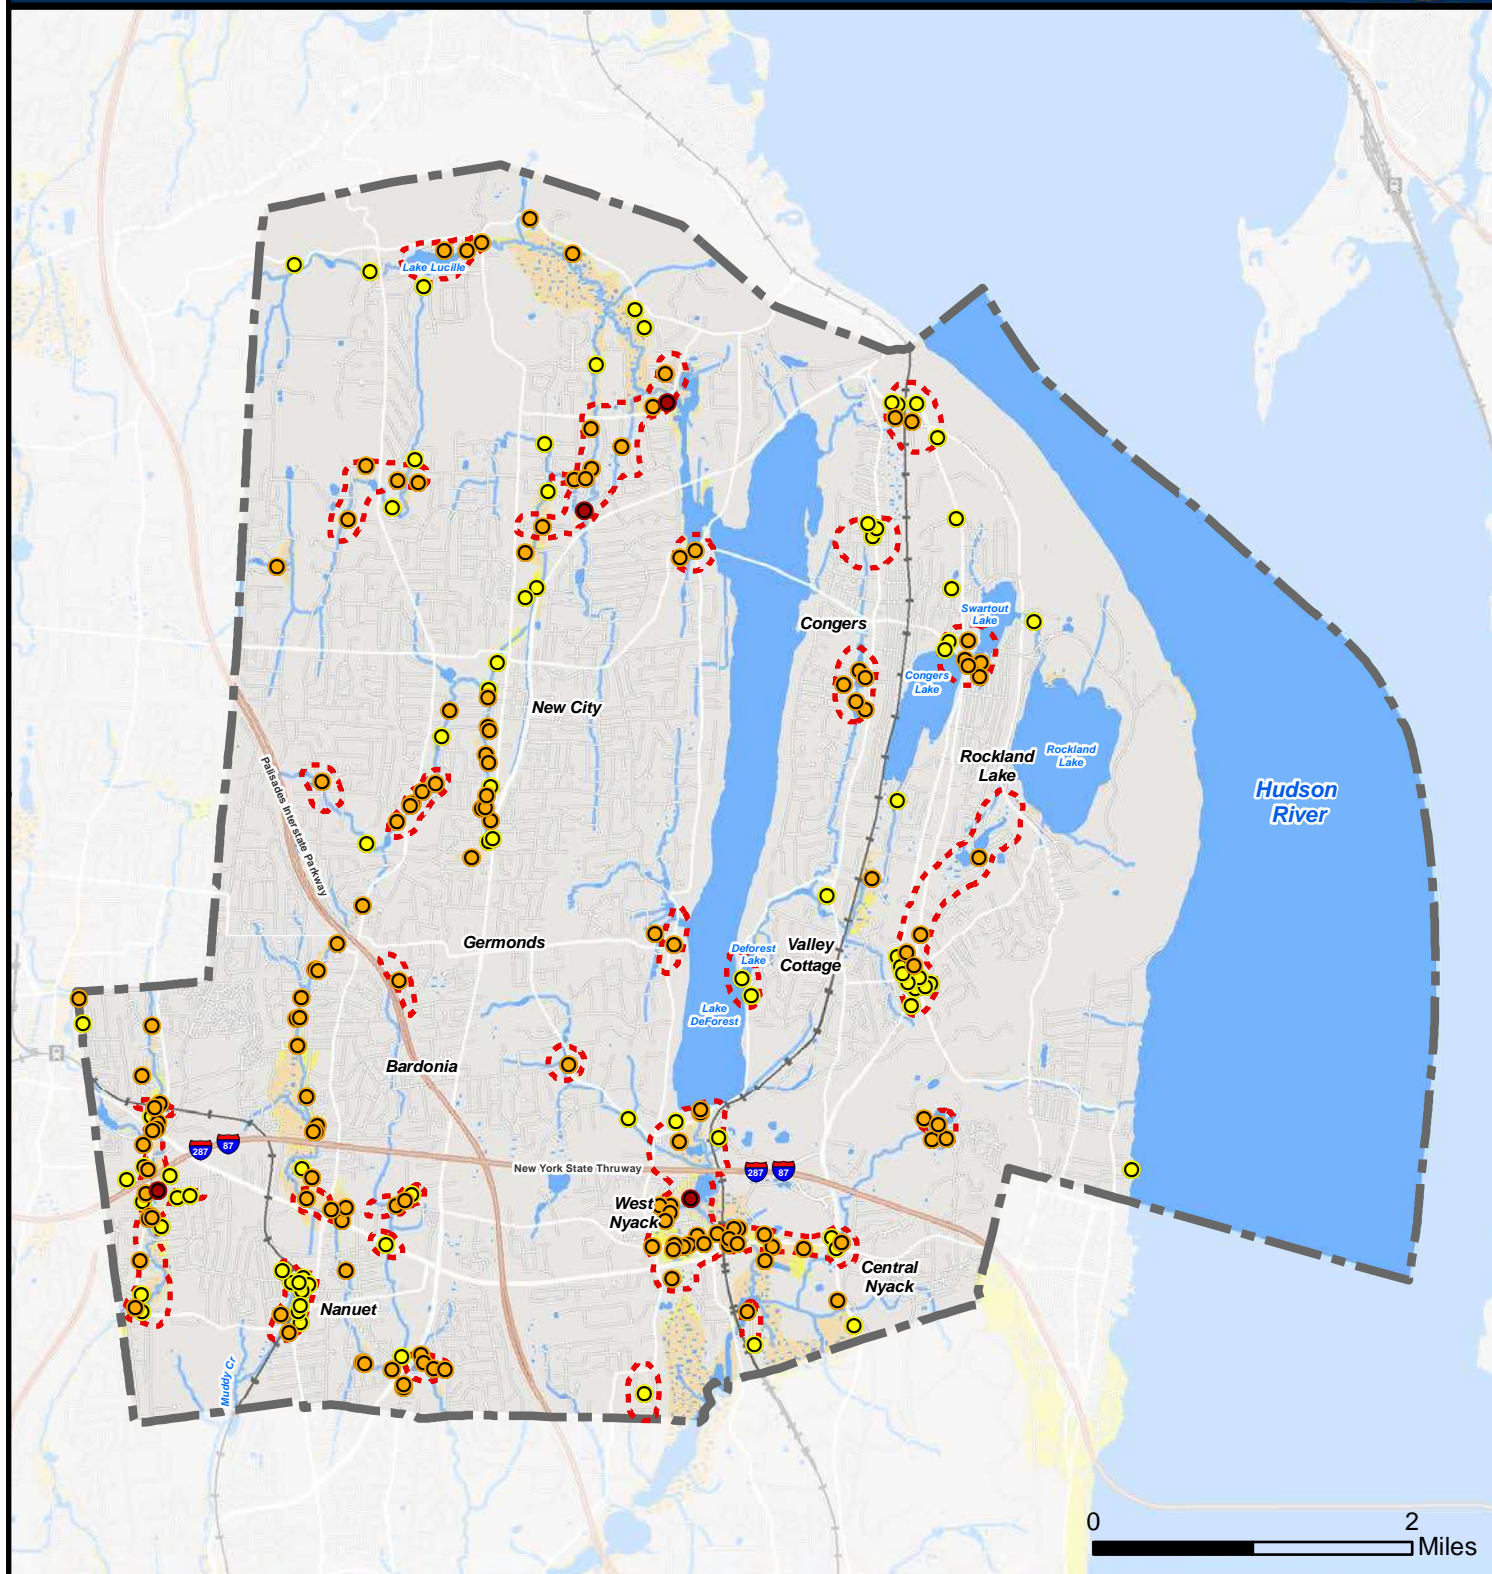

A number of neighborhoods within the community are at severe or high risk and include a combination of single family homes, townhomes, apartments and multi-family homes. Cranford Drive/Termakay Drive, Klein Avenue and New Holland Village Condominiums are all at severe risk. In addition, there are 68 neighborhoods at high risk. Many of these areas are at risk

from flooding, but are also at risk due to access issues caused by flooding and damages to infrastructure such as roadways and bridges, electric supply and stormwater, water and sewer facilities.

The geographic distribution of preliminary unmitigated risk scores is presented in Figures II-7 to II-11. Figure II-7 presents the risk areas, and the assets located therein for the whole Town. Figures II-8 through II-11 present focused area maps of risk areas and assets located therein for Eastern Clarkstown, Nanuet, New City and West Nyack. West Nyack, south of the Lake Deforest dam and western Nanuet near the Pascack Brook, are two primary concentrated areas where assets are at severe or high risk. Due to the extensive network of waterways, there are also many smaller clusters of high risk assets including in Congers, between Congers Lake and Swartout Lake. The high risk scores in these areas are driven by the close proximity and exposure of these assets to the primary flood sources in the community and their location within extreme flood hazard areas, as identified on NYS DOS flood hazard area maps. These identified areas of concentrated risk require targeted attention in the evaluation of potential mitigation measures.

B. Assessment of Needs and Opportunities

The Town of Clarkstown has been extremely proactive in reviewing their emergency preparedness protocols before, during and after severe storm events and adjusting their procedures based on lessons learned. Following severe storm events, the Town's elected officials, staff, emergency service personnel, County and State representatives, and utility providers have debriefed on measures that have been effective, and identified areas for improvement. Significant measures have been implemented to help the community become more resilient following not only catastrophic storm events, but also the frequent high intensity, short duration storm events that cause substantial flash floods throughout the community.

This systematic reexamination of emergency preparedness and recovery needs enables the Town to identify weaknesses and gaps and allocate resources where they need to go. The NYRCR Program provides a formal framework for the Town of Clarkstown to further evaluate their emergency preparedness needs. While the emergency response systems proved very strong, maintaining such a high caliber operation is paramount and requires ongoing attention. Also, the need to reach out to and protect vulnerable residents is critical to resiliency planning initiatives. Widespread flooding and the resulting substantial damage to homes, businesses, and Town infrastructure assets revealed vulnerabilities and has enabled the Committee to focus on these challenges and devise viable solutions to develop a more resilient community.

As described in Section I of this Plan, the NYRCR Planning Committee developed a vision for their community and goals to guide the NYRCR Program decision-making process. The vision and goals to achieve that vision provide the footing for this process. Identifying what works well in Clarkstown, and any specific deficiencies in the protective measures, allows the community to refine their critical needs. Identifying

short, mid-range, and long-term needs and opportunities to address those needs form the foundation for the strategies, projects, programs, and actions that will be developed later in this process.

The identification of Clarkstown's needs and opportunities grew from the vision, guidance from the Committee and comments and observations from concerned citizens at the first Public Engagement Event held at Town Hall. Identifying key community assets (see Figure II-1, Asset Inventory – Town of Clarkstown), also helped the Committee focus their needs on Clarkstown's vulnerable facilities and features. The Committee identified pressing community resiliency and recovery needs, which were then presented for review to the larger community. The Committee then developed opportunities to address those needs and build the long-term resiliency of the Town. The resulting list was refined through in-depth discussions with municipal officials, community stakeholders, the general public, and Town representatives.

The final needs and opportunities list provides a basis for developing strategies, projects, programs and actions to address community resiliency. Recurring themes of critical concern to the community include: repetitive flooding in residential neighborhoods, inundation of key commercial areas, widespread power outages and coincident road closures due to downed trees and power lines, aging infrastructure including stormwater management and drainage systems, and regional coordination with adjacent municipalities and the state of New Jersey regarding flooding issues.

The following section provides an overview of the identified needs and opportunities organized by the six NYRCR RSFs. The core recovery capability of each RSF and its relevance to the Town of Clarkstown are described below.

Economic Recovery Support Function

This RSF identifies measures to fortify the local and regional economy to increase the resiliency of businesses during acute storm events, and initiatives to assist in efficient and expedient recovery

after the storms have subsided. As shown in Figure II-12, Economic Land Uses – Town of Clarkstown, Clarkstown has several key economic/commercial clusters, some of which have been subject to significant damage due to repetitive flooding— including in particular, West Nyack. The ability for a community to recover from disastrous events is inherently tied to how quickly it can return to business-as-usual following these events. Helping businesses that have suffered great irreplaceable loss, and bringing businesses that have been closed due to lack of power and flood damage back to working conditions as soon as possible is critical to recovery.

Needs:

- ▶ Protection of businesses and commercial centers subject to repetitive flooding, from future storm damage; and
- ▶ Provision of secondary and supplemental power sources for commercial and industrial uses and ensuring that new power sources are environmentally sustainable, flood resistant or flood proof.

Opportunities:

- ▶ Evaluate options and various technologies to alleviate flooding conditions to commercial centers; and
- ▶ Identify resources, low interest loans and/or grants to assist small businesses to recover from damage, including flooding and prolonged power outages caused by storm events.

Health and Social Services Recovery Support Function

This RSF addresses the community's ability to rebuild and improve vital health and social services, particularly those serving vulnerable populations. Restoring such networks, and making them more

resilient, will promote the well-being of residents, ultimately improving the overall health and independence of the whole community.

Needs:

- ▶ Backup power supply for and installation of permanent generators at key facilities;
- ▶ Continued high level emergency services operation and communication among local, county and state responders;
- ▶ Established network of 'basic need' providers (i.e., transportation for seniors, shower facilities, food, etc.); and
- ▶ Protection of health and social service facilities from future flooding and maintained access to critical supplies including, in particular, medicine, during storm events.

Opportunities:

- ▶ Locate and evaluate the vulnerability of health and social service facilities, including access to medicine;
- ▶ Identify municipal facilities in need of generators and back-up power sources and investigate funding sources;
- ▶ Implement training, education and cutting edge technologies for emergency service operations and communications;

Figure II-12

Economic Land Uses - Town of Clarkstown

--	---	--

- ▶ Prepare an access management plan during and after storm events (for example by improving the County's paratransit bus service program for the underserved and medically needy, elderly, low income and handicapped community (Transportation Resources, Intra-county, for Physically disabled and Senior citizens [TRIPS]); and
- ▶ Prepare information to disseminate to Clarkstown residents regarding access to basic needs during storm events such as transportation for seniors, shower facilities, and access to food.

Housing Recovery Support Function

This RSF considers the entire current housing stock (rental and ownership) and evaluates its vulnerability with regard to storm events. In its evaluation of housing needs, the community considers:

measures to mitigate flooding and damage by inundation and winds; revisions to codes to protect existing and future housing stock; the adequacy of emergency preparedness and evacuation plans for all residents, and in particular vulnerable populations including children and the senior community, and the potential for alternative energy sources to minimize the impacts of prolonged power outages.

Needs:

- ▶ Education for homeowners on pre-storm preparedness, storm protection procedures and post storm recovery initiatives and programs;
- ▶ Implementation of an effective tree maintenance program to reduce downed trees and resulting widespread power outages;
- ▶ Protection of single family and multi-family neighborhoods from flooding;
- ▶ Provision of resilient housing choices outside of the floodplain for all income levels, focusing in particular on the following residential neighborhoods, which regularly flood: Squadron Garden Apartments, New City Condominium Complex, New Holland Village; and
- ▶ Identification of new economically sustainable power sources that are flood-resistant or flood proof.

Opportunities:

- ▶ Develop guidance on alternative environmentally sustainable power sources, and backup power supplies;
- ▶ Educate residents in homes that repeatedly flood about buyout and relocation programs;
- ▶ Identify opportunities outside the floodplain to relocate repeatedly flooded neighborhoods;
- ▶ Investigate and pinpoint causes of neighborhood flooding (i.e., stormwater systems, stream alignment, watershed development, location in mapped floodplain, etc.) and develop plans for flood mitigation;
- ▶ Provide flood related publications/materials produced by the Town of Clarkstown, FEMA and NYS Office Emergency Management (NYS OEM) to homeowners regarding pre, during and post storm event preparedness and assistance programs; and
- ▶ Provide guidance on tree-ownership responsibilities and jurisdiction and create a Master Tree Plan to inventory and assess health, size, and number of trees in the public right-of-way.

Infrastructure Services Recovery Support Function

This RSF seeks to identify the community infrastructure that was damaged during the storms, components and facilities that have been patched up until permanent repair and replacement can occur,

facilities that have been replaced, and those that remain untouched since the storm events still requiring significant attention.

Needs:

- ▶ Enhanced multi-modal opportunities including bicycle and pedestrian facilities and Town-wide bus services;
- ▶ Permanent generators for identified critical uses including, in particular gas stations;
- ▶ Restoration and protection of road, bridge, and culvert infrastructure assets; and
- ▶ Upgrades to stormwater management infrastructure and improvement of drainage systems.

Opportunities:

- ▶ Inventory stormwater management infrastructure including age and condition of facilities and continue to identify funding sources for maintenance and/or replacement;
- ▶ Consider implementation of green infrastructure improvements for stormwater management projects identified by the Clarkstown Storm Drainage Task Force; and
- ▶ Implement the multi-modal transportation recommendations provided in previously completed various planning documents, including in particular bicycle and pedestrian facilities and Town-wide bus service.

Natural and Cultural Resources Recovery Support Function

This RSF focuses on protecting and restoring the health of natural systems and cultural resources for continued provision of benefits to the community. These benefits can include stormwater manage-

ment, recreational opportunities and tourism. Conserving and rehabilitating natural and cultural resources will have direct consequences on reducing the County's vulnerability during storm events while promoting economic development, ultimately having lasting benefits on the community's environmental and economic well-being.

Needs:

- ▶ Continued investigation of alternative stormwater management initiatives (i.e., green technology);
- ▶ Improved coordination with NY and NJ state agencies, neighboring communities, and other agencies such as the Soil and Water Conservation District on water-related issues related to the Hackensack River;
- ▶ Protection of open space assets for recreation and tourism, and as a means to assist with stormwater management; and
- ▶ Protection of Lake DeForest, Rockland Lake, Congers Lake, and other water bodies and wetland systems.

Opportunities:

- ▶ Consider additional protective measures for recreation and open space through land use regulation or other means, such as conservation easements;
- ▶ Create a Regional Coordination Committee to address flooding issues across state and municipal boundaries;

- ▶ Determine impacts on recreational assets from flooding and evaluate protection measures to protect from future flood events;
- ▶ Identify areas where green infrastructure techniques can be used to alleviate flooding from stormwater runoff; and
- ▶ Prepare a Watershed Protection Plan(s) focused on Lake DeForest, Rockland Lake, Congers Lake, and other water bodies.

Community Planning and Capacity Building Recovery Support Function

This RSF addresses a communities' ability to respond to and implement short and long term recovery measures, including: policy initiatives, laws, regulations, and planning activities, as well as

civic engagement and public education.

Needs:

- ▶ Development balanced with open space preservation;
- ▶ Continued upgrades to communication and operational infrastructure at Town Facilities including the Emergency Operations Center;
- ▶ Education and outreach campaign to enlist more participation in the "Ready Clarkstown Emergency Notification System";
- ▶ Restricting new development in floodplain areas;
- ▶ Improved regional coordination with state, federal, and municipal agencies to protect the community and plan for future disasters;
- ▶ Informational outreach regarding local and regional shelter locations, shower facilities, and local reception centers, facilities for eating and sleeping; and
- ▶ Updated stormwater management infrastructure inventory, mapping, and file storage.

Opportunities:

- ▶ Create a comprehensive Town-wide digital inventory of stormwater management infrastructure (i.e., catch basins, storm drains);
- ▶ Ensure every resident of Clarkstown is aware of the location of the regional shelters and local reception centers for use during storm events and is enrolled in the "Ready Clarkstown Emergency Notification System";
- ▶ Establish public-private partnerships (with health clubs, gyms, and other private facilities) to provide showers and other essential services to Town residents with long term power outages;
- ▶ Evaluate local regulations to ensure a proper balance is maintained between new development and open space protection;
- ▶ Form a Regional Coordination Committee to address flooding issues across state and municipal boundaries; and
- ▶ Continue initiatives to provide state of the art communication and operational infrastructure at Town facilities, the Police Station, and Emergency Operations Center.

Downed Tree and Wires at Gable Road and Tavo Lane Intersection – Superstorm Sandy, October 30, 2012 (Michelle Olson)

2014 NY RISING COMMUNITY RECONSTRUCTION PLAN NYRCR CLARKSTOWN

Section III Reconstruction and Resiliency Strategies

Reconstruction and Resiliency Strategies

The NYRCR Clarkstown Planning Committee (Committee) developed the following strategies to support reconstruction and promote resiliency in the Clarkstown community. This list considers existing known areas of vulnerability due to flood, wind, and other storm damage from Superstorm Sandy and Hurricane Irene.

The vision, goals, needs, and opportunities presented in Section I of this NY Rising Community Reconstruction (NYRCR) Plan, were identified by the Committee with input from the larger Clarkstown community and collaboration with the Consultant Team and provide the foundation for this list of strategies.

The strategies help identify and resolve critical issues identified in Section I of this NYRCR Plan, address risks to assets explored in Section II and consider flood mitigation, disaster recovery and long-term resiliency needs that remain unmet by existing planning and rebuilding initiatives. The strategies represent statements of action that address how to best fortify community assets, capitalize on identified opportunities and meet short, medium, and long-term goals identified during the NYRCR planning process.

The following section presents a description of each strategy followed by a table listing the projects that help realize that strategy. While not every strategy has a specific Proposed or Featured Project identified to accomplish that strategy, the intent and the goal of the strategy remains an important guide for the Community in their future planning efforts. Similarly, many of the Proposed and Featured Projects developed by the Committee address multiple strategies. For ease of reference, this NYRCR Plan presents the Proposed and/or Featured Project—only once—under the strategy to which it is most relevant and most applicable. Table V-2 in Section V.B, “Master Table of Projects,”

presents detailed descriptions of all Proposed Projects, Featured Projects, and Additional Resiliency Recommendations proposed in this NYRCR Plan.

Strategy A: Restore and protect critical infrastructure and transportation assets

Implementing measures to restore and permanently protect critical infrastructure and transportation routes addresses the Recovery Support Functions of Infrastructure, Community Planning and Capacity Building, Health and Social Services, and Economic Development.

During extreme storm events, many of the Town’s waterbodies overflow and flood into their natural floodplains resulting in the closures of major through roads, and in some cases require the rescue of travelers stranded in their vehicles. Widespread road closures result in significant disruption to residents and create emergent conditions when emergency service providers cannot access those in need. After the flooding and high winds subside, building material debris and fallen trees leave roads impassable. Storm-water management and drainage infrastructure enhancements along critical roads and evacuation routes minimize the potential for extensive road closures as a consequence of flooding.

Prolonged power outages result not only in disruption to residents and businesses but also impacts street lights, traffic signals and cell towers. This strategy not only addresses the vulnerability of the power system itself, but also the ability of various Clarkstown neighborhoods to reduce vulnerabilities created by power outages. Power is a necessary resource for emergency responders and recovery and access to an alternative power sources is vital. In addition to

providing assistance for purchase and installation of back-up power generators, the Town of Clarkstown would amend their zoning code to require, as a matter of policy, back-up power generation for critical facilities including gas stations and cell towers.

Table III-1:

Strategy A: Restore and protect critical infrastructure and transportation assets

Project Name	Short Project Description	Estimated Cost	Proposed or Featured Project	Regional Project (Y/N)
Fredric Street Drainage Improvements	Resize and replace piping for approximately 1,200 linear feet from Fredric Street west through and including the New Holland Village Condominiums. This project has been identified as an urgent need by the Town of Clarkstown Storm Drainage Task Force.	The capital cost to complete the engineering and implementation of these improvements is estimated to be \$1,400,000.	Proposed Project	N
Old Haverstraw Road Drainage Improvements	Resize and replace existing deteriorated and undersized drainage lines to adequately drain areas along Old Haverstraw Road. This project has been identified as an urgent need by the Town of Clarkstown Storm Drainage Task Force.	The capital cost to complete these improvements is estimated to be \$750,000.	Proposed Project	N

Strategy B: Develop initiatives and financial assistance programs to better protect residents, businesses, and commercial centers from future storm damage and to allow them to recover more quickly

Substantial storm events like Superstorm Sandy and Hurricane Irene impose a significant burden on small business owners, particularly those that have been flooded or frequently lose power. These burdens are exacerbated when business owners are also struggling with flood damage to their homes. Ensuring the financial stability of residents and businesses is critical to efficient and expedient economic development and recovery. This strategy addresses the Recovery Support Functions of Economic Development, Housing and Community Planning, and Capacity Building.

While there are a variety of organizations and resources available to assist residents and business owners in their pre-storm preparedness and post-storm recovery, it is sometimes difficult to find out from whom help can be sought and where to turn. This strategy promotes the consolidation of information and provides detailed roadmaps for finding information, technical and storm preparation assistance, emergency resources, and residential and business post storm recovery assistance programs including low-interest loans and grants for pre-storm preparedness and post storm recovery. Several projects would address various components of this strategy including: the “Comprehensive Town-wide Education and Alert Program,” which addresses storm preparedness, implementation, emergency assistance, and recovery; the “Ready Clarkstown Emergency Assistance Program,” which would encourage enrollment in the Town’s emergency notification system; and “Operational and Communication Infrastructure Improvements,” which would commit resources to better data collection.

Strategy C: Improve stormwater management infrastructure and drainage systems using green infrastructure practices where possible and cost-effective

Stormwater management and drainage system improvements are critical to minimizing the widespread damage caused by episodic, flash-flood, and surge-related flooding events. Infrastructure improvements address several needs identified by the Committee and the community and specifically address the Infrastructure and Natural and Cultural Resource Recovery Support Functions. Improvements to the management and drainage of storm water also result in enhanced water quality, particularly where green measures are implemented. Green infrastructure programs could include bioswales, infiltration ponds, rain-gardens, retention basins, and permeable paths and pavers. Using natural systems to control and manage floodwaters is an inherently long term initiative supporting lasting community resiliency.

Stormwater management and drainage system projects include the preparation of a comprehensive digital inventory of the Town’s infrastructure, including the size, date of installation, and inspection and maintenance schedules for replacement or upgrades. The preparation and adoption of required green infrastructure building and stormwater management regulations would ensure permanent changes. Other projects include resizing and replacement of stormwater management drainage infrastructure in various areas throughout the Town. Implementation of a comprehensive “green” redesign of 143 cul-de-sacs throughout the Town to eliminate raised, planted medians and replace them with bio-filtration and retention systems would not only capture roadway run-off but also improve water quality throughout Clarkstown.

Table III-2:**Strategy C: Improve stormwater management infrastructure and drainage systems using green infrastructure practices where possible and cost-effective**

Project Name	Short Project Description	Estimated Cost	Proposed or Featured Project	Regional Project (Y/N)
Cranford Drive Drainage Improvements	Resize stormwater management drainage infrastructure and implement green infrastructure practices (regrading and placement of fiber rolls, rock weirs and vanes, boulder revetment), along Cranford Drive from north of Old Route 304 to the intersection of Cranford Drive and Route 304.	The capital cost to complete these improvements is estimated to be \$2,100,000.	Proposed Project	N
Drainage Improvements to the Demarest Kill Stream	Stormwater management improvements to redesign, rightsize, and modify the existing drainage infrastructure in and around the Demarest Kill, including: replacing a failed culvert and collapsed headwall under Hall Avenue just west of Lake Drive; design and construction of basins and berms at the Virginia Street detention area; and modifications to existing drainage lines and underground detention areas along Virginia Street to prevent surcharging of the system.	The capital cost to complete these improvements is estimated to be \$810,000 in total. This includes \$360,000 for the Hall Avenue Culvert and Headwall, \$150,000 for the Virginia Street Detention Area, and \$300,000 for the drainage improvements along Virginia Street.	Proposed Project	N
Drainage Improvements to the Naurashaun Brook Basin	Redesign and resizing of storm drainage infrastructure under East Alison Avenue, on Blauvelt Road from Townline Road to Lake Nanuet Drive and stream bank restoration measures along the Naurashaun Brook. This project has been identified as an urgent need by the Town of Clarkstown Storm Drainage Task Force.	The capital cost to complete these improvements is estimated to be \$500,000.	Proposed Project	N
South Mountain Road Drainage Improvements	Evaluate the South Mountain Road corridor to identify coordinated “green” and “gray” stormwater management improvement projects, which could be implemented in phases. This project has been identified as an urgent need by the Town of Clarkstown Storm Drainage Task Force.	The capital cost to conduct the feasibility analysis and implement improvements is estimated to be \$1,000,000.	Proposed Project	N
Cul-de-sac Island Reconstruction	Redesign 143 cul-de-sac islands to remove raised planted medians and replace them with green-infrastructure systems to improve water quality and reduce peak rates of run-off and streamflow quantities and velocities.	The capital cost to complete the design and implementation of these improvements is estimated to be \$35,000-\$45,000 per planted island	Featured Project	N
Jeffrey Place Drainage Improvements	Excavate an 11-foot trench to relieve flooding during rain storm events on Jeffrey Place, just south of Old Mill Road. This project has been recognized as an urgent need by the Town of Clarkstown Storm Drainage Task Force.	The capital cost to complete these improvements is estimated to be \$500,000.	Featured Project	N
Pineview Road Storm Drainage Improvements	Install a levee structure to provide flood protection to properties that repeatedly flood along Pineview Road. This project has been recognized as an urgent need by Town of Clarkstown Storm Drainage Task Force.	The capital cost to complete these improvements is estimated to be \$500,000.	Featured Project	N

Strategy D: Ensure access to and improve resiliency of critical health and social service facilities and safe-havens during and after storm events

To supplement existing County and Regional emergency notification systems, the Town of Clarkstown offers its own emergency notification system called “Ready Clarkstown.” This program is managed by the Clarkstown Police Department and enables the police department to contact residents via phone and/or email, about storm recovery efforts, including road closures, flood and snow emergencies, burglaries, and other emergent community situations. The program is entirely voluntary and specific measures are in place to accommodate those residents who are visually and hearing impaired. In addition, the Town offers various reception centers or “safe-havens” throughout the community, to supplement Red Cross emergency shelters. Reception centers are designated by the Town and provide coordinated assistance and information, and serve as warming and cooling centers to Clarkstown residents. The reception centers are generally open for a few days during and after extreme events.

Despite the current availability of these resources and organizations, residents who were displaced from their homes during and after Superstorm Sandy and Hurricane Irene due to flooding or prolonged power outages were unsure about the resources that were available to them. Educating the community about existing assistance programs is critical to ensuring their safety. This strategy addresses various stated community needs and several Recovery Support Functions, but focuses on Health and Social Services, and Community Planning and Capacity Building. The Comprehensive Town-wide Education and Alert Program will provide direct information links via the Town’s website, and via smartphone apps, for residents seeking a variety of information assistance, including safe travel routes, shelter locations, and supplies.

Disseminating critical information and enlisting more resident participation in the Ready Clarkstown program will increase pre-storm preparedness and minimize the fear that often accompanies a lack of information on where to turn when an emergency occurs. In addition, to address this strategy, the Town will investigate the potential to use their existing Mini-Trans systems for use as a “Mobile Help Unit” during and after storm events. The Mobile Help Unit would be staffed by emergency service personnel, who would travel to affected neighborhoods and provide various services to residents, including: electronic device charging stations, information regarding road closures, restoration of power services, and potentially provide transportation for the elderly and more vulnerable members of the community to County and Red Cross shelters and Town of Clarkstown reception centers.

Strategy E: Preserve open spaces and restore natural resources to better support flood mitigation

In addition to implementing green infrastructure construction policy changes, the Town of Clarkstown has many opportunities to use existing parks and natural areas to further manage inundation during storm and flood events. This strategy addresses the Recovery Support Functions of Natural and Cultural Resources, and Community Planning and Capacity Building. The Town has mapped and prioritized parcels with the potential for acquisition for use as open space and flood control. Projects to implement this strategy would include design and implementation of flood control measures on existing open space and parkland parcels and also properties that may be acquired in the future. The formation of a regional watershed management organization and implementation of protections measures developed by that organization would also further the goals of this strategy.

Table III-3:**Strategy E: Preserve open spaces and restore natural resources to better support flood mitigation**

Project Name	Short Project Description	Estimated Cost	Proposed or Featured Project	Regional Project (Y/N)
Implementation of Post-Residential Buyout Program Measures for Flood Protection	Evaluate and design flood mitigation and flood control uses for appropriate parcels acquired by the Town through FEMA's HMGP Buyout Program. These properties must remain undeveloped in perpetuity and can therefore be repurposed for use as public open space, and potentially for flood control.	The capital cost to conduct this feasibility study is estimated to be \$50,000.	Featured Project	N

Strategy F: Provide education, outreach and implementation assistance regarding pre-storm preparedness (including proper maintenance of waterbodies and stormwater runoff mitigation on private properties), storm protection procedures and post-storm recovery initiatives to protect from future flooding

This strategy addresses virtually every need expressed by the Committee and the community regarding flood resiliency and recovery. Because it is a comprehensive outreach initiative that accommodates pre, mid- and post storm recovery assistance with education, financial and physical assistance, the strategy addresses the following Recovery Support Functions: Community Planning and Capacity Building, Housing, Health and Social Services, Natural and Cultural Resources.

There are four key components of storm resiliency: pre-storm preparedness education, pre-storm preparedness assistance for vulnerable residents, storm response procedures, and post-storm recovery initiatives. Pre-storm preparedness measures would include providing information to residents on how to prepare themselves and their properties in advance of storms with long-term and in some cases permanent solutions, including: general stream management, floodproofing for homes and businesses (elevating

mechanical and electrical equipment, sealing basement walls with waterproofing compounds, and securing propane tanks), and location and contact information for Town resources. The information could be presented in hard copy, through links on the Town's website or through seminars and Town sponsored meetings to educate the public.

The Committee asserted that it is critical to also provide physical pre-storm preparedness assistance to more vulnerable residents. As such, implementation assistance is the second component of this strategy. Assistance could include dispatching teams of volunteers to help residents clear their gutters, move or otherwise secure outdoor furniture, and make sure that streams or waterbodies that flow through their properties are generally clear of debris.

The third component to address this strategy includes informing and equipping residents with the information they need to assist them during storms. A key currently unmet need identified by the Committee was access to location information for phone charging stations and shower facilities. Measures to address this need include developing evacuation plans, providing information regarding the closest emergency shelters and what facilities are offered at County and Red Cross shelters versus local Town supported reception centers. Residents would also be provided with a list of materials and equipment for emergency kits (flashlights, batteries, drinking water, and canned foods). Preparedness and response projects would also

include the potential for repurposing the Mini-Trans system to serve as a Mobile Help Unit during and after storm events. A Mobile Help Unit could provide information, necessities and also potentially transportation for the elderly or handicapped to shelters and reception centers.

The fourth initiative to address this strategy provides education, financial and physical assistance in the aftermath of storms. Residents and business owners who suffer property damage, are out of power, and are facing other flood related difficulties need to know what to do and whom to call for all manners of assistance. Creating a comprehensive list of assistance agencies for technical advice and funding, through a link on the Town's website, would provide immediate reference to residents.

Strategy G: Promote resilience and flood management best practices through land-use planning, policy, and regulation

Permanent changes to Town regulations are critical to ensure long-term resiliency. Adopting amendments to existing Town policy documents addresses various needs expressed by the Committee including the need for a permanent change in the way the Town regulates new construction to significantly limit development in the floodplain. This strategy addresses the

Recovery Support Functions of Community Planning and Capacity Building, Infrastructure, Housing, and Natural and Cultural Resources.

The *Town of Clarkstown Comprehensive Plan (2009)*⁶ recommended that the Town develop and adopt stream corridor protection measures and improved stormwater treatment and on-site detention requirements through modifications to the zoning code. Currently, through their zoning provisions, the Town of Clarkstown offers density bonuses if an applicant provides on-site treatment and stormwater detention in excess of the volume produced by the proposed development project.

The Town has committed to revising their local zoning codes to create additional protections to streams, lakes, and wetlands. Once a Town-wide digital inventory of stormwater management infrastructure is complete, decisions regarding storm flows and the impact and siting of stormwater management infrastructure can be better managed. A comprehensive tree maintenance program for trees located in the public right-of-way would minimize damage and disruption from downed trees and power lines following high wind events. To enact permanent change, the Town can adopt code amendments requiring use of flood resilient materials, incentivize flood-resilient building construction and renovation, and allow housing retrofits to support senior and multi-family housing.

Table III-4: Strategy G: Promote resilience and flood management best practices through land-use planning, policy and regulation

Project Name	Short Project Description	Estimated Cost	Proposed or Featured Project	Regional Project (Y/N)
Digital Inventory of Stormwater Management Infrastructure	Provide funding for the Town to retain professional services to collect data on its roughly 12,000 catch basins. Information to be collected would include: size, date of installation, and inspection and maintenance schedules for replacement or upgrades.	The capital cost to retain professional services to complete this inventory and monitoring system is estimated to be \$200,000.	Featured Project	N
Tree Maintenance Program	Proactively manage trees located in the public right-of-way to reduce incidents of road closures and power interruptions resulting from downed trees during storm conditions.	The capital cost to develop and implement this program is estimated to be \$30,000.	Featured Project	N

Strategy H: Improve regional coordination with neighboring communities and local and state agencies for watershed management to better mitigate flooding and plan for future disasters

Regional initiatives that address the entire watershed are critical to effective resiliency planning. The Committee identified the need for improved regional coordination with State, Federal, and municipal agencies to protect the community and plan for future disasters. To address this need, the Committee and the community recognized the opportunity to create regionally coordinated resiliency plans. This strategy addresses several Recovery Support Functions, but focuses on Natural and Cultural Resources and Community Planning and Capacity Building.

Recognizing the need for comprehensive flood prevention approaches to ensure the preservation of the environmental benefits of various watersheds, in 2012, the State of New Jersey endorsed and passed legislation to create a bi-state organization and framework for regional coordination of potential flood hazards along the Hackensack River, Sparkill Brook/Creek, Saddle River, Ramapo/Mahwah River, and their tributaries. In April 2014, the New York State Legislature included \$100,000 in the 2014-2015 Budget to enact the Rockland-Bergen Commission (Commission). The Commission would comprise 12 voting members (six from each state) and New York's and New Jersey's Environmental Commissioner and a representative of United Water as non-voting members. The Commission is mandated to issue a report by June 2016 to include recommendations for legislation, administrative action, and local government action. This legislation furthered a history of cooperation among State and local governmental entities and various private organizations and individuals in the vicinity of these water bodies and watersheds. The creation of a bi-state commission represents an appropriate means to accomplish these very important goals.

A multi-jurisdictional flood coordination commission could authorize watershed modelling to identify natural infrastructure practices, environmentally sensitive stream management programs including components of emergency stream intervention with project implementation, and education and outreach to municipal and County officials, and residents. To ensure that the proposed initiatives meet permitting standards, the management entity can comprise representatives from State and County agencies. The Town of Clarkstown seeks to be an active participant in this process and disseminate information back to Town residents. The Town would consider committing resources for the local implementation of the regional watershed management recommendations developed by the Commission.

2014 NY RISING COMMUNITY RECONSTRUCTION PLAN NYRCR CLARKSTOWN

Section IV Implementation – Project Profiles

The Town of Clarkstown is eligible to receive up to \$3 million in U.S. Department of Housing and Urban Development (HUD) Community Development Block Grant—Disaster Recovery (CDBG-DR) funds to implement reconstruction and resiliency projects. While developing projects for inclusion in this NYRCR Plan, the Planning Committee took into account alignment with reconstruction and resiliency strategies, cost estimates, cost-benefit analyses, the effectiveness of each project in reducing risk to populations and critical assets, feasibility, and community support.

This section presents a complete project profile for each Proposed and Featured Project identified by the Committee throughout the six-month planning process. The NYRCR Plan also includes “Additional Resiliency Recommendations” presented in Section V.A, “Additional Resiliency Recommendations.”

- ▶ Proposed Projects are proposed for funding through a Community’s allocation of CDBG-DR funding.
- ▶ Featured Projects are innovative projects where an initial study or discrete first phase of the project is proposed for CDBG-DR funding or other identified funding; and regulatory reforms and other programs that do not involve capital expenditures.
- ▶ Additional Resiliency Recommendations are resiliency projects and actions the Committee would like to highlight and are not categorized as Proposed or Featured Projects.

Risk Mitigation Analysis

Projects with potential flood risk reduction benefits were analyzed through a mitigated risk assessment process. Project locations were mapped using available documentation, designs, and plans to establish the geographic area to be analyzed for each project and the proximity to assets. Additional data including aerial imagery, flood risk areas, and topography were also utilized to gain a more complete understanding of the surrounding site characteristics. After the project locations were mapped, project documentation was reviewed to identify how proposed project actions may decrease flood risks to nearby assets through improvements to stormwater conveyance systems and flood mitigation measures.

Once projects were reviewed, asset locations mapped previously in the Asset Inventory and Unmitigated Risk Assessment tasks were analyzed to locate and evaluate those assets that would be affected by each project. The Mitigated Risk Assessment task builds on the Unmitigated Risk Assessment by analyzing how proposed projects may decrease flood risks to assets. Assets are entered into the New York State Department of State (NYS DOS) Risk Assessment Tool; however the flood risk areas, landscape attributes, and vulnerability rankings are modified to reflect anticipated effects of proposed projects. For example, localized flooding on a poorly-drained street could be remedied with a proposed catch basin and culvert pipe; thereby reducing risk to assets or eliminating an existing flood risk area. In the Risk Assessment Tool, removing that flooding hazard would result in a Mitigated Risk Score lower than the original Unmitigated Risk score. By generating and comparing the Mitigated / Unmitigated Risk Scores, the potential risk reduction benefits of projects can be assessed.

The Project Profiles provide an overview of Anticipated Reduction of Risk. For details on the Risk Assessment results, see Section V.D, “Community Asset Inventory.”

Cost-Benefit Analysis Methodology

The Cost-Benefit Analysis (CBA) developed the benefits and costs associated with Proposed and Featured Projects. The CBA provides the anticipated cost of implementation and an evaluation of the benefits of the Proposed and Featured Projects. The purpose of the CBA is to inform the Clarkstown NYRCR Planning Committee as it formulates projects for implementation; and to help the community prepare grant applications for CDBG-DR funds and other funding opportunities identified in the future. The effectiveness of each project in reducing risk to populations and critical assets, feasibility, and community support were taken into account as well as discussions with Committee members, community members and Town staff. Based on this, the cost-effectiveness of a project was assessed.

The costs and benefits used to evaluate projects through the CBA are explained further below.

Project Costs

The Proposed and Featured Project Profiles include a summary of anticipated project costs. For some Proposed and Featured Projects, estimated costs were provided by the municipal engineering staff and consultants. Where information was not available, the Consultant Team developed preliminary project cost estimates, which included evaluation, design and/or construction where appropriate. Due to various uncertainties, the estimates are just that—estimates: they provide the community with a practical understanding of the potential estimated costs of project implementation.

The following three factors were used to evaluate costs and benefits:

- ▶ Capital Cost;
- ▶ Life-Cycle Cost – annual maintenance cost for upkeep and operations for the useful life of the project (if applicable); and
- ▶ Useful Life of Strategy – number of years before replacement is required (if applicable).

The CBA not only provides an assessment of the cost of implementing the projects, but also provides a description of the future costs of not implementing the Proposed and Featured Projects. If projects are not implemented, long-term viability of municipalities to withstand and rebound following significant storm events may be negatively impacted. The costs of not implementing projects are more difficult to quantify, but are nonetheless critical to the analysis and are therefore addressed qualitatively. These costs include: repetitive damage to personal property and public infrastructure resulting from frequent recurring flooding and future storm events; economic loss to residents, local and regional employers as a result of the inability to work; and obstacles or limitations to the provision of life safety and emergency services due to road closure that result in repeated inability to access areas of the community.

Project Co-Benefits

The types of benefits evaluated in the CBA are summarized below:

Risk Mitigation: The extent to which a Proposed or Featured Project mitigates the risk of damage to an identified community asset from a future storm event.

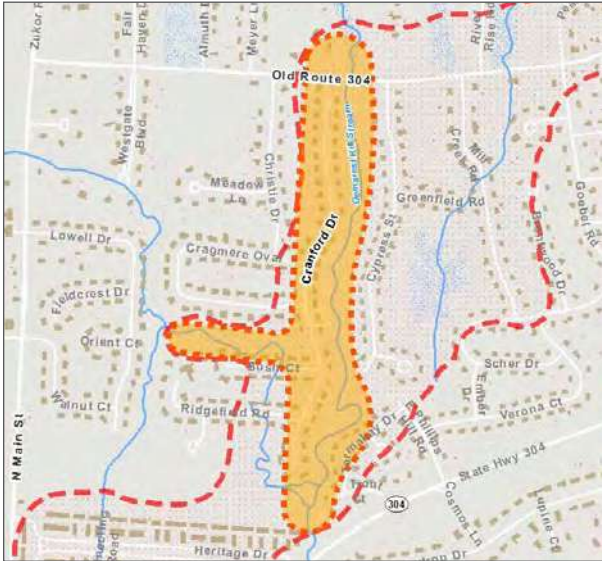

Economic Impacts: The potential for a Proposed or Featured Project to minimize costs and reduce the time required for the local economy to rebound from a storm event. Economic assessment data included, where applicable: an estimate of permanent jobs secured/added; relationship to, and/or furtherance of,

plans in the *Mid-Hudson Regional Economic Development Council Strategic Plan (2011)*¹⁶ and the *Mid-Hudson Regional Economic Development Council's 2014 Progress Report*;²⁰ potential for additional economic activity; and the net effect on local municipal expenditures.

Environmental Benefits: The potential for a Proposed or Featured Project to protect critical environmental assets, high-priority habitat, threatened and endangered species, migration or habitat connectivity; any cleanup resulting from the action; and creation of open space or a new recreational assets.

Health and Social Benefits: The potential for a Proposed or Featured Project to benefit the overall population due to improved access to health and social service facilities and public safety services; type and size of socially vulnerable population secured; and degree to which essential health and social service facilities are able to provide services to a community during a future storm or weather event as a result of the implementation of a Proposed or Featured Project.

Cranford Drive Drainage Improvements

Cranford Drive Project Area
(MJ Engineering and Land Surveying, P.C.)

Demarest Kill at Cranford Drive (Elizabeth Matamoros)

Project Description:

This stormwater management improvement project includes the redesign of existing on-site drainage infrastructure and installation of new drainage using green infrastructure practices on Cranford Drive—north of Old Route 304 to the intersection of Cranford Drive with Route 304. Improvements will include: stream restoration and stabilization through regrading and placement of armored channel lining, brush matting, fiber rolls, rock weirs and vanes, boulder revetment, and retaining walls; regrading for approximately 5,500 linear feet; armored channel sections totaling approximately 500' (D50 12" Stone, 18" thick); replacement of various existing drainage pipes (15-18"); planted areas for flood storage include grass, shrubs, and trees; and safety fencing near retaining walls and steep slopes. This area has been identified as an area of extreme risk due to repetitive flooding by the Demarest Kill and has been identified by the Town of Clarkstown Storm Drainage Task Force as an urgent need.

Project Location

New City

Estimated Cost

The total project cost is \$3.5 million, of which \$2,100,000 would be assumed by the community and \$1,400,000 by Rockland County. Engineering design would be completed in house by the Clarkstown Department of Environmental Control and therefore engineering design fees are not anticipated.

Economic Benefits

Stormwater pollution prevention, management, and treatment creates costs for communities and residents. These costs can be offset or reduced by ensuring appropriately sized stormwater management infrastructure and incorporating green infrastructure practices, which in some cases can be less costly. Better management of stormwater runoff reduces energy costs, diminishes the impacts of flooding and flood related damages to residences and businesses, and reduces overall infrastructure costs.

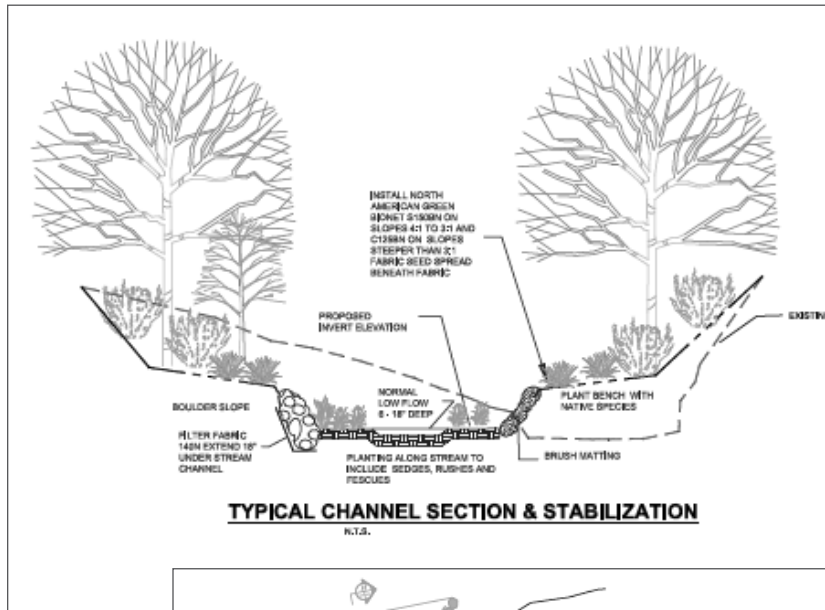

Environmental Benefits

Ensuring that stormwater management infrastructure is functioning properly and implementing green infrastructure practices, which rely on natural processes like evaporation, infiltration, and plant transpiration effectively and affordably complement traditional "gray" infrastructure, giving stormwater managers the ability to create integrated solutions to better serve the community and its residents. A shift to utilizing "green" and "gray" stormwater management practices creates more sustainable communities, that are more resilient to storm events.

Health and Social Service Benefits

The project would improve drainage to an area that has been identified by the community as extreme risk due to repetitive flooding, that frequently results in road closure, which impedes through travel by residents and emergency

Cranford Drive Drainage Improvements (cont'd)

Typical Channel Section & Stabilization, Cranford Drive Detail, June 11, 2014 (Town of Clarkstown, Department of Environmental Control)

service providers. Implementation of drainage improvements would minimize roadway flooding and closure. A shift to utilizing “green” and “gray” stormwater management practices would positively affect air and water quality, resulting in local and regional health benefits.

Cost-Benefit Analysis

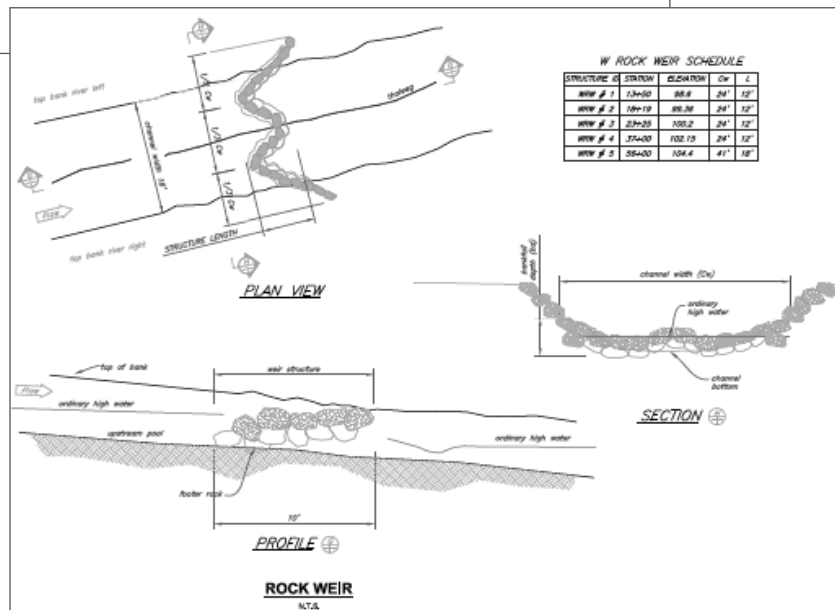

Implementation of this project would mitigate flooding along the stream corridor, increasing resiliency and sustainability. Flood mitigation would improve access for emergency services, reduce the risk of potential damage to property and approximately 47 homes, and reduce the cost of reconstruction and rehabilitation after storm events. It is anticipated these improvements would provide significant savings in municipal expenditures, such as roadway repair, repetitive drainage systems repair and provision of emergency services. Although no permanent jobs are likely to be created, the project is expected to result in approximately 25 full-time equivalent (FTE) short-term construction related jobs.

The useful life of this flood mitigation project would be over a period of 80-100 years. The anticipated routine maintenance of these improvements will be scheduled within the existing maintenance programs within the Town, and are anticipated to be covered within existing or future operating budgets without a specific cost increase required. Based on this analysis, the potential benefits of this project are believed to outweigh the financial investment of implementation.

Anticipated Reduction of Risk

Project improvements and fortifications along the stream channel corridor are anticipated to improve Exposure and Vulnerability conditions thereby reducing risk to five nearby assets. However, risk is not completely mitigated because assets remain in close proximity to the waterway.

Rock Weir Detail, Cranford Drive Detail, June 11, 2014 (Town of Clarkstown, Department of Environmental Control)

Cranford Drive Drainage Improvements (cont'd)

General Timeframe for Implementing Actions

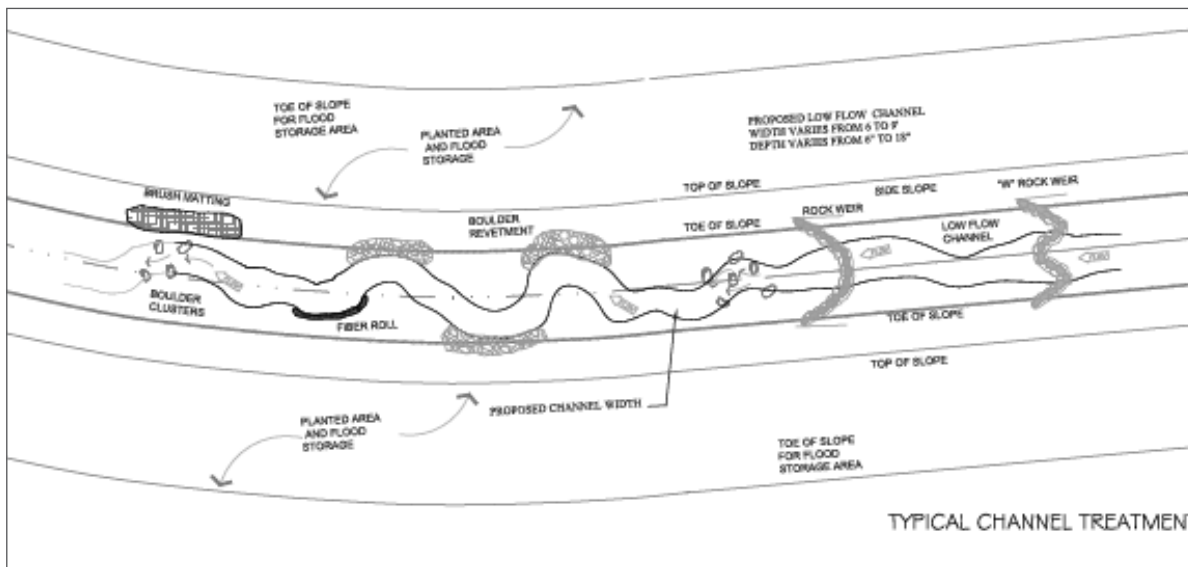

This project has been identified by the Town of Clarkstown Storm Drainage Task Force as an urgent need. The construction documents for this project are 70% complete and New York State Department of Environmental Conservation (NYS DEC) is currently reviewing the Town's proposal for this project in the context of their Article 15 Permit review. When funding is secured, it is anticipated that: permits will be secured within approximately six months (NYS DEC is currently reviewing the application for permits); the final construction drawings and project specifications will be completed within approximately two months; and the project will be bid through a Request for Proposal (RFP) process and awarded (approximately one month). Project construction is estimated to take 12 months.

Government Regulatory Requirements

NYS DEC is currently reviewing the Town's proposal for an Article 15, Protection of Waters (6NYCRR Part 608), and a Water Quality Certification permit for the "Cranford Drive Flood Amelioration Project" because a NYS DEC protected stream runs parallel to and crosses Cranford Drive. A U.S. Army Corps of Engineers (USACE) Article 10 Water Quality Certification. A permit from the Rockland County Drainage Agency may also be required.

Town of Clarkstown Department of Environmental Control.

Typical Channel Treatment, Cranford Drive Detail, June 11, 2014 (Town of Clarkstown, Department of Environmental Control)

Drainage Improvements to the Demarest Kill Stream

Demarest Kill Stream Project Area
(MJ Engineering and Land Surveying, P.C.)

Project Description

Flooding of and along various tributaries to the Demarest Kill Stream during Hurricane Irene resulted in significant damage to property and infrastructure in New City. This project includes stormwater management improvements to: redesign, rightsize, and modify the existing drainage infrastructure; reduce the potential for flood-related damages to residences and businesses; and reduce costs associated with their repair. The failure of the culvert under Hall Avenue adjacent to homes along Little Tor Road has resulted in the collapse of the headwall and a sink hole has formed. The Town of Clarkstown Storm Drainage Task Force identified this project as an urgent need.

The project would involve the rightsizing and replacement of the failed culvert and collapsed headwall on Hall Avenue just west of Lake Drive and diversion of the stormwater into the Virginia Street detention area. Improvements to the Virginia Street detention area to accommodate the additional flow would include design, engineering and construction of basins and berms. Additional stormwater management infrastructure improvements along Virginia Street include the modification of existing drainage lines and underground detention chambers to upgrade the existing system to higher detention capacity and prevent

surcharging of the system which currently causes flooding of properties and New York State (NYS) Route 304.

Project Location

New City

Estimated Cost

The capital cost to complete these improvements is estimated to be \$810,000 in total. This includes \$360,000 for the Hall Avenue Culvert and Headwall, \$150,000 for the Virginia Street Detention Area, and \$300,000 for the drainage improvements along Virginia Street.

Economic Benefits

During storm events, large volumes of stormwater exceed the capacity of the existing network of culverts, pipes, tunnels, and ditches along and adjacent to the Demarest Kill Stream. The overflow volumes have not only damaged the infrastructure, but their failure has also resulted in significant property and roadway damages. Implementing infrastructure improvements would reduce the potential for flooding related damages to residences and businesses, as well as costs associated with their repair.

Drainage Improvements to the Demarest Kill Stream (cont'd)

Environmental Benefits

Undersized drainage infrastructure can impede storm flows and consequently exacerbate upstream and downstream flooding conditions. Appropriately-sized infrastructure in the context of an overall assessment of storm flow routing is an important component of reducing flood damage. Replacing undersized infrastructure with appropriately-sized infrastructure improves stream function by increasing capacity in the channel to accommodate additional demand created by stormwater. Maintaining the natural channel will improve water quality and also prevent detrimental impacts to habitat for flora and fauna.

Health and Social Service Benefits

The project would improve drainage to a broad, dense residential area that has been identified by the Community as extreme risk due to repetitive flooding, that frequently results in road closure, which impedes through travel by residents and emergency service providers. Implementation of drainage improvements would minimize roadway flooding and closure.

Cost-Benefit Analysis

This project would provide long-term benefits through flood mitigation near the Demarest Kill, especially in the area of East Hall Avenue, South Little Tor Road, and Virginia Street. By mitigating flooding, this will provide for improved emergency response to areas that may otherwise be cut off during storm events, including approximately 34 homes. By reducing the risk of damage to roadways, infrastructure and property from flooding, this project would limit associated rehabilitation and reconstruction costs, resulting in significant savings in local government expenditure. Although no permanent jobs are likely to be created, the project is expected to create approximately six short-term full-time equivalent (FTE) construction jobs.

Drainage Improvements to the Demarest Kill Stream (cont'd)

The useful life of this flood mitigation project would be over a period of 80 years. The anticipated routine maintenance of these improvements will be scheduled within the existing maintenance programs within the Town, and are anticipated to be covered within existing or future operating budgets without a specific cost increase required. Based on this analysis, the potential benefits of this project are believed to outweigh the financial investment of implementation.

Anticipated Reduction of Risk

The culvert widening and headwall replacement on East Hall Avenue is anticipated to return the infrastructure to a functional condition. Implementation of this project would reduce risk to three adjacent assets through improved Vulnerability conditions. However some risk remains present because the Demarest Kill Stream still passes beneath the roadway, making it a potential constriction during a storm event. While improvements will increase the detention capacity of the stormwater system, the two Virginia Street assets remain located within the system's discharge area, so they will still be susceptible to flooding.

General Timeframe for Implementing Actions

Culvert and headwall: The survey work is 100% complete; preliminary design is 15% complete. Preliminary design of the Virginia Street drainage modifications is 80% complete. The project has been identified by the Town of Clarkstown Storm Drainage Task Force as an urgent need. Immediately upon receipt of funding, the final engineering design will be completed (anticipated two months); final construction drawings and project specifications will be completed (anticipated one month); the project will be bid through a Request for Proposal (RFP) process and awarded (anticipated one month). It is anticipated that project construction would take approximately three to months.

Government Regulatory Requirements

The Demarest Kill Stream is a Class "C" non-protected stream and therefore an Article 15 Permit, Protection of Waters Permit from New York State Department of Environmental Conservation (NYS DEC) is not required. However the project would likely require an U.S. Army Corps of Engineers (USACE) Clean Water Act Section 404 Permit for disturbance to "waters of the U.S.", which also requires Water Quality Certification (WQC) from NYS DEC. Local communities are required by the Federal Emergency Management Agency (FEMA) National Flood Insurance Program (NFIP) to prepare data for a revision to the Flood Insurance Rate Map (FIRM) within six months of the completion of any project that changes the base flood elevation at any location. This process is accomplished through a Letter of Map Revision to FEMA. A Town Highway Road Opening Permit will also be necessary.

Entity with Jurisdiction

Town of Clarkstown Department of Environmental Control.

Culvert at Hall Avenue (Elizabeth Matamoros)

Drainage Improvements to the Nauraushaun Brook Basin

Nauraushaun Brook Basin Project Area
(MJ Engineering and Land Surveying, P.C.)

Culvert at East Allison Avenue (Elizabeth Matamoros)

Project Description

The overtopping of the adjacent unnamed tributary to the nearby Nauraushaun Brook and resulting roadway flooding on East Alison Avenue during storms causes widespread flooding, road closures, and severely limits through travel for residents and emergency service workers to this densely developed residential neighborhood. The project would include redesign and resizing of the culvert under East Alison Avenue, resizing and replacement of stormwater drainage infrastructure on Blauvelt Road, from Townline Road to Lake Nanuet Drive including implementation of green infrastructure components, which may include: vegetated swales, bioretention, and stream bank restoration measures along the Nauraushaun Brook. The Town will be constructing a berm on the channel to serve as an interim flood mitigation measure until this design and construction of the full mitigation project is complete. This project has been recognized as an urgent need by the Town of Clarkstown Storm Drainage Task Force.

Project Location

Nanuet

Estimated Cost

The capital cost to complete these improvements is estimated to be \$500,000.

Economic Benefits

Rightsizing stormwater management infrastructure reduces stress to the system by accommodating increased volume, and extends the useful lifetime of the drainage system. When the system is sized appropriately, the potential for damage and early replacement and the labor and materials costs associated with this work is minimized.

Environmental Benefits

Undersized drainage infrastructure can impede storm flows and consequently exacerbate upstream and downstream flooding conditions. Appropriately-sized infrastructure in the context of an overall assessment of storm flow routing, is an important component of reducing flood damage. Replacing undersized infrastructure with appropriately-sized infrastructure improves stream function by increasing capacity in the channel to accommodate additional demand created by stormwater. Maintaining the natural channel will improve water quality and also prevent detrimental impacts to habitat for flora and fauna.

Drainage Improvements to the Nauraushaun Brook Basin (cont'd)

Health and Social Service Benefits

The project would improve drainage to an area that has been identified by the community as extreme risk due to repetitive flooding. Implementation of drainage improvements would significantly improve system behavior maximizing efficiency of the surrounding municipal infrastructure, protecting homes and residents, and maintaining roadway and emergency vehicle access to vulnerable neighborhoods during a disaster or flooding event.

Cost-Benefit Analysis

This project would provide long-term benefits through flood mitigation in the Nauraushaun Brook Basin, particularly in the area of East Alison Avenue and Blauvelt Road. By mitigating flooding, emergency response to areas that may otherwise be cut off during storm events including approximately 16 homes, will be improved. By reducing the risk of damage to roadways, infrastructure and property from flooding, this project would limit associated rehabilitation and reconstruction costs, resulting in major savings in local government expenditure. Although no permanent jobs are likely to be created, the project is expected to create approximately four full time equivalent (FTE) short-term construction jobs.

The useful life of this project is estimated to be over a period of 80 years for the concrete culvert on East Allison Avenue and over 40 years for the drainage infrastructure on Blauvelt Road. The anticipated routine maintenance of these improvements will be scheduled within the existing maintenance programs within the Town, and are anticipated to be covered within existing or future operating budgets without a specific cost increase required. Based on this analysis, the potential benefits of this project are believed to outweigh the financial investment of implementation.

Anticipated Reduction of Risk

While a larger culvert on East Allison Avenue will increase flow capacity, the curve in the stream at the culvert inlet could still lead to eddying, pooling, and scouring issues during extreme storm events. Implementation of this project is conservatively estimated to reduce risk to four Blauvelt Road assets because final design has not yet been completed. This reduction in risk is reflective of improved Vulnerability conditions.

General Timeframe for Implementing Actions

The conceptual design for the interim measure, the culvert resizing and the stream channel improvements is 100% complete. Preliminary design for the Blauvelt Road improvements is underway. The project has been identified by the Town of Clarkstown Storm Drainage Task Force as an urgent need. Immediately upon receipt of funding, the final engineering design will be completed (anticipated one month); final construction drawings and project specifications will be completed (anticipated one month); and the project will be bid through a Request for Proposal (RFP) process and awarded (anticipated one month). Project construction is estimated to last approximately three to six months.

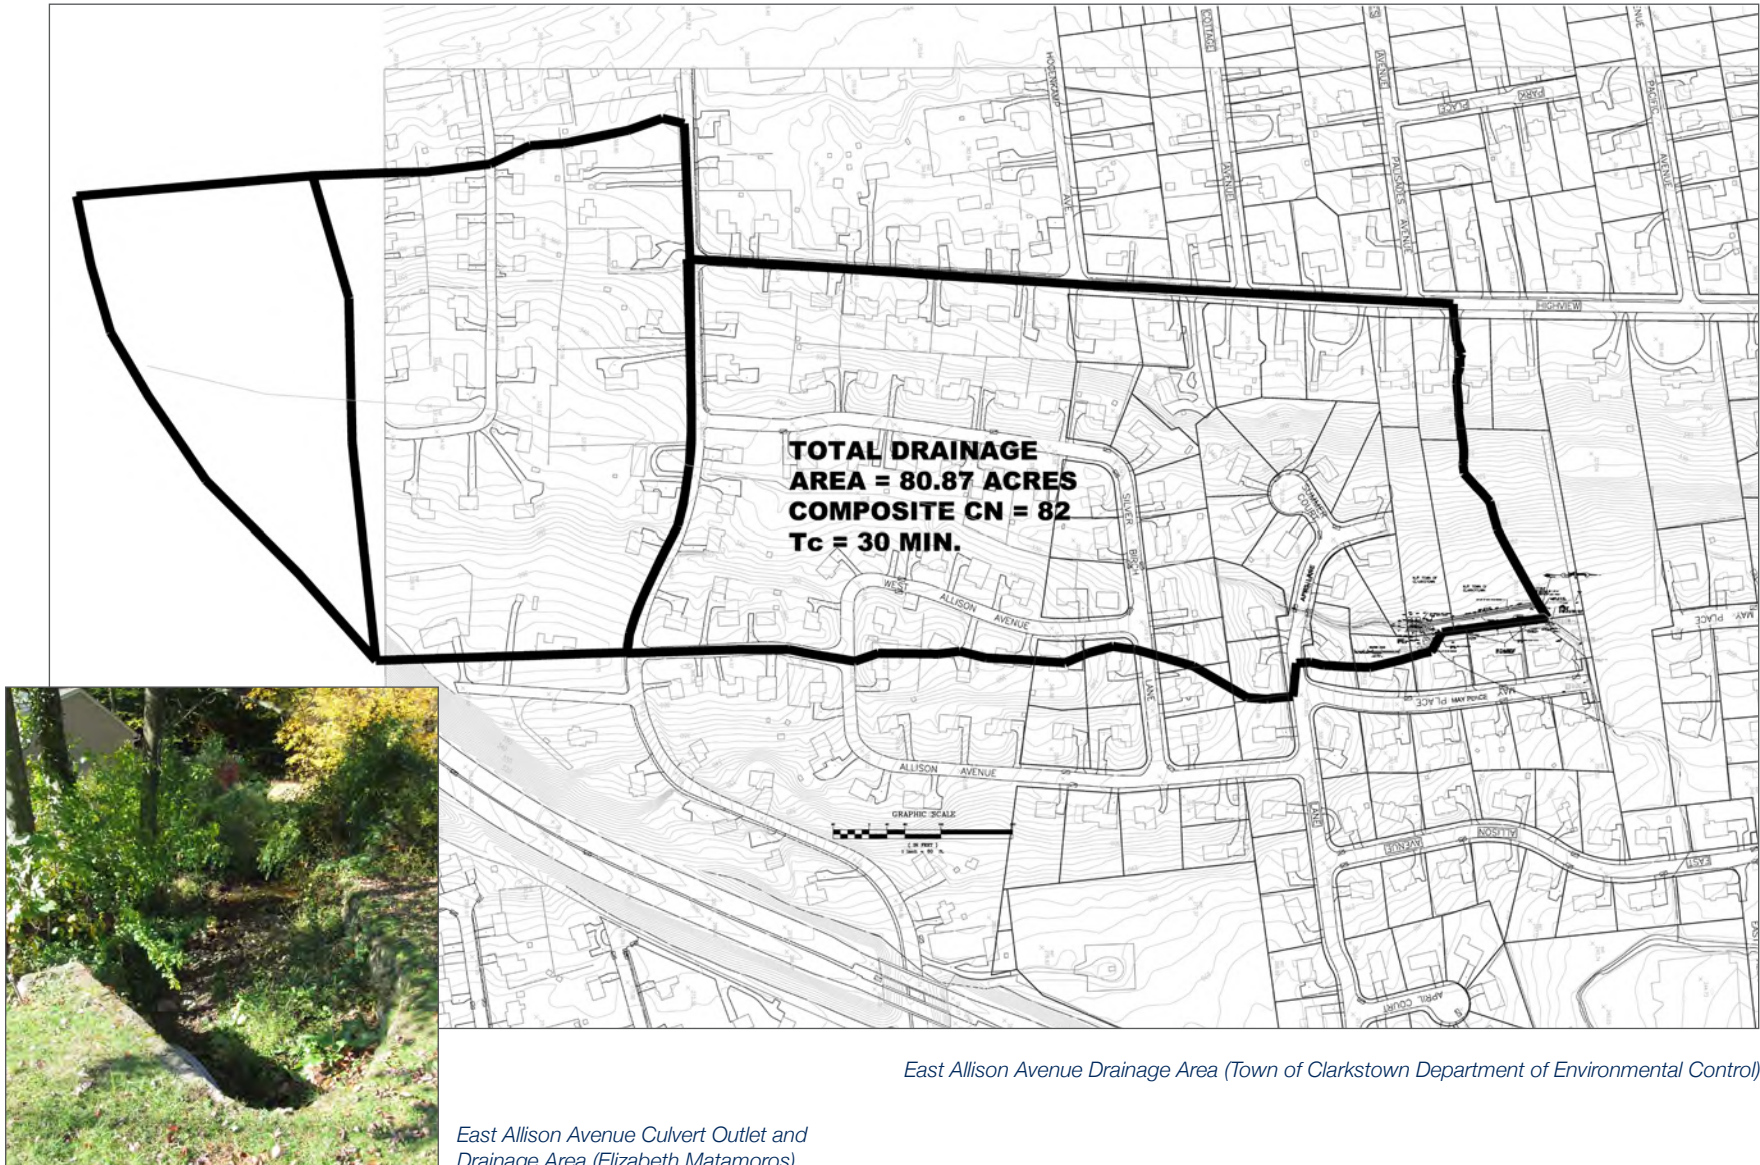

Government Regulatory Requirements

The project may require an Article 15 (6NYCRR Part 608), Protection of Waters Permit from the New York State Department of Environmental Conservation (NYS DEC). If the project includes in-stream work, it will also require a U.S. Army Corps of Engineers (USACE), Clean Water Act (Section 404) Permit. Local communities are required by the Federal Emergency Management Agency (FEMA) National Flood Insurance Program (NFIP) to prepare data for a revision to the Flood Insurance Rate Map (FIRM) within six months of the completion of any project that changes the base flood elevation at any location. This process is accomplished through a FEMA Letter of Map Revision. A Town Highway Road Opening Permit will also be necessary.

Drainage Improvements to the Nauraushaun Brook Basin (cont'd)

East Allison Avenue Drainage Area (Town of Clarkstown Department of Environmental Control)

Proposed Project

Project Description

is sized appropriately, the potential for damage and early replacement and the labor and materials costs associated with this work is minimized.

Environmental Benefits

Undersized drainage infrastructure can impede storm flows and consequently exacerbate upstream and downstream flooding conditions. Appropriately-sized infrastructure in the context of an overall assessment of storm flow routing, is an important component of reducing flood damage. Replacing undersized infrastructure with appropriately-sized infrastructure improves stream function by increasing capacity in the channel to accommodate additional demand created by stormwater.

Project Location

Nanuet

Estimated Cost

The capital cost to complete the engineering and implementation of these improvements is estimated to be \$1,400,000.

Economic Benefits

Rightsizing stormwater management infrastructure reduces stress to the system by accommodating increased demand, and extends the useful lifetime of the drainage system. When the system

Health and Social Service Benefits

The project would improve drainage to an area that has been identified by the community as extreme risk due to repetitive flooding. Implementation of drainage improvements would significantly improve system behavior maximizing efficiency of the surrounding municipal infrastructure, protecting homes and residents, and maintaining roadway and emergency vehicle access to vulnerable neighborhoods during a disaster or flooding event.

Fredric Street Drainage Improvements (cont'd)

Cost-Benefit Analysis

Implementation of this project would result in long-term sustainable benefits by reducing the risk of flooding of the roadways and approximately 50 homes in the target area for the foreseeable future. Although no permanent jobs are likely to be created, the project is expected to create approximately 10 full-time equivalent (FTE) short-term construction related jobs. In addition, the reduction in flooding on roadways, infrastructure and property would result in more efficient emergency response to the adjacent residential areas that would be otherwise cut off during flooding events, increasing the Town's resiliency and ability to recover more quickly.

The useful life of this flood mitigation project would be over a period of 40 years. The anticipated routine maintenance of these improvements will be scheduled within the existing maintenance programs of the Town, and are anticipated to be covered within existing or future operating budgets without a specific cost increase required. Based on this analysis, the potential benefits of this project are believed to outweigh the financial investment of implementation.

Anticipated Reduction of Risk

Following implementation of the proposed project, the estimated risk reduction for the New Holland Village Condominiums asset was significant, with risk reduction to three assets and likely elimination of risk to two assets. However, even with upslope runoff diverted, flood risks from the nearby Pascack Brook will remain. The estimated risk reduction for the Charles Street assets is dramatic because project actions are anticipated to remedy the localized drainage issues, thereby eliminating the risk to the area. The reduction in risk is achieved through improved Exposure and Vulnerability conditions.

General Timeframe for Implementing Actions

Hydraulic analysis and preliminary design is 100% complete (Construction Documents are 30% complete). The project has been identified by the Town of Clarkstown Storm Drainage Task Force as an urgent need. Immediately upon receipt of funding, the final engineering design will be completed

(anticipated two months); final construction drawings and project specifications will be completed (anticipated one month); and the project will be bid through a Request for Proposal (RFP) process and awarded (anticipated one month). Project construction is estimated to take 6-12 months.

Government Regulatory Requirements

The Town currently holds several drainage easements within the New Holland Village Condominiums residential development, another such easement is required. The project may require an Article 15 (NYCRR Part 608), Protection of Waters Permit and a Water Quality Certification (WQC) from the New York State Department of Environmental Conservation (NYS DEC) and will likely require an Army Corps of Engineers (USACE) Clean Water Act Section 404 permit for disturbance to "waters of the U.S." A permit from the Rockland County Drainage Agency and a Town Highway Road Opening permit will also be required.

Proposed Project

Clarkstown NYRCR Plan

Fredric Street Drainage Improvements, April 23, 2013 (Town of Clarkstown, Department of Environmental Control)

Old Haverstraw Road Drainage Improvements

*Sitting Area at Swartwout Lake near Old Haverstraw Road
(Elizabeth Matamoros)*

Project Description

This stormwater management infrastructure project involves resizing and replacing existing deteriorated and undersized drainage lines to adequately drain areas along Old Haverstraw Road. This project has been recognized as an urgent need by the Town of Clarkstown Storm Drainage Task Force.

Project Location

Congers

Estimated Cost

The capital cost to complete these improvements is estimated to be \$750,000.

Economic Benefits

Rightsizing stormwater management infrastructure reduces stress to the system by accommodating increased demand, and extends the useful lifetime of the drainage system. When the system is sized appropriately, the potential for damage and early replacement and the labor and materials costs associated with this work is minimized.

Environmental Benefits

Undersized drainage infrastructure can impede storm flows and consequently exacerbate upstream and downstream flooding conditions. Appropriately-sized infrastructure in the context of an overall

assessment of storm flow routing is an important component of reducing flood damage. Replacing undersized infrastructure with appropriately-sized infrastructure improves stream function by increasing capacity in the channel to accommodate additional demand created by stormwater.

Health and Social Service Benefits

The project would improve drainage to an area that has been identified by the community as extreme risk due to repetitive flooding. Implementation of drainage improvements would significantly improve system behavior maximizing efficiency of the surrounding municipal infrastructure, protecting homes and residents, and maintaining roadway and emergency vehicle access to vulnerable neighborhoods.

Cost-Benefit Analysis

Implementation of this project would result in long-term sustainable benefits by reducing the risk of flooding of the roadways and approximately 15 homes in the target area for the foreseeable future. Although no permanent jobs are likely to be created, the project is expected to create approximately five full-time equivalent (FTE) short-term construction jobs. In addition, the reduction in flooding on roadways, infrastructure and property would result in more efficient emergency response to adjacent residential areas that would be otherwise cut off

Old Haverstraw Road Drainage Improvements (cont'd)

during flooding events, increasing the Town's resiliency and ability to recover more quickly.

The useful life of this flood mitigation project would be over a period of 40 years. The anticipated routine maintenance of these improvements will be scheduled within the existing maintenance programs of the Town, and are anticipated to be covered within existing or future operating budgets without a specific cost increase required. Based on this analysis, the potential benefits of this project are believed to outweigh the financial investment of implementation.

Anticipated Reduction of Risk

The estimated risk reduction to three assets with project implementation is anticipated to be significant. The project is anticipated to remedy the localized drainage issues, thereby likely eliminating the risk to the area. Both Exposure conditions are eliminated and Vulnerability factors are greatly reduced.

General Timeframe for Implementing Actions

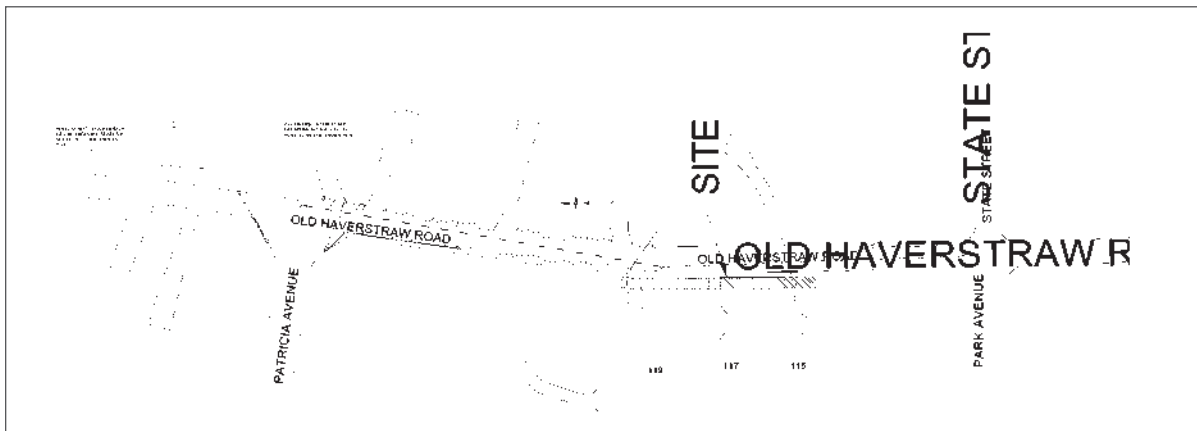

The project has been identified by the Storm Drainage Task Force as an urgent need. Immediately upon receipt of funding, the final engineering design will be completed (anticipated one month); final construction drawings and project specifications will be completed (anticipated one month); the project will be bid through a Request for Proposal (RFP) process and awarded (anticipated one month). Project construction is estimated to take three to six months.

Government Regulatory Requirements

Depending on the exact location of the proposed improvements, there may be a need for Article 15 (NYCRR Part 608), Protection of Waters and Article 24 Freshwater Wetlands (HS-8) Permits from the New York State Department of Environmental Conservation (NYS DEC). A Town Highway Road Opening permit will also be required.

Entity with Jurisdiction

Town of Clarkstown Department of Environmental Control.

*Old Haverstraw Road – Drainage Improvement Project Site Plan, October 15, 2014
(Town of Clarkstown Department of Environmental Control)*

South Mountain Road Drainage Improvements

*South Mountain Road Drainage Improvements Project Area
(MJ Engineering and Land Surveying, P.C.)*

Project Description

This comprehensive feasibility analysis and implementation program would examine the stormwater management and drainage infrastructure along South Mountain Road from its westerly terminus at the Town of Clarkstown municipal border to its eastern intersection with Old Route 304. Although final design has been completed for several smaller projects along South Mountain Road, (Church/Centenary Road; two projects west of North Little Tor Road) a corridor-wide analysis is warranted. The project would include various coordinated “green” and “gray” stormwater management improvements along the entire length of South Mountain Road. Incorporation of bioswales, pervious pavement, and other natural systems to encourage infiltration and reduce peak flows to streets and storm sewers will protect clean drinking water, provide water for irrigation and protect residents and businesses from flooding. This project has been recognized as an urgent need by the Town of Clarkstown Storm Drainage Task Force.

Project Location

New City

Estimated Cost

The capital cost to conduct the feasibility analysis and implement improvements is estimated to be \$1,000,000.

Economic Benefits

Designing and implementing a holistic and coordinated system of stormwater management improvements along the South Mountain Road corridor, which would be implemented in phases is economically more efficient than incorporating improvements on an as needed basis. Implementing a combination of “gray” and “green” infrastructure improvements will reduce the potential for flooding related damages to residences and businesses, and costs associated with their repair.

Environmental Benefits

Ensuring that stormwater management infrastructure is functioning properly and implementing green infrastructure practices—which rely on natural processes like evaporation, infiltration, and plant transpiration—effectively and affordably complement traditional “gray” infrastructure practices and gives stormwater managers the ability to create integrated solutions to better serve the community and its residents. Benefits include improved water quality, reduced stormwater volume, improved air quality, and reduced heat island effect in densely developed areas. A shift to utilizing “green” and “gray” stormwater management practices creates more sustainable communities, that are more resilient to storm events.

South Mountain Road Drainage Improvements (cont'd)

Health and Social Service Benefits

Improved management of stormwater to an area that has been identified by the community as extreme risk due to repetitive flooding would minimize widespread road closures that inhibit through travel for residents and emergency service providers during storm events.

Cost-Benefit Analysis

Implementation of this project would provide flood mitigation to South Mountain Road for the foreseeable future. Although no direct increase in economic activity is expected, such improvement measures would help maintain access for emergency vehicles to the northern portion of the community, and approximately 50 homes. In addition, reduced flooding of roadways, infrastructure, and property would result in lower reconstruction and rehabilitation costs following future storm events. Although no permanent jobs are likely to be created, the project is expected to create approximately seven full-time equivalent (FTE) short-term construction jobs.

The useful life of this flood mitigation project would be over a period of 40 years. The anticipated routine maintenance of these improvements will be scheduled within the existing Town maintenance programs, and are anticipated to be covered within existing or future operating budgets without a specific cost increase required. Based on this analysis, the potential benefits of this project are believed to outweigh the financial investment of implementation.

Anticipated Reduction of Risk

This project would include various coordinated stormwater management improvements along South Mountain Road to increase roadway drainage capacity and reduce localized flooding during heavy storms. Because many of the project components are still in the preliminary design phase, it is difficult to estimate the reduction of risk. Therefore, the estimated reduction of risk is conservative, with risk reduction to two assets.

General Timeframe for Implementing Actions

Preliminary design of several discrete projects along the corridor has been completed. However, this project includes a comprehensive analysis of the South Mountain Road corridor. Immediately upon receipt of funding, the hydrology and hydraulics will be analyzed (anticipated four months); the final engineering design will be completed (anticipated two months); final construction drawings and project specifications will be completed (anticipated three months); the project will be bid through a Request for Proposal (RFP) process and awarded (anticipated one month). Project construction is estimated to take 12-18 months.

Government Regulatory Requirements

There is a New York State (NYS) Regulated Wetland (HS-7) and Protected Stream adjacent to most of South Mountain Road. The project may require Article 15 (NYCRR Part 608), Protection of Waters and Article 24 Freshwater Wetland Permits from the New York State Department of Environmental Conservation (NYS DEC). A Town Highway Road Opening permit will also be required.

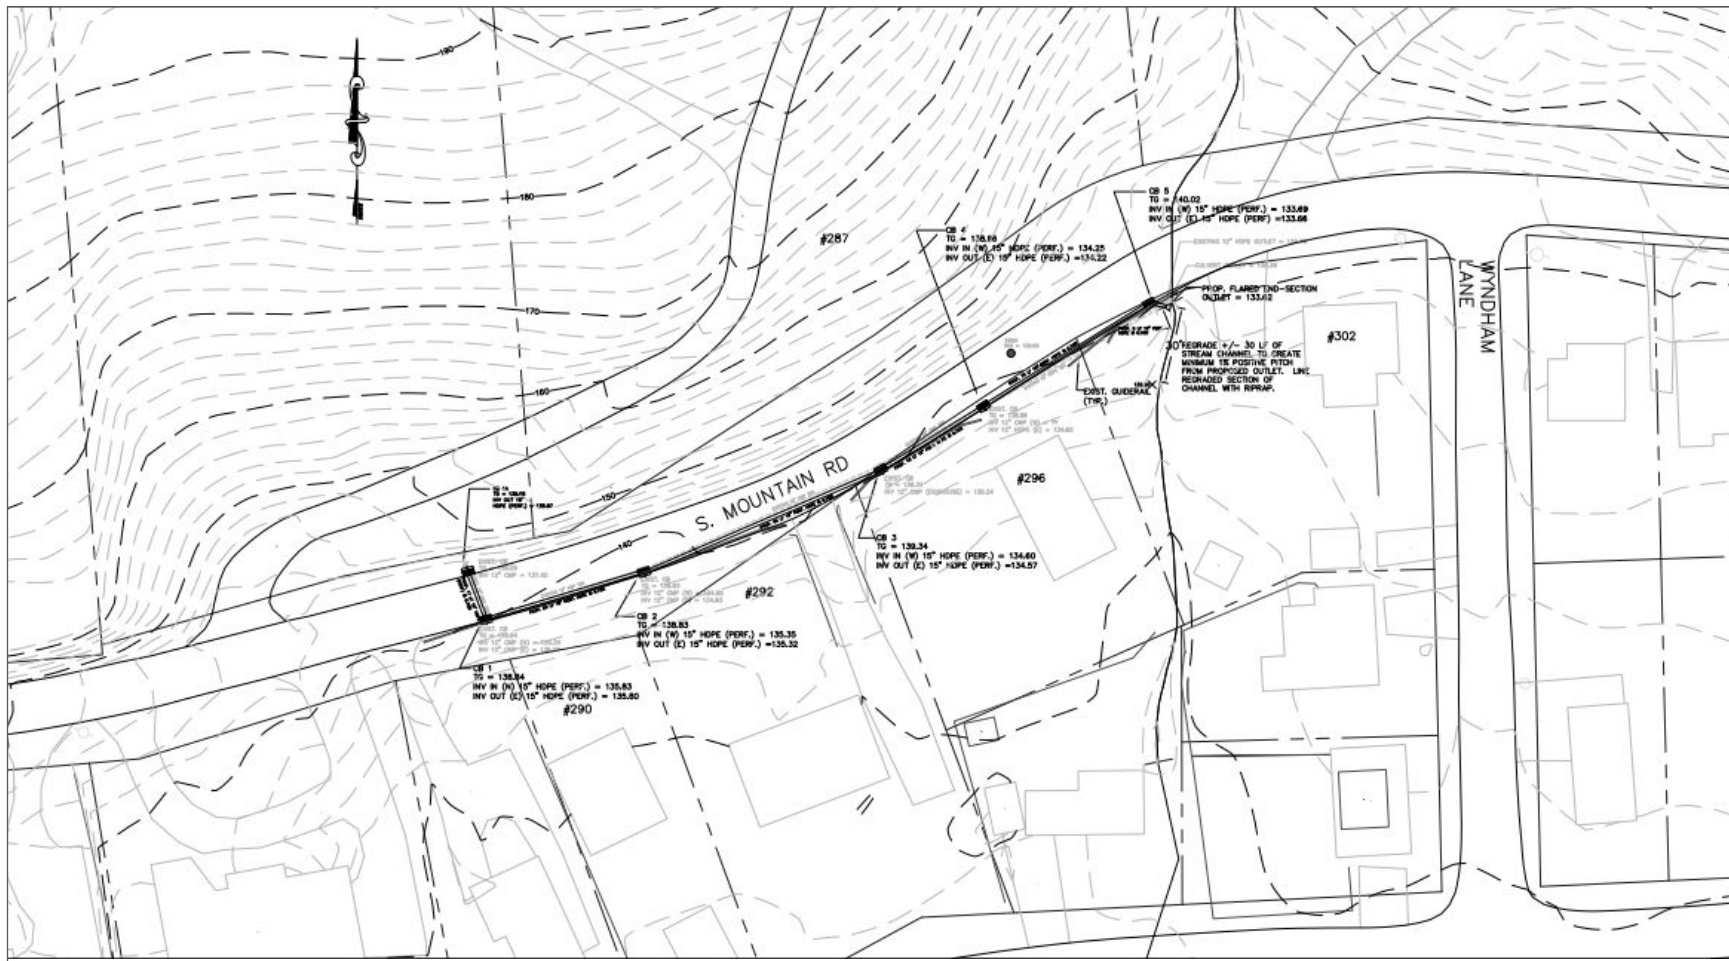

Entity with Jurisdiction

Town of Clarkstown Department of Environmental Control.

South Mountain Road Catch Basin (Elizabeth Matamoros)

South Mountain Road Drainage Improvements (cont'd)

South Mountain Road Drainage Improvements – Site Plan February 22, 2008 (Town of Clarkstown, Department of Environmental Control)

Cul-de-sac Island Reconstruction

Brentwood Drive Cul-de-sac (Dennis Letson)

Project Description

The current design of 143 cul-de-sacs consists of raised center islands that significantly impact the drainage profiles of these Town roads causing runoff and ponding issues. This project includes the removal of these existing raised cul-de-sac planting islands, installation of depressed and replanted bio-filter islands and re-profiling of existing cul-de-sac pavements to route surface drainage to the bio-filter. This project would include testing/analysis of soil infiltration rates in all the cul-de-sacs to determine whether the bio-filters would be designed with or without infiltration. The conversion of these islands will promote “green” infrastructure practices, provide water quality improvement, reduce peak rates of run-off from these paved areas to reduce flooding locally, and reduce streamflow quantities and velocities. The project can be expanded to create new bio-filter areas in cul-de-sacs which do not presently have center planting islands.

Project Location

Town-wide

Estimated Cost

The capital cost to design and implement these improvements is estimated to be approximately \$35,000-\$45,000 per planted island.

Economic Benefits

The current configuration of the planted/landscaped medians in 143 cul-de-sacs throughout the Town, requires maintenance and upkeep and associated labor and materials costs to the Town. Removing the planted medians and replacing them with bio-filtration systems/drainage swales will significantly reduce maintenance costs to the Town.

Cul-de-sac Island Reconstruction (cont'd)

Environmental Benefits

This project will reprofile the cul-de-sacs, remove the raised planted medians and replace them with bio-filter/bio-retention basins, which will capture roadway run-off resulting in a substantial improvement to water quality. Generally, bioretention/filtration effectively removes suspended solids through concentration reduction. In addition, runoff volume reduction promotes removal of roadway pollutants, and water quality benefits associated with hydrologic performance. A potential additional benefit would include minimizing pavement and the resulting increase in pervious surface.

Health and Social Service Benefits

Reduction of roadway runoff, improved drainage and the resulting reduction in roadway flooding will facilitate uninterrupted access to vital health and social service facilities and providers and ease of access for emergency responders and evacuation of residents.

Cost-Benefit Analysis

Implementing green infrastructure improvements to replace an existing labor- and maintenance-intensive roadway design would save time and Town manpower/financial resources thereby providing significant cost savings. Green infrastructure improvements by design have a very long useful life with annual maintenance monitoring that would be significantly less than what is currently required for the infrastructure in place. Based on this analysis, the potential benefits of this project are believed to outweigh the financial investment of implementation. Although no permanent jobs are likely to be created, implementation of improvements for each cul-de-sac would be expected to create one full-time equivalent short-term construction job.

Anticipated Reduction of Risk

Implementing natural stormwater management infrastructure reduces the risk of localized flooding caused by storm events. This would benefit the entire community by protecting assets, property and infrastructure.

General Timeframe for Implementing Actions

The Town would design and implement several pilot test cases, within approximately three months, once funding is secured. Design and implementation of improvements for all 143 cul-de-sacs, would be completed in several phases within one to three years of initiating the project.

Government Regulatory Requirements

This project will require a Town Road Opening permit. The conversion of the islands will disturb less than one acre, which is below the New York State Department of Environmental Conservation (NYS DEC) General Permit threshold.

Entity with Jurisdiction

Town of Clarkstown.

Digital Inventory of Stormwater Management Infrastructure

East Allison Avenue Culvert – Example of Stormwater Drainage Infrastructure (Elizabeth Matamoros)

Town of Clarkstown Storm Drainage Infrastructure GIS Database (Town of Clarkstown GIS)

Project Description

The Clarkstown Planning Department has an ongoing project to augment their Geographic Information Systems (GIS) database with a comprehensive digital inventory of the approximately 12,000 catch basins within the Town using hand-held Global Positioning Systems (GPS) locators. Currently, information is collected by a limited number of volunteers working only in the summer months. It is estimated that at the current rate of data collection, the inventory would take approximately ten years to complete. This project would allow the Town to retain professional services to complete the inventory and monitoring system. With the retention of professional services and a defined, contractual schedule, it is anticipated that the project could be completed within one year. When completed, the Town's GIS database would include size, date of installation, inspection and maintenance schedules for replacement or upgrades of catch basins. The system would also be used to track the status of individual projects through final design, permitting, construction, inspection, maintenance and performance monitoring and track various funding initiatives and grant programs to evaluate success. This comprehensive digital inventory is an essential component of pre-storm preparedness, allowing the Town to appropriately size and maintain their infrastructure to accommodate high intensity stream flow, an issue that arose during past storm events.

Project Location

Town-wide

Estimated Cost

The capital cost to retain professional services to complete this inventory and monitoring system is estimated to be \$200,000.

Economic Benefits

Once the stormwater management infrastructure database is complete, the personnel and financial resources that would be required to keep it up to date would be minimal. Having an inventory of the inspection and maintenance schedules for replacement or upgrades of catch basins will allow the Town to budget for these improvements and minimize the necessity for emergency repairs, which can be expensive and disruptive. Proper scheduled maintenance will increase the lifetime of the infrastructure, reducing the frequency of and costs for replacement.

Environmental Benefits

In the event of a hazardous material spill, the Town can use the database to pinpoint the location of drainage infrastructure, intercept spills and provide absorption materials to prevent contamination through the Town's storm drainage systems protecting the environment from hazardous substance contamination.

Digital Inventory of Stormwater Management Infrastructure (cont'd)

Health and Social Service Benefits

In the event of a hazardous material spill, the Town can access the database and provide absorption materials in adjacent storm drainage infrastructure to prevent contamination through the Town's storm drainage systems, thereby protecting public health from hazardous substances.

Additional Benefits

A comprehensive database of critical stormwater management infrastructure would not only allow for better tracking to improve the delivery of future projects, but it could also be used to create reports to document implementation progress for key funders and stakeholders.

Cost-Benefit Analysis

This project would save time and resources when locating, assessing and repairing infrastructure throughout the Town, thereby providing significant cost savings. By identifying improvements and repairing stormwater infrastructure before a storm, the risk of damage during a storm would be reduced, diminishing post-storm damages. Where repairs are warranted, they could be done in a targeted, cost-efficient manner.

This project would have a very long useful life with inventory updates as needed, likely annually. The anticipated maintenance and performance monitoring of the inventory will be completed within the existing Planning Department utilizing existing GIS staff, and are anticipated to be covered within existing or future operating budgets without a specific cost increase required. Based on this analysis, the potential benefits of this project are believed to outweigh the financial investment of implementation.

Anticipated Reduction of Risk

The digital inventory will indirectly reduce risk to assets by creating an organized accessible database of stormwater infrastructure throughout the Town. The comprehensive inventory can be searched for information on installation, condition, maintenance and replacement schedules, and can identify critical location closures during emergency events.

General Timeframe for Implementing Actions

The current data collection process includes seasonal Ameri-Corps volunteers supervised by the Town of Clarkstown Planning Department and is estimated to be approximately 15% complete, including data entry into the GIS database. With the implementation of this project, professional services would replace the volunteer activities and project completion is estimated at approximately 12-18 months, once funding is secured. A Request for Proposals (RFP) for professional services would be procured to survey locations and sizes of stormwater infrastructure.

Government Regulatory Requirements

No permits will be necessary to implement this project.

Entity with Jurisdiction

Town of Clarkstown Department of Planning.

Implementation of Post-Residential Buyout Program Measures for Flood Protection

Schematic of Flood Risk to Residences within the Floodplain (USGS)

Project Description

This project proposes conducting a feasibility study for stormwater management initiatives and parks restoration projects (repurposing newly acquired open space parcels for flood control improvements) for parcels acquired by the Town through Federal Emergency Management Agency's (FEMA's) Hazard Mitigation Grant Program (HMGP) residential buyout program. If the Town receives grant funding for the buyout, those residential parcels that would be acquired by the Town would need to remain undeveloped in perpetuity. As such, this project would examine the potential for multi-purpose uses for this newly vacant land as both parkland/open space and for flood control measures. This project would identify candidate parcels, which would likely be a subset of the parcels acquired by the Town (i.e., not all parcels will be suitable for repurposing) and design site specific improvements based on geographic conditions, such as topography, adjacent streams or waterbodies and the corresponding floodplain. For those parcels that are not suitable for active use, design would include minimal landscape improvements for passive use or reclaiming as natural area, including seeding and tree-planting.

Project Location

Town-wide

Estimated Cost

The capital cost to conduct this study is estimated to be \$50,000 feasibility. It is anticipated that engineering design for the proposed improvements would be completed in-house.

Economic Benefits

Repurposing open space and parkland for use as natural flood control would allow the Town to reap multiple economic benefits, including potential tourism related spending resulting from visitors attracted by newly created recreation areas. Creating an interconnected green space system reduces flood control and stormwater management cost, resulting in a significant financial benefit gained when green infrastructure reduces the need for built infrastructure.

Environmental Benefits

Parks and open spaces protect biological diversity and preserve essential ecological functions while serving as a place for recreation and civic engagement. A network of open spaces and parks provides pathways for wildlife moving from one isolated natural area to another. When designed to include stream networks, wetlands, and other low-lying areas, a well planned green space system can provide numerous stormwater management benefits, including storing, carrying, and filtering storm runoff.

Implementation of Post-Residential Buyout Program Measures for Flood Protection (cont'd)

Health and Social Service Benefits

Creating an interconnected network of parks and greenspaces connects people and neighborhoods, provides opportunities for exercise and enhances emotional well-being by bringing nature “close to home.”

Cost-Benefit Analysis

Restoring residential buyout land to greenspace with the inclusion of storm-water facilities would create sustainable flood mitigation areas and increase the Community’s resilience. This would lead to savings in local government expenditures by reducing the risk of flooding to residences, infrastructure and property as well as the level of needed emergency response during storm and flood events.

The risk to homes in the buyout area would be eliminated as they are removed and risk to adjacent assets would decrease as flood mitigation measures are implemented. In addition, the reduction in impervious surface would result in greater water detention and less runoff. The useful life of this flood mitigation project would be over a period of 80-100 years. The anticipated routine maintenance of these improvements will be scheduled within the existing Town maintenance programs, and are anticipated to be covered within existing or future operating budgets without a specific cost increase required. Based on this analysis, the potential benefits of this project are believed to outweigh the financial investment of implementation.

Anticipated Reduction of Risk

Creating additional flood control and retention areas in existing and newly acquired parks and open space would reduce risk of flooding in residential areas, roadways, and other critical infrastructure prone to flooding by reducing impervious surface and creating additional flood retention areas.

General Timeframe for Implementing Actions

This project would be implemented following the completion of the HMGP residential buyout program. While the design/disposition of the newly acquired parcels could occur concurrently with the buyouts and any necessary demolition, projects to repurpose open space for flood control and parkland could be implemented after the land is cleared. Immediately upon receipt of funding, the demolition and restoration designs can begin. Project construction is estimated to take 12-24 months, dependent on FEMA processing.

Government Regulatory Requirements

An Article 24 Freshwater Wetlands permit from the U.S. Army Corps of Engineers (USACE) may also be required depending on the location of the proposed improvements.

Entity with Jurisdiction

Town of Clarkstown, Federal Emergency Management Agency (FEMA), New York State Office of Emergency Management (NYS OEM).

Jeffrey Place Drainage Improvements

Jeffrey Place Project Area (MJ Engineering and Land Surveying, P.C.)

Project Description

This stormwater management infrastructure project includes the excavation of an 11-foot trench to allow for the replacement of a drainage culvert. The project is located on Jeffrey Place, just south of Old Mill Road. This project has been recognized as an urgent need by the Town of Clarkstown Storm Drainage Task Force.

Project Location

Valley Cottage

Estimated Cost

The capital cost to complete these improvements is estimated to be \$500,000.

Economic Benefits

The replacement of the existing undersized culvert along Jeffrey Place requires the excavation of a trench at an approximate depth of 11 feet will result in the extension of the useful lifetime of the infrastructure and associated cost savings.

Environmental Benefits

Undersized culverts can impede storm flows and consequently exacerbate upstream and downstream flooding conditions. Resizing culverts, in the context of an overall assessment of storm flow routing, is an important component of reducing flood damage. Replacing an undersized culvert

with appropriately sized infrastructure improves stream function by increasing capacity in the channel to accommodate additional demand created by stormwater.

Health and Social Service Benefits

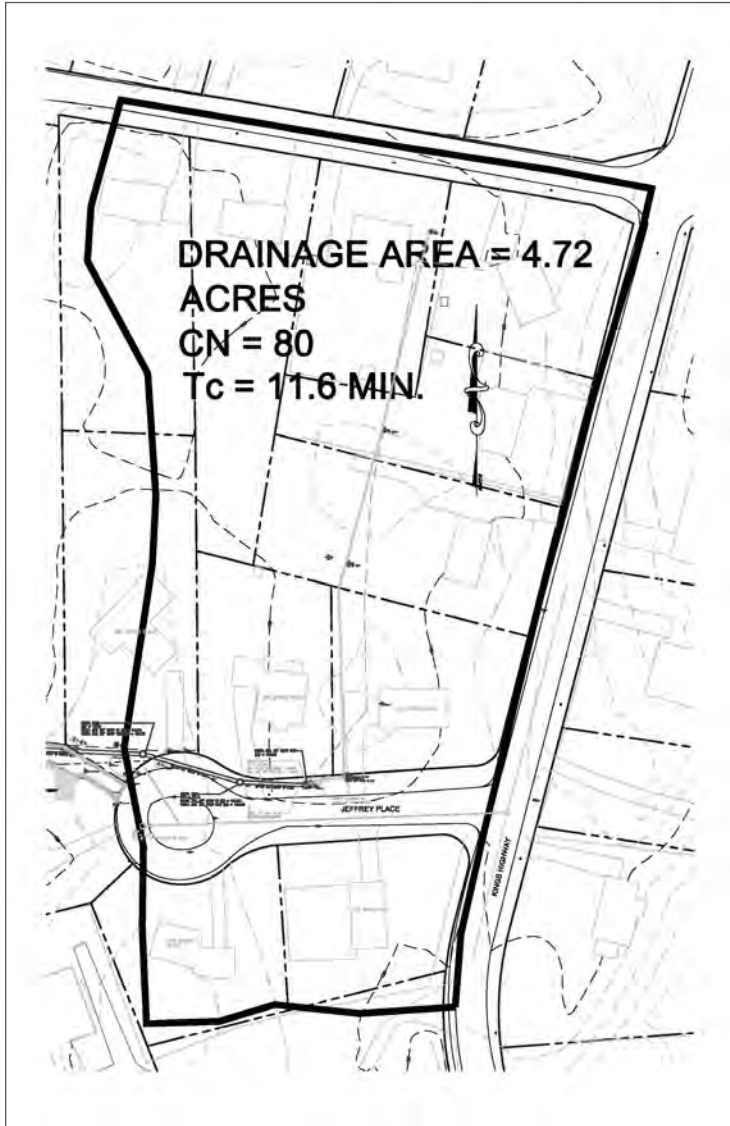

The Town will benefit from improved drainage and the resulting reduction in roadway flooding will provide uninterrupted access to vital health and social service facilities and providers.

Cost-Benefit Analysis

This project would provide long-term benefits through permanent flood mitigation on Jeffrey Place. By mitigating flooding, this project will improve emergency response to areas that may otherwise be cut off during storm events. The reduced risk of flooding resulting from this project would lower the potential damage to roadways, infrastructure, and property, which would limit rehabilitation and reconstruction costs, thus resulting in savings of local government expenditures. Although no permanent jobs are likely to be created, the project is expected to create approximately four full-time equivalent (FTE) short-term construction jobs.

The implementation of this project would eliminate the risk to the two homes within the Jeffrey Place neighborhood. The useful life of this flood mitigation would be over a period of 60 years. The anticipated routine

Jeffrey Place Drainage Improvements (cont'd)

Jeffrey Place Drainage Area, August 10, 2014 (Town of Clarkstown, Department of Environmental Control)

maintenance of these improvements will be scheduled within the existing Town maintenance programs, and are anticipated to be covered within existing or future operating budgets without a specific cost increase required. Based on this analysis, the potential benefits of this project are believed to outweigh the financial investment of implementation.

Anticipated Reduction of Risk

The estimated risk reduction for this asset is substantial as the project is anticipated to alleviate the localized drainage issues on the street. The Exposure conditions are likely eliminated and Vulnerability factors greatly reduced, thereby also greatly reducing risk to the area.

General Timeframe for Implementing Actions

Immediately upon receipt of funding, the final construction drawings and project specifications will be completed (anticipated two months). The project will be bid through a Request for Proposal (RFP) process and awarded (anticipated one month). Project construction is estimated to take approximately three months.

Government Regulatory Requirements

The class of stream changes near this location and therefore additional information is necessary to determine the permit requirements. The project may require an Article 15 (NYCRR Part 608), Protection of Water Permit from the New York State Department of Environmental Conservation (NYS DEC). A Town Highway Road Opening permit will also be required.

Entity with Jurisdiction

Town of Clarkstown Department of Environmental Control.

Featured Project

Clarkstown NYRCR Plan

Pineview Road Storm Drainage Improvements

Pineview Road Project Area
(MJ Engineering and Land Surveying, P.C.)

Project Description

This project proposes the installation of a levee structure to provide flood protection to properties that repeatedly flood along Pineview Road. This project has been recognized as an urgent need by the Town of Clarkstown Storm Drainage Task Force.

Project Location

West Nyack

Estimated Cost

The capital cost to complete these improvements is estimated to be \$500,000.

Economic Benefits

Installation of a levee in the vicinity of Pineview Avenue would protect approximately two homes in the low-lying residential neighborhood that has been subject to repeated flood damage. Minimizing flood damage to these homes would eliminate the financial consequences of repeated repair.

Health and Social Service Benefits

The construction of a levee structure would prevent flooding to a residential neighborhood that has limited roadway access due to the CSX rail line. Diverting stormwater flow away from this neighborhood would protect residents and minimize the potential for road closure and resulting disruption of access by emergency service providers due to inundation during and after storm events.

Cost-Benefit Analysis

Implementation of this project would permanently mitigate flooding along the Hackensack River and Pineview Road resulting in sustainable benefits in the foreseeable future. Reduced flooding and improved access would result in more efficient emergency response efforts, reduction of vulnerability of public facilities and infrastructure, and lower reconstruction and rehabilitation costs following future storm events.

The useful life of this flood mitigation would be over a period of 80 years. The anticipated routine maintenance of these improvements will be scheduled within the existing Town maintenance programs, and are anticipated to be covered within existing or future operating budgets without a specific cost increase required. Based on this analysis, the potential benefits of this project are believed to outweigh the financial investment of implementation.

Anticipated Reduction of Risk

The levee structure is yet to be advanced to preliminary design, however, it was estimated that risk reduction benefits for one asset would be moderate through improved Vulnerability conditions. Even with protection, these assets would still be proximate to significant floodplains and a confluence of streams keeping the Exposure conditions constant.

Pineview Road Storm Drainage Improvements (cont'd)

Pineview Road (Elizabeth Matamoros)

General Timeframe for Implementing Actions

Immediately upon receipt of funding, the final construction drawings and project specifications will be completed (anticipated two months); the project will be bid through the Request for Proposals (RFP) process and awarded (anticipated one month). Project construction is estimated to take three months.

Government Regulatory Requirements

The project runs adjacent to a protected stream, therefore, an Article 15 (NYCRR Part 608), Waters Quality Certification Permit from the New York State Department of Environmental Conservation (NYS DEC), an Article 24 Freshwater Wetlands and Article 10 Water Quality Certification Permits from the U.S. Army Corps of Engineers (USACE) will be required. A permit from the Rockland County Drainage Agency will likely also be required. Local communities are required by the Federal Emergency Management Agency (FEMA) National Flood Insurance Program (NFIP) to prepare data for a revision to the Flood Insurance Rate Map (FIRM) within six months of the completion of any project that changes the base flood elevation at any location. This process is accomplished through a FEMA Letter of Map Revision.

Entity with Jurisdiction

Town of Clarkstown Department of Environmental Control.

Tree Maintenance Program

Downed Trees from Superstorm Sandy, October 29, 2012 (John Eshoo)

Downed Trees from Superstorm Sandy, October 29, 2012 (John Eshoo)

Project Description

Following Superstorm Sandy, the Town of Clarkstown and Orange & Rockland (O&R) Utilities developed a protocol to ensure coordinated post-storm power line/tree removal. This protocol establishes two-person teams (one representative from the Town of Clarkstown Highway Department and one representative from O&R Utilities) to be dispatched to allow for coordinated securing of power lines, and subsequent tree removal to expediently eliminate safety issues and reopen roads. This project would augment that program by performing regular tree maintenance. Working with O&R Utilities, the community would develop and implement a comprehensive maintenance program for trees located in the public right-of-way (ROW). The community would retain a licensed arborist to survey the condition of trees to ensure that they are safely and properly trimmed.

Project Location

Town-wide

Estimated Cost

The capital cost to develop and implement this program is estimated to be \$30,000.

Economic Benefits

A consolidated tree maintenance program that is coordinated between the community and O&R Utilities will effectively allocate manpower and financial resources toward preventive measures to minimize damage to residences and businesses and the resulting costs associated with their repair. This project will ensure that trees are adequately pruned and maintained in advance of storm season. The project will also minimize the need for emergency crews to be dispatched to remove downed trees and power lines, both of which cause rippling economic impacts to the residents and businesses that cannot operate without power.

Environmental Benefits

In addition to pruning dead branches that are the primary candidates for breaking and falling, proper tree maintenance directs tree growth by slowing the growth of branches that may entangle with power lines. Controlled management creates healthier, stronger trees.

Tree Maintenance Program (cont'd)

Health and Social Service Benefits

Downed trees and power lines resulted in significant health and safety issues from live wires along roadways, prolonged power outages, and disrupted travel for both residents and emergency service workers. A comprehensive tree maintenance program would include trimming dead or dying branches away from primary and secondary power lines as well as from roadways throughout the Town.

Cost-Benefit Analysis

Properly maintained trees would reduce the risk of woody debris blocking roadways and streams, damaging property and infrastructure such as power lines, and causing injury. Economic benefits would be realized through uninterrupted access for emergency vehicles and residents, potentially uninterrupted power supply, as well as decreased costs for reconstruction and rehabilitation of roadways and infrastructure after severe weather and flooding.

It is anticipated that the program would be implemented annually—or bi-annually—to ensure ongoing maintenance. Therefore the useful life of this project is perpetual. Based on this analysis, the potential benefits of this project are believed to outweigh the financial investment of implementation.

Anticipated Reduction of Risk

Properly maintained trees will assist in reducing risk from high winds to property and essential utility service as well as reduce risk of flooding that may be caused by fallen trees, branches, and other debris blocking stream channels and roadways.

General Timeframe for Implementing Actions

Immediately upon receive funding, the following will be completed: preparation of Request for Proposals (RFP) for professional services for arborist to perform tree survey and evaluation; survey and evaluation of trees in Town right-of-way (ROW); and preparation of the tree maintenance program.

Government Regulatory Requirements

Coordination with O&R Utilities.

Entity with Jurisdiction

Town of Clarkstown Department of Environmental Control.

2014 NY RISING COMMUNITY RECONSTRUCTION PLAN NYRCR CLARKSTOWN

Section V Additional Materials

A. Additional Resiliency Recommendations

Throughout the NY Rising Community Reconstruction (NYRCR) Planning process, the Clarkstown NYRCR Planning Committee (Committee) developed the Additional Resiliency Recommendations listed in Table V-1. These recommendations were developed as projects and actions that the Committee would like to highlight and that are not categorized as Proposed Projects or Featured Projects. Additional Resiliency Recommendations are not ranked or prioritized, and they are presented in no particular order of importance.

Table V-1 Additional Resiliency Recommendations

Strategy	Project Name	Short Description	Estimated Cost	Regional (Y/N)
Ensure access to and improve resiliency of critical health and social service facilities and safe-havens during and after storm events	Mobile Help Unit	Evaluate repurposing Clarkstown's community transit service for use as a "Mobile Help Unit" during and after storm events.	The capital cost to complete this project is estimated to be less than \$50,000.	N
	"Ready Clarkstown Emergency Notification System" Education and Outreach Campaign	Enroll Clarkstown residents in the Town's "Ready Clarkstown" Emergency Notification System, and improve the Town's ability to efficiently and effectively inform residents of hazardous conditions.	The capital cost to complete this project is estimated to be \$15,000.	N
Improve regional coordination with neighboring communities and local and state agencies for watershed management to better mitigate flooding and plan for future disasters	Regional Watershed Coordination Commission	Develop local strategies to reduce the effects of flooding at a regional level.	The capital cost to implement recommendations developed by the Commission is estimated to be \$200,000.	Y
Notes: Projects marked with a * were suggested by the Town of Clarkstown Storm Drainage Task Force in their August 2014, Storm Drainage Task Force Project List.				

Table V-1 Additional Resiliency Recommendations (cont'd)

Strategy	Project Name	Short Description	Estimated Cost	Regional (Y/N)
Improve stormwater management infrastructure and drainage systems using green infrastructure practices where possible and cost-effective	Bellwood Drive Drainage Improvements*	Reconstruct the storm channel along Bellwood Drive to potentially remove existing piping and manage the stormwater through natural systems.	The capital cost to complete this project is estimated to be \$30,000.	N
	Dykes Park Rd Storm Drainage Improvements*	Design and implement storm drainage improvements on Dykes Park Road.	These improvements have not been fully designed. A potential range of costs to complete the design and construction could be \$50,000 - \$500,000.	N
	Eileen Avenue Culvert Replacement*	Design and replace the 48-inch culvert adjacent to 2 Eileen Avenue.	These improvements have not been fully designed. A potential range of costs to complete the design and construction could be \$50,000-\$500,000.	N
	Red Hill Rd/Burda Lane Improvements*	Resize and replace a culvert and potentially realign the intersection at Red Hill Road and Burda Lane.	The capital cost to complete these improvements is estimated to total: \$1,200,000; Preliminary drainage estimate: \$350,000 and intersection realignment: \$850,000.	N
	Toni Court Stream Channel Improvements*	Stream bank restoration and stream channel improvements along Toni Court, including additional infrastructure (channel walls).	The capital cost to complete this project is estimated to be \$36,000.	N
Preserve open spaces and restore natural resources to better support flood mitigation	"Green Clarkstown" - Stormwater, Wetlands and Wetland Buffers, Flood Mitigation Regulations and Ordinances	Develop and implement regulatory changes to protect wetlands, lakes and stream corridors and require green construction and infrastructure improvements to mitigate flood impacts within the Town. This project was recommended in the Clarkstown Comprehensive Plan and the Stormwater Regulations.	The capital cost to prepare an RFP, retain a consultant to develop mapping and draft revisions to ordinances, and conduct SEQRA is estimated to be \$145,000.	N
Notes: Projects marked with a * were suggested by the Town of Clarkstown Storm Drainage Task Force in their August 2014, Storm Drainage Task Force Project List.				

Table V-1 Additional Resiliency Recommendations (cont'd)

Strategy	Project Name	Short Description	Estimated Cost	Regional (Y/N)
Provide education, outreach and implementation assistance regarding pre-storm preparedness (including proper maintenance of waterbodies and stormwater runoff mitigation on private properties), storm protection procedures and post-storm recovery initiatives to protect from future flooding	Comprehensive Town-wide Education and Alert Program for: (1) Storm Preparedness, (2) Implementation, and (3) Emergency Assistance and (4) Post-Storm Recovery	This project proposes a four-phased approach for storm preparation, implementation and post-storm recovery. 1. Education for pre-storm preparedness; 2. Implementation assistance for storm preparedness to the elderly or vulnerable populations; 3. Develop a comprehensive database for emergency assistance resources during emergency events; and 4. Prepare a comprehensive list of assistance agencies for technical advice and funding to assist with post storm recovery and rebuilding.	The capital cost to complete this project is estimated to be 1- \$20,000; 2 - \$30,000; 3-\$20,000; 4-\$20,000 for a total of \$90,000.	N
Restore and protect critical infrastructure and transportation assets	Back-up Power for Critical Infrastructure - Policy Changes and Implementation Assistance	This project will: (1) require new cell towers to include a back-up power supply as a condition of local approvals; and incentivize the retrofit of existing cell towers for back up supply; (2) provide financial assistance for the installation of a permanent backup power supply for critical infrastructure including gasoline stations; and (3) conduct a feasibility study to evaluate opportunities to bury power lines in older neighborhoods throughout the Town.	These improvements have not been fully designed. The policy text amendment and grant applications would be completed in house. As the project is more fully defined, costs can be determined. A potential range of costs to complete a feasibility study for and bury some power lines could be \$500,000 - \$1,000,000.	N
	Operational and Communication Infrastructure Improvements - Additional Weather Tower and Stream Gages and Installation of Cameras on Existing Stream Gages	Evaluate optimal locations for additional weather stations and fund the installation of cameras and new equipment at selected sites.	These improvements have not been fully designed. A potential range of costs to complete the design and installation would be \$50,000 - \$500,000.	N
Notes: Projects marked with a * were suggested by the Town of Clarkstown Storm Drainage Task Force in their August 2014, Storm Drainage Task Force Project List.				

B. Master Table of Projects

Table V-2 presents all projects developed by NYRCR Clarkstown throughout the planning process. This comprehensive list includes Proposed Projects, Featured Projects, and Additional Resiliency Recommendations, defined below. Projects are listed by Reconstruction and Resiliency Strategy.

- ▶ Proposed Projects are proposed for funding through a Community's allocation of CDBG-DR funding.

- ▶ Featured Projects are innovative projects where an initial study or discrete first phase of the project is proposed for CDBG-DR funding or other identified funding; and regulatory reforms and other programs that do not involve capital expenditures.
- ▶ Additional Resiliency Recommendations are resiliency projects and actions the Committee would like to highlight and are not categorized as Proposed or Featured Projects.

Table V-2 Master Project Table

Strategy	Project Name	Short Description	Project Category	Estimated Cost	Regional (Y/N)
Ensure access to and improve resiliency of critical health and social service facilities and safe-havens during and after storm events	"Ready Clarkstown Emergency Notification System" Education and Outreach Campaign	Enroll Clarkstown residents in the Town's "Ready Clarkstown" Emergency Notification System, and improve the Town's ability to efficiently and effectively inform residents of hazardous conditions.	Additional Resiliency Recommendation	The capital cost to complete this project is estimated to be \$15,000.	N
	Mobile Help Unit	Evaluate repurposing Clarkstown's community transit service for use as a "Mobile Help Unit" during and after storm events.	Additional Resiliency Recommendation	The capital cost to complete this project is estimated to be less than \$50,000.	N
Improve regional coordination with neighboring communities and local and state agencies for watershed management to better mitigate flooding and plan for future disasters	Regional Watershed Coordination Commission	Develop local strategies to reduce the effects of flooding at a regional level.	Additional Resiliency Recommendation	The capital cost to complete to implement recommendations that are generated by the Commission is estimated to be \$200,000.	Y
Improve stormwater management infrastructure and drainage systems using green infrastructure practices where possible and cost-effective	Cranford Drive Drainage Improvements*	Resize stormwater management drainage infrastructure and implement green infrastructure practices (regrading and placement of fiber rolls, rock weirs and vanes, boulder revetment), along Cranford Drive from north of Old Route 304 to the intersection of Cranford Drive and Route 304.	Proposed Project	The capital cost to complete these improvements is estimated to be \$2,100,000.	N
Notes: Projects marked with a * were suggested by the Town of Clarkstown Storm Drainage Task Force in their August 2014, Storm Drainage Task Force Project List.					

Table V-2 Master Project Table

Strategy	Project Name	Short Description	Project Category	Estimated Cost	Regional (Y/N)
Improve stormwater management infrastructure and drainage systems using green infrastructure practices where possible and cost-effective (cont'd)	Drainage Improvements to the Demarest Kill Stream*	Stormwater management improvements to redesign, rightsize, and modify the existing drainage infrastructure in and around the Demarest Kill, including: replacing a failed culvert and collapsed headwall under Hall Avenue just west of Lake Drive; design and construction of basins and berms at the Virginia Street detention area; and modifications to existing drainage lines and underground detention areas along Virginia Street to prevent surcharging of the system.	Proposed Project	The capital cost to complete these improvements is estimated to be \$810,000 in total. This includes \$360,000 for the Hall Avenue Culvert and Headwall, \$150,000 for the Virginia Street Detention Area, and \$300,000 for the drainage improvements along Virginia Street.	N
	Drainage Improvements to the Naurashaun Brook Basin*	Redesign and resizing of storm drainage infrastructure under East Alison Avenue, on Blauvelt Road from Townline Road to Lake Nanuet Drive and stream bank restoration measures along the Naurashaun Brook. This project has been identified as an urgent need by the Town of Clarkstown Storm Drainage Task Force.	Proposed Project	The capital cost to complete these improvements is estimated to be \$500,000.	N
	South Mountain Road Drainage Improvements*	Evaluate the South Mountain Road corridor to identify coordinated “green” and “gray” stormwater management improvement projects, which could be implemented in phases. This project has been identified as an urgent need by the Town of Clarkstown Storm Drainage Task Force.	Proposed Project	The capital cost to conduct the feasibility analysis and implement improvements is estimated to be \$1,000,000.	N
	Cul-de-sac Island Reconstruction	Redesign 143 cul-de-sac islands to remove raised planted medians and replace them with green-infrastructure systems to improve water quality and reduce peak rates of run-off and streamflow quantities and velocities.	Featured Project	The capital cost to design and implement the improvements is estimated to be \$35,000-\$45,000 per planted island.	N

Notes: Projects marked with a * were suggested by the Town of Clarkstown Storm Drainage Task Force in their August 2014, Storm Drainage Task Force Project List.

Table V-2 Master Project Table

Strategy	Project Name	Short Description	Project Category	Estimated Cost	Regional (Y/N)
Improve stormwater management infrastructure and drainage systems using green infrastructure practices where possible and cost-effective (cont'd)	Jeffrey Place Drainage Improvements*	Excavate an 11-foot trench to relieve flooding during rain storm events on Jeffrey Place, just south of Old Mill Road. This project has been recognized as an urgent need by the Town of Clarkstown Storm Drainage Task Force.	Featured Project	The capital cost to complete these improvements is estimated to be \$500,000.	N
	Pineview Road Storm Drainage Improvements*	Install a levee structure to provide flood protection to properties that repeatedly flood along Pineview Road. This project has been recognized as an urgent need by Town of Clarkstown Storm Drainage Task Force.	Featured Project	The capital cost to complete these improvements is estimated to be \$500,000.	N
	Bellwood Drive Drainage Improvements*	Reconstruct the storm channel along Bellwood Drive to potentially remove existing piping and manage the stormwater through natural systems.	Additional Resiliency Recommendation	The capital cost to complete this project is estimated to be \$30,000	N
	Dykes Park Road Storm Drainage Improvements*	Design and implement storm drainage improvements on Dykes Park Road.	Additional Resiliency Recommendation	These improvements have not been fully designed. A potential range of costs to complete the design and construction could be \$50,000-\$500,000.	N
	Eileen Avenue Culvert Replacement*	Design and replace the 48-inch culvert adjacent to 2 Eileen Avenue.	Additional Resiliency Recommendation	These improvements have not been fully designed. A potential range of costs to complete the design and construction could be \$50,000-\$500,000.	N
	Red Hill Road/Burda Lane Improvements*	Resize and replace a culvert and potentially realign the intersection at Red Hill Road and Burda Lane.	Additional Resiliency Recommendation	The capital cost to complete these improvements is estimated to total: \$1,200,000; Preliminary drainage estimate: \$350,000 and intersection realignment: \$850,000.	N
	Toni Court Stream Channel Improvements*	Stream bank restoration and stream channel improvements along Toni Court, including additional infrastructure (channel walls).	Additional Resiliency Recommendation	The capital cost to complete this project is estimated to be \$36,000.	N
Notes: Projects marked with a * were suggested by the Town of Clarkstown Storm Drainage Task Force in their August 2014, Storm Drainage Task Force Project List.					

Table V-2 Master Project Table

Strategy	Project Name	Short Description	Project Category	Estimated Cost	Regional (Y/N)
Preserve open spaces and restore natural resources to better support flood mitigation	Implementation of Post-Residential Buyout Program Measures for Flood Protection	Evaluate and design flood mitigation and flood control uses for appropriate parcels acquired by the Town through FEMA's HMGP Buyout Program. These properties must remain undeveloped in perpetuity and can therefore be repurposed for use as public open space, and potentially for flood control.	Featured Project	The capital cost to conduct this feasibility study is estimated to be \$50,000.	N
	"Green Clarkstown" - Stormwater, Wetlands and Wetland Buffers, Flood Mitigation Regulations and Ordinances	Develop and implement regulatory changes to protect wetlands, lakes and stream corridors and require green construction and infrastructure improvements to mitigate flood impacts within the Town. This project was recommended in the Clarkstown Comprehensive Plan and the Stormwater Regulations.	Additional Resiliency Recommendation	The capital cost to prepare an RFP, retain a consultant to develop mapping and draft revisions to ordinances, and conduct SEQRA is estimated to be \$145,000.	N
Promote resilience and flood management best practices through land-use planning, policy, and regulation	Digital Inventory of Stormwater Management Infrastructure	Provide funding for the Town to retain professional services to collect data on its roughly 12,000 catch basins. Information to be collected would include: size, date of installation, and inspection and maintenance schedules for replacement or upgrades.	Featured Project	The capital cost to retain professional services to complete this inventory and monitoring system is estimated to be \$200,000.	N
	Tree Maintenance Program	Proactively manage trees located in the public right-of-way to reduce incidents of road closures and power interruptions resulting from downed trees during storm conditions.	Featured Project	The capital cost to develop and implement this program is estimated to be \$30,000.	N
Provide education, outreach and implementation assistance regarding pre-storm preparedness (including proper maintenance of waterbodies and stormwater runoff mitigation on private properties), storm protection procedures and post-storm recovery initiatives to protect from future flooding	Comprehensive Town-wide Education and Alert Program for: (1) Storm Preparedness, (2) Implementation, and (3) Emergency Assistance and (4) Post-Storm Recovery	1. Education for pre-storm preparedness; 2. Implementation assistance for storm preparedness to the elderly or vulnerable populations; 3. Develop a comprehensive database for emergency assistance resources during emergency events; and 4. Prepare a comprehensive list of assistance agencies for technical advice and funding to assist with post storm recovery and rebuilding.	Additional Resiliency Recommendation	The cost for each phase of this project is estimated as follows: 1- \$20,000; 2 - \$30,000; 3-\$20,000; 4-\$20,000 for a total cost of: \$90,000.	Y
Notes: Projects marked with a * were suggested by the Town of Clarkstown Storm Drainage Task Force in their August 2014, Storm Drainage Task Force Project List.					

Table V-2 Master Project Table

Strategy	Project Name	Short Description	Project Category	Estimated Cost	Regional (Y/N)
Restore and protect critical infrastructure and transportation assets	Fredric Street Drainage Improvements*	Resize and replace piping for approximately 1,200 linear feet from Fredric Street west through and including the New Holland Village Condominiums. This project has been identified as an urgent need by the Town of Clarkstown Storm Drainage Task Force.	Proposed Project	The capital cost to complete the engineering and implementation of these improvements is estimated to be \$1,400,000.	N
	Old Haverstraw Road Drainage Improvements*	Resize and replace existing deteriorated and undersized drainage lines to adequately drain areas along Old Haverstraw Road. This project has been identified as an urgent need by the Town of Clarkstown Storm Drainage Task Force.	Proposed Project	The capital cost to complete these improvements is estimated to be \$750,000.	N
	Back-up Power for Critical Infrastructure - Policy Changes and Implementation Assistance	This project will: (1) require new cell towers to include a back-up power supply as a condition of local approvals; and incentivize the retrofit of existing cell towers for back up supply; (2) provide financial assistance for the installation of a permanent backup power supply for critical infrastructure including gasoline stations; and (3) conduct a feasibility study to evaluate opportunities to bury power lines in older neighborhoods throughout the Town.	Additional Resiliency Recommendation	These improvements have not been fully designed. The policy text amendment and grant applications would be completed in house. As the project is more fully defined, costs can be determined. A potential range of costs to complete a feasibility study for and bury some power lines could be \$500,000 - \$1,000,000.	N
	Operational and Communication Infrastructure Improvements - Additional Weather Tower and Stream Gages and Installation of Cameras on Existing Stream Gages	Evaluate optimal locations for additional weather stations and fund the installation of cameras and new equipment at selected sites.	Additional Resiliency Recommendation	These improvements have not been fully designed. A potential range of costs to complete the design and construction could be \$50,000 - \$500,000.	N
Notes: Projects marked with a * were suggested by the Town of Clarkstown Storm Drainage Task Force in their August 2014, Storm Drainage Task Force Project List.					

C. Public Engagement Process

Public Engagement Process

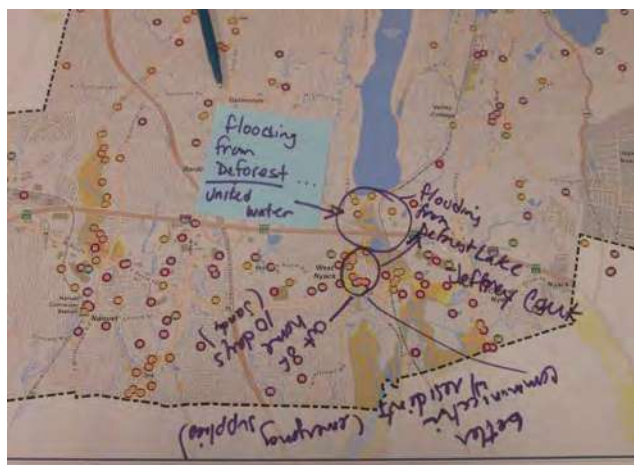

The public engagement process was designed to reach the broadest possible cross-section of the Clarkstown community and ultimately inform the full scope of projects to consider in the Clarkstown NYRCR Plan. Outreach regarding the NYRCR Plan and opportunities for community input included: bi-weekly Planning Committee Meetings that were open to the public; four Public Engagement Events held at four different locations in the Town and scheduled at strategic points throughout the six-month planning process; site and facility tours; a stakeholder email list, which was updated after each Committee and Public Engagement Event; posting of press releases on the Town website; meeting and event details and materials posted on the NYRCR Program website (www.stormrecovery.ny.gov/nyrcr); distribution of a tri-fold brochure, flyers (in English and Spanish), and posters throughout the community; social media alerts; display of information regarding the NYRCR Program at the West Nyack Heritage Festival; and notices sent home with school children. Table II-3 presents a full list of all meetings and events held throughout the Clarkstown NYRCR planning process.

*Clarkstown NYRCR Planning Committee Meeting 1 - July 9, 2014
(Arch Street Communications)*

Clarkstown NYRCR Planning Committee

The Clarkstown NYRCR Planning Committee (Committee) is composed of nine voting members who represent a cross-section of community groups and interests, including senior and historic preservation groups, municipal officials representing the departments of Emergency Management, Planning, and Environmental Control; two non-voting ex-officio members (the Town Supervisor and Director of Operations), members of the community; and business owners who have themselves experienced repeated flooding.

*Asset Inventory Mapping at Planning Committee Meeting 3 –
August 13, 2014 (Elizabeth Matamoros)*

The Committee met approximately every other week at Clarkstown Town Hall in New City from July 2014 through December 2014. Prior to each meeting, the Committee received reminder emails, an agenda with explanatory information, worksheets, and summary notes from previous meetings.

The general format for Committee Meetings included a summary discussion of accomplishments made since the last meeting, followed by work sessions on specific NYRCR Program tasks. These tasks included: formulating a vision; identifying goals and objectives; asset mapping; identifying and developing needs and opportunities; and developing specific projects. Speakers were invited to address the Committee to

educate them on the U.S. Department of Housing and Urban Development (HUD) Community Development Block Grant-Disaster Recovery (CDBG-DR) Program and the Federal Emergency Management Agency (FEMA) Hazard Mitigation Grant Program (HMGP). The Committee also hosted a joint meeting with the Village of Suffern NYRCR Planning Committee to learn about green infrastructure practices and how these practices could be utilized in the respective communities.

Summaries of all Committee Meetings as well as meeting materials were made available on the NYRCR Program website at www.stormrecovery.ny.gov/nyrcr.

Public Engagement Events

Four Public Engagement Events were held throughout the six-month planning process. Attendees at these events included: Clarkstown residents, representatives from public and private agencies; elected officials and their representatives, community organizations and local businesses. Attendees were notified of the events via media releases issued by the Town and the NYRCR Program, social media postings, flyers and posters displayed throughout the Town, a project email list and notices sent home with school children. Notices for all four Public Engagement Events were also posted on the NYRCR Program website at www.stormrecovery.ny.gov/nyrcr/meetings. This multi-pronged effort brought out a cross section of interested individuals.

Each Public Engagement Event was held in a different location within the Town to encourage widespread participation.

Public Engagement Event 1

Public Engagement Event 1 was held at Clarkstown Town Hall in New City on July 30, 2014. At this event, residents received information about the NYRCR Program, process and timelines. The focus of this event was to solicit community feedback of the vision, needs, and opportunities developed by the Committee and provide information on critical issues, storm

damage and preliminary asset inventory and mapping. Various “stations” were set up around the room where attendees could learn about and give input on various NYRCR Plan components. Preliminary asset maps were displayed and residents were encouraged to add information directly to maps and/or discuss issues with representatives from the Consultant Team, Committee, and Governor’s Office of Storm Recovery (GOSR)/NYS Department of State (NY DOS) stationed at each table.

Event attendees were also encouraged to participate in the Photo Booth where they were asked to write answers to one of the questions listed below on a white board and have their photograph taken while holding the board. This helped provide a visual representation of the Community’s values and vision for making Clarkstown more resilient in the future.

- ▶ One word that describes Clarkstown...
- ▶ My Vision for Clarkstown is...
- ▶ What does “Building Back Better” mean to you?

Public Engagement Event 1 – July 30, 2014 (Elizabeth Matamoros)

"One Word to Describe Clarkstown: Beauty" Public Engagement Event 1 – July 30, 2014 (Arch Street Communications)

This event brought out people whose lives and livelihoods were severely impacted by storm events. The NYRCR Program is a community-driven initiative. As such, public engagement events provide an essential forum for residents to tell their stories and provide direction for the planning process—from inception to completion.

Public Engagement Event 2

The second Public Engagement Event was held at the Pascack Community Center in Nanuet on September 17, 2014. The Event was publicized via social media, media releases, the stakeholder email distribution list, the Town website, and posters, brochures and flyers sent home with school children.

"One Word to Describe Clarkstown: Wet" Public Engagement Event 1 – July 30, 2014 (Arch Street Communications)

Public Engagement Event 2 focused on discussion of strategies and projects developed by the Committee to address Clarkstown's key needs and critical issues. The strategies and projects were organized by the six Recovery Support Functions (RSFs) as follows: Health and Human Services; Natural and Cultural Resources; Community Planning and Capacity Building; Housing; Economic, and Infrastructure. Diverging from the "station" format utilized at Public Engagement Event 1, this event was organized as a guided group discussion. Meeting attendees sat together and discussed each proposed strategy and program, providing detailed input on each component.

The Photo Booth offered at Public Engagement Event 1 was also offered at Public Engagement Event 2.

*Public Engagement Event 2 – September 17, 2014
(Arch Street Communications)*

West Nyack Heritage Festival

Several Planning Committee Members attended the West Nyack Heritage Festival on October 18, 2014 to display and distribute NYRCR Program information. Members of the community were encouraged to learn more about the program, provide email contact information and attend future Planning Committee Meetings and Public Engagement Events.

Supervisor Gromack, Councilwoman Hausner, and NYRCR Planning Committee Members Mark Brecher and Michael Gach at the West Nyack Heritage Festival – October 18, 2014 (Heritage of West Nyack)

Public Engagement Event 3

Public Engagement Event 3 was held at the Valley Cottage Library, in Valley Cottage, on November 6, 2014. The event was advertised using many of the same outlets and approaches utilized for Public Engagement Events 1 and 2; however, to encourage additional attendance, the Committee, the Consultant Team and Town representatives started publicizing the event approximately three weeks prior to the event. The primary focus of Public Engagement Event 3 was to solicit community input on projects, programs and actions developed by the Planning Committee. The format for this event included a brief presentation about the NYRCR Program, after which attendees were provided a “passport” detailing project information.

Attendees were encouraged to circulate throughout the room and view the posters and maps that illustrated the Proposed and Featured Projects, and Additional Resiliency Recommendations. After learning more about the projects from the posters and discussion with Committee members, representatives from the Consultant Team and GOSR/DOS representatives, attendees filled out the “passports” indicating their thoughts and concerns regarding Committee-developed projects, and providing suggestions on other projects to be considered in the NYRCR Program.

Supervisor Gromack Speaks at Public Engagement Event 3 – November 6, 2014 (Arch Street Communications)

Flyer for Public Engagement Event 3 – November 6, 2014 (AKRF)

Boards displaying the Vision and Goals, Needs and Opportunities, Asset Mapping, and Strategies were also displayed at the event venue.

Public Engagement Event 4

The fourth and final Public Engagement Event will be held in January 2015 to present the final NYRCR Plan to the Clarkstown Community.

Additional Outreach Efforts

The Clarkstown Planning Committee and Consultant Team worked to develop many opportunities for community participation and public engagement.

Brochures and Flyers

The Consultant Team created a tri-fold brochure that highlighted NYRCR Program components. The Consultant Team and Committee Members distributed these brochures throughout the community in key locations, including: Town Hall, various libraries and businesses. These brochures provided information on

the NYRCR Program, the Planning Committee, Program progress, contact information for the Governor's Office of Storm Recovery and the stormrecovery.com website. The brochures were also provided at the three Public Engagement Events.

The Committee and Consultant Team discussed the importance of encouraging involvement throughout Clarkstown's diverse community. To achieve a broader outreach, the Consultant Team prepared flyers for the Public Engagement Events in Spanish and English. The Committee and Town representatives distributed hard copies of the flyers throughout Clarkstown to help attract participation of a key but traditionally underrepresented sector of the community.

School Outreach

The NYRCR Plan also considered youth engagement as key to improving Clarkstown's resilience. With this in mind, the Consultant Team worked to ensure that event notices were also circulated via email from the Town of Clarkstown to the School District mailing lists in order to reach the Community's youth as well as a more diverse range of parents. The Consultant Team also prepared age-appropriate worksheets for younger attendees at the Public Engagement Events.

Town Website

To ensure that community residents who were not on the Planning Committee remained involved in the planning process, information related to the NYRCR Program and Plan, including Committee Meeting presentations was posted to the NYRCR Clarkstown webpage (www.stormrecovery.ny.gov/nyrcr/community/town-clarkstown), which also provides a section for public feedback and comment.

These various outreach methods helped to solidify the public engagement process and ensure that the NYRCR Planning Process considered a variety of different opinions and voices.

Online Survey

The Planning Committee and the Consultant Team prepared an online survey to provide another opportunity for Clarkstown residents who were unable to attend community meetings to participate in the NYRCR Planning Process and provide their valuable input. The survey listed the projects developed by the Clarkstown NYRCR Planning Committee and asked residents to express their preference for each project by selecting “high” or “low,” thereby gauging community support for each project. In addition, the survey allowed an opportunity for respondents to comment on each of the projects and provide feedback in a narrative format. The survey responses were combined with the feedback gathered at the Public Engagement Event 3.

Clarkstown NYRCR Program Overview Brochure (AKRF)

The survey was distributed via email to the NYRCR email list, posted on the Clarkstown NYRCR webpage, distributed via handout at the Public Engagement Event, and available to the public on the Town website from November 3 to November 24, 2014. This successful public outreach method enabled the Consultant Team to incorporate the perspectives of a diverse group of residents in Clarkstown that may not have been able to voice their opinion at Public Engagement Events.

The survey received four hundred and ninety-eight responses. More than 50% of the respondents indicated “high” community support for the Proposed Projects. Narrative feedback included: “improvement in drainage should be a priority” and many respondents indicated that drainage projects were “urgent”, citing specifically that the drainage issues to be addressed by the Cranford Drive Drainage Improvement Project dated back more than 20 years. Comments on the South Mountain Road project included: “The current situation is untenable. Water overflow has caused significant repeated damage to our road,” and many comments similar to “Improvement in drainage should be a priority.” Featured Projects, specifically the Tree Maintenance Program, also received “high” community support, with comments highlighting that this is an issue that affects the entire Town.

Recurring feedback included that efforts need to be focused on protecting homeowners from property damage. Residents also stressed the importance of regional coordination with neighboring Towns, Rockland County, and Orange & Rockland Utilities.

The responses to the online survey resoundingly indicate that erosion and flood issues have been plaguing the community for many years. Clarkstown residents have been very much affected by flooding, stormwater management issues, and disruption in power and therefore they actively support proactive drainage, storm preparedness response, and recovery initiatives proposed in the NYRCR Plan.

Table V-3: NYRCR Meeting and Event Summary

Meeting/Event	Date	Location	Topics Covered
Consultant Team Site Tour	6/26/2014	Town of Clarkstown Site Tour	Guided Tour of the Town, all Recent and Proposed Infrastructure Projects
Planning Committee Meeting 1	7/9/14	Clarkstown Town Hall 10 Maple Avenue New City, NY	Kick off, Discussion of Storm Damage and Critical Issues
Planning Committee Meeting 2	7/23/14	Clarkstown Town Hall 10 Maple Avenue New City, NY	Visioning, Goals and Objectives
Public Engagement Event 1	7/30/14	Clarkstown Town Hall 10 Maple Avenue New City, NY	Review of Vision Statement and Asset Inventory
Consultant Team Tour of Emergency Operations Center	8/5/2014	Clarkstown Police Department 20 Maple Avenue New City, NY 10956	Guided Tour of Emergency Operations Center
Planning Committee Meeting 3	8/13/14	Clarkstown Town Hall 10 Maple Avenue New City, NY	Needs and Opportunities, Asset Inventory and Risk Analysis
Planning Committee Meeting 4	8/27/14	Clarkstown Town Hall 10 Maple Avenue New City, NY	Discussion and Review of Asset Inventory and Preliminary Risk Assessment, Green Infrastructure
Planning Committee Meeting 5 (Joint Meeting with Suffern)	9/10/2014	Clarkstown Town Hall 10 Maple Avenue New City, NY	Educational Session on Green Infrastructure with Khristopher Dodson, Syracuse University
Public Engagement Event 2	9/17/2014	Pascack Community Center Gymnasium 87 New Clarkstown Road, Nanuet NY	Progress Review, Discussion of Strategies
Planning Committee Meeting 6	9/23/2014	Clarkstown Town Hall 10 Maple Avenue New City, NY	GOSR CDBG-DR Presentation, Project Development
Planning Committee Meeting 7	10/8/2014	Clarkstown Town Hall 10 Maple Avenue New City, NY	GOSR HMGP Presentation Regarding Residential Buyout Program, Project Development
West Nyack Heritage Festival	10/18/14	Congers Lake Memorial Park Congers, NY	Public Engagement –NY Rising Program
Planning Committee Meeting 8	10/22/14	Clarkstown Town Hall 10 Maple Avenue New City, NY	Project Development, Discussion of Town of Clarkstown Storm Drainage Task Force Projects, Prepare for Public Engagement Event 3
Public Engagement Event 3	11/6/14	Valley Cottage Library 110 New York 303 Valley Cottage, NY	Review and Discussion of Projects
Planning Committee Meeting 9	11/13/14	Clarkstown Town Hall 10 Maple Avenue New City, NY	Public Engagement Feedback Review, Rising to the Top Competition Discussion, Voting
Planning Committee Meeting 10	11/19/14	Clarkstown Town Hall 10 Maple Avenue New City, NY	Review of Draft 2 of NYRCR Plan
Public Engagement Event 4	Jan 2015	Location TBD	Review of Final Clarkstown NYRCR Plan

Methodology

Cost-Benefit Analysis FTE Job Projections

Cranford Drive Drainage Improvements

According to the U.S. Department of Commerce (DOC) Economics and Statistics Administration (ESA) report, *Economic Impact of Hurricane Sandy Potential Economic Activity Potentially Lost and Gained in New Jersey and New York*²¹, the estimated job creation from recovery spending on infrastructure projects in New York reported 7.15 construction jobs per \$1,000,000 in construction spending. Using this methodology and given the \$3,500,000 project cost, an estimated 25 construction jobs would be created by this project.

Drainage Improvements to the Demarest Kill Stream

Using the methodology from the U.S. DOC ESA report²¹, the \$810,000 project would create an estimated 5.8 construction jobs.

Drainage Improvements to the Nauraushaun Brook Basin

Using the methodology from the U.S. DOC ESA report²¹, the \$500,000 project would create an estimated 3.6 construction jobs.

Fredric Street Drainage Improvements

Using the methodology from the U.S. DOC ESA report²¹, the \$1,400,000 project would create an estimated 10 construction jobs.

Old Haverstraw Road Drainage Improvements

Using the methodology from the U.S. DOC ESA report²¹, the \$750,000 project would create an estimated 5.4 construction jobs.

South Mountain Road Drainage Improvements

Using the methodology from the U.S. DOC ESA report²¹, the \$1,000,000 project would create an estimated 7.2 construction jobs.

Cul-de-sac Island Reconstruction

Using the methodology from the U.S. DOC ESA report²¹, the project would create an estimated 0.3 construction jobs per \$40,000 cul-de-sac.

Digital Inventory of Stormwater Management Infrastructure

Not Applicable.

Implementation of Post-Residential Buyout Program Measures for Flood Protection

Using the methodology from the U.S. DOC ESA report²¹, the project would create an estimated 2.7 construction jobs. This is based on an assumption that approximately 80% of the total cost (\$525,000) will be construction cost (\$375,000).

Jeffrey Place Drainage Improvements

Using the methodology from the U.S. DOC ESA report²¹, the \$500,000 project would create an estimated 3.6 construction jobs.

Pineview Road Storm Drainage Improvements

Using the methodology from the U.S. DOC ESA report²¹, the \$500,000 project would create an estimated 3.6 construction jobs.

Tree Maintenance Program

Not Applicable.

INTRODUCTION

A successful Complete Streets project involves clear identification of needs to be addressed, consistency with the Town's Complete Streets Policy, familiarization with the road/street segment from data-driven and community-driven perspectives, community and other stakeholder engagement, effective tools to address the needs and be in context with the surroundings, and an implementation and coordination plan. It demands that the process be documented and transparent so that it is easily understood, and the project can be reviewed and, if necessary, approved by others who may not have had an opportunity to be involved in the planning phase. Also, post-implementation monitoring or a follow-up survey should be included to report back to the stakeholders and Town on the effectiveness of the project.

The steps outlined below show the chronology and basic requirements of the Complete Streets planning process for the Town of Clarkstown Complete Streets Committee in the form of a Project Selection and Implementation Guide, which includes a toolbox of improvements. Following these steps will ensure the preferred solution meets the needs of the community, is justified by data collection and analysis, will address the issue/opportunity, is implementable/fundable, and can be approved before moving ahead to the design and construction phase.

This guide seeks to be easily understood and not overly restrictive or complicated. Minimal use of jargon and abbreviations has been employed. Minimum numbers of households or businesses approving of solutions have not been included, nor have minimum speed/volume requirements, forms (unless the Town wants to maintain the existing forms or augment them for the Complete Streets Committee to receive/track requests), or exhaustive problem descriptions that may be difficult for the Committee to assemble. The reason for simplifying the original 2010 Town of Clarkstown Traffic Calming Program is that each case will have many considerations, and therefore restrictions such as roadway classification, exact data to be collected or transportation studies to be conducted, or a limited toolbox of potential solutions for each problem are not included. This is because each issue or opportunity should be explored conjointly with the Complete Streets Committee, the Town, and its Consultants, and a work plan unique to each project should be developed following the steps below. Like the old program, this process will be transparent, should Town Supervisor or Town Board approvals be necessary. It is hopeful that Town of Clarkstown Complete Streets Project Selection and Implementation Guide creates a process that greatly increases the number of improvement projects that are approved and implemented by the Town.

PROJECT SELECTION AND IMPLEMENTATION STEPS

1. Identification of Issue/Opportunity

The Committee itself—or a public request—generates the need to address a safety, walkability, transit accessibility, bicycling, or other complete street-related issue or create an opportunity to improve mobility using complete streets solutions. This can be initiated by a process of the Town's desire, i.e., email, letter, Town Board Meeting testimony, filling out a form, etc.

This is the first step, and in order to present a clear and concise problem statement to the Town and/or its Consultants, the issue or opportunity must be identified in writing, including the starting and ending points, general complaints/problems/opportunities, how it serves or complies with the Town's Complete Streets Policy, and primary connection points and stakeholders along the segment. It is proposed that the Committee will conduct this step itself, and engage the Town and/or its Consultants in subsequent steps.

2. Draft Work Plan Including Purpose and Need

Working with the Town and/or its Consultants, the Committee will further develop the problem statement to justify the purpose, identify who benefits and why it is needed, and draft a work plan. Also in this step, compliance with the Town's Complete Streets Policy will be affirmed.

More desktop research will be done in this step. Although changes to the draft work plan are inevitable and part of the planning process, initial thoughts on data needs, potential solutions, community engagement, context and aesthetics, landscaping/stormwater/maintenance considerations, and implementation timeline and coordination needs should be drafted. Care must be taken to identify other road/street jurisdictional agencies such as Rockland County, NYSDOT/Thruway, fire department/EMT, and which police patrol the facility, because these stakeholders/agencies may share the responsibility for design approvals, permitting, implementation, maintenance, crash, injury, emergency and fire response, and enforcement. Based on the range of potential solutions, the draft work plan will also need to identify data analysis and/or transportation studies that may be required so that the work is scoped ahead of time and taken into account in the implementation timeline.

3. Field Visit and Community Outreach

The Committee, Town, and its Consultants will organize and conduct a field visit, preferably a walking tour. Other potential attendees should include community stakeholders, road/street jurisdictional agencies, and first responders familiar with the segment. The field visit will serve many purposes:

- Familiarization with the issue or opportunity first hand in a group setting
- Discuss potential solutions and gauge community tolerance/interest before going too far
- Consider the context of the surroundings and design aesthetics of the solutions
- Discuss implementation feasibility and maintenance concerns
- Community engagement and acquaintance with stakeholders
- Photo/video log and Complete Streets field checklist by Consultant

4. Evaluation of Data/Information

Following the draft work plan and field visit, data will be gathered by the Committee, Town and/or its Consultants. Together, these groups will evaluate the data and other information such as photo/video logs, field checklists, and community and stakeholder input, to form a thorough understanding of issues and opportunities. Each data collection effort will be unique to the project, and the Town and its Consultant will determine the level of effort needed to gather necessary information, test and analyze data, and justify the solutions. In addition to transportation data gathering, initial data and information on landscaping, engineering concerns such as materials, design and stormwater conveyance, maintenance, and environmental effects should be gathered.

5. Identification of Complete Street Solutions

The data and information gathered in previous steps will form the basis for initial selection of Complete Street alternatives. Analysis of data and transportation studies may need to be conducted in this step, which will have been initially scoped out in the draft work plan. Changes to the work plan may be

required at this point based on the results of data analyzed, or community and stakeholder input. The Committee, Town and its Consultants will review data and information gathered, analyzed/summarized data, and/or transportation study results against the Complete Street alternatives. Alternatives should rely on—but not be limited to—the latest Town of Clarkstown Complete Streets Toolbox.

TOWN OF CLARKSTOWN COMPLETE STREETS TOOLBOX

The Town's toolbox should be a living document that evolves over time. It is envisioned that the Complete Streets Project Selection and Implementation Guide would be a fixed process that can be used for many years once approved. But the latest Toolbox itself could be a link within the Guide that directs users to the online document, which will change and be updated by the Town and its Consultants after implementation of the first round of projects by the Complete Streets Committee in 2018, and subsequently as needed. The Toolbox can be hosted as an electronic .pdf at a URL that will be maintained by the Town via its Consultants, or as a page on the Town's website, should the Town prefer to maintain the link itself. The Town may wish to add tools over time that are not initially envisioned, such as rural road lane departure, urban bike infrastructure, dedicated bus lanes, or other seldom-used tools. Or it may be necessary to remove ineffective or difficult to implement/maintain tools based on post-implementation evaluations.

A draft set of tools for the Town's Complete Streets Toolbox is presented, which incorporates relevant portions of the 2010 Town of Clarkstown Traffic Calming Program. The tools are organized by the issue each addresses, or opportunity each creates. Tools may be repeated if they address different needs/opportunities. The full Toolbox document will elaborate on the tools and show a schematic diagram, rendering or photograph for each.

- A. Speed reduction/diversion of cut-through traffic: travel lane narrowing, speed humps, turning traffic or through traffic prohibitions, pavement markings, curb extensions/neckdowns, curb installations, driver speed feedback sign, chicanes, roundabouts, neighborhood traffic circles, trees/vegetation, gateway treatments, etc., in context with the street's character and existing/projected future users.
- B. Walkability improvements: sidewalks, curb ramps, crosswalks, shared use paths/sidepaths, walkable shoulders, etc., based on existing/projected future use and connections, and taking into account user age and mobility requirements.
- C. Bike improvements: bikeable shoulders, shared lane markings/sharrows, shared use paths/sidepaths, or bike lanes. May be used in conjunction with speed reduction efforts such as travel lane narrowing.
- D. Safety improvements: Curve warning improvements, road diets, turning lanes, striped shoulders, turn prohibitions to reduce vehicular or pedestrian conflicts, high crash location mitigation, etc. May be used in conjunction with walkability, bike improvement, and speed reduction tools such as intersection conversions to roundabouts.
- E. Improved access to transit: bike racks, benches, shelters, wayfinding, etc. May be used in conjunction with speed reduction, walkability, bike, and safety improvement tools.
- F. Placemaking/pocket parks/pedestrian plazas: closure of a slip lane or channelized right turn lane, normalizing an intersection approach to make it perpendicular with the intersecting streets, and other improvements to reduce large, underused paved areas to create new open space for public use in the context of the surroundings while concurrently improving safety for all road users. May be used in conjunction with speed reduction, walkability, bike, safety, and transit access improvement tools.

6. 3-E Approach/Coordination with Stakeholders/Agencies

To improve the effectiveness of each Complete Streets Committee project, each should seek to coordinate the implementation with enforcement and public education efforts. The 3-E approach to safety has proven that engineering, enforcement, and education are less effective on their own, and are more effective when efforts are combined. Therefore, one of the steps in the Project Selection and Implementation Guide requires, if possible, that the Complete Streets Committee, the Town, and/or its Consultants engage stakeholders/agencies who can educate the public on the benefits of the project before implementation, and who can enforce the vehicle and traffic laws immediately after implementation of the project.

7. Implementation and Coordination Plan/Funding

The implementation and coordination plan will describe the timeline, approvals, permits, coordination with other agencies, and design and construction drawings needed, if necessary, and funding sources. This will provide all stakeholders with an understanding of the coordination needs and timing of the project, which may include previously unforeseen complexities. It will be part of the final report for each Complete Streets project which can be shared with interested agencies for input and concurrence, should additional approvals beyond the Town of Clarkstown be needed.

8. Reporting

It is critical to the success of the Complete Streets Committee that each project document the development of solutions, all steps leading up to it, a plan for implementation and coordination, and other solutions considered. This reporting is necessary to ensure a transparent process and earn the trust of the public, stakeholders, and Town. Part of the reporting may include post-implementation studies to measure the performance of a project, or satisfaction surveys so that the particular Complete Streets improvement can be used again, if it is proven effective and welcomed by the community. It will also be important to flag measures that have not been effective or welcomed by the community so that they can potentially be removed from the Complete Streets Toolbox. The report should also document the proposed implementation plan for the Complete Streets project including potential additional work necessary before implementation like Town or other agency approvals, landscaping design, engineering design, and/or environmental studies or permitting.

✱

Complete Streets Project Selection Short List Criteria Scoring

1. Initial Elimination of Local Road Inputs

- a. Type of Road
 - i. Cul-de-sac
 - ii. Dead end
 - iii. "Staples"

2. Dynamic Score

a. Vehicle and Pedestrian Incidents (10/2018-12/2019)

Score is applied to each **road segment** within 40 feet of incident, on each side of road, for each incident.

- | | |
|---|-----------|
| i. Is Present | Count x 1 |
| ii. Additional Additive Injury Score | |
| Vehicle | Count x 2 |
| Pedestrian | Count x 3 |
| iii. Additional Additive Fatality Score | |
| Vehicle | Count x 4 |
| Pedestrian | Count x 5 |

3. Static Score

a. Road Class (Pavement width)

Score is applied to entire **road length**. If road class is not consistent along length of road, road will be split by road class for scoring purposes.

	1980-present	Prior to 1980
	Standard	Substandard
i. Local	7	9
ii. Collector	3	5
iii. Secondary	0	1

b. Intersection Density

Score is applied to entire **road length** and includes intersections with County & State roads.

- i. Number of intersections (Intersection Count/linear feet)x1000

c. Endpoints Connecting to a Higher Class Road

Score is applied to entire **road length** and includes each endpoint intersection with a higher class Town, County, and/or State road.

- | | |
|--|---|
| i. Connecting to a Higher Class Town Road | 2 |
| ii. Connecting to a Higher Class County Road | 5 |
| iii. Connecting to a Higher Class State Road | 8 |

d. Pedestrian/Traffic Generator

Score is applied to each **road segment** within $\frac{1}{4}$ mile radius of generator.

i. Hamlet Center	Count x 2
ii. School	Count x 2
iii. Places of Worship	Count x 2
iv. Libraries	Count x 2
v. Community Center	Count x 2
vi. Government Facility	Count x 2
vii. Retail Center	Count x 2
viii. Transportation Hub	Count x 2

e. Sidewalk Class

Score is applied to each **road segment** within $\frac{1}{4}$ mile of a public school property.

i. Non-arterial	
1. Sidewalk	2
2. No Sidewalk	6
ii. Arterial	
1. Sidewalk	4
2. No Sidewalk	8

Complete Streets Project Development Process

1. Short List Secondary Evaluation Criteria
 - a. Traffic Counts
 - b. Detailed Road Measurements
 - c. Right of Way Mapping to Identify Necessary Property Acquisition
 - d. Inventory of Traffic Control Devices & Signage
 - e. Assessment of Road Condition
 - i. Pavement
 - ii. Curb
 - iii. Sidewalk
 - f. Roadway Geometry
 - g. Potential Conflicts with Improvements (including but not limited to)
 - i. Utility Poles
 - ii. Utility Boxes
 - iii. Lighting
 - iv. Vegetation
 - v. Driveway Pavers
 - vi. Mailboxes
 - vii. Pilasters
 - viii. Fences
 - ix. Walls
2. Public Meeting for Input on the Design of Improvements (presentation of problems and discussion of potential solutions)
3. Conceptual Design of Improvements
4. Public Meeting on Conceptual Design
5. Resident Acceptance Survey (2/3rd of households along a project)
6. Final Design of Improvements
7. Capital Programming
8. Bidding and Construction

1.0 Introduction

This planning study was undertaken to develop a transit-oriented development (TOD) plan for the Nanuet Hamlet Center in the Town of Clarkstown in New York State. The objective of the TOD plan is to support the development of a transit-oriented neighborhood, centered around the Nanuet Train Station and mixed-use infill development that will link the historical downtown commercial district and the Shops at Nanuet, a regional outdoor shopping center. Developing a vibrant, walkable neighborhood will provide new workforce housing, encourage public transit use, create jobs, and strengthen the local economy. TOD is especially useful in achieving these goals and objectives because it prioritizes and encourages efficient land uses that create sustainable, attractive communities where people of all ages, incomes and backgrounds can live, work and play.

The Town of Clarkstown joins a growing list of towns and cities of all sizes all across the United States that are embracing TOD as a means of growing the local economy, maximizing use of existing infrastructure and increasing overall quality of life. National trends indicate that people are increasingly gravitating towards mixed use communities with access to public transportation. Given the Nanuet Hamlet Center's proximity to New York City, Northern New Jersey, Westchester and local commercial centers, as well as its position on the Pascack Valley Rail Line operated by New Jersey Transit, the community, referred to in this document as the Greater Nanuet TOD area, is in an excellent position to reap the benefits of smart growth TOD.

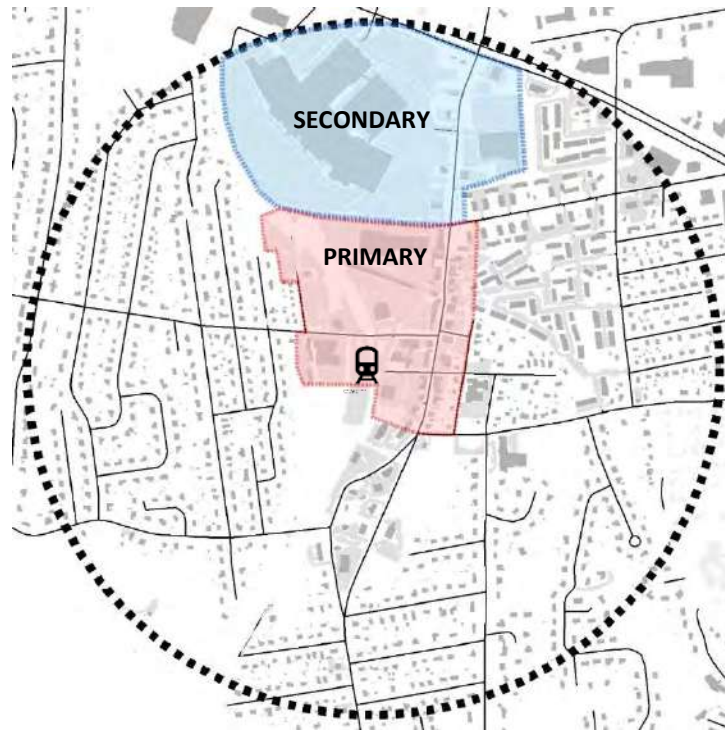

Figure 1: TOD area, Primary (Red) and Secondary (Blue) Study Areas

The Greater Nanuet TOD area is defined as the area within a short (10-15 minute) walk of the Nanuet Train Station, and as illustrated above approximately a circle with a 1/2 mile radius. Within the Greater Nanuet TOD area, there is both a primary and secondary study area (Figure 1). The primary study area within the TOD area focuses on parcels currently zoned as hamlet center, commercial, or light industrial office or those parcels adjacent to or one block

removed from Middletown Road (also known as Main Street or CR-33) between SR-59 and Church Street in Downtown Nanuet. The secondary study area is focused on the interface between the Nanuet hamlet and the Shops at Nanuet regional shopping mall. Shops at Nanuet is the largest employer and attractor of trips in the area. It is important that residents, employees and shoppers alike experience a safe and pleasant connection between the train station and the mall.

The TOD area is located at the intersection of four 2010 Census Block Groups (360870113021, 360870113022, 360870113023, and 360870113032). Although the TOD plan primarily focuses on the area within a ½ mile radius of the Nanuet Train Station, all four census block groups that form the Greater Nanuet TOD area were utilized for demographic analysis purposes. The maps below (Figure 2) illustrate the TOD area as a dotted black circle, while the four census block groups are outlined in red.

Figure 2: Greater Nanuet TOD Area (Black Dotted Circle) and Demographic Analysis Area (Solid Red Boundaries)

2.0 Existing Conditions

Existing conditions pertain to the physical setting, historical context, urban design, multimodal accessibility and current local demographic trends of the Hamlet of Nanuet. Combined, these features help illustrate the role that transportation has played in the historical development of Nanuet, as well as how it stands to further benefit in the future by embracing the full potentials of on-site passenger rail service.

2.1 Study Area Description

Nanuet is a hamlet and census-designated place in the town of Clarkstown, Rockland County, New York, United States located north of Pearl River, south of New City, east of Spring Valley, and west of West Nyack. Located approximately 2 miles north of Bergen County, New Jersey, Nanuet has one of three Rockland County stations on New Jersey Transit's Pascack Valley Line. The other Pascack Valley stations in Rockland County are located in Pearl River (approximately 2.5 miles to the south) and Spring Valley (approximately 2.5 to the north).

The Nanuet TOD area is located on North Middletown Road (also known as Main Street in Nanuet / CR-33) running about ½ mile south of SR-59 West (Nanuet) to Church Street. On average the corridor road right of way (referred to as ROW) is 54 feet, and is configured to include an 11 foot lane, 8 feet of parallel parking, and an 8 foot sidewalk in each direction. The corridor is primarily zoned Hamlet Center (HC), Light Industrial Office (LIO), Commercial Shopping (CS), and Regional Shopping (RS).

2.2 Study Area History

In 1797 the hamlet was named Nannawitt's Meadow after a Kakiat Native American named Nannawitt¹. In 1856 Clarkstown founder James DeClarke changed the town name to Nanuet, most likely due to mispronunciation. Nanuet's growth has always been linked to its accessibility to New York City. The Town's early roads and railways, like later transportation infrastructure, played an important part in regional development. Nanuet can attribute its growth to the construction of the Erie Railroad in Rockland County in 1841 (Figure 3 - left).

Figure 3: Erie Railroad Station, Nanuet – 1909 (Left) and Nanuet Mall – 1969 (Right)

¹ "IF YOU'RE THINKING OF LIVING IN: Nanuet" www.nytimes.com/1989/05/07/realestate/if-you-re-thinking-of-living-in-nanuet.html

Later, during the twentieth century, several transportation projects had enormous impacts on the development of Clarkstown. The construction of the Palisades Interstate Parkway (1947) and the Tappan Zee Bridge (1955) brought immense changes to Clarkstown's landscape, and led to the development which shaped the Town into the place it is today. With the rapid growth in population during the 1960s and 1970s and subsequent infrastructure expansion, the Town experienced an influx of business and industry (Figure 4). Small retail stores and strip malls developed throughout the Town, and several large firms located their offices and industrial works in Clarkstown. The Nanuet Mall, which opened in 1969, featured 101 stores in a fully enclosed two-level complex (Figure 3 – right).

Figure 4: Town of Clarkstown Historical Population

The Nanuet Hamlet Center has continued to grow and develop through the turn of the century. The Nanuet Station, located on the Pascack Valley Line, offers access to Pascack Valley Line stations (Pearl River and Spring Valley in Rockland County) including Hoboken, the PATH which offers access to World Trade Center, as well as transfer opportunities to Penn Station, New York at Secaucus Junction and to other New Jersey stations including Newark, New Jersey and Newark Liberty International Airport. Ridership has continued to grow on the Pascack Valley Line, and infrastructure projects have been proposed which would offer a transfer-free ride on the Pascack Valley Line into New York City. In 2007 the Rockland County Highway Department and Town of Clarkstown completed a Nanuet Hamlet Center streetscape revitalization project, which improved pedestrian infrastructure throughout the area. In 2013 Simon Properties completed construction on the Shops at Nanuet. This 880,000 SF “open-air” shopping mall redeveloped the former Nanuet Mall and has created new jobs and attracted a number of new shoppers from throughout the region.

In 2016, residents, business and landowners had the opportunity to voice their opinions and concerns on the direction and quality of life of the Nanuet Hamlet Center, as well as the entire Town of Clarkstown. Citing concerns of traffic, pedestrian safety and other important quality of life indicators, a comprehensive transportation corridor study was put together to explore means of better integrating land use and transportation planning in the local community. Focused on the Greater Nanuet TOD Area, this TOD plan aims to build off of Nanuet's rich history, well-established transportation ties and the desires of the local community as highlighted in the most recently conducted transportation corridor study.

2.3 Study Area Natural Systems

The majority of the Primary Nanuet TOD area is located in a low lying part of Nanuet (Figure 5). Located between two North-South floodways and surrounded by acres of predominantly non-permeable vehicle parking lots, the area experiences a high likelihood for flooding.

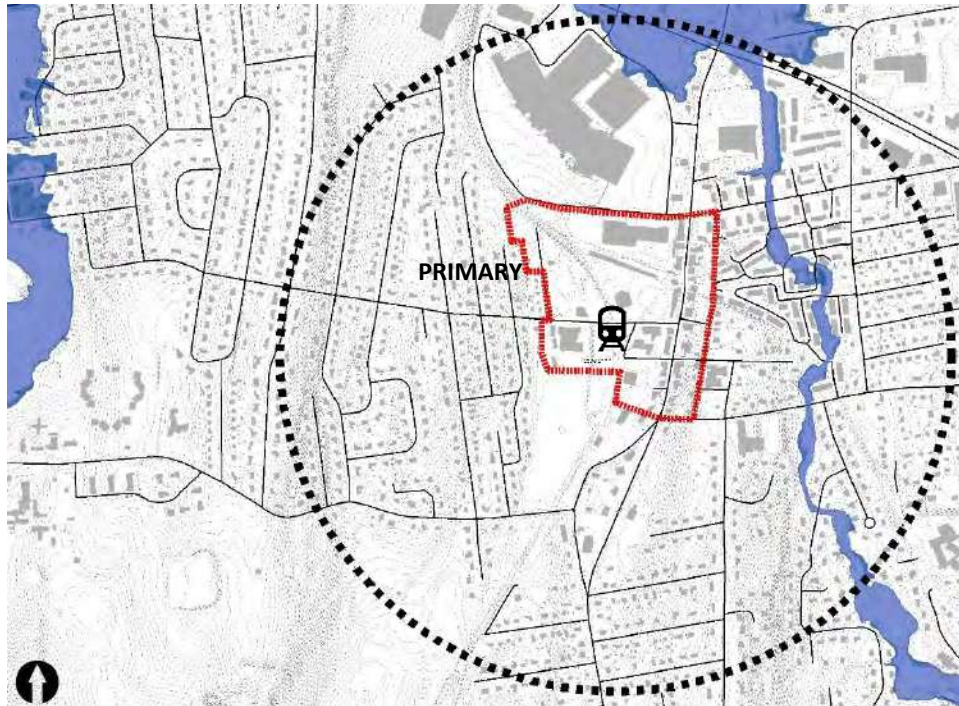

Figure 5: Relationship Between Built Environment and Topography and Flood zones (with TOD Area and Primary Study Area)

In particular, significant flooding in the area was reported in September of 1999 when Hurricane Floyd struck Rockland County. Located immediately adjacent to the Nanuet Train Station, Prospect Street and Nanuet's fire station flooded. The fire engine bays took in 3 feet of water, and the recreation room and parking lot were inundated. As a result, a new fire station was constructed at a new location just south of the primary study area on Old Middletown Road that is better protected from local flooding. Similarly, following severe thunderstorms in 2011, numerous local roads in Nanuet were closed due to flooding, resulting in a State of Emergency for the County. Thus, any proposed development for the Study area will need to mitigate potential flooding.

2.4 Literature Review

The following local planning guides offer guidance to understanding the existing plans proposed for the hamlet center and its surrounding environment.

Clarkstown Comprehensive Plan 2009

In 2009, the Town of Clarkstown updated its 1999 Comprehensive Plan to examine the past, present and potential future conditions of the Town and works to serve as a reference and guide for land use decisions. The comprehensive plan has the following vision statement for the Hamlet of Nanuet:

“...A hamlet center with a small town feel, focused on the development and vibrancy of its downtown. The center will focus on quality dining and entertainment, as well as communal greenspace all defined by specific design standards. The center will provide a multimodal environment providing safety and accessibility for bicycles and pedestrians and will continue to advocate for uses important to current residents including housing for seniors and young professionals.”

Mid-Hudson Regional Sustainability Plan

The Mid-Hudson Regional Sustainability Plan (May 2013) charts a path of both sustainability and economic development for its approximately two million residents that live in seven counties. Within the broad context of sustainable development, this plan outlines strategies to mitigate the effects of climate change. It aims to achieve this by managing land use, transportation, and materials to improve community health, reduce energy consumption, and protect agriculture, open space, and water resources. Rockland County, and Nanuet, are within the Mid-Hudson region, and will benefit from a properly-executed Regional Sustainability Plan. This Transit-Oriented Development Plan for Nanuet will complement the pre-existing Regional Sustainability Plan by using common performance metrics and using the regional plan as a guidance document.

Partnerships & Connections: Town of Clarkstown Commercial Corridor Transportation & Land Use Study

A comprehensive transportation corridor study was completed for the Town in 2016 that sought to rebalance transportation investment priorities and support the integration between land use and transportation planning. The study included an extensive analysis of existing conditions, documentation of community-led corridor visions and development concepts, and specific zoning code alterations to support the goals identified by the Town and community.

As part of the study, a business and landowner survey was conducted and a series of public outreach meetings were completed. The survey sought to build on the vision established in the Town of Clarkstown’s Comprehensive plan as it relates to land use, zoning, transportation and overall quality of life in Clarkstown. Businesses and landowners in the TOD area reported that their primary areas of concern included traffic congestion, excessive road speeds, lack of parking, unsafe pedestrian crossings, and power outages. Survey respondents were concerned that the Nanuet Hamlet Center was lacking a “Town feel” and needed landscaping, preservation, improved signage, and building renovation. Respondents also requested additional options for senior and affordable housing.

Community members also felt that limited senior and affordable housing created a challenge to the corridor’s demographic visions. Regardless of the narrow roadway and parallel parking, members felt that road speeds were excessive. Finally, they noted that the existing zoning requirements and current mix of uses (especially light industrial office adjacent to the hamlet center and train station) were serious impediments to achieving the community vision.

The corridor vision as developed through community meetings includes the following goals: retain urban nature and small town feel; focus development efforts on ensuring vibrancy of its core, establish quality destinations (dining, arts entertainment, urban greenspace, etc.), and prioritize safe and convenient access to key destinations for bicyclists, pedestrians and public transit users. The ideal hamlet center developments will not displace current residents and be inclusive of housing and opportunities for seniors and young professionals.

Hudson Valley Pattern for Progress – Urban Action Agenda: A Regional Plan for Urban Centers

The Hudson Valley Pattern for Progress' Urban Action Agenda (UAA) is an ongoing regional planning effort that seeks to promote sustainable initiatives, including preserving green and open space, avoiding urban sprawl, and attracting and retaining population through informed urban growth practices. The UAA planning process is comprised of 25 urban centers within a 9-county region of New York that includes the northern and northwestern suburbs of New York City, the Hudson River Valley and the southern and eastern portions of the Catskill Mountains. As a major transportation and commercial hub in Rockland County, Nanuet was identified as one of these 25 urban centers where growth efforts should be concentrated in order to further cultivate social, cultural, civic and economic activity. The ongoing efforts of the Nanuet TOD plan to establish a walkable, mixed-use community centered around the Nanuet Train Station and Hamlet Center further work to advance those initiatives set forth by Patterns for Progress. These efforts will ultimately and effectively contribute to the sustainable development and vibrancy of Nanuet, while also serving as a bedrock for future TOD plans in the Hudson Valley.

2.5 Land Use and Urban Design

This section focuses on how the Town of Clarkstown's current zoning districts are applied across the study area.

2.5.1 Land Use

The following zoning districts are present in the primary study areas²:

- HC: Hamlet Commercial - The purpose and intent of the Hamlet Commercial District is to reinforce and protect the existing historic character of the hamlet by encouraging renovation and new construction which is in keeping with the local historic scale and character as recommended in the Town Comprehensive Plan. Located in the Town's hamlet centers, this district encourages the provision of pedestrian and bicycle amenities as well as apartments over ground floor commercial development.
- CS: Community Shopping - This district offers goods and services that are needed by a larger segment of the town, including items of a more special nature such as clothing, banks and printing shops. This district does attract persons throughout the town but is not meant to be a major attraction to large numbers of shoppers from adjacent towns or counties.
- RS: Regional Shopping - This district offers the full range of commercial shopping needs from convenience to shopping specialty items in a location that is on or immediately adjacent to major state highways, in order to handle shoppers from the surrounding region.
- LIO: Light Industrial Office - The purpose of the Limited Light Industrial Office District is to permit the development of selected industrial uses on land planned and suited to such uses but at the same time protecting the character of the surrounding residential areas or planned residential areas. Manufacturing operations are to be permitted only if they are incidental or accessory to the primary operation of the plant, or allowed by special permit of the Town Board. This district is planned and intended for industrial land uses

² From Town of Clarkstown Zoning Map. http://town.clarkstown.ny.us/PDF/Town_Zoning_Map.pdf

characterized by low land coverage, with large year-round landscaped setbacks for protection of residential areas, attractive building designs and developing an industrial parklike setting. The regulations are designed to promote industrial developments using the highest acceptable planning standards to properly handle any obnoxious and objectionable external effects upon the surrounding residential areas, circulation systems, drainage and other natural features.

- MF-1 and MF-3: The MF-1 and MF-3 zones are established in order to provide additional housing opportunities in attached housing developments. These zones are designed for areas which can provide local services necessary to support relatively intensive housing development and where such developments will be compatible with the existing scale of development. As such, these zones are intended and to be located in the dense portions of the town's hamlets.

Figure 6 illustrates that the primary study area is comprised of a mix of residential, commercial, retail and office uses which generally conform with corresponding zoning districts. Regional shopping, in the form of the Shops at Nanuet, occupies a bulk of the TOD area. Residential districts comprise an appreciable amount of the area, but are restricted to the east of the Hamlet Commercial (HC) District; the exception is one multifamily district (MF-1) situated inside the Light Office Industrial (LIO) District, and below the Regional Shopping District, which is developed as a commuter lot. The Hamlet Commercial District lies in the middle of the TOD Area.

This zoning configuration poses some challenges to achieving transit-oriented development goals. The district immediately abutting the Nanuet train station to the west is the Light Industrial Office (LIO) zone. The LIO allows light industry and office but does not allow residential uses. Recent changes to Clarkstown's zoning codes have made it possible to include denser mixed housing and mixed-use development and encourage alternative modes of transportation in the HC zone east of the train station, but the redevelopment of this area is limited.

Another zoning element that may pose challenges to TOD development is both height, and the number of floor restrictions within the TOD area; erecting at least 3-floor structures will enable more compact development in critically-accessible areas. A variety of opportunities exist to update the town's zoning code that can help attract new businesses, beautify existing buildings, and increase connectivity and accessibility for all travelers. Various zoning changes can be made that will help create opportunities better-suited for the community and future development of the Hamlet Center.

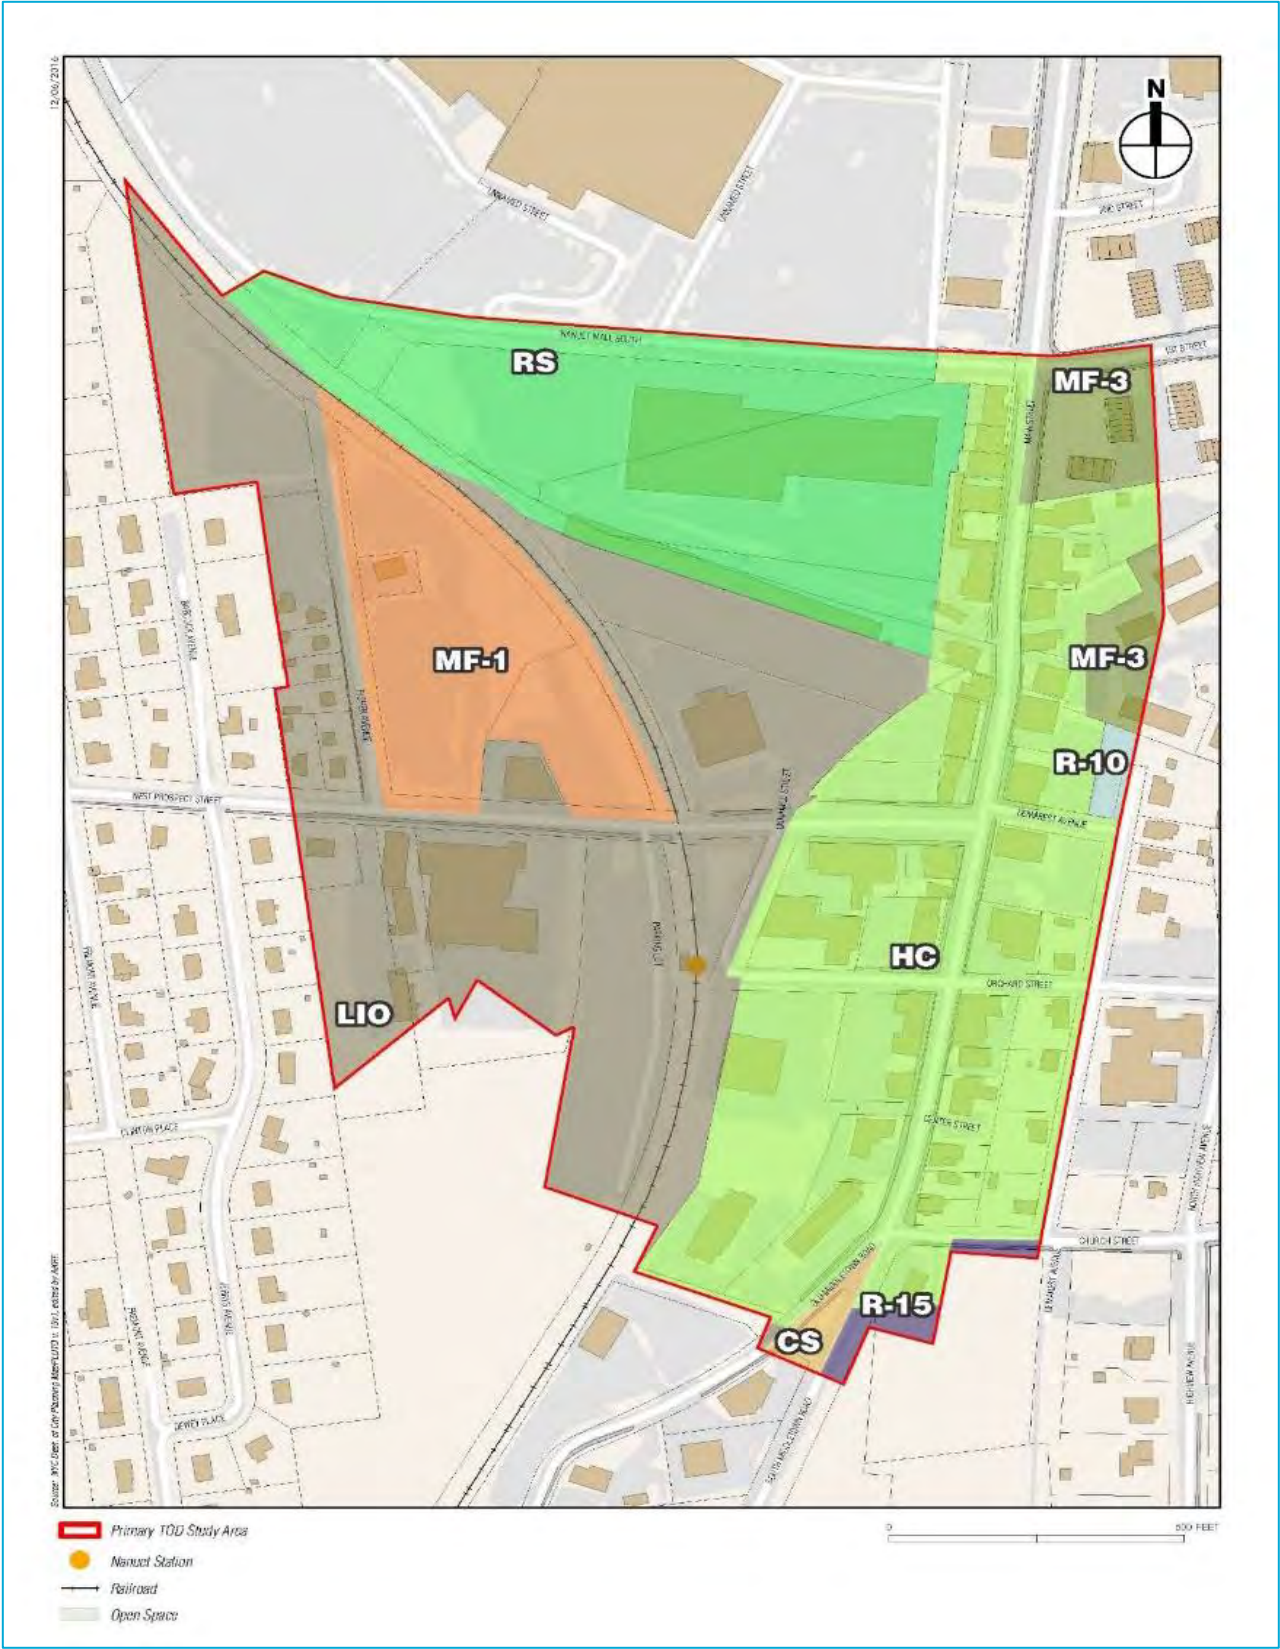

Figure 6: Existing Zoning within the Primary TOD Study Area

2.5.2 Urban Design

The Nanuet TOD Area is considered a “downtown” area made up of small businesses located on small lot sizes (0.08 to 1.8 acres). Although this is a busy corridor with many retail uses, there are three key sites that shape the zone’s urban form: Shops at Nanuet, the Nanuet Hamlet Center, and the Nanuet train station.

Located on the former site of the Nanuet Mall mentioned above, the Shops at Nanuet is a \$150 million development which opened in 2013. Designed as an outdoor mall with an “open air” main street, it features two anchor tenants (Macy’s and Sears), shops, restaurants, a fitness center, movie theater, and high-end supermarket. The Shops at Nanuet has ample parking area (approximately 1.5 million square feet) and includes a multi-bay bus stop with four shelters and a dedicated bus lane that is currently used by the Clarkstown Mini-Trans. While the Shops at Nanuet covers 750,000 square feet and is recognizable as large-scale retail, most commercial structures in the TOD Area are smaller, with multiple tenants.

The Nanuet Hamlet Center is located on North Middletown Road (also known as Main Street in Nanuet / CR-33) running about ½ mile South of SR-59 West to Church Street and ¼ Mile south of Shops at Nanuet. On average the public street (door to door) is 54 feet, and is configured to include an 11 foot lane, 8 feet of parallel parking, and an 8 foot sidewalk in each direction. The Hamlet Center is primarily zoned CS and RS. Very little acreage is utilized for parking due to the age of the parcels and the fact that the retail activity is primarily small businesses (often with second floor residences) that are located on small lot sizes (0.08 to 1.8 acres). It is important to note that most of the buildings would not be approved if they were constructed under existing zoning requirements.

Nanuet Hamlet is unique in the context of Clarkstown’s typical urban form due to its high concentration of small one and two-story buildings which support a variety of neighborhood shopping and professional office land uses. It is the only hamlet within the Town of Clarkstown with access to a train station. Corridor buildings are situated close to the street (minimal setbacks / buffers). The small block sizes facilitate pedestrian access, as does the presence of high quality pedestrian infrastructure. The roadway and sidewalks were recently resurfaced and designed with attractive streetscape features.

The Nanuet train station is a key destination within the TOD area. The track and infrastructure is owned by New Jersey Transit (NJ Transit) and leased to the Metropolitan Transportation Authority’s (MTA) Metro-North Railroad (Metro-North), and the transit service is operated by NJ Transit under contract with Metro-North. The urban form adjacent the train station is predominantly comprised of parking and light industry to the west of the tracks, and light industry and mixed-use residential/retail to the east of the tracks. The following parking facilities are present:

- **Nanuet Train Station Lot 1 (Clarkstown Lot).** The Nanuet Train Station Lot 1 is located on the south side of West Prospect Street near the intersection with South Middletown Road, on the west side of the train station. Lot 1 has 332 spaces, including 12 handicapped-accessible parking spaces. No fees are required but a Town residential permit is needed. The lots are relatively close to commercial activities on Main Street. Some guide signs are in disrepair and may hinder access. There are no bicycle racks and travel lanes within the lot are tight and narrow.
- **Nanuet Train Station Lot 2 (County Lot).** The Nanuet Train Station Lot 2 is located on the north side of West Prospect Street further from the intersection with South Middletown Road, to the northwest of the Train Station. The lot has 229 spaces with 12 handicapped-accessible spaces. No fees or residential permits are required. As with Nanuet Train Station Lot 1, while approximately 250 feet further west, the lot provides access to stores on

Main Street. Some guide signs are in disrepair and may hinder access and there are no bicycle racks. There is no signage to the train station platform for pedestrians from Lot 2, and the available path to the platform is poor.

- **Nanuet Train Station Lot 3 (MTA Lot).** The Nanuet Train Station Lot 3 is located to the north of West Prospect Street behind the US Post Office. The lot has 235 spaces. The lot is owned by Metro-North and operated under contract by LAZ Parking (www.rrparking.com) and not by the Town of Clarkstown. The fee for 16 hours (1 working day) is \$1.25 and for 24 hours the cost is \$3.25. Annual permits are also available for \$21.68 (fee with tax). These spaces are furthest from the Nanuet Train Station.

Table 1: TOD Area - Transit Station Parking Amenities

Parking Asset	Spaces	Utilization	ADA	Cost
Nanuet Train Station Lot 1 (Clarkstown Lot)	332	At Capacity	12	Free
Nanuet Train Station Lot 2 (County Lot)	229	High	12	Free
Nanuet Train Station Lot 3 (MTA Lot)	235	Low	0	\$1.25 (16 hrs) \$3.25 (24 hrs)

The above table compares the three parking assets (Table 1). Given that the three parking lots are very close to each other, their land use profiles are similar. The existing land use is predominantly single family residential and multifamily residential covering over 50% of the area in walking distance. There are regional and community business centers near the lots, which make up to 35% of the area. A nominal share of the area (3%) is used for recreation activities. Providing pedestrian access to these locations will be instrumental in improving walkability and increasing non-motorized trips to these locations.

Building Form Requirements

The Town of Clarkstown's building form requirements limit the construction of tall structures in our study area. Regional Shopping allows for the tallest structures (height of 55 feet), while Hamlet Center (HC) allows for a maximum building height of 28 feet.

Setback Requirements

In the Town of Clarkstown setbacks differ between residential, commercial, retail and industrial uses. The following table summarizes the setbacks for zoning districts located within the Nanuet TOD Area.

Table 2: Setback Requirements for Zoning Districts in the Nanuet TOD Area

	Front	Back	Side
HC: Hamlet Commercial	None required when adjacent to commercial district, but 15 feet when provided 20 feet when adjacent to residential district	25 feet	None required when adjacent to commercial district, but 15 feet when provided 25 feet when adjacent to residential district
CS: Community Shopping	30 feet	None required when adjacent to commercial district, but 15 feet when provided 25 feet when adjacent to residential district	50 feet
RS: Regional Shopping	40 feet	50 feet when adjacent to non-residential district 75 feet when adjacent to residential district	25 feet when adjacent to non-residential district 37.5 feet when adjacent to residential district
LIO: Light Industrial Office	80 feet	15 feet when adjacent to non-residential district 22.5 feet when adjacent to residential district	40 feet when adjacent to non-residential district 60 feet when adjacent to residential district
MF-1 & MF-3: Multifamily	25 Feet from any private street 50 Feet from any public street 100 Feet from any state highway	50 feet	50 feet

Landscaping Requirements

All zoning districts within Nanuet's TOD area require minimum yard area on all sides of a structure. Residential districts (R-15, R-10, RG-2) require the largest yards in the rear of the structure, the next largest in the front, and the smallest on the sides. This is consistent across Regional Shopping, Community Shopping and Professional Office districts. However, Light Office Industrial districts require the largest yards in the front of the structure and smallest yards in the rear, while Laboratory Office districts require equally-sized front and rear yards. Hamlet Commercial districts only require a rear yard near residential districts.

Design Standards

The Nanuet Hamlet Commercial (HC) District is intended to preserve the look and feel of the hamlet center. The code states that its purpose is to "to reinforce and protect the existing character of the hamlet commercial center by encouraging renovation and new construction which is in keeping with the local historic scale and character."³ This district follows a "Main Street Style" common to small towns in the region. Buildings are mixed-use, with second floor residential or commercial space, and dwelling unit densities are relatively high.

Additional steps could be taken to further beautify the district and induce transit uses and pedestrian activities therein. For example, consistent design guidelines that detail clear signage and transparent building frontages with large windows would provide easy visual access to shops and their contents.

Consistent design standards will help ensure improved community, commercial and retail aesthetics that may spur pedestrian activities and draw future residents. Additionally, a welcome sign at South Middletown Road and SR-59 West could improve the cohesive community feel and unique town identity. Design standards may help this corridor feel like a destination with attractive shops and restaurants. But to achieve this, town actions must be closely coordinated with local businesses (through a strong business improvement district, for example). A key element is ensuring that standards incorporate existing small-scale parks (such as the Rose Garden) that are connected through greenways and protected bicycle and pedestrian linkages to the hamlet center. This would improve access to commercial activities in the HC district and improve non-motorized transit options.

Design standards, in conjunction with zoning adjustments, infill development and business supported programming will help achieve this plan's TOD development goals.

2.6 Transportation

This section analyzes the transportation access to, from, and within the TOD Area study area. This has significant impacts on the economic vitality of the areas, the safety and comfort of potential customers, and the overall identity of the commercial area.

2.6.1 Pedestrian Network

The Nanuet hamlet center has good foundational elements, such as a preliminary street grid network and a historic Main Street, to build upon. However, supportive zoning and infrastructure improvements would enhance these

³ Clarkstown, NY zoning codes, ecode360 (<http://ecode360.com/search/CL0028?query=HC>)

foundational elements to create a truly walkable and multi-modal environment. For example, with the exception of a few blocks of South Middletown Ave / Main Street sidewalks, curb-cuts, crosswalks and pedestrian signals are missing or substandard across Nanuet's street network.

Numerous physical barriers exist in Nanuet that hamper pedestrian and non-motorized activities. The lack of a complete, ADA accessible sidewalk network is one of the largest of these barriers, along with properly-striped crosswalks, enforcement and education of proper crosswalk usage, pedestrian-friendly walk signals at traffic signals (ones that are automatic and not push-button activated) and all-way stop signs. Additionally, long block sizes and wide street crossings discourage pedestrian activities, as do high vehicle speeds (even with a sidewalk present).

One of the major indicators of the potential for increased pedestrian traffic and decreased vehicle miles travelled (VMT) is the level of connectivity in a street network⁴. A dense, well-connected street network gives bicyclists and pedestrians a wide range of options when choosing a route, and helps to decrease the speed of motor vehicles. Currently, Nanuet maintains a limited sidewalk program that is disjointed, fragmented, and disconnected from major activity centers. The only true sidewalk infrastructure of significance is the aging sidewalk along Main Street. While many commuters walk from adjacent parking lots, they do so on unmarked, run-down, and severely deteriorating asphalt. By introducing new pedestrian infrastructure Nanuet has the potential to encourage neighboring residents to walk to the train station rather than driving, thus reducing VMT.

2.6.2 *Bicycle Network*

Bicycling is a popular recreational activity in Clarkstown and Nanuet, especially with access to various parks (Lake Nanuet Park and Mountainview Nature Park), state parks (Blauvelt and Hook Mountain) and the Hudson River within six miles of the TOD Area. However, cycling is less viable for casual cyclists who may wish to use their cycle to commute or make local trips in the neighborhood. While cycling should be encouraged for all ages, it is important to note that 12%⁵ of Nanuet residents are between the ages of 10 to 19; for them biking is not only a source of recreation, it is also a cost-effective means of transportation and potent symbol of personal freedom.

Cycling infrastructure both within Nanuet and to access these resources is missing across the street network. This will be crucial to focus on in order to facilitate robust TOD development.

2.6.3 *Transit Service*

Local Bus Service

Two local bus services operate within Nanuet's TOD Area. Transport of Rockland runs Routes 59 and 93, and Clarkstown Mini-Trans runs Routes A, B, C, D, and E. These public bus services grant resident access to crucial retail amenities. In addition, the Clarkstown Mini-Trans Route D provides service to the Nanuet Train Station, while Transport of Rockland Route 93 can be accessed through a short walk from the Nanuet Train Station.

⁴ Ewing, R. and R. Cervero, 2010. Travel and the built environment: a meta-analysis. *Journal of the American Planning Association*, vol. 76.

⁵ 2014 ACS, 5 year estimate

Commuter Bus Service

Two commuter bus services operate within Nanuet's TOD Area. COACH USA runs Routes 11T, 11AT, 20, 20T, 47, 49 and 49J, mostly with connections to the Shops at Nanuet. Saddle River Tours/AmeriBus operates Route 11C. The TAPPAN ZEEExpress is also an important transit service, with connections to multiple train stations (Spring Valley Transit Center, Tarrytown Metro-North Station, White Plains Transit Center) shopping amenities (Palisades Center Stores at Macy's and White Plains Galleria Mall), and locations in Nyack and White Plains. However, it falls outside of the TOD Area: Nanuet's only stop is the Exit 14 Park & Ride stop, which is 1 mile northwest of the Shops at Nanuet.

Rail Service

Nanuet residents have access to Metro-North's (provided through an operating agreement with New Jersey Transit) Pascack Valley Line service. The Pascack Valley Line operates 7 days a week between Hoboken Terminal and Spring Valley, with direct services to the PATH system and connecting services to New York Penn Station and other New Jersey Transit rail lines available at Secaucus Junction. During peak-direction rush hours, rail service operates at approximate frequencies between 15 and 30 minutes. During off-peak hours, service operates approximately on an hour schedule with less frequent service available during the evening. It should be noted that for inbound service from Spring Valley to Hoboken, there are no trains in operation between 3:46 PM and 9:14 PM. On weekends, service is operated hourly and every other hour, depending on the time of day. This rail service is critical to residents and a focal point of TOD development; access to the New York City metropolitan area improves Nanuet residents' access to jobs, education, health care and recreation.

Demand Response Transit

Not specific to Nanuet or Clarkstown, Rockland County operates TRIPS paratransit bus service. Both disabled (physical, mental, developmental, or intellectual disabilities) residents and those age 60 or over can use this service if they are unable to use the municipal, fixed-route bus service.

2.6.4 Automobile Access

Nanuet is situated within close proximity to the region's major roadways; offering easy automobile and bus transit access to employment, commercial, and residential centers throughout the region. Directly to the north, I-287 provides east-west mobility and access to Westchester County and employment centers in White Plains via the Tappan Zee Bridge, as well as north-south connections along I-87. In addition, running parallel to I-287 is New York State Route (SR) 59. SR-59 is a major commercial corridor that provides easy access to the north-south SR-304 and Palisades Interstate Parkway, and destinations in New Jersey and access to New York City via Hudson River crossings to the south. In short, Nanuet is positioned ideally for commuting via a number of modes (automobile, bus, and rail) to New York City, Westchester, and northern New Jersey.

Parking

Automobile access is dependent on the availability of parking. While Nanuet's actual supply of parking may be sufficient, a lack of coordinated parking resources for the HC district creates a perception of a parking shortage. Park and Ride facilities can solve this problem, but they must be managed such that they do not impact station access for pedestrians. Additionally, parking resources adjacent to the HC District exist (large, often vacant lots at the Shops at Nanuet) but need to be managed so that people can comfortably walk to the train station and Hamlet Commercial destinations.

Community members have cited a lack of parking in close proximity to shopping destinations along Main Street in the heart of the Hamlet Center. To solve this problem they suggested shifting parking to the rear of buildings, creating angular parking and improving walking and bicycling infrastructure, or leveraging under utilized parking facilities such as the MTA Metro-North Railroad parking lot behind the Post Office. Other public recommendations include the creation of a shuttle bus that could connect the Hamlet Commercial District to less walkable parking lots and mixed-use development.

2.6.5 Future Development Plans and Projects

The following area projects may have significant impacts on the study area's transportation system.

New NY (Tappan Zee) Bridge Construction

The new Tappan Zee Bridge, called the New NY Bridge, is slated to open in 2018. In order to meet the needs of residents on both sides of the Hudson River, a Mass Transit Task Force (MTTF) was convened to make assessments and recommendations for public transit across the New NY Bridge. The 31-member MTTF recommended that a Bus Rapid Transit system operates across the new bridge. At present approximately \$91 million has been identified to implement the Lower Hudson Transit Link (LHTL). The LHTL will provide an important, transit service to Clarkstown, and possibly Nanuet in the future⁶. In the short term, the bridge construction does not initially impact the Nanuet TOD Area, however potential remains to leverage Nanuet's transit assets for multi-modal connections in the future.

The first phase of the LHTL is being developed along the I-287 corridor between Suffern to the west and White Plains to the east. The LHTL also includes integrated corridor management (ICM) elements that will improve traffic flow on I-287 and other key roads in Rockland and Westchester Counties. Through these enhancements, the LHTL project aims to improve reliability and safety for travelers, improve the availability, accessibility and quality of transit services in the Lower Hudson Valley, and reduce travel times along the I-287 corridor for all travelers.

Pfizer Pearl River Campus Redevelopment

The Pfizer Pearl River Campus (401 N Middletown Rd) is located approximately 1.5 miles from the Nanuet Train Station off Middletown Road just over the Clarkstown border in the neighboring town of Orangetown. This campus is of particular interest to the TOD project as it has a high potential for mixed use redevelopment. The sprawling 500-acre campus has been a big part of Rockland County's economic and social fabric since 1907. The company currently employs 1,300 employees; however, it is reported to be cutting its workforce down to 550 by 2017.

In 2015, Industrial Realty Group (IRG) bought 200 acres of the campus including 38 buildings. Most existing buildings will be kept for uses such as biotech, medical tech, manufacturing and office space. IRG envisions using vacant land facing Middletown Road to create a mix of residential, retail, office space, a medical facility and a hotel that would attract employees (especially Millennials⁷) to live and work at the campus. IRG has prefaced its ability to hire qualified workers on its success in creating a vibrant urban environment that attracts businesses.

⁶<http://www.newnybridge.com/mttf/>

⁷<http://www.lohud.com/story/news/local/rockland/orangetown/2015/12/01/pfizer-campus-millennials/76604922/>

The Nanuet Train Station is closer to the planned development than the Pearl River station; thus it is likely that new employees will be using the station which will benefit the surrounding community businesses. The Nanuet TOD Area will similarly need to respond to the preferences of these new workers if it hopes to attract them and their families. Effective transit connections through improved local bus (or corporate shuttle) options could reduce potential congestion impacts on the area road network.

2.7 Demographics

Key demographic information describes the residents that live in Nanuet's TOD Area, which constitutes a ½ mile limit around the Nanuet Train Station (Please see Section 1. Introduction and Overview, Study Area Description). This section explores six demographic points that were selected to assess the economic composition of the TOD Area, establish baseline data to compare against in the future (5, 15, and 30 years), and to act as possible predictors of Nanuet's demand for TOD development: Educational Attainment, Employment Status, Employment Industries, Annual Household Income, Poverty Rate and Age. Comparing the residents of the project study area (TOD Zone – area comprised four block groups surrounding the Nanuet Hamlet Center) to the composition of the Town of Clarkstown and/or New York State as a whole provides a comparative understanding of the studies areas demographic conditions.

2.7.1 Age Cohorts

Figure 7: Age Cohorts, Town of Clarkstown & TOD Zone (source: 2014 ACS 5-year estimate)

Age is an important demographic factor because for those that desire to age in place, access to transit and amenities is crucial. In addition to being able to comfortably access transit and amenities, seniors may want to downsize, which may increase demand for smaller housing units in the TOD Area. The pedestrian network is important to everyone, but it is especially important to seniors that come to rely more on transit if their ability, or desire, to drive decreases. For all of these reasons the needs of Nanuet seniors must be carefully considered in the TOD Area developments. As observed in Figure 7, the population within the four Nanuet census blocks maintains similar demographic cohorts as the Town as a whole. Interestingly, of the senior citizen population, Nanuet maintains a larger share of the eldest members of the community and a smaller share of Boomers, as compared to the Town as whole. This may be an opportunity for and create a scenario where Nanuet could be a landing spot for Clarkstown Boomers wishing to age in place, if appropriate alternative housing stock is developed to cater to their new housing needs.

2.7.2 Educational Attainment

The TOD Area does not differ appreciably from New York State in educational attainment, except for two categories: high school graduate (includes equivalency) and bachelor's degree (Figure 88). A higher percentage of residents of the TOD Area have a bachelor's degree (24%) than New York State overall (19%), while the opposite is true for the percentage of high school graduates: New York State has a higher percentage (27%) than does the TOD Area (23%). Because these categories are mutually exclusive, it is likely that the TOD Area has less residents with only a high school diploma because more of them have a bachelor's degree.

Figure 8: Educational Attainment, New York State & TOD Zone (2014 ACS 5-year estimate)

2.7.3 Household Income

Household income is the demographic with the greatest variance between New York State households and Nanuet TOD Area households. Households in the TOD Area Block Groups are wealthier than New York State households.

Figure 9: Annual Household Income, New York State & TOD Zone (2014 ACS 5-year estimate)

New York State's 2014 median household income is \$58,687, compared to \$103,577 for TOD Area residents. Nanuet's largest household income bracket is \$100,000 to \$149,999 (20% of households) while New York State's largest household income bracket is \$50,000 to \$74,999 (16% of households). Additionally, a significantly higher percentage of Nanuet's households belong to the two highest income brackets, at 28%, compared to 13% of New York State households that belong to the two highest income brackets. It is also significant to compare the lowest-earning households: 28% of TOD Area households earn less than \$50,000 a year, compared to 44% of New York State households.

2.7.4 Poverty Rate

Figure 10: Poverty Rate, Nanuet & New York State (2014 ACS 5-year estimate)

Another important demographic is poverty. The United States Census Bureau defines poverty in the following manner, "if a family's total income is less than the family's threshold, then that family and every individual in it is considered in poverty...The official poverty definition uses money income before taxes and does not include capital gains or noncash benefits (such as public housing, Medicaid, and food stamps)."⁸ Poverty is significant because it determines a household's or individual's buying power, demand for social services, and particular demands for housing stock. As evident from the annual household income chart above, Nanuet's poverty rate is well below the State's poverty rate.

⁸ United States Census Bureau - <https://www.census.gov/hhes/www/poverty/about/overview/measure.html>

2.7.5 Employment Status

Figure 11: Employment Status, New York State & TOD Zone (2014 ACS 5-year estimate)

Nanuet and New York State do not differ greatly on unemployment status, as this statistic in both areas is between 5 and 6%. However, the two areas vary more in both the percentage of residents not in the labor force and those who are employed. 58% of New York State residents are employed, compared to 64% of TOD Area residents, and 37% of New York State residents are not in the labor force, compared to 31% of TOD Area residents. Though speculative, these statistics may be explained by a smaller percentage of retirees in Nanuet compared to New York State.

2.7.6 Employment Industries

Table 3: Employment Industries, New York State & TOD Zone (source: 2014 ACS 5-year estimate)

Industry	NYS	TOD Area
Agriculture, forestry, fishing and hunting, and mining	1%	0%
Construction	6%	3%
Manufacturing	7%	7%
Wholesale trade	3%	4%
Retail trade	11%	11%
Transportation and warehousing, and utilities	5%	5%
Information	3%	3%
Finance and insurance, and real estate and rental and leasing	8%	9%
Professional, scientific, and management, and administrative and waste management services	11%	11%
Educational services, and health care and social assistance	28%	28%
Arts, entertainment, and recreation, and accommodation and food services	9%	9%
Other services, except public administration	5%	7%
Public administration	5%	4%

The break-out of the percentage of residents that work in different industries are similar between New York State and the TOD Area: in both areas 28% of residents work in Educational services, health care and social assistance, 11% work in Professional, scientific, management, and administrative and waste management services and 11% work in retail trade. As mentioned, the differences between the two areas are small, with the largest variance found in construction: 6% of New York State residents work in construction compared to 3% of TOD Area residents.

3.0 Public Engagement Program

The project team developed an extensive public engagement program in order to draw from the expertise of local stakeholders and residents in the development of an effective and inclusive TOD Plan. The public engagement program additionally served the purpose of educating the public on the benefits of TOD, especially within the local context of Nanuet. The engagement program consisted of a steering committee, public workshops and stakeholder surveys. The following is a description of the project team, led by the New York State Energy Research & Development Authority and the Town of Clarkstown:

Table 4: Nanuet TOD Plan Project Team

Stakeholder Organization	Role	Contact, Title
NYSERDA	Project Manager	Christopher Roehr, NYSERDA
Town of Clarkstown	Project Lead/Primary Contact	Jose Simoes, Principal Planner
Cambridge Systematics	Lead Consultant	Chris Titze, Senior Associate
AKRF	Sub Consultant	Nina Peek, Senior Vice President
Behan Planning and Design	Sub Consultant	Michael Allen, Senior Associate

3.1 Steering Committee

The project team coordinated a formal steering committee to represent a diverse spectrum of local representation of the Nanuet Hamlet. The steering committee included the Town Supervisor, Town Attorney, as well as members of the Nanuet Civic Association, Chamber of Commerce, School District, EMS and Post Office. Additionally, representatives from Simon Properties (manager of the Shops at Nanuet), NYSDOT, MTA Metro-North Railroad and Rockland County Planning, were included in the steering committee. Throughout the project, the Steering Committee periodically met to assess project goals, project deliverables and advise the project team on current plan strategies. The Steering Committee included the following members:

Table 5: Nanuet TOD Plan Steering Committee

Committee Member	Role
Honorable George Hoehmann	Town Supervisor
Lino Sciarretta	Town Attorney
Risa Hoag	Chamber of Commerce
Susan Farese	Chamber of Commerce
Anthony Pallogudis	Chamber of Commerce
James Flynn	Civic Association
Roberta Bangs	Civic Association
Barbara Wallenstein	Nanuet EMS
Mark McNeil	Superintendent of the Nanuet Union Free School District
Vincent Carella	Principal, Nanuet Senior High School
Jeff Hutt	Nanuet Post Office
Honorable Edwin Day	County Executive, Rockland County
Douglas J. Schuetz	Rockland County Public Transportation & Planning
Helen Kenny-Burrows	Rockland County Planning
Robyn Hollander	MTA Metro-North Railroad
Thomas Weiner	NYSDOT
Todd Westhuis	NYSDOT
Ryan Hidalgo	Simon Properties

These committee members were selected because of their local knowledge of the Nanuet hamlet, their experience with previous local planning efforts and their ability to represent and leverage discussions with the public.

A total of six meetings were held between the Project Team and the Steering Committee at the Town of Clarkstown Town Hall. Review materials and draft deliverables were provided to the Steering Committee in advance of each meeting. Notes from each Steering Committee meeting were also compiled and documented as a record of the project. A record and short summary of each meeting is summarized below:

Steering Committee Meeting 1

The introductory meeting was conducted on August 5, 2016 and introduced the consultant and project team. Additionally, the group discussed project opportunities and constraints, as well stakeholder feedback, land use, and the upcoming market analysis and property owner business survey.

Steering Committee Meeting 2

The second meeting was conducted on October 12, 2016 and the steering committee covered multiple items. The committee reviewed the draft existing conditions report to further assess and analyze the study. Additionally, the results of the business and landowner interviews was discussed. Key issues disseminated from these interviews included the following:

- Lack of parking within the Downtown/Nanuet Hamlet Center
- Traffic and travel speeds on Prospect and Main Streets
- A general need for improved connectivity between the Nanuet Train Station and the Shops at Nanuet.

Lastly, input was solicited for the Future Land Use and Market Analysis Report. The meeting concluded with the development of an agenda for the first public engagement workshop to be held in November, 2016.

Steering Committee Meeting 3

The Steering Committee met for a series of additional committee meetings throughout the Winter 2017 to review the market trends and to discuss potential TOD alternatives. These activities culminated in Steering Committee meeting #3 which occurred on March 20, 2017. During this meeting the group reviewed the draft TOD Plans and Alternatives document entailing the proposed development designs set forth by Cambridge Systematics. Additionally, the group discussed and planned for upcoming public workshops to be held at the beginning of April, 2017

Steering Committee Meeting 4

The fourth steering committee meeting was conducted May 5th 2017. During this meeting the results of the public workshops held on April 1 and April 3 were reviewed and discussed. Additionally, an initial concepts for the Final TOD Plan, that took public comment into consideration, was presented to members for review and comment.

Steering Committee Meeting 5

The final steering committee meeting was conducted on May 26, 2017. During this meeting the project team presented the revised draft TOD Plan to the Steering Committee from comments provide on May 5th, presented draft

presentation materials and discussed logistics for Public Workshop #3 that was held on June 4th. Lastly, the project team presented area renderings for each TOD area, and reviewed next steps to bring the project to completion.

3.2 Public Workshop & Engagement

Over the course of the project, a total of four public meetings were conducted to introduce the public to the project, present draft ideas and solicit additional ideas and suggestions. All comments and suggestions from the public during these meetings were documented, collected and organized into meeting summaries, including sign-in sheets, photographs, copies of presentation materials, notes and a written summary of major findings. To advertise these public meetings, the Town of Clarkstown contacted all property owners in Nanuet via post mail with a meeting announcement and invitation. The announcement was also augmented on the Town website, a Press Release, as well as on posters and flyers which were posted in and around the project area in advance of each meeting.

A record and short summary of those meetings is as follows:

Public Workshop 1

The initial public workshop was conducted on November 16, 2016 in the Nanuet High School cafeteria. Within this meeting the project team introduced the goals, objectives and outcome for the project, a timeline in which the work would be completed, as well as how their input would be beneficial to the project's development and progression. As part of the session, members of the project team worked with groups review potential areas of significance and what they would like to see from transit oriented development in Nanuet. The workshop was attended by at least 77 members of the public (those who officially signed the sign-in sheet).

Figure 12: Public Workshop 1

Public Workshop 2

Public workshop #2 was held on two dates, Saturday April 1st at 10:00 AM and Monday April 3rd at 7:00 PM, to provide a weekday/weekend option as well as a daytime/evening option to the public. During the second workshop, the public was presented with the draft TOD plan alternatives and was given the opportunity to provide feedback on the proposed designs elements. The input gathered from this meeting was used to help identify the preferred design alternatives to pursue further. 38 attendees signed the sign-in sheet for the Saturday morning session and 39 attendees signed the sign-in sheet for the Monday evening session.

Figure 13: Public Workshop 2

Public Workshop 3

Public workshop #3 was held outdoors on Sunday June 4th from 10:00 AM to 2:30 PM at the Greater Nanuet Chamber of Commerce Annual Street Fair. The project team maintained a booth at the northwest corner of Prospect Street and Main Street and presented the draft TOD Plan to the public through a series of visuals and walking tours. The public was receptive of the plan and solicited feedback by writing comments on a mounted comment board. Approximately 65 people visited the booth over the 4.5 hours, 19 people participated in the two walking tours, and 30 individuals signed their names on the official sign-in sheet. The following image depicts a resident reviewing the draft Final Plan.

Figure 14: Resident Examining Conceptual Zoning at Public Workshop 3

3.3 Stakeholder Outreach Interviews & Surveys

In addition to the steering committee and public workshops, stakeholder groups were also involved in the project through interviews and property owner surveys. Those stakeholders included:

- Local residents
- Local property and business owners
- Nanuet School District
- Shops at Nanuet
- Nanuet Post Office
- Nanuet Civic Association
- Nanuet Chamber of Commerce

- Transport of Rockland (Rockland County Public Transportation)
- Metropolitan Transportation Authority (MTA)
- New York State Department of Transportation (NYSDOT)

As part of the stakeholder outreach, local property and business owners were identified, with an emphasis on owners who hold multiple properties or key parcels within the immediate study area. With assistance from the Town of Clarkstown, these owners were contacted to introduce them to the project and request to participate in a survey with interview questions in advance of the first public meeting. This introduction also served the dual function of raising initial awareness of the upcoming public meetings and soliciting their attendance. A total of ten interviews were conducted. Some of the main takeaways and common themes discerned from these interviews are as follows:

- Stakeholders expressed interest in changing zoning in order to allow the private sector to bring in development.
- Promote mixed-use development consisting of apartments, condominiums, townhouses, along with businesses and options to shop and eat after work.
- Access and increased connectivity to the Nanuet Train Station and to the Shops at Nanuet.
- Make downtown Nanuet more aesthetically attractive with additional landscaping elements, greenspace and pedestrian amenities.

3.4 Additional Review & Public Communication Opportunities

In addition to the stakeholder groups and public meetings, additional input was available throughout the entire planning process via the following methods:

Town Website

During the course of the project, the Town of Clarkstown Planning Department provided copies of all project materials on a dedicated page of the town website, document the planning process and public input. Provided materials include meeting announcements, meeting notes, copies of presentation materials, survey results and copies of draft deliverables. Additionally, the project team received public comment through email.

Tri-State Transportation Campaign: Pedestrian & Bicycling Safety in the Town of Clarkstown – Results from September 2016 Walking Audit of Nanuet Hamlet

Stemming from the ongoing Nanuet TOD planning and design efforts, the Tri-State Transportation Campaign (TSTC) recently performed an audit to examine bicycle and pedestrian conditions in the area near the Nanuet Train Station and Main Street within the Hamlet Center. The Tri-State Transportation Campaign is an advocacy group dedicated to reducing automobile dependency in New York, New Jersey and Connecticut. On September 16, 2016 members of the Steering Committee, public officials, project staff, and members of the public joined TSTC staff in a walking audit throughout Nanuet that was open to the public. In their audit, TSTC focused on two primary corridors; Prospect Street and Main Street. Although the TSTC individually analyzed segments of these primary thoroughfares, certain

overarching themes are evident throughout the extents of both streets within the Hamlet Center. For the most part, bicycle and pedestrian accommodation and infrastructure can be described as limited and inconsistent, with the design of these thoroughfares favoring automobile usage. TSTC made multiple recommendations in their audit, including the need for clearly marked crosswalks, street and landscape improvements, bike lanes, thematic wayfinding signage and ADA accommodation, especially in those locations adjacent to the Nanuet Train Station. Through the development of a vibrant TOD neighborhood centered around the Nanuet Train Station, the Nanuet TOD Plan and the ongoing planning process gives special attention and consideration to these important programmatic elements, as identified by the TSTC and general public. Incorporation of these elements in the TOD planning and design process will ensure that Downtown Nanuet is a vibrant community open and accessible to residents and business owners alike.

Additional Government Reviews / Public Opportunities

In addition to the public meetings listed above, additional opportunities for public review and comment will be available during forthcoming public workshops and Town Board hearings as the Town officially considers proposed zoning regulatory changes for adoption and performs SEQRA review.

4.0 TOD 101

Transit Oriented Development (TOD) is an emerging and growing trend in development in the United States. The Center for Transit Oriented Development projects that by 2025 near half of all households (4.9 million out of 8.7 million) in the New York City region will be located within one-half mile of a transit station and that demand for TOD will outpace supply⁹.

4.1 What is TOD?

Broadly stated, TOD is a development pattern intended to take advantage of high levels of accessibility to fixed guideway transit systems. Due to the nature of fixed guideway transit, TOD typically implies compact, walkable development with a mix of uses and high levels of multimodal accessibility. The benefits of successful TODs include increased transit ridership and more walking and cycling, reduced reliance on private auto use, lower household transportation costs, greater access to jobs, better quality of life and reduced energy consumption.

Generally speaking, TOD refers to an area between a one-quarter mile and a one-half mile radius from a transit station.

The scale and character of TOD can vary by the specific mode and frequency of transit service, surrounding character (urban or suburban), local and regional markets and other factors.

Classic TOD concept. (source: Calthorpe Associates)

4.2 TOD Guidelines

There are a number of TOD guidelines published for communities and regions that prescribe characteristics or criteria such as density, intensity and land use mix. Guidelines are typically stratified into typologies for different station areas to account for differences in context (a downtown urban core versus a suburban location, for example).

Several published TOD guidelines were reviewed to get insight into how other communities and regions address TOD from a development standpoint. A summary of findings for station area typologies most similar to the Hamlet of Nanuet is identified in Table 4. Most of the typologies are not mode-specific, instead of more generally describing premium or rail transit service, but all of them describe a primarily residential, neighborhood-oriented setting.

The following table summarizes TOD guidelines observed from other agencies. This type of comparison is valuable when determining the scale and size of a particular TOD project and can be used to determine potential impacts. A summary of three key observations follows Table 6.

⁹ "Hidden in Plain Sight: Capturing the Demand for Housing Near Transit," Center for Transit Oriented Development, 2004.

Table 6: Summary of TOD Guidelines

Agency	TOD Type	Description	Average Density		Average Intensity		Building Height	Land Use Mix	Other
			Net	Gross	Net	Gross			
Massachusetts Bay Transportation Authority (MBTA) ¹	Town & Village	Commuter rail station areas in mixed-use town centers, business districts, or villages, ranging from outlying Boston neighborhoods to suburban downtowns and small village centers.	NA	26.2 du/ac	NA	21.8 emp/ac	NA	76% population; 24% employment	
Florida Department of Transportation (FDOT) ²	Neighborhood Center Commuter Rail	Neighborhood Centers are dominated by residential uses and are served by some type of premium transit. Non-residential uses in them are limited to local-serving retail and services.	12-15 du/ac	9-12 du/ac	1.0-1.5 FAR	15-20 jobs/acre	3 stories	75% residential/25% non-residential	Total station area population and employment are 2,000-3,000 each.
Reconnecting America and the Center for Transit-Oriented Development ³	Transit Neighborhood	Transit neighborhoods are primarily residential areas that are served by rail service or high-frequency bus lines that connect at one location. Densities are low to moderate and economic activity is not concentrated around stations, which may be located at the edge of two distinct neighborhoods.	25-50 du/ac		1.0 FAR		NA	Primarily residential with some supporting retail. Employment is market-based.	Total station area dwelling units 2,000-5,000.
Metropolitan Atlanta Rapid Transit Authority (MARTA) ⁴	Neighborhood	Neighborhood stations are located in primarily residential districts, and their principal transportation function is to help the people who live nearby get to work, school, shopping, entertainment, medical services, and other destinations accessible through the transit network. The immediate station area is appropriate for higher-density housing or neighborhood-scale mixed-use development.	15-50 du/ac		1.0-5.0 FAR		2-8 stories	Multi-family residential and/or neighborhood scale mixed-use with retail, restaurant, and service-oriented offices.

[2] "Florida TOD Guidebook", Florida Department of Transportation, 2012									
[3] "TOD 202: Station Area Planning", Reconnecting America,									
[4] "Transit Oriented Development Guidelines", MARTA, 2010									

4.2.1 Minimum net density:

Net density is defined as the total number of dwelling units divided by the total amount of residential land, exclusive of other land uses, in the TOD area. Most of the guidelines prescribe net density ranges, although some also prescribe gross density ranges (which is the total number of dwelling units divided by the total amount of all land in the TOD area). The minimum net density falls within the range of 12 to 25 dwelling units per acre. This translates approximately into development types ranging from two-story townhomes to low-rise (up to three stories) apartments, depending on unit size, parking, yard area, amenities, etc. The prescribed maximum net density varies significantly, from a low of 15 dwelling units per acre to a high of 50 dwelling units per acre.

4.2.2 Appropriate floor area ratio (FAR):

FAR is defined as the ratio of a building's total floor area (zoning floor area) to the size of the piece of land upon which it is built. FAR is traditionally used by municipalities as a mechanism in zoning codes to control the density of development on any given parcel. Conversely, FAR plays a key role in private development. Since FAR limits the amount of allowable development (building size) on a given parcel, lower FAR's may act as a deterrent and limit a parcel's attractiveness to private development. As a result, establishing an appropriate FAR that meets municipal, community, and private development needs is critical. Most guidance for TOD prescribes a minimum FAR of 1.0, in which the total amount of building area is equal to the total amount of land area. In theory, this could be a one-story building that covers an entire lot. However, because of other site factors such as yard area, parking, setbacks, etc., actual building heights are in the two to four story range. The prescribed maximum FAR ranges from 1.5 to 4.0.

4.2.3 Land use mix:

All of the guidelines prescribe that a majority of the land use within a TOD area is residential. Some go a step further to prescribe the specific amount (75%) of residential land. The prescribed non-residential uses include retail to support adjacent residential and transit passenger foot traffic and service-oriented office uses.

4.3 Case Studies and Best Practices

In addition to prescriptive guidelines, it is also useful to get an on-the-ground perspective of TOD that has been implemented both within the region and nationally. A number of published reports on TOD case studies and best practices were reviewed for this study. Many of the case studies are not applicable because they are in a context much different than the Hamlet of Nanuet. However, a handful of case studies are applicable.

All of the case studies included here are served by commuter rail into a major employment center. Two of the case studies, Cranford Crossing in New Jersey and Georgetown TOD in Connecticut, are located in New York City bedroom communities. The other two case studies are located in exurban Boston (Concord Commons) and Chicago (Arlington Heights). Most of the stations are located in neighborhood/village settings, although one (Arlington Heights) is adjacent to a traditional downtown.

Additionally, all of the case studies reviewed feature a significant residential component, ranging from 20 to 1,500 units. Exact development data isn't published, so it's difficult to estimate net density. However, based on information about building heights, the densities appear to be in the same range as prescribed by the TOD guidelines cited above.

Lastly, all of the case study developments include supporting retail, ranging from 22,000 square feet to 157,000 square feet. The Georgetown TOD in Connecticut also includes 300,000 square feet of commercial space, including office and retail uses. The Arlington Heights TOD includes a performing arts facility.

Table 7: Summary of TOD Case Studies

TOD	Location	Context	Size	Development Characteristics	Notable characteristics
Cranford Crossing ¹	Cranford, NJ	Commuter rail station in a New York City bedroom community.		50 condominiums 22,000 of-of retail 310 space public parking garage Three to four-story building heights	Uses a Special Improvement District to fund streetscape improvements.
Georgetown TOD	Redding, CT	Former Brownfield site in a New York City bedroom community.	55 acres	416 housing units 300,000 of commercial space	
Concord Crossing	Concord, MA	Commuter rail station in a suburban Boston village. Serves Boston commuter as well as historic downtown tourism.	2.3 acres	20 rental apartments Office/retail mixed use 180-seat restaurant 126 parking spaces	Uses shared parking to reduce the total number of spaces.
Downtown Arlington Heights	Arlington Heights, IL	Suburban Chicago commuter rail station adjacent to a traditional downtown.		1,500 residential units 157,000 of retail Performing arts facility Four to six-story building heights	Relocated station and platform to be closer to downtown. Public investment of \$27 million (including transit agency, DOT and local TIF funds) has leveraged the private investment of \$225 million.

4.4 Regional Trends in TOD

Over the next 3 years, 1.5 million Americans will turn 65 – a rate that is quadruple the rate of a decade prior. By the year 2029, all of the “baby boomers” will be 65 or over and more than 20 percent of the total U.S. population will comprise people over the age of 65.¹⁰ The United States also has a population of approximately 80 million people born between the years 1982 and 2000 – an age cohort commonly known as the “Millennials.”¹¹ The changing housing and lifestyle preferences of these generational cohorts are driving a market shift toward living scenarios where residents are surrounded by a mix of uses in a pedestrian-friendly environment that is proximate to numerous transportation options.

In the Hudson Valley region, trends published by the United States Census Bureau (U.S. Census) and informed by the American Community Survey (ACS) show that of survey responders who changed residences between the year 2000 and 2013, only about 20 percent moved to another location within the Hudson Valley. During this time period in Rockland County, about 83 percent of people migrated to a location outside the region while only about 17 percent of movers stayed within the region. Those from the region who moved away tended to be younger, at the beginning of their careers and without children.¹² Regional statistics detailing exactly why people chose to move during these years are not available; however, on a national level, the U.S. Census determined that close to 50 percent of everyone who moved in 2013 chose to relocate for housing-related reasons.¹³ The national trends indicate that people are moving to urbanized areas to find better, more desirable and affordable housing options. These motivations likely reflect motivations of movers leaving the Hudson Valley as well.

As noted in Urban Action Agenda’s 2015 report *Hudson Valley Pattern for Progress*, the Hudson Valley region does not have a single urban center that “acts as the region’s heart, but instead consists of a constellation of urban centers along the Hudson River [and within] transportation corridors” such as railroad corridors. While this may be true based on spatial patterns, regional commuting trends and patterns would cite New York City as the regional engine of growth and major trip generator and trip attractor. Because commuting patterns and housing preferences are inextricably linked, it is important to analyze regional commuting trends to assess the type of housing, and development, which may be in demand.

The following figure depicts the historic trend of travel across the Hudson River (bi-directional) to and from Manhattan, from 1980 to 2014 from data provided by the Port Authority of New York/New Jersey. As observed, the mode share of public transportation has been continuously growing while the share of automobile commuters has remained relatively stagnant for over 30 years. This has direct implications for the demand for housing – if people continue to increase their mode share utilization of public transit, then demand for TOD should increase. This should hold true for all travel into Manhattan, including commuters from the Hamlet of Nanuet.

Source – Port Authority of New York & New Jersey; Trans-Hudson Commuting Capacity Study

Figure 15: Historic Trends in Trans-Hudson Travel by Mode

The following graphically represent the modal choice of commuters into Manhattan, based on origin. These figures show that Rockland County residents commute into Manhattan mostly by car and bus but enclaves of commuters do travel by rail. Based on Figure 3 approximately 10 percent of commuters from Rockland County travel to Manhattan by rail.

Source – Port Authority of New York & New Jersey; Trans-Hudson Commuting Capacity Study

Figure 16: Mode Split by Origin for Trans-Hudson Commuters to Manhattan

The distribution of passengers modal split and why certain counties have higher shares of rail commuters than others may be due to accessibility of rail services and frequency, duration of trip, required transfers of one-seat rides, availability of train station parking and many other factors. Explanation of these distributions is beyond the scope of this memorandum, but the important message is that demand for TOD is directly linked to commuting patterns and Rockland County has a presence among Manhattan-bound commuters. Rockland County is currently underserved by rail, but encouraging TOD along the Pascack Valley Line supports potential improvements to service frequency, infrastructure improvements, and may help to justify the return on investments.

Source – Port Authority of New York & New Jersey; *Trans-Hudson Commuting Capacity Study*; Appendix A: *Interstate Bus Network – Operational and Service Strategies*

Figure 17: Mode Share of Rail by Origin for Trans-Hudson Commuters to Manhattan

Commuting trends and housing are inextricably linked. Many transportation corridor communities lack the facilities, amenities or housing stock to accommodate the national and regional shifts in housing preferences not only for the Millennials but also for those who are 65 and over. It has been widely recognized in contemporary urban planning and economic development literature that there is a tremendous renewed interest in walkable, transit-oriented and urban style living accommodations for both young adults and senior citizens.

Housing preference changes amongst varying age cohorts are supported by national surveys such as those conducted by real estate advisors Robert Charles Lessor Company (RCLCO). Of those who identified as “baby boomers”, 83 percent ranked walking, 67 percent ranked nearby shopping, and 51 percent ranked bicycling as top priorities for choosing housing.¹⁴ A poll by AARP in 2010 of people age 45 and older found nearby transit stops, grocery stores, parks, pharmacies and drug stores particularly important for deciding upon housing.¹⁵ A RCLCO survey also stated a

¹⁴ RCLCO, Best Practices Report, Seniors Housing Innovative Intergenerational Projects,

March 5, 2013 <http://www.rclco.com/advisory-seniors-housing-innovativeintergenerational-projects>

¹⁵ AARP, Where ages 45+ want to live, November, 2010, <http://assets.aarp.org/rgcenter/general/home-community-services-10.pdf>

trend that aging seniors often prefer intergeneration housing projects, or age-restricted housing projects closely integrated into an intergenerational walkable neighborhood.¹⁶

Therefore, development proposals that would create walkable, lively and active neighborhoods upon existing urban infill may find a viable residential market by encompassing senior citizens in the future. Del Webb, one of the most prominent developers of retirement communities in the United States conducted a survey of “baby boomers” and found that approximately 28 percent of boomers surveyed anticipated that their housing needs would change in the next five years and of those, 60 percent planned to downsize in their next home purchase.¹⁷ A survey in the Sacramento California region showed almost two-thirds of survey respondents in the Baby Boomer cohort wanted their next home to be an attached townhouse, condominium or small home.¹⁸

Generation Y and Millennials also indicate an inclination toward urban living. A 2013 RCLCO survey of those identifying as part of Generation Y indicated approximately 40 percent of those surveyed would prefer to live in an urban environment. A 2013 Urban Land Institute (ULI) survey of those identifying as Millennials showed that close to 40 percent also prefer urban style living.^{19, 20}

These shifts are not only abstract housing preferences amongst age cohorts but also have come to fruition on a national level. The ACS indicates that from 2010 to 2013, the population of 20- to 29-year-olds in ‘core counties’ rose by 407,400, or 3.2 percent. In addition, between 2007 and 2011, the number of renter households increased by 3.4 million and 3 million household units shifted from owner-occupied to rental housing stock.²¹ Almost simultaneously, the rate of homeownership in the U.S. has steadily declined since 2006 and is now reaching a 50 year low, according to the U.S. Census.²² Survey data indicates a market for urban-style, rental living accommodations in combination with other design and transit elements that contribute to desirable living conditions.

In the past, employers located commercial office campuses immediately in and around regional highways to facilitate access for their employees. Workers living in low-density suburbs without direct access to public transit, commute either directly to work, or to transportation hubs using private vehicles creating peak hour congestion and seas of at-grade parking in/around train stations.

Some contend that the introduction of autonomous cars onto American roads is likely to further exacerbate congestion due to induced demand for road space.²³ When accounting for these factors, combined with the volatility of fuel prices and increasing real estate costs, it is easy to understand why regional policy and planning organizations want to reassess whether current residential and commercial land use patterns can meet anticipated demand. Employers seeking talent from around the globe and remote working arrangements are the norms rather than the exception. As noted above, preferences are changing toward more efficient and geographically focused living.

Therefore, to not only sustain economic viability and retain residents, but also to accommodate changing housing preferences, communities in the Hudson Valley region should focus on creating vibrant town centers, walkable neighborhoods, and access to high-quality public spaces, residential rental opportunities, and competitive transportation alternatives. This can be accomplished by encouraging growth and TOD in the village, town, and urban centers.

In 2007, the Regional Planning Association (RPA) completed the *Rockland County Tappan Zee Corridor Transit-Oriented Development Study* of the Route 59 and I-287 Tappan Zee Bridge corridors, which featured TOD concepts. One of the “workshop sites” featured in the study was the Hamlet of Nanuet due to suburban development opportunities and challenges including the relationship between traditional “main streets” in downtown Nanuet, commercial strip development along Route 59 and the “edge city” collection of big box retail and hotels, surrounded by large swaths of surface parking at the Nanuet Mall.²⁴ The study suggested two alternatives: create a future commuter rail stop east of the Route 59/Thruway overpass, which would locate a train station closer to the concentration of higher density housing on the north side of the Thruway or a possible transfer to the Pascack Valley Line. The disadvantages of this proposal were that the location was more isolated from a future potential pedestrian activity because arterial roadways and parking lots for big box retail would have made the environment hostile to the pedestrian. The other alternative for a future train station was south of the Route 59/Thruway overpass on the south side of the Thruway east of the park-and-ride off Forman Drive and Route 59. This alternative was closer to the higher density residential areas south of the Thruway accessed from Old Turnpike Road.

The study explored an incremental approach to accommodating future parking needs in the Hamlet of Nanuet for train station commuters and shoppers. Instead of future development projects creating a single large parking structure in the Hamlet of Nanuet, the findings proposed that future parking needs for all uses would be better accommodated if each future development project was required to provide some shared and commuter parking. Such an initiative would foster a walkable environment throughout the area because it would avoid vast expanses of parking lots and the traffic bottlenecks that so often come in conjunction with parking facilities with minimal access points. Finally, the study suggested that in order to facilitate this community vision derived from these workshops, the Hamlet of Nanuet would need to create a new mixed-use overlay district, write new shared-parking requirements, and implement design guidelines to promote a pedestrian friendly environment.

In 1999, the State of New Jersey launched the Transit Village Initiative creating a “transit village” designation to encourage growth and revitalization in areas where infrastructure and public transit already exist. The Transit Village Initiative operates under the assumption that adding residential housing options, transit-supportive parking, place making, pedestrian emphasis and a high-quality walking and biking environment within walking distance of a transit

facility reduces traffic congestion, improves air quality and revitalizes downtown.²⁵ Since 2016, the program has successfully added 32 municipalities each year to its list of designated Transit Villages.

Source: njmda.org

Figure 18: Atlantic Street Park, Main Street Hackensack

To attain designation, a municipality must meet “transit village” criteria, which includes having a village district with a half-mile radius around the transit station and significant planning and visioning work setting the stage for multiple TOD projects within the area. Along the Pascack Valley Line, the city of Hackensack recently was designated by the New Jersey Department of Transportation as the State’s 31st “transit village”. Their application focused on reimagining the downtown and creating an “18-hour city” that encourages mixed-use development, walkability, and a sustainable urban growth pattern.²⁶ By demonstrating a commitment to good planning through the adoption of zoning ordinances and policies that encourage accessibility to multiple mass transit options, as well as biking and walking, Hackensack can access additional grant and funding opportunities. Figure 4 highlights the newly redeveloped Atlantic Street Park and the mixed-use Metro Meridia project located at 94 State Street in the background.

Communities throughout the Hudson Valley region have also embraced transit-oriented development projects with the goal of providing more affordable housing choices, spurring downtown revitalization, increasing multi-modal transportation alternatives and reducing automobile dependence. TOD is a community development tool and a public realm design enhancement that often includes developing a mixture of housing, office space, retail and other amenities integrated into a walkable neighborhood located within a half mile of quality public transportation.²⁷

The Smart Growth Cabinet suggests that a true transit-oriented plan is built with a mixed-use core of about a quarter to a half-mile in size (sometimes considered a traditional village scale), often incorporating the walkable, bike-able and ‘human-scale’ design elements of New Urbanism where buildings are constructed close to the street on small lots with

parking in back. In theory, residents of places that have been developed with access to transit as a priority need not be completely dependent on their cars. TOD is a term used in walkable development plans for the last several decades but development around transit hubs is not a radical concept. The truth is that many villages, towns, and cities grew around transit from their inception – whether that was a city growing from a shipping and trade waterway like New York City, or a village growing around a train station, like many communities in the Hudson Valley.

Today, those living in the region are not newcomers to the concept of TOD. Many communities are looking to their transit stations as potential catalysts to spur investment, revitalize their downtown corridors and “keep empty-nesters and younger members of the workforce commuting to NYC” in these downtowns.²⁸ Hamlets like the Hamlet of Nanuet seeking to implement innovative land use and best practices for developing TOD can find guidance in methodologies and lessons learned within communities throughout the region.

The White Plains Metro-North Railroad Station is an express stop station that offers one-stop express trains to and from New York City. Therefore, it offers abundant potential redevelopment opportunities for increased residential development around the train station. White Plains was an early adopter of TOD principles with several apartment buildings built two decades ago within a short walking distance of the train platform.

In August 2015, the City of White Plains rezoned Westmoreland Avenue, which is approximately one half-mile from the White Plains Metro-North Railroad Station, from Light Industrial (LI) to Light Industrial Mixed Use (LI-M). The new LI-M District now permits multi-family dwellings, hotels and extended hotel uses to maximum heights of six stories or 85 feet alongside light industry. In addition to adding vitally needed housing stock, a secondary benefit was the ability for developers to reclaim rare original architecture (previously razed in other parts of White Plains during urban renewal projects of the 1970’s), such as the Old Swackhamer Building seen above, and repurpose uses that meet current market demands.

Source: *The Westchester View*

Figure 19: Old Swackhamer Building, 122 Westmoreland Avenue, White Plains, NY

Additionally, the rezoning was an opportunity to bring in new private investment to Westmoreland Avenue. For example, Norden Lofts LLC converted an existing 48,000 square foot (SF) structure into a 56,424 SF transit-oriented

28 Garbarini, Samantha, “Breaking Down Westchester’s Future Transit Oriented Development”, Westchester Magazine, <http://www.westchestermagazine.com/914-INC/Q2-2015/Breaking-Down-Westchesters-Future-Transit-Oriented-Development/>

residential building.²⁹ Today, the City of White Plains is currently preparing an evaluation of public transit use, development potential and the feasibility of a “transit zone” around the Metro-North Railroad Station and regional bus station. The ongoing *Downtown White Plains Transit District planning study* is currently gathering public input for a 1,500-foot study area around the train station.

The City of New Rochelle amended its zoning code and parking requirements to allow for heights, densities and parking requirements (maximum parking requirements at transit areas) consistent with TOD principles.³⁰ Through this process, the City learned that economic development, downtown pedestrian circulation and transit connectivity, as well as accommodating a range of income levels currently residing in the “TOD zone,” were important to a robust TOD plan.³¹ Through a public/private partnership, the City of New Rochelle and RDRXR (a private developer) created a zoning plan with “clusters” of TOD study areas forming a series of gateways in conjunction with a “complete streets plan” to facilitate pedestrian wayfinding and a more efficient transit-oriented street layout. The land around the New Rochelle Metro-North Railroad station and transit hub were split into six “downtown overlay zone” districts based on a proposed development program and walking distance/travel time on foot – to the train station. Central districts were proposed closer to the train station to encourage higher density office, restaurant, and residential uses.

As the distance from the train station increases, the proposed development intensity is proposed to decrease. For example, the “Downtown Core District DO-1” and “Downtown District DO-2” are both within a 5-minute walk of the train station while the farther “North of Lincoln District DO-6” district is within a 15-minute walk of the train station.³² Each overlay zone guides development to meet design standards, offer community benefits and coalesce with an overall transit-oriented master plan. In return, as long as developers meet guidelines established in the master planning process, projects would only have to provide minimal traffic impact studies to gain City approval rather than lengthy full state environmental quality review (SEQRA) process. In 2016, the area surrounding the train station is poised for transit-oriented redevelopment due to conditions created by the downtown overlay zones.

In 2003, the City of Yonkers carefully carried out urban design enhancements such as the daylighting of the Saw Mill River in combination with multi-family mixed-use development on the Hudson riverfront. These efforts created a successful TOD around the Yonkers Metro-North Railroad station. The City adopted a master plan and a “Master Plan Zone” that steered development by creating as-of-right status for developments that conformed to specific design standards outlined in the ‘Master Plan Zone’ zoning text; this reduced parking requirements by 50 percent, is economically appealing to developers and has numerous community benefits.³³ The zone facilitated the development of *Hudson Park* along the Yonkers waterfront, which included 780 rental studio-, one-, two-, and three-bedroom apartments, with 15,500 square feet of commercial space and a pedestrian-only river-walk.

In 2016, South Norwalk, Connecticut sought to revitalize the area centered on the South Norwalk Metro-North Railroad Station and released a plan to encourage contextual infill development around the station area and create “complete, compact neighborhoods” that would encourage new residential and commercial growth. A South Norwalk Railroad Station Area TOD Strategy Report released in 2011 established goals, objectives, and implementation

strategies, which were expanded upon in the South Norwalk TOD Redevelopment Plan, released in January 2016.³⁴ The overall goal of the TOD efforts in Norwalk was to maintain and bolster the economic viability of the downtown core by attracting workers and residents. This initiative established a TOD Study Area that would be called a “TOD-Core” zone. The plan proposed to replace existing zoning districts with new TOD-focused guidelines, encourage TOD principals and identify future development corridors to connect developments in the TOD area.

As noted above, many villages and communities throughout the region relied on transit since their inception and developed due to their proximity to rail. Now, after half a century of vehicular-oriented land use development patterns (often referred to as Sprawl), many Hudson Valley municipalities are looking inward toward their central transit and rail corridors and partnering with private entities to realize development goals as they plan for the future of their communities. For example in 2016, private developer GDC opened the Harbor Square development immediately adjacent to the Ossining Metro-North station in the Village of Ossining. The development contains 188-unit luxury apartments and a 5,000 square foot destination waterfront restaurant. In approving the project, the Village of Ossining aimed to attract newcomers and bring visitors from other communities to shop, dine and enjoy Ossining.

Similarly, the Comprehensive Plan for the Village of Harrison identified a similar community goal and recognized an opportunity for a mixed use TOD near the train station. In 2015, the MTA entered into a Joint Development Agreement for the first Metro-North initiated TOD, partnering with Avalon Bay Communities to create 143 residential units, 27,000 SF of retail and pedestrian plazas on a 3.28-acre site adjacent to the station, on the south side of the tracks. The proposed development, created by a public-private partnership between the MTA, the Village of Harrison and Avalon Bay, is aimed to enliven the Village of Harrison with stores and a 24-hour community of residents

In 2013, the Village of Port Chester created a master plan and a zoning text rewrite, which has incentivized mixed use and TOD and revitalized the area along the railroad tracks. The Village code offers incentives in the form of density bonuses for height, floor area, or the number of dwelling units in exchange for a public benefit including the provision of donations toward a fund to create publicly accessible open space or a downtown parking garage.³⁵ These changes have facilitated the development of buildings like a proposed 79-unit mixed use building on Westchester Avenue two blocks from the Metro-North Station and an approved 50-unit rental project on North Pearl Street.³⁶

In February 2016, the Village of Sleepy Hollow Planning Board unanimously approved the phase one site plan for the redevelopment of the 85-acre former General Motors (GM) plant – a riverfront property one-half mile north of the Tarrytown Metro-North Railroad station. The project proposes approximately 1,000 new residential units, 135,000 square feet of retail space, 30,000 square feet of office space and 16 acres of parkland.³⁷ The development has been incorporated into the 2016 Tarrytown Station Area Study exploring pedestrian connectivity and way-finding, place-making, and development opportunities and constraints immediately around the Tarrytown Metro-North Railroad

Station in conjunction with the New New York Bridge (NNYB) and Lower Hudson Transit Link regional projects.³⁸ Other similarly scaled municipalities that have initiated TOD station area studies include Villages of Mamaroneck and the City of Rye.

4.5 Local Trends in TOD

When examining opportunities for TOD in a community, it is instructive to examine local peers so standards and planning concepts are as informed and harmonious as possible. For this study, the Hamlet of Nanuet's peers are neighboring municipalities that have engaged or are actively engaging in TOD activities within approximately 10 miles from Nanuet. What follows summarizes the local trends observed in the bulk and zoning regulations of neighboring towns.

Table 8 shows important building code limits based on zoning in the Hamlet of Nanuet's peer towns. The most important aspects of this table are building heights and units per acre for condos and apartment buildings and minimum lot areas for single family and semi-attached homes because these zoning codes dictate what kinds of dwelling units could be built around the Hamlet of Nanuet's train station. In terms of TOD market competition for new residents, minimum lot sizes and units per acre will impact a municipality's competitiveness; greater dwelling unit density and smaller minimum lot sizes will make projects more attractive to developers, which would induce the creation of housing close to a transit hub; these factors may also make dwelling units more affordable for renters and buyers, which would induce people to move into an area.

Building height requirements impact the competitiveness of a community in terms of retaining existing residents and attracting new residents to places that can retain their character and scale of livability; existing and potential residents may not want buildings that are too high if they are out of scale with the surroundings, even if such projects may be more attractive to developers.

As observed below, the average building height of all zoning codes for these seven communities is 42 feet, the average density is 26 units per acre and the average minimum lot area is 35,057 square feet. However, these figures include multifamily housing, high-rise units, apartments, single-family detached and semi-attached units. Additionally, the minimum parking requirements vary from two and a half spots per dwelling unit to zero spots, depending on the municipality and its zoning area. Suffern does not list explicit minimum parking requirements, perhaps due to its Transit Development District zone, which is the only community of the eight (including the Hamlet of Nanuet) with a proper TOD zoning district.

³⁸ Tarrytown, Connected. A Framework for the Station Area & Waterfront, October 2016.

Ridgewood NJ	R-4 (Garden apartment residence dist.)	20	30 ft	44,000	1.8 spots/ DU
	R-5 (multifamily residence district)	14.5	30 ft	44,000	1.5-2 spots / DU
	R-7 (multifamily residence district)	22.11	35 ft	44,000	1.5-2 spots / DU
	R-10	4.4	32 ft	10,000	2 spots / DU
Park Ridge NJ	R-GA-1	58*	35 ft	87,120	1.5 spots / DU + 1 for every 6 DU's for visitors
	R-GA-2	58*	35 ft	217,800	1.5 spots / DU + 1 for every 6 DU's for visitors
Nyack, NY	MFR-1	14	40 ft	20,000	0-2 / DU
	MFR-2	30	50 ft	20,000	0-2 / DU
	MFR-3	50	85 ft	40,000	0-2 / DU
	DMU	50	40 ft	-	0-1.7 / DU
	RMU	18	32 ft	7,500	0.85 - 1.7 / DU
Suffern, NY	MR-15 (Multiple dwellings)	15	35 ft	40,000	-
	MR-50 (Multiple dwellings, high-rise)	50	70 ft	40,000	-
	TDD (Multiple dwellings, high-rise)	65	75 ft	40,000	-
Tarrytown, NY	M-4 (Multifamily)	1.4	35 ft	20,000 (4k each add. DU)	2.5 spots / DU
	M-3 (Multifamily)	1.8	35 ft	15,000 (3k each add. DU)	2.5 spots / DU
	M-2 (Multifamily)	2.5	35 ft	10,000 (2.5k each add. DU)	2.5 spots / DU
	M-1.5 (Multifamily)	3.6	35 ft	7,500 (1.5k each add. DU)	2.5 spots / DU
	M-1 (Multifamily)	4.8	-	5,000 (1k each add. DU)	2.5 spots / DU

* These numbers were not stated in zoning codes but were calculated based on dwelling units of 1,500 square feet, maximum building footprints and a maximum number of stories.

4.6 The Hamlet of Nanuet TOD Indicators

There are a few critical indicators that can be drawn for the Hamlet of Nanuet TOD:

- *Residential as the primary focus:* Without exception, every single guideline and case study features residential as the primary use.
- *Densities in the 10 to 35 unit range:* The net residential density should begin at ten (10) dwelling units per acre as a starting point. This is the equivalent of two-story townhomes or low-rise apartments. Maximum residential densities, as high as 40 dwelling units per acre, should be determined by market demand.
- *Supporting retail is a key component:* Virtually all of the guidelines and case studies include retail as an important supporting component. This is both to satisfy local demand, drive station-related foot traffic and create a more robust activity center. Retail uses can include restaurants, shopping, and services.
- *Other uses are optional:* Beyond residential and supporting retail, there are no readily evident land use themes among the guidelines and case studies. Any other uses should be considered specialized and subject to the Hamlet of Nanuet's unique circumstance.

These conclusions can be used as a framework to guide planning decisions as the Hamlet of Nanuet TOD moves forward. They should not be considered specific targets, but rather a starting point for more detailed, site-specific planning and analysis.

5.0 Hamlet of Nanuet Transit Oriented Development Plan

After a review of existing conditions, a thorough assessment of physical opportunities and constraints was conducted with feedback and outreach with property and business owners in the area. Combined with the ongoing public participation process, this allowed the project team to effectively determine the most effective TOD zoning and design recommendations as they relate the scale and scope of transformation of the Greater Nanuet TOD area. This additionally included a preliminary examination of moving the Nanuet Train Station from its current location to an acceptable location further north and closer to the Shops at Nanuet regional shopping center and its parking lot. Metro-North Railroad, as a stakeholder and member of the project's steering committee, has occasionally been asked to consider such an approach. However, after review within the context of this study, constraints such as power lines, track geometry, property ownership and a new high level station platform, would make the relocation significantly cost prohibitive. Most importantly, moving the train station further away from the Nanuet downtown would be counteractive to the goals and objectives of the project as expressed by the community. As a result, relocation of the Nanuet Train Station was not further considered.

The following TOD plan components have been shaped by a well-defined public vision and characterize planned configurations of form and character for the TOD area, shaped by public input and an appetite for public investment. Prior planning processes that have occurred in this area include in-depth corridor land use studies and the comprehensive plan, which clearly defined the overall vision of the area residents as part of the participatory process to focus on the rejuvenation of the Main Street corridor to spur activity and economic development in downtown Nanuet.

The TOD Plan is not meant to be a stringent architectural design code, but rather a set of guidelines meant to foster vibrant and inclusive residential and economic development around the Nanuet Train Station. The Plan leverages the designs and concepts of successful examples of TOD throughout the New York City region, keeping in mind the local context of Nanuet. Ultimately, it is the hope that this plan and the Greater Nanuet TOD Area will serve as a model TOD neighborhood achieving sustainability and economic vitality.

5.1 Goals and Principles

The creation of the draft TOD Plan is rooted in the community developed vision that the "Nanuet Hamlet Center will enhance its small town feel and will be focused around the train station, main street, and communal green spaces. The center will focus on quality dining, local shopping, and housing for seniors and young professionals; and guided by specific design standards. The center will support a safe and accessible multimodal environment for bicycles and pedestrians". Recommendations were developed using the vision statement as a backbone and refined to support the traits or qualities the residents, landowners, and businesses consider worthwhile for the Nanuet TOD Plan Area. Each recommendation element attempts to support the following goals verbalized by the community:

- Use train station as a catalyst for redevelopment of less desirable land uses into more desirable assets that enhance the community;
- Promote a mixed-use community around a transit center that encourage alternative housing choices for young professionals and seniors;
- Encourage walkability;

- Ensure visual continuity through a signage and streetscape program;
- Improve parking management through more efficient use of existing parking infrastructure; and
- Support the creation of employment centers and other economic engines.

5.2 Zoning

Zoning is an integral part of the TOD Plan and Clarkstown's ability to maximize the full potential of Nanuet's train station. Because zoning dictates the specifications of what types of buildings and uses are permitted, an effective TOD plan is only as good as the zoning ordinances that dictate the area's land use.

TOD Plan recommendations are restricted within the TOD Plan Boundary Area (see Figure 20) that was approved by the community. Under these existing conditions, current zoning ordinances inhibit TOD potential. Land uses within the TOD Plan Boundary Area are comprised predominantly of light industrial office (LIO) and hamlet commercial (HC), with the remainder of the area is comprised of regional shopping (RS), and multi-family (MF-1), and an inconsequential amount of residential (R-10, R-15), commercial (CS), and multi-family (MF-3). The TOD Plan Boundary Area is comprised of 72 parcels and is approximately 37.11 acres in size.

Within the TOD Plan Boundary Area, four areas with distinct features and development potential have been identified – TOD Area 1, TOD Area 2, TOD Area 3 and Hamlet Center (illustrated in Figure 21). Collectively, all four areas would aim to attract amenities that would support a diverse, multi-generational community; with a more residentially focused area west of the rail line transitioning to a commercially mixed-use core which then seamlessly blends into the existing hamlet center along Main Street. This publicly accepted four development zone concept is a foundational element, acting as the backbone for each of the following TOD Plan recommendations. As defined by the public for potential transit-oriented development treatments, these four development areas are further defined as follows:

- TOD Area 1 – an area between Fisher Avenue and Babcock Avenue/Jerrys Avenue and to the west of TOD Area 2 and the railroad tracks that is currently zoned Light Industrial Office (LIO) and occupied by light industrial and commercial uses, as well as single-family homes;
- TOD Area 2 – an area immediately west of the railroad tracks that is currently zoned Light Industrial Office (LIO) and Multi-Family (MF-1) and occupied by vacant parcels previously used for industrial activities;
- TOD Area 3 – an area immediately to the east of the railroad tracks and along Orchard Street that is currently zoned HC and occupied by light industrial and commercial uses; and
- Hamlet Center – an area along Main Street (Middletown Road) that is currently zoned Hamlet Commercial (HC) and occupied by mixed-use "downtown" commercial uses with residential on the second and third floors

This section presents the recommended changes to existing zoning regulations within the TOD study area, including zoning, building placement and building height.

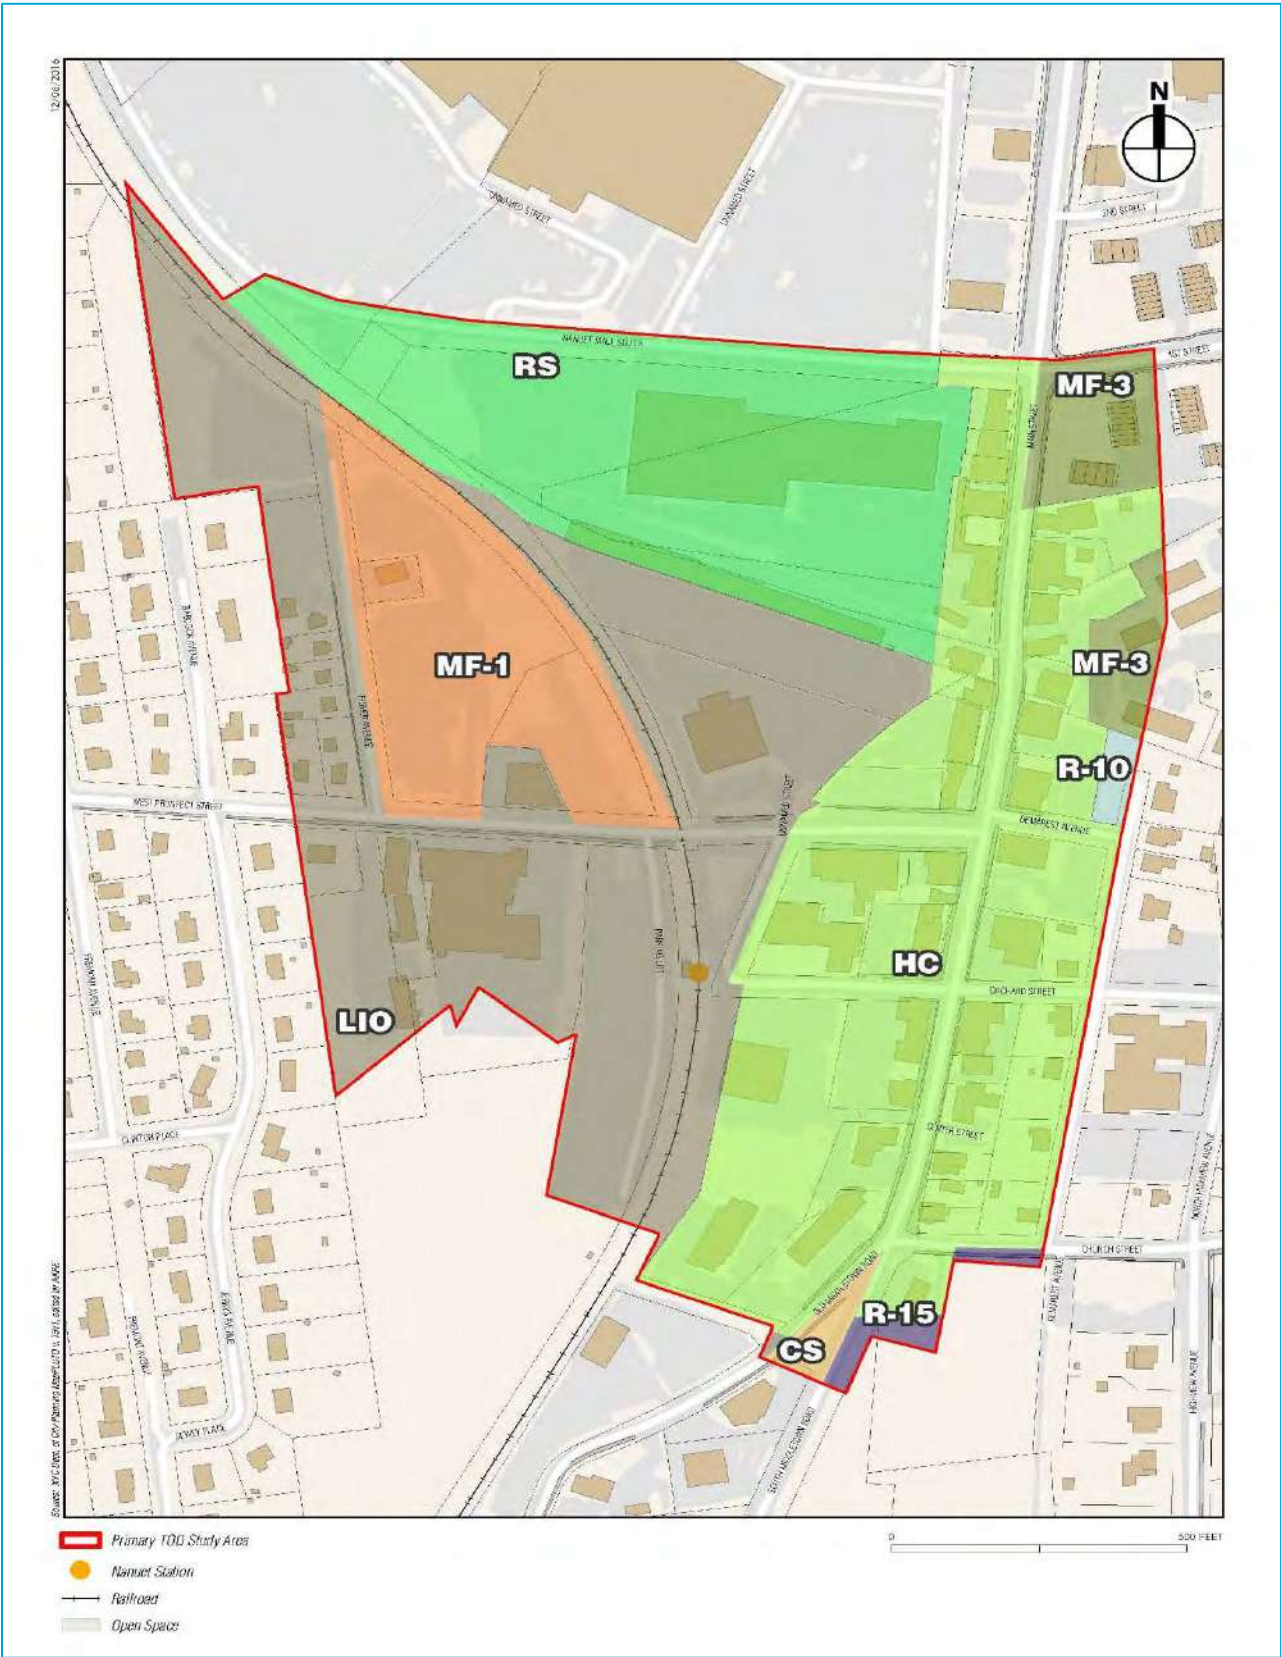

Figure 20: Existing Zoning in the TOD Plan Boundary Area

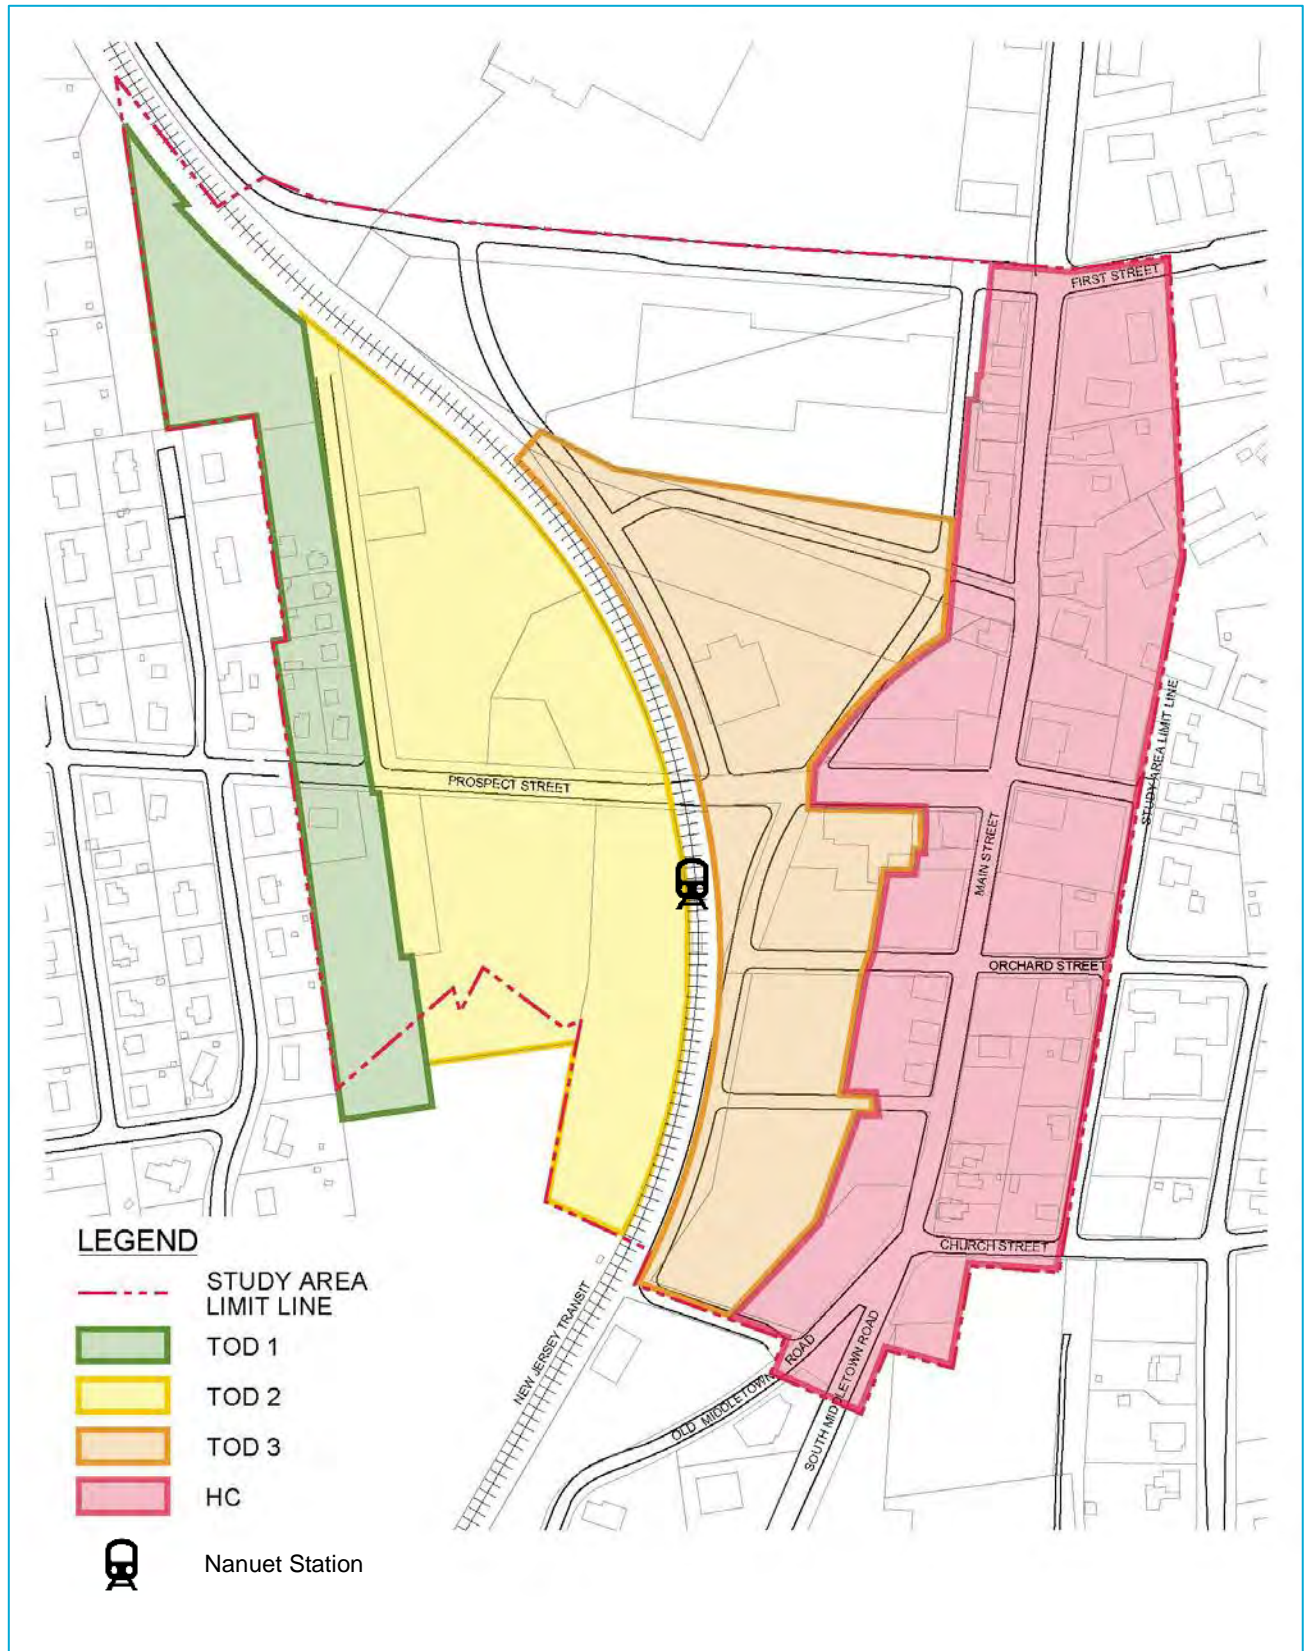

Figure 21: Conceptual Zoning Map

5.2.1 Overall Program & TOD Design

The TOD Plan zoning recommendations are modeled after a concentric zoning design centered around the Nanuet Train Station. In this design, the Train Station serves as the focal point of the TOD neighborhood, with an emphasis on improving pedestrian flow between neighborhoods and residences on both sides of the railroad tracks. Radiating from the Nanuet Train Station are a series of higher density mixed-use residential buildings up to four stories in height. With respect to the character of the existing Hamlet Center (HC) downtown portion of Nanuet, ground-floor commercial within these residential buildings is most prevalent in the area immediately to the east of the railroad tracks, further enhancing the neighborhood's vibrant character.

Conforming to neighborhood TOD design, ground-floor commercial space is additionally prioritized in those buildings adjacent to the Nanuet Train Station and railroad tracks. Further to the west of the Train Station and Hamlet Center, the denser residential buildings gradually transition into attached townhomes and apartments with limited commercial development. This portion of the TOD area is meant to serve as a buffer between the denser developments closer to the Train Station and the existing single-family residential neighborhoods along Prospect Street. The concentric design additionally seeks to maintain all existing green and public spaces while providing additional green space and pedestrian-oriented areas, especially within and adjacent to the Hamlet Center.

Figure 22: Birds-Eye View of Proposed Zoning Districts with Aerial Imagery

5.2.2 Transit Oriented Development (TOD) Area 1

Zoning Description

TOD Area 1 is located west of the rail line and directly adjacent to the residential neighborhood along Prospect Street, and runs predominately along Fisher Avenue. The TOD 1 zoning district serves as a buffer between the denser developments (TOD Areas 2 and 3) closer to the Nanuet Train Station and the existing single-family residential neighborhoods to the west along Prospect Street. The area would consist of two- and three-story walk-up residential attached townhomes or condominiums. These types of residences could appeal to attract young families, couples and

‘empty nesters’. Although the area’s existing use as LIO functions as a buffer, a rezone to accommodate townhome style development would make better use of proximity to the Train Station and Hamlet Center, while providing increased flow and connectivity to those shops and amenities to the east of the railroad tracks.

TOD Area 1 would consist of attached townhomes of two and three stories, rising no higher than 35 feet. A total of 10 units per acre would be permitted. Of the three TOD Areas, TOD Area 1 is the most suburban in design, providing parking for each unit in the form of street parking and private garages. The front side of each townhome would also be set back from the street by 30 feet, which would be reserved for parking and bio-swales. A setback of 35 feet would be required for property boundaries adjacent to residentially zoned district, and would be exclusively reserved for greenspace and buffering treatments. Sidewalks of 10 feet in width would align the public right-of-way, separated from a two-way, 22-foot lane street by grass and lined with trees. TOD Area 1 would provide a minimum of 15% green space.

The following figures offer visual examples of what type of design and style buildings that are planned for development in TOD Area 1.

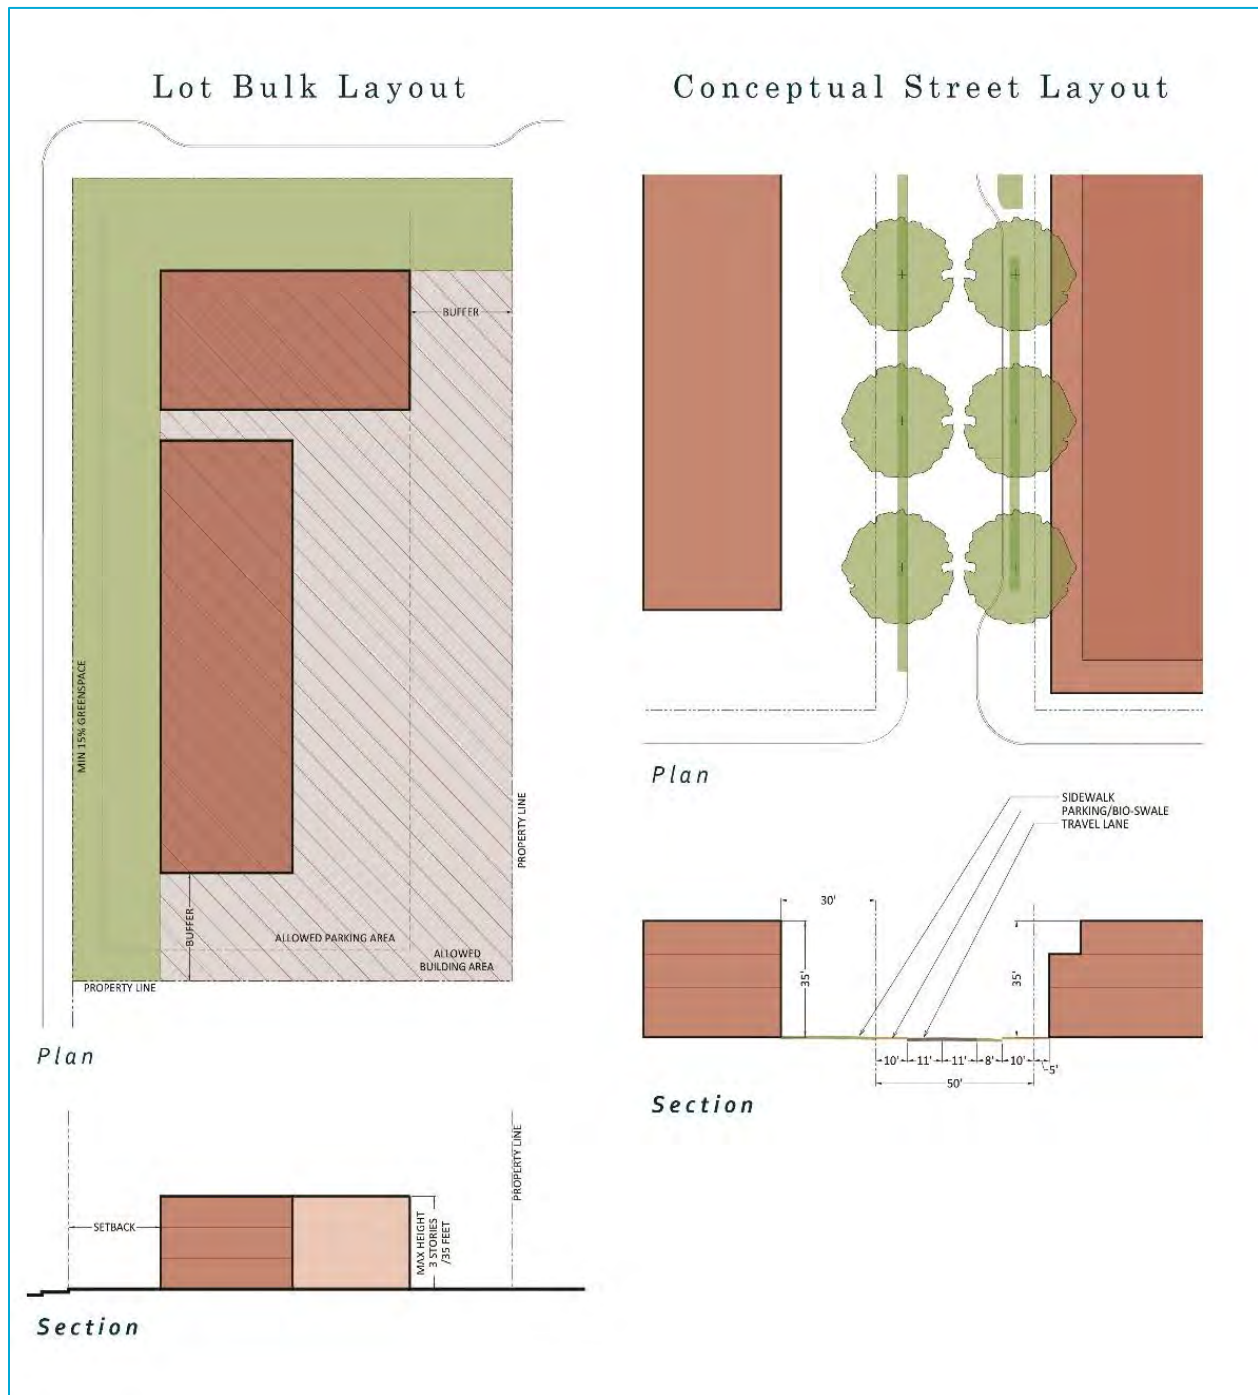

Figure 26: TOD Area 1 Conceptual Site Plan and Cross-Section for Proposed Area, Bulk, and Density Regulations and Streetscape Program

5.2.3 Transit Oriented Development (TOD) Area 2

Zoning Description

TOD Area 2 is located directly west of the rail line. The proposed new zoning in this area would consist of two- and three-story residential apartments with one and two bedroom units. These types of residences could appeal to couples, young professionals, 'empty nesters' and senior citizens. As an area of increasing density given its adjacency to the Nanuet Train Station, TOD Area 2 would also include limited ground-level commercial space (comprised of 10% of the floor building square foot footprint and frontage facing the rail line) with a program aimed at serving commuters. The purpose of TOD Area 2 is to act as a transitional zone between the single-family residency and townhomes and the true mixed-use focused TOD Area 3 east of the rail line.

TOD Area 2 would consist of apartment buildings of three stories and rising no higher than 35 feet or 3 stories. A total of 30 units per acre would be permitted as of right. However, developers may be eligible for a potential development bonus of 10 additional units per acre for LEED-certified units and/or additional streetscape beautification efforts. The frontage of each buildings first two floors must be setback 5 feet from the lot line and the 3rd floor must be setback 15 feet from the properties lot line. This architectural nuance promotes a more open feeling at ground level. As compared with TOD Area 1, TOD Area 2 is architecturally more aligned with Main Streets urban character and focused on promoting a walkable community of alternative housing options. Sidewalks of 10 feet in width would align the public right-of-way, separated from a two-way, 24-foot lane street by grass and lined with trees. TOD Area 2 would also provide a minimum of 15% green space. Additionally, TOD Area 2 would be supportive of including public parks or other amenities.

The following figures offer visual examples of what type of design and style buildings that are planned for development in TOD Area 2.

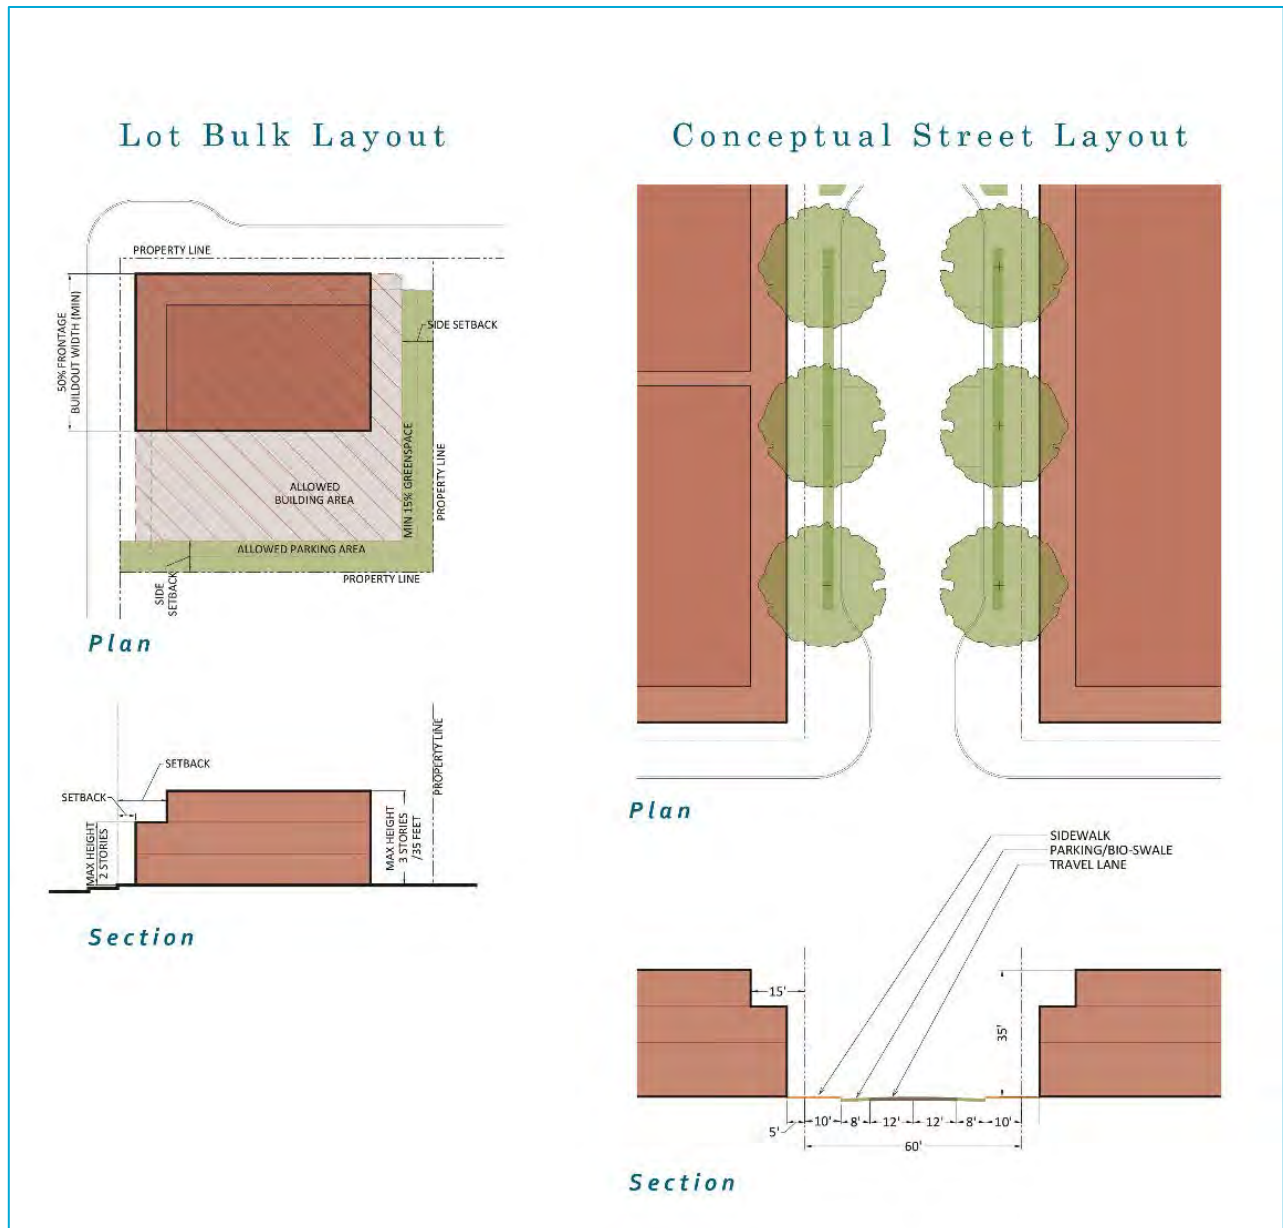

Figure 30: TOD Area 2 Conceptual Site Plan and Cross-Section for Proposed Area, Bulk, and Density Regulations and Streetscape Program

5.2.4 Transit Oriented Development (TOD) Area 3

Zoning Description

TOD Area 3 is located immediately east of the rail line, with its northern boundary just north of the current Metro-North parking lot. The area is currently zoned LIO and HC and is being proposed to be rezoned for mixed use development – commercial uses on the first floor and residential uses above. Of the three TOD areas, TOD Area 3 is proposed to be the most urban in character and serves to act as a continuation of Main Street and provide enough population density to enable Nanuet’s commercial activities to become more lively, diverse, and supportive of a 24-hour community. It should be noted that if development within the proposed TOD Area 3 is successful and additional three to four story apartment housing is needed, the Town should consider expanding the TOD Area 3 further north to Market Street, a private road south of the Shops at Nanuet, which connects to First Street to the east.

Within TOD Area 3, as-of-right buildings will be three-to-four story apartment buildings, with commercial uses exclusive to the first floor. The program of commercial uses would be servicing the overall community living in the Hamlet of Nanuet as well as some commuter services. Residential units located on upper floors of buildings will cater to smaller studio and one bedroom apartments of around 750 sq. ft. to 1,000 sq. ft. in size. These types of residences would appeal to couples, young professionals, ‘empty nesters’ and senior citizens who are looking to downsize but remain in their community. The proposed uses would be required to blend seamlessly into the character of the hamlet center along Main Street. There should be a focus to maintain the existing green space and integrate the Rose Garden into the design as a community focal point.

TOD Area 3 would consist entirely of apartment style building of a height no greater than 45 feet. A total of 40 units per acre would be permitted. However, developers would be eligible for a potential development bonus of 10 additional units per acre for LEED-certified units and/or additional streetscape beautification efforts. Buildings in TOD Area 3 will be required to maximize street frontages (a minimum of 75 percent of frontage must be used in building program) in order to encourage a continuous streetscape and Main Street-like design. Additionally, emphasis should be given to building and sidewalk amenities that will attract foot traffic. The frontage of each buildings first three floors must be setback 5 feet from the lot line and the 4th floor must be setback 15 feet from the properties lot line. This architectural nuance promotes a more open feeling at ground level. Sidewalks of 10 feet in width would align the public right-of-way, separated from a two-way boulevard and lined with trees. The boulevard would contain a 10 foot wide, landscaped median, in order to calm passing vehicular traffic. Vehicle travel lanes would be 12 feet in width with one lane per direction. TOD Area 3 would provide a minimum of 15% green space.

The following figures offer visual examples of what type of design and style buildings that are planned for development in TOD Area 3.

Greenspace % min	15% min
Maximum floor area ratio	1.5
RESIDENTIAL DENSITY –	
Square feet of land area per unit	1,089
Units per acre	40 max (potential for up to 50 units per acre with LEED development and Nanuet beautification bonus)
Units per building	n/a
Bedrooms per unit	Studios, 1, and 2 bedrooms (maximum of 50% 2 bedroom units)
Unit size	750 – 1,000 sf
COMMERCIAL DENSITY	
Maximum size of 1 st floor commercial	100%

The following graphic offers a conceptual site plan and cross section using proposed area, bulk, and density regulations for TOD Area 3 and a conceptual site plan and cross section for a streetscape program along Prospect Street east of the rail line.

Figure 35: TOD Area 3 Conceptual Site Plan and Cross-Section for Proposed Area, Bulk, and Density Regulations and Streetscape Program

5.2.5 Hamlet Commercial (HC)

The Hamlet Commercial (HC) area, comprising the current core of the historic downtown Nanuet, is defined as the area along Main Street (Middletown Road) and is currently zoned for Hamlet Commercial (HC) uses. This area is to remain as currently zoned; mixed-use with ground floor commercial and one or two residential stories above. The only proposed modification to the existing zoning is to increase the maximum building height from 28 feet to 35 feet. The most significant improvement to the Main Street area would be landscape and streetscape improvements, as well as targeted infill development opportunities. It is proposed that a “beautification bank” be created for the sole purpose of collecting funds from developers of TOD Area 1, 2, and 3 and reinvested through a single vision and program of streetscape and beautification enhancements along Main Street.

The following illustration offers a conceptual rendering of what potential beautification enhancements may look like along Main Street.

Figure 36: Conceptual Rendering of Streetscape and Beautification Enhancements to Main Street

The following illustration provides conceptual site plan and cross section for a streetscape program along Main Street.

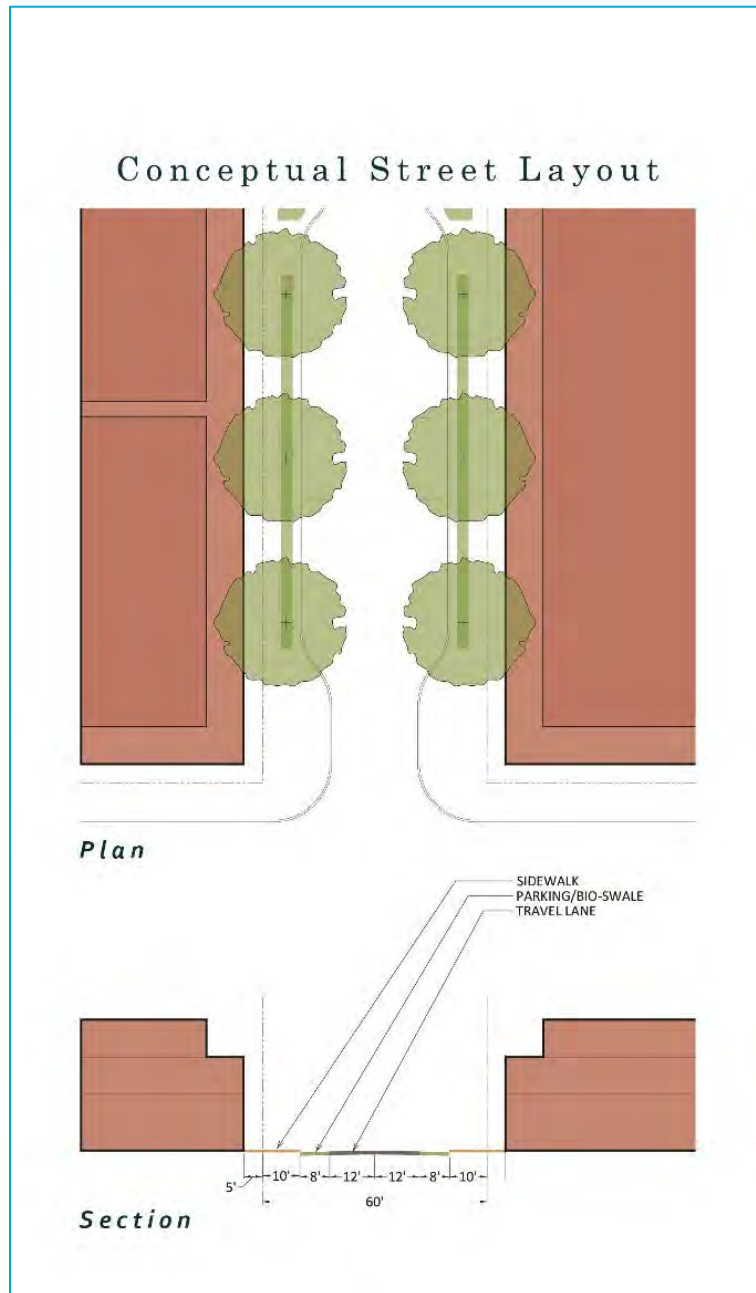

Figure 37: HC Conceptual Site Plan and Cross-Section for Streetscape Program Along Main Street

5.3 Infrastructure

5.3.1 Transportation Infrastructure

Several new vehicular and pedestrian connections are proposed. These connections would improve circulation and facilitate access from the transit hub to the adjacent commercial and retail development within the TOD area.

Figure 38: Proposed Transportation Infrastructure Improvements

As illustrated in Figure 38, a new one-way southbound vehicular connection from First Street to Prospect Street would run mostly parallel to Main Street – on its western side. This roadway would provide a critical link between the train station and the commercial/retail development to the north, while also alleviating existing congestion on Main Street. It should be noted, that if Nanuet Mall South is rezoned in the future to TOD Area 3 and, the property owner would need to take the one-way southbound portion of new Orchard Street into consideration and should plan for a bi-directional two lane vehicular travel way. In addition, traffic signals at the intersection of Market Street and the proposed northern extension of Orchard Street and the intersection of Main Street and First Street would require signal coordination.

In addition, the proposed northern extension of Orchard Street would also create exposure to new development on the Post Office parcel and activate the on-street environment on parcels north of Prospect Street and east of Main Street. South of Prospect Street, improvements to Orchard Street and the creation of a street grid with new east-west roadways that connect to Main Street will improve access and mobility throughout the Hamlet of Nanuet. The new roadway will be designed based on best practices for complete streets, incorporating traffic calming and green infrastructure elements to contribute to the treatment of storm water runoff from rooftops and impervious surfaces.

Figure 39: Example of a Multi-Use Path

A new multi-use path is recommended to improve north-south pedestrian/cyclist mobility along the eastern edge of the rail line, but not within the railroad right-of-way. It would provide additional access from the mixed-use development around the train station to The Shops at Nanuet and the regional shopping activities. The new multi-use path will be constructed with a hard surface of adequate width for two way pedestrians and slow moving cyclists. Lush vegetation will provide a visual buffer from the rail road tracks and seating areas will be provided at regular intervals. This segment of path may be integrated into a future roadway connecting local and regional green spaces, as well as retail and commercial uses, to public transportation nodes.

5.3.2 *Parking*

A key component of the Nanuet TOD planning process is to prepare for evolving parking needs as a factor in the area's transformative landscape. In consultations with residents of the area, public parking has been identified as being a concern that will need a careful consideration during the TOD planning process. The follow discussion presents the proposal outlined under the TOD plan:

The Nanuet TOD planning process addresses existing parking in the Hamlet and additional parking infrastructure development on the proposed new roads. Modifications to current parking include:

- Enhanced enforcements;
- Improved signage; and

- Establishing a parking agreement(s) with MTA Metro-North.

Enhanced Enforcement:

From the outreach for TOD planning process, public comment stated that the 2-hour parking along Main Street is not actively enforced, which reduce the turnover of parking and creates a perceived shortage in parking availability. Also mentioned was the issue of parking availed by the establishment owners and their employees who typically need to stay for extended durations during business hours. Time limited parking and its enforcement along the business/commercial areas of the TOD are of high importance to tackle the parking availability in the area.

Improved Signage:

Information on parking availability in the TOD area is of importance for managing the need and availability of parking across the area. This measure is aimed at educating riders about available parking at various locations in the vicinity as well as better managing parking demand in key locations like the intersection of Prospect and Main St.

Parking Agreement with MTA Metro-North:

The changes in development across the TOD area will have to be matched with appropriate availability for parking. Apart from the existing parking facilities and their optimized use to meet the demand, Town of Clarkstown should consider leveraging other areas for parking to meet the demand and provide adequate parking to patrons of businesses and citizens overall in the area. This will require identification, coordination, and provision of parking across the TOD area. Among the options that may be available for consideration include:

- The MTA parking lot currently has paid parking spaces available, but there could be provision for arranging for a section of parking to be allotted for retail parking or parking for business owners and their employees.
- Providing parking vouchers to business owners and their employees to park in MTA parking lot in order to open up parking along Main Street.

New Roadway Infrastructure:

The following options address parking on new roadway infrastructure:

- On-street parking on new road infrastructure;
- Moving the County parking lot to the train station by swapping land that includes allotment of land of a similar size³⁹; and
- Evaluate and establish metered parking along Main Street;

Some of the actions regarding existing and proposed new parking may need careful additional consideration and thorough parking studies to estimate changes in parking demand due to the influx of development and the types of

³⁹ Note: the concept of relocating the County lot would first need to be coordinated with the Rockland County Department of Public Transportation and NYSDOT.

commercial facilities that may induce travel demand from the surrounding areas that may involve the need for parking for short, and long periods in the Nanuet TOD area during various times of the day. It should be noted, that over the course of the TOD construction, there should be no loss in Railroad commuter parking. Once completed however, customers should actually see in an increase in parking availability in order to accommodate future growth.

5.4 Programmatic Elements

Programmatic elements include those additional recommendations designed to supplement zoning and transportation improvements. These includes civic (public) uses including public spaces, parks and recreation facilities, pedestrian amenities, water infrastructure, as well as lighting and electrical infrastructure recommendations.

5.4.1 Civic Spaces, Parks and Recreation Facilities

Streetscape and pedestrian space improvements are proposed for the Main Street (South Middletown Road) retail corridor and Prospect Street. The improvements include short- and long-term improvements to create a vibrant, attractive, and enjoyable pedestrian environment and also improve the safety, navigation, glow and overall quality of the vehicular travel experience. Investment in the shared public ROW will enhance the user experience, promote economic activity and encourage private investment in property. Physical improvements will also provide a foundation for the planned TOD district and solidify the connection of future land development to Nanuet's character.

In the short-term, the use of a consistent design language along Main Street will strengthen the sense of place as a local retail and dining destination, accentuating Main Street's historic character and pedestrian scale. Design elements will include street furniture (benches, recycling bins, light poles), hard scape materials (sidewalk borders, curbs), and signage (identification and directional). Public art, accent lighting and containerized vegetation may be introduced to further define, energize and enliven the pedestrian space. Design treatment of street corners and crosswalks will assure accessibility and pedestrian safety with tactile and visual cues, and suitable pedestrian drop-curbs.

Main Street can be understood as a linear space made up of a series of linked experiences. Each experience along the corridor adds to the overall perception of the urban environment. Each experience also serves a navigational function such as entry, transition, arrival or connection. Three intersections have been identified for treatment focused on reinforcement of specific navigational function:

Figure 40: Example of a Multi-Use Path

- Entry/ Gateway: Church Street Intersection
- Arrival/ Center: Prospect Street Intersection
- Transition/ connection : Market Street Intersection

Special attention will be paid to the design of directional signage and pedestrian amenities at each of these intersections. Design elements may include seating, paving materials, public art and vegetation to emphasize nodal quality of the intersection and its navigational function. This focused treatment will begin to create a hierarchical structure to be carried through the TOD district.

Short-term recommendations include: enforcing existing regulations and creating new guidance to include incentives for commercial façade improvements, review of existing regulations and guidance for signage, and a strategy to reduce vehicle crossing of sidewalks (at parking lot access and automobile oriented businesses).

In the long-term, a more extensive reorganization of the urban structure will be implemented. In addition to the short term aesthetic improvements, the roadway network will be redesigned, creating new vehicular connections from north of the study area to the train station. Providing new vehicular travel-ways will alleviate traffic on Main Street and allow for the realignment of travel lanes to better accommodate multimodal transportation. Prospect Street will become an attractive boulevard, with a significant vegetated median and activated pedestrian spaces, strengthening the east-west connection for both vehicular and alternative transportation modes. A new public green-space fronting on Prospect Street west of the proposed relocated County Parking Lot and the existing Veteran’s Memorial Garden located just east of the track crossing will be expanded and improved to function as a central hamlet green.

A new multi-use path from the train station to existing retail centers north of the study area will be introduced to provide an essential connection for shoppers and employees. Sidewalks, roadways and public areas will be designed with adequate space for alternative transportation modes and pedestrian amenities to support the active urban environment envisioned in the TOD plan.

These public amenities will play a significant role in the character and accessibility of the TOD neighborhood. As a

Figure 41: Pocket Park and Street Furniture

Figure 42: Pedestrian Crosswalk Improvements

result, it is recommended that the TOD developers play a big role in the development of these amenities when constructing and maintaining their properties. This can be achieved effectively by enticing developers through development bonuses in exchange for going ‘above and beyond’ to promote environmentally sustainable initiatives and public spaces.

Main Street

The design and realignment of Main Street will include complete streets elements such as bike lanes and/or shared lane markings and traffic calming techniques such as bulb outs at corners and pedestrian crossings. Regulations for signage and façade treatments will be updated to create a unified image for the historic retail corridor. Regulations for infill buildings, additions and new construction will encourage the strengthening of a consistent street wall and building height, and appropriate architectural styles and materials.

Prospect Street

The TOD Plan envisions a lively, vibrant and active pedestrian-scale character with uses supporting the needs of local residents and a new mix of residential and commercial development. The reconstructed Prospect Street will take on a boulevard-like character with ample green space and high quality hard scape materials. A wide vegetated median and regularly spaced canopy trees along the curb line will create a strong visual connection between Main Street and the Nanuet Train Station.

Planning of the shared ROW will prioritize the pedestrian experience with a dual focus on safety and enjoyment. Building setback regulations for new development along Prospect Street in TOD Areas 1 and 2 promote consistent retail frontages. The dimensional and use requirements for new construction assure sufficient pedestrian space within the public ROW with zones allocated for utilities, signage, street furniture and quasi-public uses such as café seating.

Source: Marquette, Michigan, Credit: Brad Neumann

Figure 43: Urban Design Showcasing Consistent Street Frontages

5.4.2 Pedestrian Space Design

The design of the public spaces and building facades within the TOD will adhere to comprehensive Pedestrian and Public Recreation Space Design Guidelines. This document will be created to provide guidance to architects and landscape architects for the design of both private and publically funded projects. It will establish a cohesive design vision for the design of the hamlet's urban environment and a flexible system of design tools, materials, treatments and dimensions guidance to assure consistency while allowing for the creativity and expression necessary in creating a unique sense of place.

Figure 44: Example of Streetscape Beautification

5.4.3 Public Buildings, Schools, Police, Fire Stations, Municipal Buildings

Long-term redevelopment of TOD Area 2 would include the potential relocation of the County municipal parking lot from its current location to just west of the railroad tracks on the north side of Prospect Street. However, this conceptual relocation would require coordination with the County Department of Public Transportation and the New York State Department of Transportation (DOT), and final approval by Rockland County. Long term redevelopment within TOD Area 3 could include the relocation of some or all of the functions at the U.S. Post Office sorting facility to a proximate location. Any repurposing of this parcel, could incorporate some Post Office services, while the more space intensive uses associated with sorting and distribution could be relocated along Route 59. It should be noted, that since a goal of TOD is to provide sustainable development with densities and land uses that complement the use of transit systems and residents not relying on automobiles for everyday activities (including the use of existing transit infrastructure); an analysis and consideration of impacts to transit infrastructure (including but not limited to Nanuet Station facilities and grade crossings) will need to be performed for each development application. Additionally, mitigation measures, such as but not limited to improvement to the pedestrian grade crossing, striping, signage, wayfinding, etc., may be required to accommodate the additional use and/or traffic associated with new development within TOD Area 1, 2, and 3, and should be considered accordingly.

5.4.2 Water, Stormwater, and Wastewater Infrastructure

Preliminary evaluation of current potable water and wastewater infrastructure has indicated sufficient available capacity to accommodate short- and long-term recommendations. Any proposed redevelopment project within the TOD Zone would require a site specific environmental review as part of the Town of Clarkstown Site Plan Approval process during which project-generated utility demand would be evaluated. Similarly, all development would be required to incorporate suitable stormwater management practices into their Site Plan. Development within the low-lying areas of TOD Areas 2 and 3, which are known to be prone to flooding during high intensity short duration storms (i.e., the former Fire Station) would be required to incorporate sufficient stormwater management practices or otherwise mitigate the impacts of developing in a flood zone.

5.4.5 Light-Emitting Diode (LED) Lighting

Installing Light-Emitting Diode (LED) lighting in the TOD area is cost-effective, energy efficient, and has safety implications for residents. Community lighting is typically funded by public money and instructing utility companies to install LED lights or worked into development agreements where common amenities and other lighting can preferably be using LED technology. In the context of a TOD, which is driven by the objective of increased mobility and alternative means of transportation including bicycle and pedestrian travel, LED lighting has improved visibility on sidewalks, transit stops, and multi-purpose pathways, thereby reducing risk of conflicts between pedestrians and vehicles. Optimized lighting using LED lights has larger public safety benefits by eliminating dark spots.

The Town of Clarkstown already maintains a policy of including LED lighting within publicly sponsored or funded projects; which supports the environmental goal established in the Town's Comprehensive Plan to reducing the municipal carbon footprint by way of energy efficiency. It is anticipated that this practice would continue when improving the streetscape and urban environment of Nanuet.

5.4.6 Electrical Utilities

During consultations with the project stakeholders and the community at-large, the appearance of existing electrical utility lines was identified as an issue affecting the aesthetics of the Nanuet Hamlet. Though the preference is to move overhead electrical wiring underground, it is extremely cost-prohibitive; both in terms of physically moving the lines below ground as well as relocating all building connections along Main Street to support buried wiring hook-ups. Additionally, moving wiring underground will create a secondary negative aesthetic impact, since underground wiring would require above ground junction boxes that would negatively impact the streetscape both aesthetically and physically. As such, this concern should be addressed through utility line consolidation. Utility line consolidation would focus on reducing the number of electrical wires (if technically possible) and consolidating them to one side of the street to reduce clutter; similarly as has been done in other parts of the Town.

Figure 45: Example of Above Ground Junction Box Interfering with Streetscape in Park Ridge

5.4.7 Electrical Vehicle (EV) Parking

According to the Clarkstown Zoning Code, “electric vehicle (EV) use supports the Town of Clarkstown transportation and environmental goals of the Clarkstown Comprehensive Plan by reducing commercial and personal vehicle emissions and thereby mitigating impacts from mobile pollution sources”. By code, Level 1 and 2 electric vehicle charging stations are permitted in the Commercial Office (CO) District to serve both commercial and public vehicles and may be located adjacent to public parking stalls. The Commercial Office District is located approximately ½ mile north of the Nanuet Train Station, adjacent to the Shops at Nanuet and just south of Route 59. Level 3 charging stations are limited to commercial vehicles only. It is recommended that the creation of EV parking availability should be encouraged and

enabled in proposed zoning for TOD Area's 1, 2 and 3. It should be noted that upon the writing of this report, the Town of Clarkstown is actively considering a local law that would allow Level 1 and 2 EV charging stations in all non-residential districts as-of-right, which should include the proposed TOD Areas 1, 2, and 3 in the future.

5.4.8 Integration of LEED ND Design Principles

The TOD Plan recommends incentivizing the use of Leadership in Energy and Environmental Design (LEED) principles. LEED is a rating system designed by the United States Green Building Council (USGBC) to evaluate the environmental performance of a building and to encourage market transformation towards sustainable design. LEED advocates for incorporation of green infrastructure into buildings, connecting spaces and other neighborhood elements as a tool for fostering livable communities. In addition to the incorporation of suitable waste and storm water infrastructure, LED lighting and electrical vehicle charging as previously described, the use of sustainable building materials, water efficient landscaping and minimization of impervious surfaces could also be incorporated into the TOD construction. Increased density and mix of land-use ultimately improves the LEED rating of facilities. LEED-incorporated high density infill development encourages walking and other alternative forms of transportation, especially in a context such of the Greater Nanuet TOD Area. Incorporating these design principles into projects can be encouraged by granting a development bonus in the form of an additional recessed floor or in other appropriate ways. Additional potential incentives could include tax credits and expedited review/permitting processes.

6.0 Cost Estimates for Proposed Infrastructure and Programmatic Elements

The following section provides order of magnitude cost estimates for infrastructure and programmatic elements proposed with the TOD Plan, bundled together as treatment packages. Treatment packages are a grouped set of infrastructure and programmatic elements that are applied together to create an implementable project. Within a particular geographic area one or more treatment packages could be combined to create a single project. Table 12 summarizes the various infrastructure and programmatic elements proposed within the TOD Plan and organizes them into treatment packages. Each treatment package has an estimated liner cost per foot to implement the treatment package (with its bundled infrastructure and programmatic elements included). The liner cost per foot estimates were calculated using modeled hypothetical examples. Creating generic model costs was done so a singular treatment packages cost estimate could be generated and then applied to the proposed program with actual linear dimensions within Nanuet for planning purposes. Table 13 provides a summary of the proposed treatment packages within different areas within the Nanuet TOD study area and the estimated cost to implement those treatments. Figure 46 summarizes the areas within the Nanuet TOD study area that have been proposed for one or more treatment packages. When summed, the estimated cost of implementing all proposed infrastructure and programmatic elements is around 13 million dollars, not including required right-of-way acquisition.

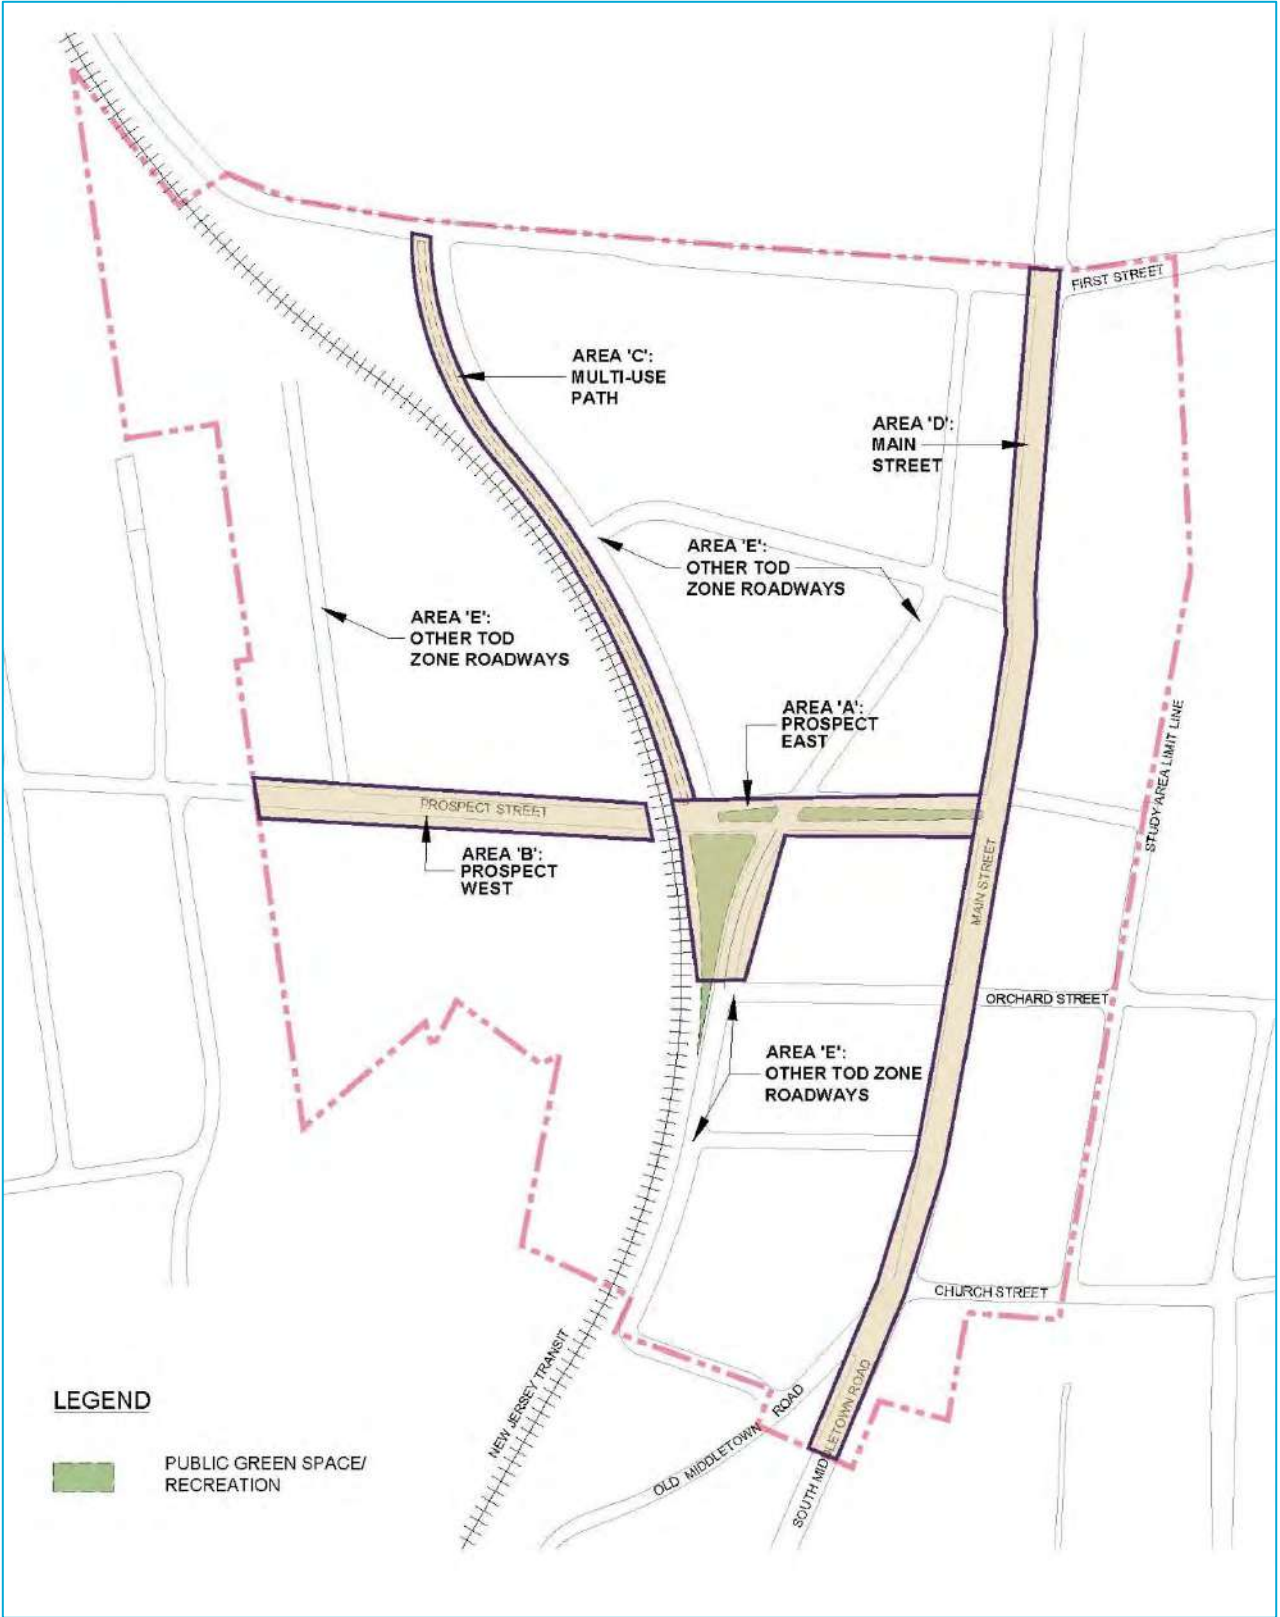

Figure 46: Identification of Infrastructure and Programmatic Project Area

Table 12: Cost Estimate of Bundled Treatment Packages of Proposed Infrastructure and Programmatic Elements

*** Rough, order of magnitude cost estimate for planning purposes only, not an engineer's estimate***					
<i>* unless otherwise noted, calculations below are based on 300 LF of roadway</i>					
Planted Median, 10' wide	<u>unit</u>	<u>unit cost</u>	<u>quant</u>	<u>est cost</u>	<u>cost rounded</u>
Concrete Curb	LF	\$ 28.00	650	\$ 18,200.00	
Soil	CY	\$ 75.00	20	\$ 1,500.00	
Planting Materials	allowance	\$ 15,000.00	1	\$ 15,000.00	
				\$ 34,700.00	
			Estimated Cost / LF	\$ 115.67	\$ 120.00
Sidewalk and Parking/ Stormwater Zone, 8' wide (one side of street)	<u>assumed areas</u>				
Total area (18' w)	5400	SF			
Pedestrian Travel (+/-8' wide)	2800	SF			
Surface area at Street Trees (5' x 10', 8 total)	400	SF			
Parking Spots (8' x 22', 8 total)	1800	SF			
(Table 12 continued)	<u>assumed areas</u>				
Bioswales (5' x 10', 2 total)	100	SF			
Bulbouts (8' x 20', 2 total)	350	SF			
	<u>unit</u>	<u>unit cost</u>	<u>quant</u>	<u>est cost</u>	<u>cost rounded</u>
Concrete Pavement	SF	\$ 5.00	3500	\$ 17,500.00	
Concrete Curb	LF	\$ 28.00	300	\$ 8,400.00	
Tree Pits (soil and curbing- trees separate item)	EA	\$ 1,200.00	8	\$ 9,600.00	
Planting Materials	allowance	\$ 15,000.00	1	\$ 15,000.00	
ADA Drop Curb	EA	\$ 4,000.00	4	\$ 16,000.00	
Asphalt	SF	\$ 17.00	1800	\$ 30,600.00	
				\$ 97,100.00	
			Estimated Cost / LF	\$ 323.67	\$ 325.00

Vehicle travel lanes, two direction- total 24' travelway	<u>unit</u>	<u>unit cost</u>	<u>quant</u>	<u>est cost</u>	<u>cost rounded</u>
Asphalt (12*300*2)	SF	\$ 17.00	7200	\$ 122,400.00	
Painted lines and markings	allowance	\$ 2,000.00	1	\$ 2,000.00	
				\$ 137,400.00	
			Estimated Cost / LF	\$ 458.00	\$ 460.00
Street Furniture (benches, bike racks, street lights)	<u>unit</u>	<u>unit cost</u>	<u>quant</u>	<u>est cost</u>	<u>cost rounded</u>
Overhead Street Lights	EA	\$ 10,000.00	8	\$ 80,000.00	
Pedestrian Street Lights	EA	\$ 6,000.00	8	\$ 48,000.00	
Benches	EA	\$ 2,000.00	4	\$ 8,000.00	
Bike racks	EA	\$ 1,000.00	4	\$ 4,000.00	
				\$ 140,000.00	
			Estimated Cost / LF	\$ 466.67	\$ 470.00
Green Infrastructure (bioswales assume 2 each side for 300 LF)	<u>unit</u>	<u>unit cost</u>	<u>quant</u>	<u>est cost</u>	<u>cost rounded</u>
Bioswales	EA	\$ 2,000.00	4	\$ 8,000.00	
Misc. infrastructure	allowance	\$ 10,000.00	1	\$ 10,000.00	
			Estimated Unit Pricing	\$ 10,500.00	\$ 10,500.00
Multi-use Path, 8' wide	<u>unit</u>	<u>unit cost</u>	<u>quant</u>	<u>est cost</u>	<u>cost rounded</u>
<u>(using length of 1000 LF for calculations)</u>					
Asphalt	SF	\$ 17.00	8000	\$ 136,000.00	
Pedestrian Street Lights	EA	\$ 6,000.00	16	\$ 96,000.00	
Benches	EA	\$ 2,000.00	4	\$ 8,000.00	

Bike racks	EA	\$ 1,000.00	2	\$ 2,000.00	
Vegetation	allowance	\$ 20,000.00	1	\$ 20,000.00	
Painted Lines and symbols	allowance	\$ 2,000.00	1	\$ 2,000.00	
Bollards	EA	\$ 500.00	10	\$ 5,000.00	
				\$ 269,000.00	
			Estimated Unit Pricing / LF	\$ 269.00	\$ 270.00
Crosswalks with Pavers (8' x 50' + lines)	<u>unit</u>	<u>unit cost</u>	<u>quant</u>	<u>est cost</u>	<u>cost rounded</u>
	EA	\$ 6,500.00			
			Estimated Unit Pricing	\$ 6,500.00	\$ 6,500.00

Table 13: Planning Cost Estimate for Proposed Project Areas

*** Rough, order of magnitude estimate for planning purposes only, not an engineer's estimate***			
Area 'A': Prospect East (500 linear feet)			
<i>Elements included:</i>	Length of design element / number of units	Estimated Cost/ LF	Estimated cost for planning purposes
Planted Median, 10' wide	380	\$ 120.00	\$ 45,600.00
Open space improvements allowance	1	\$ 500,000.00	\$ 500,000.00
North Sidewalk, 10' wide, and Parking/ Stormwater Zone, 8' wide (one side of street)	440	\$ 325.00	\$ 143,000.00
South Sidewalk , 10' wide, and Parking/ Stormwater Zone, 8' wide (one side of street)	420	\$ 325.00	\$ 136,500.00
New Orchard South, , 10' wide, and Parking/ Stormwater Zone, 8' wide (one side of street)	250	\$ 325.00	\$ 81,250.00
Vehicle travel lanes, two direction- total 24' travelway	500	\$ 460.00	\$ 230,000.00
Typical Street Furniture (benches, bike racks, street lights)	500	\$ 470.00	\$ 235,000.00
Bioswales and related infrastructure	6	\$ 10,500.00	\$ 63,000.00
Cross walks	7	\$ 6,500.00	\$ 45,500.00
			\$ 1,479,850.00
Area 'B': Prospect West (600 linear feet)			
<i>Elements included:</i>	Length of design element / number of units	Estimated Cost/ LF	Estimated cost for planning purposes
North Sidewalk, 10' wide, and Parking/ Stormwater Zone, 8' wide (one side of street)	550	\$ 325.00	\$ 178,750.00
South Sidewalk, 10' wide, and Parking/ Stormwater Zone, 8' wide (one side of street)	600	\$ 325.00	\$ 195,000.00
Vehicle travel lanes, two direction- total 24' travelway	600	\$ 460.00	\$ 276,000.00
Typical Street Furniture (benches, bike racks, street lights)	600	\$ 470.00	\$ 282,000.00
Bioswales and related infrastructure	6	\$ 10,500.00	\$ 63,000.00
Crosswalks	4	\$ 6,500.00	\$ 26,000.00
			\$ 1,020,750.00

Area 'C': Multi Purpose Path (1,000 linear feet)			
<i>Elements included:</i>	Length of design Element	Estimated Cost/ LF	Estimated cost for planning purposes
Multi Purpose Path	1000	\$ 270.00	\$ 270,000.00
Area 'D': Main Street (2,000 linear feet)			
<i>Elements included:</i>	Length of design Element/ number of units	Estimated Cost/ LF	Estimated cost for planning purposes
East Sidewalk, 10' wide, and Parking/ Stormwater Zone, 8' wide (one side of street)	1750	\$ 325.00	\$ 568,750.00
West Sidewalk, 10' wide, and Parking/ Stormwater Zone, 8' wide (one side of street)	1750	\$ 325.00	\$ 568,750.00
Typical Street Furniture (benches, bike racks, street lights)	2000	\$ 470.00	\$ 940,000.00
Bioswales and related infrastructure	10	\$ 10,500.00	\$ 105,000.00
Crosswalks	20	\$ 6,500.00	\$ 130,000.00
			\$ 2,312,500.00
Area 'E': Other TOD Zone Roadways (aggregate 5,000 linear feet)			
<i>Elements included:</i>	Length of design Element/ number of units	Estimated Cost/ LF	Estimated cost for planning purposes
East Sidewalk, 10' wide, and Parking/ Stormwater Zone, 8' wide (one side of street)	4500	\$ 325.00	\$ 1,462,500.00
West Sidewalk, 10' wide, and Parking/ Stormwater Zone, 8' wide (one side of street)	4500	\$ 325.00	\$ 1,462,500.00
Vehicle travel lanes, two direction- total 24' travelway	5000	\$ 460.00	\$ 2,300,000.00
Typical Street Furniture (benches, bike racks, street lights)	5000	\$ 470.00	\$ 2,350,000.00
Bioswales and related infrastructure	20	\$ 10,500.00	\$ 210,000.00
Cross walks	20	\$ 6,500.00	\$ 130,000.00
			\$ 7,915,000.00

7.0 Implementation Strategy

The implementation strategy is divided into short-term and long-term strategies to drive the growth of a vibrant TOD neighborhood centered on the Nanuet Train Station. This strategy is especially important in helping the Town of Clarkstown to identify those elements and improvements that could be addressed in the short-term within a relatively quick timespan. Additionally, the strategy also will assist in identifying more comprehensive improvements that may require assistance from the TOD developer and which may also take longer to implement. Table 14 summarizes those short- and long-term strategies.

Table 14: Summary of Short-Term and Long-Term Strategies

Short Term (1-5 Years)	Long Term (5-15 Years)
Signage	Complete Streets (to be implemented locally upon completion of each new development)
Hamlet Center Parking	Multi-Use Path
Hamlet Center Street Furniture	Prospect Street Boulevard Upgrade
Hamlet Center Public Art	Development of New Streets
Hamlet Center Recycling Bins	New Transportation Infrastructure
Temporary Traffic Calming Measures	Electric-Vehicle Parking Accommodation
	Overhead Electrical Utility Wire Consolidation

7.1 Short-Term (1-5 years)

The proposed short-term recommendations are focused on laying a foundation for appropriate development, and do not include any land acquisition or significant public investment, unlike the long-term recommendations which are almost exclusively dependent on the private sector to embrace proposed TOD zoning. Most notably, these elements include neighborhood signage and existing parking. Signage improvements could be achieved by developing a common signage design throughout the entire Hamlet center and areas to the west of the Nanuet Train Station. In addition to points of interest, the signage would prioritize locations for bus and rail transportation, as well as taxi/passenger drop-offs and pick-ups. The signage could additionally be implemented in areas where TOD would be expected to occur, with the ability to update the signage once development is actually complete. Parking could be improved by further exploring opportunities and coordination with Metro-North Railroad and through further assessing the existing parking conditions within the Hamlet Center.

In addition to these elements, additional urban design elements such as street furniture, public art and 'green' recycling bins could also be implemented throughout the Hamlet Center. Temporary strategies for traffic calming, in the form of additional and/or widened painted pedestrian crossings could also be explored. It is anticipated that implementation and updates to these elements could be implemented in a one to five year timetable.

7.2 Long-Term (6-15 years)

The proposed long-term recommendations further the development potential expected for completion in the short-term, and leverages those successes to introduce new development potential and a series of publicly funded transportation infrastructure improvements with a projected five to fifteen year timeline for implementation. Unlike those proposed short-term recommendations, long-term recommendations are almost entirely dependent on the private sector to embrace TOD zoning guidelines and begin construction of new units. Long-term elements include those new transportation and water infrastructure, electric-vehicle accommodation and the consolidation of overhead electrical utility wiring.

The most significant implementations would address transportation improvements through the construction of new streets throughout all three of the proposed TOD areas. To further enhance pedestrian connectivity the proposed multi-use path would be constructed to connect the TOD areas and Hamlet Center to the Nanuet Train Station. Prospect Street would be upgraded into a landscaped median boulevard culminating in a downtown pedestrian square. Upon completion of new units, those identified complete street designs could be immediately implemented.

As previously identified, these recommendations require extensive input from private sector developers, as they go beyond the financial capabilities of the Town of Clarkstown. To overcome this, a beautification bank could be set up that would require contribution from developers in exchange for the ability to construct additional units. Alternatively, those developers that choose to implement these recommendations on their own, could be given the same bonus of being able to construct additional units. This strategy functions to increase the developers' profit margins while also further contributing to the goals and objectives of the TOD Plan.

Executive Summary

The Town of Clarkstown's initial embrace of Geographic Information Systems (GIS) technology was ahead of its time for a town government when it was established in 2008. Since, the Town has utilized GIS to accomplish a number of goals, including the implementation of a request and complaint management system; the implementation of a parts, fleet, and maintenance system; web-based mapping applications; and digital versions of the Town's Zoning and Official maps.

Over the past decade, GIS has become commonplace for town and county governments. The adoption of GIS has expanded efficiencies, cut costs, and made critical information readily and quickly available for public safety, town employees, and the general public. Government entities including Rockland County, Westchester County, the City of Manhattan, and Stamford, CT have invested in GIS technology to great effect. Although varied in many ways, similarities exist between Clarkstown and these entities and some useful lessons can be gleaned from their efforts. Notably, the incorporation of records and asset management into public safety and day-to-day operations should be a primary goal. Also critical is a continued commitment to support GIS technology - allowing Clarkstown to keep pace with government norms while preventing existing gains from diminishing.

With this in mind, the GIS Strategic Plan Committee, consisting of members from Engineering and Facilities Management, Highway, Planning, and the Supervisor's Office began the process of creating a long-term work plan in September, 2017. Surveys and department interviews generated a broad operational picture of department needs, many of which overlapped. Thus, a picture began to emerge of how department needs could be applied to satisfy the Town's larger mandates.

Historically, Clarkstown has maintained records in a paper environment, and much information is retained by individuals as institutional knowledge. As personnel retire and records are boxed and stored, information and access to information diminishes. Now, technological advances have created opportunities to breathe new life into these underutilized documents. The speed at which information can be made available, the ease by which departments can share it, and the potential for deeper analysis and crisper decision making are all possible when information is put into an information system designed for such purposes.

Building on the results of the original Geographic Information System Needs Assessment and Implementation Plan, the **GIS program looks to also support the development of the newly formed Department of Engineering and Facilities Management's need for data and application development.** Further, this plan **seeks to address two important Town goals – to protect public safety and to reduce risk from man-made and natural disasters.** To better align GIS resources and program objectives with Town needs, **this Plan recommends five (5) primary projects involving data creation and access that will culminate into a complete Records and Asset Management Information System.** This system will improve Clarkstown's ability to serve

the public, lower long-term maintenance costs, and protect public safety. The commitment to provide necessary resources would allow the following objectives to be achievable within the next three to five years:

- Develop Asset Management Information System to support Department of Engineering and Facilities Management and Highway operations by creating location and maintenance information of Town maintained infrastructure.
- Develop Records Management Information System to support Assessor, Building, and Planning operations by creating a searchable, geographically referenced, digital database of land records within Clarkstown.
- Expand Executive, Public Safety, and Emergency Management awareness by providing access to the Records and Asset Management Information System via mobile technology.
- Provide analytical support for infrastructure capital improvement and maintenance plans.
- Provide ongoing support and maintenance for all existing and future GIS-based systems.

The Clarkstown GIS program delivers GIS services throughout Town operations and to the public. **At this time, the program is at a crossroads. Expanding information needs of other departments are outstripping the program's capacity.** A primary challenge facing Clarkstown GIS in achieving its goals is attaining the right resource mix to grow the system. The resource additions listed below are critical to support expanding GIS responsibilities.

- The hiring of one (1) additional GIS staff member
- Dedicated funds for training of Town employees across several departments
- Dedicated funds for contractor services, as needed
- Development and/or purchase new hardware, software, and data, as needed

The addition of a Records and Asset Management Information System is a large undertaking, but one that will put Clarkstown in a better position to serve and protect the health and wellbeing of the public, make informed decisions, and reduce costs. Incorporating this work into the Town's existing Geographic Information System is a necessary evolution, and one that will continue to reap benefits many years into the future.

1. Introduction

A functional and capable GIS is a valuable resource to the Town of Clarkstown. Rooted in geography, GIS is a technology platform for gathering, managing, and analyzing data. While GIS is often used for making maps, the true value of a robust GIS for municipal government is in its ability to organize land related data for management purposes and to analyze relationships between data layers to improve decision making. Properly managed, GIS becomes a tool for identifying problems, monitoring change, managing and responding to events, forecasting, setting priorities, and understanding trends.

The Town of Clarkstown's GIS program main function is to manage the Town's geospatial capabilities and tools: interactive mapping and spatial (map-based) analysis, and to support the components of the system—the data, applications, services, and hardware that keep everything running. Although this function is performed from within the Planning Department, GIS serves all Town operations and the general public as needed. Because the majority of Town function has a geographic component, the GIS program operates with the assertion that Town operations thrive when there is an understanding of how GIS can positively impact department operations. Such understanding improves service processes across operations and informs decisions at the highest levels of management.

The original GIS plan, the Geographic Information System (GIS) Needs Assessment and Implementation Plan, was written between 2005 and 2006 and led to the creation of the GIS Coordinator position, filled in 2008. Seeing the need for a document that plans for future GIS development, the GIS Coordinator formed the GIS Strategic Plan Committee (GISSPC) in 2017. The GISSPC represents high level Town staff from the departments most integrated with GIS—Planning, Engineering & Facilities Management, Highway, and the Supervisor's Office.

The intent of the Committee is to identify the mission and high level goals for the GIS program, identify and prioritize a number of strategic opportunities, and modify the existing framework for program governance. The Plan should be updated every five years.

Process

The GISSPC developed a survey to better understand the Town's GIS needs. These needs focused the Committee as the Plan was developed. The committee met over a 20 month planning process from August, 2017 to April, 2019. To keep conversations manageable, meeting topics were focused on the following: **1) mission and goals; 2) needs gathering results; 3) identifying shared solutions, and valuing projects; 4) program evaluation; and 5) governance and budgeting.**

2. Program Overview

Clarkstown's GIS program provides a mechanism for Town departments to provide services to residents while efficiently managing their resources. The GIS Coordinator is committed to providing those departments with usable technology and information, analysis services, insights into how to engage GIS technology, and support for the above.

A. Clarkstown GIS Mission Statement

The mission of the Town of Clarkstown Planning Department, GIS is to support the activities of the Town and its citizens by using geographical data to (1) inform decisions, (2) improve service processes and systems, and (3) expand the use and utility of shared information.

B. Benefits of a GIS Program to Local Government

Many GIS benefits are qualitative and Return on Investment can be difficult to measure. However, these efficiencies have a major impact on the Town's financial bottom line through improved collaboration, streamlined service processes, and well informed decision making. The GIS program strives to support many aspects of Town function by standardizing approaches to issues that may be spatially similar—for example modeling flow direction, yet organizationally different—water flow v. traffic flow. In this way, Geographic Systems provide services that allow others to more efficiently work or gather and understand information. GIS benefits are categorized below under three closely related general areas to begin understanding how GIS supports and adds value to Town operations:

1. Operational/Service Process Efficiency

Within the structure of a GIS is the ability to relate information from different systems into correlational location-based databases, applications, and layouts. Simply, GIS can find patterns in data that are not always apparent. For example, GIS-based asset management systems can store information on features such as catchbasins or lighting based on the feature's location, rather than the closest address. These features can be displayed on a map, allowing management to view hundreds of records by location allowing for rapid and comprehensive assessments. Streetlight locations can contain information about service dates and bulb types, enabling management to target larger areas that may need to be inspected, rather than reacting to individual complaints about malfunctioning lights. Geo- and field-enabling documents, reports, complaints, permits, or inspections make the task of code enforcement or inspections more precise and more efficient. Using GIS is also an excellent way to standardize information and increase interdepartmental organization and collaboration—allowing questions to become conversations.

2. Decision Making and Policy Support

GIS creates unique geographic views of information and can inform decision making at all levels of Town government via spatial analysis: Where are crime hotspots? Which intersections have

the greatest number of pedestrian accidents? When do those accidents occur? Which senior developments do not have easy access to shopping? GIS coalesces different types of information in ways that are not possible otherwise. GIS brings locational intelligence in the development of plans for infrastructure, economic growth, or public facility projects—such as developing long range capital improvement projects for storm water drainage or sewer. Likewise, GIS brings relevant information to bear during high level policy decision making such as understanding the impact of Transit Oriented Development projects on services and infrastructure.

3. Transparency and Public Information

GIS has the potential to increase visibility for Town initiatives and to act as a first line of response for public inquiries. Web-based mapping displays information in ways that are intuitive for public use. For example, the Planning Board's Major Projects mapping application displays current and past project locations along with aerial imagery. This on-line interactive map viewer is simple, yet allows members of the residential and business communities to view project locations, project status, surrounding areas, and supporting documentation. By offering this service, the Planning Board can highlight projects and the public can easily find basic information through the Town's website, freeing the Planning Department to focus on more pressing tasks. This same approach can be applied to most internal processes that have been integrated with the GIS.

C. Program Standards

Over the past 10 years, the Town's GIS program has been successful in positively impacting a number of Town functions. Clarkstown GIS has taken the lead on projects as diverse as initiating a complaint tracking system, subdivision and easement mapping, ensuring MS4 compliance with the New York State Department of Environmental Conservation, and e911 data and software support. This strategic plan focuses moving GIS products away from standalone projects and focusing on enterprise capabilities. It will be implemented in alignment with the following standards:

- **Return on Investment (ROI):** Focus on GIS projects with the greatest possible organizational impact. Focus on economies of scale and long-term sustainability.
- **Innovation:** Create more efficient GIS-based service practices and processes.
- **Aligned with Clarkstown's Geography:** Consider that Clarkstown is a semi-dense suburban community; recognizing the "interdependence between individuals and society, between our built systems and our natural environment", as stated in the Town's 2009 Final Comprehensive Plan & FGEIS.

3. Goals

GIS program goals provide guidance and ensure that the program stays focused on its mission. Goals are divided into two main areas: (1) infrastructure—system resource development and analytical outputs; and (2) success factors—activities that ensure infrastructure is properly targeted and well used.

A. GIS Program Goals

1. GIS Infrastructure Goals

Data Development and Data Standards: Continue to ingest data that are usable and useful and ensure that each dataset is accurate and reliable.

Spatial Analysis: Use resources in a manner that reveals information and provides solutions to complex problems.

Application Development and Service Process Integration: Guide departments in using GIS technology to improve their work and service processes.

Interdepartmental Collaboration and Coordination: Develop resources that allow departments to work together through information and idea sharing.

2. Success Factor Goals

Promote GIS Capabilities and Educate Decision Makers: Educate decision makers on the value and capabilities of GIS.

Training and Technical Support: Provide technical support and staff training to maximize GIS capabilities.

Available and Accessible Systems: Make Town GIS resources available and accessible for day-to-day use.

External Partner Coordination (Regional/County/Utility/etc.): Sustain and improve existing partnerships in the region. Identify new partnership opportunities.

Support for Emergency Management: Make GIS resources accessible in emergency situations.

B. Relationship to Town's Comprehensive Plan

As GIS supports Town function, the Strategic Plan should support the goals and objectives of the Town's Comprehensive Plan, which is a template for development and management within Town boundaries. Elements of direct GIS support can be found in each of the Comprehensive Plan's central topics:

- Economic Development
- Environmental Resources
- Health, Safety, and Welfare
- Historic and Cultural Resources
- Housing

- Recreation, Parks, and Open Space
- Transportation

As the Town has implemented aspects of each topic, GIS has been prepared with raw data and analytical tools to develop information beneficial in assisting Town staff and elected and appointed officials make informed decisions. Now, as the Town prepares to update the current Comprehensive Plan, Clarkstown GIS must be prepared to meet the challenges that will arise with the development and implementation of the updated Plan.

4. GIS History

A. Phase I – Program Initiation

Clarkstown's GIS program began in 2008 within the Data Processing Department. Because Clarkstown GIS works with many Town departments to varying degrees, its organizational location was an issue of debate at the onset. It was decided that Data Processing would be a neutral location, as it would not place weighted project pressures on the new program in relation to other departmental needs. During this time the basic infrastructure of the GIS was developed and implemented and database structures were defined and created. At this time, GIS information was largely decentralized. Departments were stewards of their own data, performing routine maintenance and sharing with other departments. The GIS Coordinator maintained base data, managed the system, and addressed other Town GIS needs on an ad hoc basis.

B. Phase II – Consolidation

As the information system became more developed, the decentralized approach became less effective—leading to data duplication, data gaps, and data unreliability. The need to centralize data ownership became primary, as the need for data reliability increased and GIS projects became more prevalent. By moving data responsibilities away from departmental users, the GIS Coordinator was able to ensure data integrity, access, and universality. As such, a new geospatial infrastructure began to develop. The new goal was to generate data that would be reliable, relevant to municipal uses, up to date, and accessible, providing GIS users data with a high level of confidence. Outside of data development and maintenance, GIS activities focused on training, map creation, and basic analysis. At this time, the GIS Coordinator began releasing web-based map viewing software and began to investigate GIS-based software that could be integrated into various departmental service processes.

C. Phase III – Development

During this phase it became clear that Clarkstown GIS would need to further centralize the Town's enterprise data. Accordingly, Clarkstown GIS took the lead on assisting departments in the acquisition of GIS-related software for resident complaint and work order tracking. As a result, the number of indirect consumers of GIS grew, and system management requests became increasingly complex and wide-ranging. GIS activities outside of software and data maintenance and management focused on training and ad hoc and project specific map creation and analysis. Further, the GIS core database had matured to a point where it could meet a greater range of needs. In 2015, the GIS Coordinator was administratively moved to the Planning Department, but continued to assist all other Town departments as needed.

5. Current State

Clarkstown GIS operates under the organizational model described in GIS History, Phase III – Development. As GIS technology and departmental needs evolve, the GIS Coordinator must continue to expand his knowledge and skill sets. This proactive approach has helped to increase knowledge of the usefulness of GIS for Town employees and residents and, as a result, has raised the level of expectation for the GIS Coordinator.

A. Program Responsibilities and Duties

GIS responsibilities and duties are divided into three main areas: Operations (maintaining the system), Development (improving the system), and Ad Hoc Projects (unplanned needs). Currently, Clarkstown GIS resource planning is divided between Operations and Development. Ad Hoc Projects are variable and cause the largest management challenge for prioritization and merger to the main GIS program within a reasonable time frame.

Operations

Operations refers to ongoing processes and tasks. These tasks often grow as Clarkstown GIS implements new projects, including data maintenance, software updates, application maintenance, maintaining standard map products, or analysis projects. Naturally, this also includes unplanned tasks such as troubleshooting system breakdowns and providing technical support.

Over the last several years, Clarkstown GIS has seen a reduction in the amount of time available to dedicate to data, application, and map maintenance. These reductions are mainly due to an increase in the number of, and complexity of, data layers, GIS products, and ongoing projects. This decrease in available time has not yet impacted the integrity of GIS as a service, but will in the future as staff levels remain minimal while workloads and expectations naturally increase, and as Clarkstown GIS personnel capacity is not augmented by contractor services. In addition to the complexity of data layers, GIS products, and ongoing projects, the number of supported applications has grown. As such, the maintenance of the GIS as a system has become more complex. New projects will continue to arise and Operations workload will continue to expand. Several options, listed in the Shared Solutions section attempt to streamline or standardize common tasks or products and provide a solution to maintaining the integrity of Clarkstown GIS while ensuring adequate time for GIS development.

Development

Development is characterized by new data, application implementations, system modifications, development of additional capabilities, or a significant but unique project need. The amount of work varies from year to year depending on availability of additional funding for GIS. The Town's GIS software provider is in the process of changing their software architecture and delivery method. As such, much of the development for the GIS program in 2019 will be in the

form of network, software, and database upgrades. Training is a critical component of mission success. However, the lack of a training budget may hamper the success of this undertaking.

Unplanned development is common. These unforeseen events often monopolize staff time that would have otherwise been spent on other initiatives. These events can be minimized in the future through better identification of development needs. To this end, the needs for GIS development should be understood early in a process, leading to successful project implementation and more significant ROI from the GIS program.

Ad Hoc Projects

Projects often arise that are unrelated to operations or development, but represent an urgent need to assist a pending decision, recommendation, or other time sensitive event. They can be data collection, mapping, system repair, or analysis projects. Although they are usually short term in nature, they quickly consume limited staff resources. These projects are evaluated and prioritized by the GIS Coordinator. Although a method of project evaluation does not formally exist, the following is a set of standards that are generally applied to the decision-making process:

- **Cost-benefit:** The main cost of many ad hoc projects is staff time. Projects requiring less than 8 hours of staff time are often accepted.
- **Organizational value of the project:** Identifying project importance to the Town often dictates priority.
- **Ability to address the need:** Some potentially beneficial projects require more resources than can be reasonably allocated and are rejected on this basis.
- **Future value to the program:** Projects that allow Clarkstown GIS to improve its overall infrastructure may receive greater consideration.

The GIS Coordinator has made a concerted effort over the last several years to reduce the number of ad hoc project requests by creating or improving existing GIS services to allow users to satisfy their own GIS needs. These have been in the form of custom web-based applications, analysis tools, and map templates. In order to remain effective in the future, the GIS program must continue to supply Clarkstown's GIS user community with relevant tools that will make users more self-reliant. Technological advancements and the need for continued GIS development is critical to this GIS service.

B. Guidance

Guidance is the mechanism that determines GIS program direction. Initially, the GIS program was focused on growing the new system and needs were clearly defined. Advancing a mature GIS program is much more complex. This section of the Plan looks at the current structure, while the Strategic Plan Implementation section discusses changes to the governance model.

GIS Steering Committee

GIS Steering Committee (GISSC) membership has expanded and contracted over the years. Currently, core GISSC membership is made up of those departments that most use GIS. These departments are the Highway Department, Department of Engineering & Facilities Management, and the Planning Department. Committee meetings are typically three to four times annually, occasionally meeting more frequently as project needs dictate. Other departments are included in meetings as appropriate. Meeting agenda topics include general discussion, progress reports, project planning, and information sharing.

The GISSC began at the end of 2011 after the bulk of GIS Initiation and Consolidation was completed. The goal of the Committee was to increase the use of GIS within Town departments and to guide GIS development in order to make it a more robust and capable system. Although successful in this regard, the Committee continues to work on an ad hoc project basis. Because the Committee is made up of departmental leadership, the members are able to fully represent their departments in terms of resources available to fulfill commitments. Thus, the GISSC should ultimately be a venue to organize and follow through on long-term projects.

Departmental Guidance

It is impossible to anticipate all departmental needs at one time and projects that require GIS resources do arise at various points throughout the year. As such, the requesting department offers project guidance when necessary.

C. Resources and Personnel

The most important part of any GIS program is the staff that is dedicated to it – their depth of knowledge and capabilities dictate its impact. GIS staff must understand social and physical geographic and spatial concepts in order to accomplish an array of specialized tasks. Staff must also understand all relevant department needs in order to develop appropriate solutions to the usually uncharted tasks at hand.

Currently, Clarkstown's GIS staff consists solely of the GIS Coordinator. As projects have continued to grow in number and complexity, there is a need for more personnel. Locally competitive salaries for staff, a full range of industry standard classifications, and the development of a professional career ladder are critical to the long-term success of the GIS program. While gaining new staff is initially costly, developing an internal structure for encouraging and rewarding professional growth can produce a very high return in improved capabilities for the Town at a reasonable cost.

System Resources

Since 2008, Clarkstown GIS has evolved from a handful of users with desktop licenses using locally stored data to an enterprise level virtual environment hosting licensing, data, intranet applications, and internet applications. This infrastructure supports many Town operations in

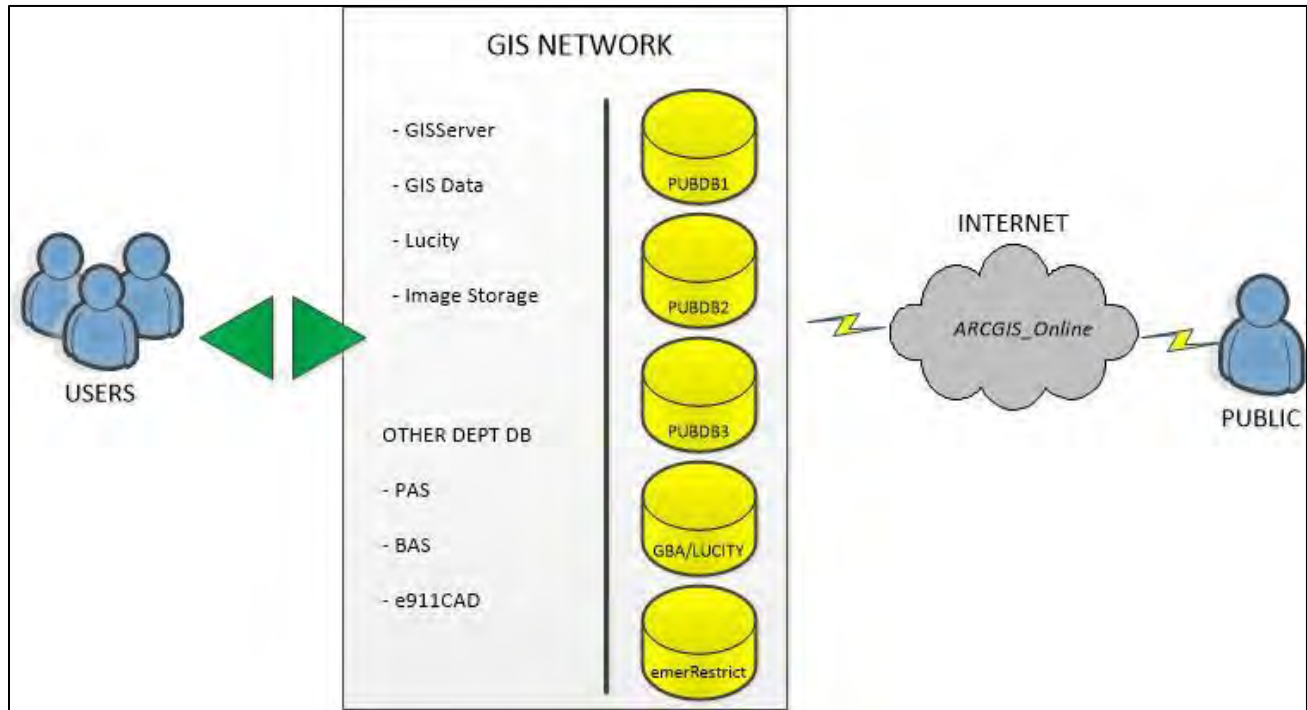

the intranet, internet, and desktop environments. Today with the support of the Data Processing department (IT), Clarkstown GIS maintains 6 servers. Within Town Hall, Clarkstown GIS supports or maintains 5 GIS desktop applications, 7 web-based applications, and an ever-growing data library consisting of 111 separate features constituting roughly 2 Terabytes of data (see Appendix 5.2). Clarkstown GIS also works with the Clarkstown Police Department, Data Processing Division and Emergency Management to support 2 Police Department servers, 1 desktop application, and 2 web-based applications. Clarkstown's GIS program is an ESRI-based operation that maintains the following ESRI Enterprise for Small Government licenses shown below in Table 5.1.

Table 5.1

Application	Deployment	Use
ArcGIS Desktop Advanced Enterprise	Desktop - Power Users	High end analysis, complex data development and management, map production
ArcGIS Desktop Standard Enterprise	Desktop - High level users and Interns	End-user software; focus on multi-user enterprise geodatabase editing capabilities
ArcGIS Desktop Basic Enterprise	Desktop - Beginner users	End-user software; basic analysis and map production, editing personal databases
Network Analyst	Desktop Extension - Any user, as needed	Development of complex routing and service area analysis
Spatial Analyst	Desktop Extension - Any user, as needed	Raster-based spatial analysis, development of surface models, site suitability studies
3D Analyst	Desktop Extension - Any user, as needed	Analysis and visualization of data, development of perspectives, animations
Geostatistical Analyst	Desktop Extension - Any user, as needed	Generate surfaces from data and evaluate predictions
ArcGIS Server Enterprise Advanced	Server - All Town staff	Management of enterprise GIS databases, development and deployment of web-based GIS services and applications

The GIS architecture, represented below in Figure 5.1, is a system of servers, applications, and data that centralizes the maintenance and Town-wide distribution of geographic information, ensuring that data are accessible, accurate, and up to date. As Clarkstown GIS continues to evolve and as industry technologies change, maintaining system architecture will be an important consideration. Time, personnel, and GIS educational development are critical components of this effort.

Figure 5.1

Applications

GIS applications provide Town staff at all levels ways to easily view and interact with location-based information. These applications are mostly seen as interactive mapping, but a GIS application is not always visible to the user. Some applications sit behind the scenes, supplying information for desktop software. Some are tools embedded within other applications, and some have multiple hardware and software components. A list of current applications is found in Appendix 5.1.

Clarkstown GIS supports three general categories of applications:

- **Commercial off-the-shelf (COTS) GIS Integrations:** COTS applications integrate into existing data and applications that make up the GIS enterprise. These tend to be department specific and are put in place to manage a specific set of workflows. Examples include Lucity for asset management, PAS for property assessment, and Computer Aided Dispatch/Records Management for public safety.
- **Custom GIS Applications and Integrations:** Some of the Town's GIS applications are custom-built and maintained by GIS staff. These applications are either accessible to Town staff via the intranet, or to the public through the Town's web page. Examples include the iMap application for general data viewing, the Zoning and Official Map applications for interactive viewing of those map products, and the Planning Board

Major Projects application for public access to documents relating to ongoing Planning projects.

- **GIS Web Services:** Clarkstown GIS develops and maintains GIS-based web services, which provide back end access to spatial data and functions without needing to provide a map or connect to a GIS. In this way, services can efficiently be made available to users and client applications.

Data

Clarkstown GIS is responsible for the design, development, maintenance, and storage of all GIS related data for the Town. This work includes management of several servers, databases, and datasets representing hundreds of thousands of individual features that include policy, environmental, emergency management, infrastructure, and imagery data. GIS data are centrally located in various ArcSDE geodatabases and distributed through scripts, services, and other processes to various internal and publically accessible locations. The following areas are some of the core functions and uses of GIS data:

- **Asset management:** Currently, GIS is used by several Town departments for managing and visualizing resident complaints. Additionally, the Highway Department uses GIS to manage permits and work orders. Other assets that are managed by GIS in some way include tax parcels, easements, zoning boundaries, Official Map elements, stormwater and sewer conveyance systems, hydrants, etc.
- **Visualization:** Visualization products such as orthophotography are vital data resources in the GIS inventory. Approximately every three years, Clarkstown GIS acquires high resolution imagery at no cost from the New York State Office of Information Technology Services, GIS Program Office that is then compiled into a single mosaic image of Rockland County. Clarkstown GIS now has an orthographic reference library that dates to 2000.
- **Map standards:** Clarkstown GIS maintains several standardized mapping products for ESRI desktop users. These products allow users to quickly produce and disseminate maps in a variety of sizes both internally and to the general public. Maintenance of these products ensures that data are correct and properly cited, and that a professional and unified appearance is maintained.
- **Network data:** A Network is a spatial data type designed to mimic connection and flow characteristics of linear systems. Clarkstown GIS makes the Rockland County Sewer District data available to the Department of Engineering & Facilities Management and other Town users. Additionally, Clarkstown GIS is in the process of developing a stormwater conveyance dataset, which serves to keep the Town in compliance with the New York State Department of Environmental Conservation's MS4 requirement. An additional benefit will be the creation of a stormwater conveyance network dataset that will benefit the Clarkstown Department of Engineering & Facilities Management for long term infrastructure planning and Emergency Management for public safety purposes.

- **Geocoded data:** Along with internal GIS-based web applications, the Clarkstown Police Department e911 dispatch system relies on address information supplied by Rockland County Planning Department, GIS Division. Clarkstown GIS has developed several custom geocoding services that are designed to recognize many of the unique addressing styles within the Town.
- **County data:** Clarkstown GIS works directly with Rockland County Planning Department, GIS Division to ensure that data received from, and sent to, the County have a high degree of confidence. Clarkstown GIS proactively shares GIS data with the County and neighboring municipalities in anticipation of and during emergency events.
- **State data:** Clarkstown GIS is a member of the New York State GIS Association as well as the New York State GIS Cooperative, which give access to large amounts of federal, state, regional, county, and municipal data. When appropriate, such as with FEMA Flood Zones, data are integrated into Clarkstown GIS core databases and maintained as necessary.

Training

Since 2008, Clarkstown GIS has offered training to new and existing users on an as needed basis. Trainings have typically covered desktop software, web based applications, and department specific software. Prior to the creation of the Town GIS, some training was offered by Rockland County Planning Department, GIS Division. In recent years, training requests have decreased. It has become apparent that changes in technology and end user needs have resulted in the need for new training and will be an opportunity to refresh prior training and skills. Additionally, it is anticipated that ESRI will migrate away from their current desktop software platform in the near future. Significant training will need to be provided to, and by, the GIS Coordinator at that time.

6. Organizational Evaluation

An important part of this assessment is to identify what does, and what does not work for Clarkstown GIS. Relying on past experience and interaction with involved departments and committee members, this section looks at the GIS Capability Maturity Model and critically examines the GIS program's Strengths, Weaknesses, Opportunities, and Threats (SWOT) and discusses challenges and solutions.

A. GIS Capability Maturity Model—Urban and Regional Information Systems Association

Using the GIS Capability Maturity Model (Appendix 6.1), available through membership in the Urban and Regional Information Systems Association (URISA), the GIS Coordinator modeled the Town's ability to accomplish a defined set of GIS tasks. This assessment was based on seven broad, but critical categories:

Figure 6.1

The model described above and detailed in Appendix 6.2 identifies strengths and weaknesses in the Town's GIS program, the results of which have been incorporated into the SWOT Analysis below. Additionally, the model is compared to a larger municipality as a means to compare capabilities with other GIS programs. This comparison is found in Appendix 6.3. It is interesting to note that the Town's GIS program is, in some ways on par with the comparison municipality which serves a larger overall population, and enjoys a larger budget and more staff. Although the ability exists within Clarkstown GIS, the overall program falls short in the areas of funding, staff development, training, and professional development. These shortcomings severely reduce the execution ability of the GIS program.

B. SWOT Analysis

Strengths

Interdepartmental sharing and collaboration

To date, the GIS program has introduced three intranet-based mapping applications to the Town. Rather than create a one-size-fits-all application, the Official Map, Zoning Map, and general map viewer have been created for employee use. These applications have not been made available to the general public. Data for these applications are taken from the core GIS databases for use as simple data viewers. Through their use, Town employees can access information that would otherwise not be immediately available. Thus, these applications serve as interactive reference materials that are used to answer questions and solve problems. As the GIS program continues, these applications will serve as the foundation for more robust tools that will incorporate departmental specific information and analytics.

Analytical expertise

The GIS program benefits from several high level users that are able to relate their field of expertise to GIS software and concepts. The result is a small, but highly technical group that is capable of performing deep analysis. As an example, this group has worked on projects ranging from the Town's Comprehensive Plan to long term capital improvement projects. When brought together, this group combines its institutional knowledge and subject matter expertise to create meaningful analysis products.

Spatial data

The GIS program has invested a significant amount of time into making a reliable and accessible core database. Data was standardized and data silos were eliminated with the establishment of an enterprise GIS. These data are updated and attributed on a regular basis when need and personnel resources permit. All data is developed to meet its immediate need as well as anticipating unforeseen analytical needs, while feeding GIS COTS applications and basic mapping purposes.

Initial investments have paid off

Shortly after the GIS program was initiated, the decision was made to invest in an enterprise GIS. As a result, GIS is available to all users in the form of desktop and web-based applications. Further, the system has the ability to tie in to other departmental systems that are on a Microsoft SQL database platform. Examples of integrated systems include: e911, complaints, assessments, inventory, permitting, etc.

Weaknesses

Insufficient personnel resources

At odds with the original Geographic Information System (GIS) Needs Assessment and Implementation Plan, staff size has remained constant during the 10 years that the GIS program

has existed. In addition to staff growth not keeping pace with the growth in obligations, the GIS program has been unable to develop a professional career ladder. Without a career ladder, GIS staff has no opportunity for advancement within the Town. This lack of advancement opportunities directly affects morale. Additionally, aside from staff salary and software licensing fees, there are limited resources available for professional development and no funds available for the hiring of additional permanent staff or outsourcing of project work. As a result, the GIS Coordinator is in a position where a level of program growth that would greatly benefit the Town is impossible. Significant cost-neutral benefits would be gained by the Town from the development of an additional full time GIS classification and a GIS career ladder.

Insufficient training resources

As budgets have tightened throughout Town departments, the training budget within the Planning Department has been eliminated. As one of the most technical positions within the Town, the GIS Coordinator must keep pace with constantly evolving GIS technology. Required training is a need that cannot be ignored without a negative impact to the Town's use and administration of GIS. Without technical training funds allocated to the GIS program, the Town will lose advantages that have historically existed in a program that maintains up-to-date knowledge and skills.

Little direct coordination with users/public

- **Town employees:** Although GIS has made great strides in educating Town employees in the function and uses of GIS, there is still a disconnect between many potential users and the technology. The creation of a technical, or user group, may help to solve this problem.
- **Civic engagement:** There is no established model or defined expectation for providing GIS services to the public – currently, GIS provides no custom mapping or data analysis services. GIS has two highly specific web-based applications that are available through various departmental pages on the Town's website. There is currently no dedicated location, or portal, that alerts residents to the existence of GIS resources within the Town. The creation of a GIS Portal site will create a public access point and increase availability.
- **Digital submission standards:** The GIS Coordinator worked with the Code Revision Committee in 2014 to develop a set of digital submission standards for site or subdivision plan submittals. The main goal of the submission standards was to require applicants to provide digital information with their submission, reducing GIS staff time spent on data management. To date, this revision has not been codified, pending review by the Town Attorney.

Weak model for project follow-thru

Most new work is committed to by the GIS Coordinator and senior departmental management. However, if a project does not require additional financial resources, there is no obvious mechanism to ensure completion. Changes in leadership and priorities throughout the

organization may impact those agreements, and projects can lose support. A re-tooling of the GIS Steering Committee may help to ensure that commitments to GIS initiatives are viewed as priorities.

Data is lacking

The GIS program maintains an extensive collection of spatial information. However, recent infrastructure acquisitions and ongoing management requirements have created major gaps in the spatial catalog. Specifically, the stormwater conveyance system is only partially mapped and above ground lighting within the Town is not mapped at all. With only part time seasonal staff to engage in data collection, it is anticipated that another 5-10 years will pass before these systems are fully mapped to the point where they are useful in an enterprise asset management system. This time line assumes that no other major data collection projects will arise within that timeframe.

Also, data exists in analog form that is simply waiting to be used in a more meaningful way. Much of this information exists in the form of site plans, meeting minutes, etc. Although many agree that this is valuable information and could be used more effectively, there is no push to engage this project. As a result, a wealth of information sits passively waiting to be used. This type of information is commonly converted to digital format when grant monies are available.

Data standards not fully developed

Data standards are not fully developed and need more definition and acceptance. Standards also need to be incorporated into scopes of work and Request for Proposals involving GIS, or location-based data. This would make system integration and use much simpler. Currently, not all departments consider GIS when they seek software vendors. The reality is that all departments use or create location-based information. Disregarding GIS integration during the planning stage will, in most cases, prohibit cost-effective GIS integration. As example, the Town's decision to purchase and manage aboveground lighting did not include the purchase of the existing spatial databases. As a result, substantial GIS staff work will be needed to create the information which, mentioned above, will take years to generate. In the meantime, management of the newly acquired infrastructure will be hampered by the lack of information.

Opportunities

Unified Town operations

The Town Supervisor's Office has advocated a collaborative work approach, or shared services, while seeking ways to reduce Town overhead. GIS should be a key component of promoting this goal. GIS establishes a platform for managing geographic resources across departments. It also standardizes processes that ensure they remain repeatable and defensible. Finally, GIS can be a potent platform for collaboration through information sharing, streamlining processes, and assisting in decision making without requiring active departmental participation in all processes.

Identifying operational improvements at staff level

A number of Town employees have expressed the desire to participate more actively in identifying opportunities to use information more effectively. The GIS Steering Committee, or possibly a dedicated User Committee, could provide the platform for strategic discussions about the Town's use of information.

External GIS efforts/partnerships (Emergency Management/ Engineering & Facilities Management focus)

There are several efforts underway from various organizations, including Rockland County Planning, GIS Division and the Rockland Stormwater Consortium. These entities provide opportunities to develop or coordinate data and application development at a larger scale than the Town could otherwise reasonably employ. It is the hope that Clarkstown can benefit from the economies of scale that come from working with other agencies and create high value projects. The GIS Coordinator has been leveraging his limited resources by participating in these projects and by taking an active role in defining them. These high value projects require significant GIS resources, but could not otherwise be completed with a positive ROI. For example, participation in the Stormwater Consortium has allowed Clarkstown GIS to develop mobile data collection tools for stormwater data collection. Additionally, grant monies from the Consortium has allowed the GIS Coordinator to recoup the costs of his involvement in the project.

Improved technology

As technology continues to evolve, opportunities to rethink use and purpose are prevalent. Previous barriers no longer exist and providing mapping data on many platforms and in real-time are now a reality. Mobile web-based mapping applications can now provide a cost-effective method of building solutions – getting them to the department, person, or public that need them. With COTS applications becoming more GIS-based (i.e. Lucity, ArcGISOnline, Public Stuff, e911, etc.) possibilities now exist for sharing information in the office, with the public, and in the field.

Threats

No resource capacity available for research and development

The relationships between geospatial applications, data, and processes within Clarkstown are unique to Clarkstown. GIS staff is currently well positioned to understand how these relationships interact. However, the GIS industry is rapidly evolving and it is critical that professional development become a core piece of the program. However, time spent staying current with trends is treated as a luxury, rather than a necessity. It is imperative that professional development become a key component of the program.

Pressure to support multiple GIS applications

There is pressure on the program to implement and support multiple custom or COTS GIS applications. Each of these applications presents its own set of unique challenges in terms of

management and support. Necessarily, these applications need to be in place, but as the number of applications increases, the ability of the GIS Coordinator to support them decreases.

Piecemeal funding

Most project requests do not become part of a formalized work plan. This, coupled with the lack of an effective GIS budget, creates confusion in regards to funding. Often a department will wish to engage in a project, only to find out that there is no funding available. In these instances, GIS works with departments to find funding, but there is an unrealistic expectation that the GIS program will provide unlimited support, or time resources to the outside vendors contracted to complete the project. Two main problems are created by this piecemeal funding model:

- **Inefficient leveraging of GIS resources:** GIS brings a significant amount of technical and data resources to projects. The use of these resources must be well planned, as their use creates dependencies within the GIS system. Often, projects are hastily prepared and create problems midstream within the project. For example, not fully anticipating future departmental data needs may create a situation where costly modification of a system may be necessary.
- **No economies of scale:** As mentioned throughout the Plan, each project should meet a specific need as well as add to the overall value of the GIS. Many projects fail to do this, and often duplicate previous efforts.

C. Challenges

Staying organized

GIS receives many requests that are not easily justified as standalone projects, but are expected to be available within an enterprise GIS. The GIS Coordinator views most projects as an opportunity to provide a high level of service for individual departments as well as to add to overall system resources – often working as a broker between departments allowing them to collaborate through their information or software platforms. Thus, as the GIS Coordinator seeks to organize small projects into larger solutions so too does he work to organize the GIS program into a system based on centralized capabilities and standardized methodologies.

Bridging Planning and Information Technology

Because GIS is a technology-heavy Planning function, most of the GIS physical infrastructure – the hardware and networks, are maintained by Data Processing. However, the maintenance and management of the Town's enterprise GIS software, data, and network has consistently been the domain of the GIS program. As more GIS-centric COTS applications are being deployed throughout Town departments, there is an increased need for tighter integration and communication between GIS and Data Processing in the form of collaboration during the software vetting process to ensure that software meets business logic requirements for all involved departments. Without proper GIS staff involvement, there is a likelihood that Clarkstown's GIS capabilities will not be fully utilized. GIS staff involvement throughout the

procurement process, from needs gathering to implementation, will be necessary to ensure a successful GIS integration.

In addition to greater involvement in COTS purchases, departments should factor longer lead times on GIS projects and implementations, especially when data gathering or modifications to system architecture are required. This will guarantee that GIS products are well designed and sustainable.

Moving from “where” to “what if”

Reliable and usable information is at the core of the Town’s investment in GIS. The GIS program has strong analytical capabilities, but is not considered an essential part of many of the Town’s analytical activities. The degree to which the Town utilizes the decision making support capacity of the GIS will determine the effectiveness of the GIS in providing high value decision making and policy support.

In order to advocate the spatial analysis capabilities of the GIS, the program must better describe the benefits and the ROI to be gained. This can be accomplished by making a distinction between GIS visualization (mapping), and GIS analysis (modeling multiple variables and “what-if” scenarios); and by building analytical capabilities into GIS products.

Commercial Off-The-Shelf (COTS) software integration

COTS represent an efficient way of implementing large scale enterprise applications. They are standardized (i.e. not custom) and will often satisfy the needs of several departments. Regardless, they still require substantial implementation and integration efforts by many members of Town staff and require GIS resources for implementation and on-going support.

In the past, GIS integration often meant plotting a location on a map, or “Where is it?” Today, COTS systems can also improve reporting and analysis of system data and to improve application functionality.

The design of Clarkstown’s GIS is flexible and considers best practices for enterprise GIS while anticipating future trends in GIS and local government enterprise business systems. COTS tend to have their own unique system design rules and workflows and integration challenges can arise when these are not consistent with the design of the GIS. This often results in negative impacts on existing and stable workflows. Understanding how a specific COTS integrates with the GIS will dictate what changes must be made to the GIS system. Because of this, as stated above, the GIS program must be heavily involved in the entire software vetting process, and costs resulting from GIS system modification must be considered as part of COTS implementation.

7. Strategic Opportunities Analysis

This section explores how specific needs fit into broader operational needs, yielding greater organizational benefits. Additionally, this section looks at similar projects and consolidates them into high value opportunities, referred to as “Shared Solutions”.

A. Needs Gathering

Needs gathering for this Plan was accomplished by supplying brief surveys to department heads to be distributed to appropriate staff, and through needs gathering discussions with each department head individually.

Survey

The GIS Coordinator developed a needs survey, distributing it to 12 departments and received 25 responses in total. The bulk of the survey asked respondents to identify specific GIS project ideas or needs, and rank several GIS program components based on importance to their work function. This ensured that respondents had a chance to present ideas and needs for consideration in the Plan. When combined with departmental interviews, 56 individual GIS projects or ideas were generated. Additional project ideas were added by the GIS Coordinator and the GISPC. The survey also asked respondents about GIS program components to get a better idea of where general GIS efforts should be focused. Refer to the information is shown in Table 7.1 below and in Appendices 7.1 & 7.2 for more detail.

Table 7.1

Rank 1-5 what you think are the most critical issues facing Clarkstown's GIS	Most/More Critical	Critical	Less/Least Critical
Not enough standard maps	4.55%	27.27%	68.18%
Not enough data in the system	40.91%	27.27%	31.82%
Not enough analytical information available	50.00%	0.00%	50.00%
Not enough GIS training available	68.18%	9.09%	22.73%
Not integrated with my primary business software application	28.57%	19.05%	52.38%

Departmental Interviews

The GIS Coordinator conducted 12 meetings. The goal of these meetings was to update existing departmental information and expand upon the survey results. The meetings, however, tended to be a mix of educating participants on GIS possibilities, as well as gathering ideas. These meetings produced ideas that ranged from document storage and retrieval to complex infrastructure planning and maintenance. The needs identified in this process should be viewed as representative and not comprehensive because of the amount of opportunity for GIS service and the limited time spent with each department. A more complete review should only be

undertaken if there is a long-term commitment to the funding and implementation of that need. Responses from stakeholder meetings are listed in Appendix 7.3.

B. Consolidating Projects

All projects and ideas collected from the survey and departmental interviews were consolidated into six project categories listed below. Five categories were based on ESRI's Five Patterns of Business¹. The sixth – System Integration and Support, was added to ensure special consideration was given to new system integrations.

- **Geographic Data Management:** storing, managing, and maintaining accurate records
- **Operational Awareness:** disseminating knowledge where and when it is needed
- **Planning and Analysis:** transforming information into actionable intelligence
- **Stakeholder Engagement:** sharing information with stakeholders
- **Field Mobility:** getting information in and out of the field
- **System Integration and Support:** integrating GIS data and processes with third party information systems

C. Shared Solutions

Shared Solutions are not necessarily specific projects, but are Town-wide approaches to similar issues. It will be possible to accomplish more with fewer resources if projects are grouped by need, rather than by department. These needs were summarized into a series of similar broad-based approaches, or Shared Solutions, and assigned one of four categories:

- **Core Capabilities:** creating and managing information
- **Information Sharing and Collaboration:** sharing information across departments or to the public
- **Decision Making:** using information for decision making purposes
- **Integration/Deployment:** integrating information with new or existing systems

These approaches do not entirely stand alone, as most things in a GIS are interconnected. Thus, it is not necessary to isolate each approach. The matrix of project categories, Shared Solutions, and departmental needs are found in Appendix 7.4. A description of each Shared Solution can be found in Appendix 7.4.1.

D. Return on Investment (ROI)

There are many benefits of using GIS in municipal applications, although it can be challenging to assign a strict monetary value to all of them. The goal is to translate these benefits into specific measurable terms that can be assigned a monetary value. Thus, the ROI process focuses primarily on things such as the value added with GIS, avoided costs, efficiency improvements, and additional revenue made. Appendix 7.5 seeks to pinpoint where value can be found for each project listed in Appendix 7.4. A description of each ROI can be found in Appendix 7.5.1.

Further, Figure 7.1 graphically displays anticipated ROI for each project in relation to the others. A deeper dive into the monetary benefits of each would occur if the decision were made to formally engage a project.

E. Prioritizing Projects

The GISSPC evaluated projects for their value to the Town, regardless of cost or level of effort to complete. Once departmental needs were evaluated, projects were prioritized based on intradepartmental gains. The five projects representing the greatest potential value are listed below, and are shown in Figure 7.1 as orange circles. Some projects were grouped together in this process, as each is tightly associated. Some projects were valued highly by members of the GISSPC irrespective of the ROI ranking depicted in Figure 7.1. As each project is reviewed, a determination must be made as to whether costs will realistically fall within budget parameters.

- **1-14:** Data schema & library of all Town maintained infrastructure
- **2-1/2-2/6-7:** Mobile technology for accessing Town GIS information in the field/Collection of geographic information in the field via mobile devices/GIS support for integration of departmental software and/or systems into/with GIS
- **4-3/4-4/6-6:** GIS based interface to store and retrieve documents and photos/Geographically organized information from land use regulations and plans/GIS support for integration of departmental hardcopy information (site plans, as built, permits, violations, etc.) into GIS accessible digital database
- **3-1:** Analytical support for infrastructure capital improvement and maintenance plans
- **6-2:** Lucity: GIS support and maintenance of infrastructure, complaint, work order, and permit system

"Follow the Five Patterns of Business to a Successful GIS" Adam Carnow. January 20, 2015. Accessed at: <https://blogs.esri.com/esri/esri-insider/2015/01/20/follow-the-five-patterns-of-business-to-a-successful-gis/>

Figure 7.1

Return on Investment (ROI) values were calculated as follows: Primary ROI (P) was assigned a value of 5, Secondary ROI (S) was assigned a value of 1, and each vote (V) was assigned a value of 1. Thus, $P+S+V = ROI$. GISSPC project selections are highlighted in orange.

8. Strategic Plan Implementation

The projects identified in the previous section will need to be developed into a Work Plan. This section outlines a new governance structure, a phased approach to the Work Plan, and budget considerations.

A. Governance

Structure

Management will be coordinated through the following groups. These groups focus on specific areas of the GIS Program and are not based on a hierarchy. The **GIS Program** will focus on program management; the **GIS Steering Committee** will focus on vetting major initiatives and implementing work plans; and the **GIS Users Group** will identify areas where improvements can be made to GIS products or department workflows.

GIS Program—Managed by the GIS Coordinator

Role: Management of GIS operations and Chair of the GIS Steering Committee on technical and functional improvement projects.

Expertise: Thorough understanding of internal GIS infrastructure and how geography can inform decisions and processes.

Members: Professional GIS staff working in the GIS Program.

GIS Steering Committee (GISSC)—Chaired by GIS Coordinator

Role: Determining and prioritizing high level projects as described herein or as presented on an ad hoc basis by members of the Committee. In the future this group may research and create work plans in regards to inputs, budgets, and timing. Work plan implementation may formalize into the creation of an annual Work Plan which cannot be altered without the agreement of the Committee.

Expertise: Understanding of the Town’s high level decision making and analytical needs, resources, and budgeting constraints and opportunities.

Members: Represented below in Table 8.1.

Table 8.1

Title	Function
Director of Engineering & Facilities Management	Department of Engineering & Facilities Management
Superintendent of Highways	Highway Department
Principal Town Planner	Planning
Director of Finance/Chief of Staff	Supervisor's Office
Director of Automated Services	Data Processing

GIS User Group (GISUG)—Chaired by GIS Coordinator

Role: Identification and execution of minor operational improvements and recommendations of new operational efficiencies.

Expertise: Working knowledge of department workflow and GIS.

Members: Open to any staff interested in improved use of information in operations.

Schedule

The GIS Steering Committee will meet three times annually and, out of necessity, will follow the budget cycle in working towards satisfying this, and subsequent, work plans. The GIS User Group will meet four times annually at regular intervals. Larger projects identified by the GIS User Group will be introduced to the GIS Steering Committee at the beginning of the budget process for consideration in the following year's work projects.

B. Work Plan & Schedule

Implementation Phases

Based on the projects listed in section 7-E and the Framework for Prioritizing Work Plans above, a phased implementation strategy for the continued development of the Town's Geographic Information System is recommended. A phased approach will allow the Town to build on successes of the previous phases:

- Phase 1: Develop Work Plan
- Phase 2: Software Integration
- Phase 3: Data Development

Implementation Schedule

The three phases of this implementation plan are intended to be completed sequentially. Each of these phases requires a minimum amount of time for completion. The actual duration of each phase and the time between phases will depend on the following:

- The speed at which the GIS Steering Committee implements the plan
- The commitment by the individual departments
- The ability to hire an additional GIS staff member and his/her ability to become familiar with the situation and stay on schedule
- The availability of adequate resources (i.e. funding) for software purchases and consultants for system integration

The following lists the anticipated steps associated with this phased approach based on the above Framework for Prioritizing Work Plans and the anticipated amount of time needed to reasonably complete each Work will be undertaken by the GIS Coordinator and the GIS Steering Committee:

Phase 1: Work Plan Initiation

Duration: February-April 2020

- Introduce Work Plan to GIS Steering Committee for consensus.
- Work with interested departments to develop a long range view of department COTS (Commercial off the Shelf) applications, and business process needs.
- Establish expectations of responsibilities between the GIS program and departments; which functions are the responsibilities of the GIS program and which are the responsibilities of the departments with GIS support.
- Research time, budget, and implementation consequences of the proposed Strategic Plan project recommendations outlined in section 7-E.
- Prioritize proposed Strategic Plan project recommendations outlined in section 7-E.
- Work with appropriate groups to create and finalize an approved GIS career ladder.
- Develop a policy for resources to be directed at training and professional development.
- Create GIS Assistant or GIS Analyst position within the Town for support of Phases 2 & 3, future Work Plans, and day-to-day operations.
- Develop method to estimate pre-project ROI.
- Develop method for estimating post-project ROI.
- Identify ways to tie new GIS initiatives to the Clarkstown Comprehensive Plan.
- Secure funding for Phases 2 and 3.

Phase 2: Software Integration

Duration: May 2020 – May 2023

- Hire GIS Assistant or GIS Analyst for support of Phases 2 & 3, future Work Plans, and day-to-day operations.
- Determine vendor(s) for infrastructure management, request & work order, and permit software.

- Consolidate and integrate new and existing software related to the above as needed in relation to the GIS.
- Integrate mobile data collection into participating department workflows.
- Training for new and existing users.

Phase 3: Data Development

Duration: November 2020 – December 2025

- Define data schema and library of all Town maintained infrastructure.
- Collect location and attributes of Town maintained infrastructure for inclusion into core GIS databases.
- Integrate Town infrastructure data into GIS business process and applications.
- Identify paper records for inclusion into core GIS databases.
- Develop GIS based interface to store and retrieve documents and photos.
- Scan and catalog paper records and photos into core GIS databases.
- Integrate records and photos into GIS business process and applications.
- Training for new and existing users.

C. Budget

The Plan establishes many expectations and opportunities for the GIS program. As discussed throughout, sufficient resources are required for the GIS program to accomplish the work necessary to support Town operations. At current staffing levels, the GIS Coordinator will not be able to meaningfully address the projects identified by the GIS Strategic Plan Committee in Section 7. With the addition of a full time employee as proposed below, it is anticipated that GIS could support current operational needs, expand COTS development, and implement the five major projects outlined in Section 7 during the next 5 years.

The next steps for the GIS Steering Committee will be to prioritize efforts by determining the component parts of identified projects and to understand the inputs, implementation time frames, and costs associated with each. Given their broad scope, it is not possible to fully estimate true costs or return on investment here. However, **the following is an effort to gauge some initial costs while offering actual examples of how GIS has generated long-term returns for the Town.**

Outside of the Planning Department's budget for the GIS program staff salary, ESRI software maintenance costs and plotter maintenance and supplies; GIS capital costs are generally applied to hardware and software that comprise the information system and network and are funded through Data Processing, Department of Engineering & Facilities Management, and the Highway Department on an ongoing basis. The budget estimates listed below are independent of existing costs.

Budget Estimates

Phase 1

At this time, other than the time spent by the GIS Coordinator and the Work Plan Committee, no additional costs are expected to be incurred with Phase 1.

Estimated Total Costs – Null

Phase 2

- Hire Staff – \$35,000-55,000
- Consolidate existing software – \$25,000-50,000
- Purchase new software – \$500,000-2,000,000
- Integrate mobile technology to workflows – TBD

Estimated Total Costs – \$560,000-\$2,105,000

Phase 3

- Collect infrastructure data – \$100,000-300,000
- Integrate infrastructure data – \$50,000-100,000
- Develop document storage and retrieval – \$50,000-100,000
- Scan and catalog paper records – \$50,000-150,000
- Integrate scanned documents – \$25,000-50,000

Estimated Total Costs – \$275,000-\$700,000

Return on Investment

As stated earlier, specific return on GIS investments are difficult to identify, as GIS plays a critical role in increasing qualitative efficiencies such as management decisions and business process. Nonetheless, reasonable assumptions can be made to demonstrate returns gained from GIS investment. As illustrated in the Needs and ROI Matrix (Appendix 7.5), ROI for these projects will be increased analytic capacity, design and planning capacity, interdepartmental communication, and time savings; risk reduction and reduced departmental costs; and improved resource and asset management, to name a few. Some specific ROI examples are noted below.

Example: Infrastructure Development

The Town has been studying long and short term potential impacts from a proposed Transit Oriented Development project. The need for new facilities and infrastructure are mainly dictated by future land use, transportation, and demographics. GIS staff can bring insight not otherwise available to ensure that the most informed decisions are being made about where and when to locate facilities.

Example: Infrastructure Management

The GIS Coordinator, in tandem with the Department of Engineering & Facilities Management, collects stormwater drainage data for the GIS. This project keeps the Town in compliance with the New York State Department of Environmental Conservation's MS4 requirements and provides information that is critical to Engineering & Facilities Management and Emergency Management. The project is conducted during summer months at the direction of the GIS Coordinator working with the Rockland

Conservation Service Corps and represents a good value based on costs. These data are used for project planning, infrastructure management, public safety, and long range capital improvement projects. Additionally, the GIS Coordinator works with the Rockland County Stormwater Consortium to generate grant monies that reimburse the GIS program for time spent working on this project – 2018 saw a reimbursement of roughly \$23,000. Opportunities exist for other long-term data development projects, which will have an immeasurable positive impact on Town operations.

Example: Time Management

Quick access to digital information allows employees to be more efficient on a daily basis. The creation of an easement database has allowed departments to quickly access information that was previously in paper format only. Engineering & Facilities Management has estimated that having easements in a digital format saves approximately 2-3 hours of research time per week. This equates to roughly 156 hours, or 22 work days per year. Similarly, the Highway department estimates that having easements in a digital format saves approximately 4 hours of research per request, at a conservative estimate of 200 requests per year. This equates to roughly 800 hours, or 114 work days per year.

Example: Public Safety

During emergencies, accurate route and preplan data saves lives and protects property. GIS helps reduce total response time and facilitates decision-making in the field. This time savings directly translates into saving lives and property. Preplanning reduces risk and improves first responders' initial plan of action. Additionally, GIS data collected during events makes the post-event process of recouping funds, for example FEMA reimbursement, more efficient and timely.

Example: Complaint Tracking

In March, 2015 The GIS Coordinator implemented a citizen request portal as a way to receive and manage resident complaints via an internet application. Residents could enter complaints online and departments could respond to and notify complainants accordingly. The following benefits were noted by the end of the year: quick access to digital information, reduction of data redundancy among departments, improved accuracy of existing information, and increased reporting abilities. A first year assessment concluded that, at current request levels, 3,140 work hours, or 448 work days per year, would be saved annually between Engineering & Facilities Management and the Highway Department without an increase in staff. Although this is most likely an overestimate, it is clear that a significant time savings had occurred in the first year of implementation.

Appendix

Appendix 5.1: Applications Detail Matrix

Application	Partner	Type	Data	Custom	Server	Desktop	Description
AutoCAD	DEFM	COTS	X		X	X	Commercial computer-aided design (CAD) and drafting software application
BAS	Building	COTS			X		Property management database system
Catchbasin Data Collector (TBD)	Stormwater Consortium	Custom GIS	X	X	X		Web-based application for mobile collection of storm water infrastructure data
ESRI	Staff	COTS	X		X	X	ArcGIS provides contextual tools for mapping and spatial reasoning so you can explore data and share location-based insights
Everbridge	Emergency Management	COTS	X				Web-based emergency callout system
iMap	Staff	COTS	X	X	X		Interactive intranet-based viewer of selected features This is meant to be the defacto GIS resource for non-GIS users
Lucity	DEFM, Highwa	COTS	X		X	X	LucityAM is a comprehensive suite of integrated COTS software solutions for Public Works that enables agencies to meet their demands for management of assets, customer requests and work orders, preventive maintenance, resources and inventory, best practices and regulatory compliance
New World Systems	Police	COTS	X		X	X	Manages single or multi-jurisdictional dispatching activities for law enforcement, fire and EMS
Official Map Viewer	Staff	COTS	X	X	X		Interactive intranet-based Official Map Viewer of Town maintained properties, roads, drainage infrasturcture, and water features
PAS32	Assessor	COTS	X		X	X	Comprehensive tax assessment system
Pictometry	County	COTS	X		X	X	Provides access to orthogonal and oblique aerial imagery, 3D models, interior mapping solution, and measurement and analytical tools
Planning Board Major Projects Viewer	Planning	COTS	X	X	X		Interactive web-based Planning Board projects viewer. Residents can view project status, associated documents, and aerial imagery
PublicStuff	Data Processing	COTS	X				Web-based mobile Citizen complaint application
Ward Map Viewer	Planning	COTS	X	X	X		Interactive web-based Ward District viewer. Residents can find Ward District information based on address search
Zoning Map Viewer	Staff	COTS	X	X	X		Interactive intranet-based Zoning Map Viewer
							COTS = Commercial off-the-shelf

Appendix 5.2: Data Detail Matrix

The following is a list of the core data holdings that are available for use.

Ownership is indicated by lettering in parentheses:

(C)= Clarkstown

(FED)= Federal

(NYS)= New York State

(R)= Rockland County

Data is itemized generally by data type

DISTRICTS

Assembly Districts (R)
Census Blocks (R)
Census Tracts (R)
Congressional Districts (R)
Election Districts (R)
Highway Deputy (C)
Legislative Districts (R)
Highway Yard Waste (C)
Postal Boundary (NYS)
School (R)
Ward (C)
Zoning (C)

EMERGENCY SERVICES

Ambulance (R)
Fire Houses (R)
Police Stations (R)

ENVIRONMENT

Federal Flood Zones (FED)
Federal Wetlands (FED)
Hydro Network (C)
Hydro Network (R)
Hudson River (R)
Lakes (R)
Soils (C)
Streams (R)
Sub Watersheds (R)
Watersheds (R)
Wetlands (NYS)
Wetlands (FED)

INFRASTRUCTURE

Bus Shelters (R)

Catchbasins (R)
Cell Towers (C)
Crosswalks (C)
Drainage (R)
Fences (R)
Hydrants (R)
Lighting – Hamlet Center (C)
Manholes (R)
MS4 – Catchbasins (C)
MS4 – Outfalls (C)
MS4 – Pipes (C)
Sewer – Manholes (R)
Sewer – Pipes (R)
Sewer – Pump Stations (R)
Sidewalks (C)
Signage (C)
Utility Poles (R)
Vehicle Detention Loops (C)

INSTITUTIONS

County Office Buildings (R)
Historic Cemeteries (C)
Historic Sites (C)
Historic Sites – National Register (FED)
Hospitals (R)
Libraries (R)
Museums (R)
Post Offices (R)
Town Halls (R)
Village Halls (R)

MUNICIPAL

Boundaries, Municipal – Town, Village, County (R)
Boundaries – State (NYS)
Hamlet Centers (C)
Historic Areas (C)
Historic Roads (C)

Mini Trans Routes (A-E) (R)
Rail Lines (R)
Roads (R)
Train Stations (C)
Turnarounds (C)

Appendix 6.1: GIS Capability Maturity Model – Description

GIS MANAGEMENT INSTITUTE®

GIS CAPABILITY MATURITY MODEL

SEPTEMBER 2013

Introduction

The URISA GIS Capability Maturity Model is a key component of the GIS Management Institute®. Its primary purpose is to provide a theoretical model of a capable and mature enterprise GIS operation within a designated organization.

Many entities – primarily government agencies, but increasingly also private business and industry – utilize an enterprise geographic information system (GIS) to enhance the effectiveness of their operations and to provide a financial return on investment. URISA – the Urban and Regional Information Systems Association – has been at the forefront of the development of government and business applications of GIS for almost 50 years. Many new government and business services are only possible because of the use of geospatial technology. Recently, studies have shown that GIS use can also deliver significant return on investment (ROI) for agencies that deploy geospatial technology. Annual ROI rates of 10:1 or more have been documented.

But within the field of GIS management key questions remain. What are the characteristics of a capable enterprise GIS? What are the characteristics of a well-managed enterprise GIS? The URISA GIS Capability Maturity Model is designed to provide a framework for addressing these questions.

Intended uses:

The URISA GIS Capability Maturity Model will serve the GIS community as a stand-alone document to define the framework for an effective enterprise GIS. The Model was developed initially with a focus on local government agencies (cities, counties, regional agencies, and other similar entities) but it is intended for future use by any enterprise GIS. The initial local agency design is because of URISA's primary focus on this community amongst its active membership. As a stand-alone document, the Model will facilitate discussion amongst GIS managers and the decision makers who deploy and fund GIS about the appropriate components of a capable enterprise GIS and the characteristics of a well-managed GIS that maximizes effectiveness and ROI from a given level of investment.

The URISA GIS Capability Maturity Model will be used within the GIS Management Institute (GMI) to provide unifying cohesion to other products and services (refer to attached Diagram A). These will include:

- The GMI will identify individual components of the GIS Capability Maturity Model that require further research or clarification to provide effective guidance to GIS managers. It is anticipated that these individual Model components will be assigned to the GMI Professional Practices Division, URISA Labs program, to develop individual GIS management professional practices standards or GIS management best practices.
- The cumulative body of standards and best practices will form the GMI GIS Management Body of Knowledge (GMBOK). Each individual best practice or standard will clarify the characteristics of a capable or mature GIS, as outlined within the model. It is anticipated that the GMBOK will be comprised of 25-40 individual best practices documents.
- The URISA GIS Capability Maturity Model will also provide the framework for assessing and accrediting local agency enterprise GIS operations. This will be a key service provided to the global GIS community by the GMI Accreditation Division. Enterprise GIS assessments will be facilitated by the detailed descriptions of best practices within the GMBOK.
- Each best practice within the GMBOK (and through them the URISA GIS Capability Maturity Model framework) will also identify the learning objectives for an advanced educational program focused on enterprise GIS management. The GMI Accreditation Division will use this framework and detail for a program to accredit technical, college, and university GIS management educational programs.

URISA GIS Management Institute®

GIS Capability Maturity Model – September 2013

- The URISA GIS Capability Maturity Model was developed and will be maintained in coordination with the URISA Geospatial Management Competency Model (GMCM). The URISA GIS Capability Maturity Model, the GMCM, and the GMBOK provide a framework for the GMI Certification Division to develop the components of a program to certify the competence of professional GIS managers. It is anticipated that these components will be used by the GIS Certification Institute to administer a future GIS Manager certification program.
- The URISA GIS Capability Maturity Model and the GMBOK will also identify learning objectives, educational requirements, and curriculum needs for effective professional GIS managers. The GMI Professional Practices Division will develop a comprehensive framework of GIS management educational requirements, along with recommendations for sources of such content, or where lacking, for development of URISA workshops, seminars, webinars, and other educational content. The Model and the GMBOK will allow the Professional Practices Division to develop a comprehensive URISA educational approach that focuses on meeting the educational needs of GIS managers. These requirements will be handed off to the URISA International Education Division for development of final content and its delivery via workshops, the URISA University, and the URISA GIS Leadership Academy.

Development Process

The original GIS Capability Maturity Model was developed in 2009 by Greg Babinski. It was administered that year on a self-assessment basis to city and county GIS operations within Washington State. The model and the results of the self-assessments were presented at a number of GIS Conferences in Washington, Oregon, and at the URISA Annual Conference in 2010. In 2010 the Model was adopted as a URISA initiative. The first major review of the Model occurred in May 2011, during the 2011 Washington GIS Conference in Lynnwood, Washington. At that event a task force of Washington and Oregon State GIS managers conducted a comprehensive day long review of the Model, along with development of the 'Strawman Draft' of the URISA Geospatial Management Competency Model (GMCM). Development of the GMCM was deemed critical to complete a revision to the Model, because of the connection between professional GIS management practices and the management of an enterprise GIS operation.

In July 2012 URISA announced development of the GIS Management Institute®, with both the GIS Capability Maturity Model and the Geospatial Management Competency Model as key components of this new program. In November 2012 the URISA GMI Committee began a comprehensive review and revision of the GIS Capability Maturity Model which culminated in February 2013. The GMI Committee then approved the following public peer review process:

- Final internal GMI Committee review and comment period of this draft. Publication of the GISCM for public review and comments was approved during the March 26, 2013 meeting of the GMI Committee.
- External public review period on the URISA website between April and June 2013, with extensive outreach to the GIS management community.
- Revised draft based on public review comments circulated for consensus agreement by the GMI Committee during July and August 2013.
- Publication of this final approved version.

Members of the 2011 Washington GIS Managers Taskforce and of the 2012-2013 GMI Review Committee are listed below.

Background

GIS development life cycle:

GIS development typically starts as an idea and progresses towards full maturity. However, the reality of enterprise GIS operations is that development is limited by available funds. Often GIS starts as a capital project with the system designed to create the 'best GIS possible' with the funds at hand. This development scenario leads to frequent compromise and deferral of many aspects of ideal GIS development in order to 'go operational' quickly and start delivering value for the agency's investment. Even if a GIS implementation project is completed successfully, it does not mean that an agency has a mature GIS, or even a cost-effective GIS operation.

GIS professional staff often know that their operation could benefit from enhancement and refinement but funds, staff, or time for further development are very difficult to come by. Enhancements are often developed as part of GIS operations, but rarely on a systematic basis with a desired end state in mind.

What is a 'Capability Maturity Model'?

A 'Capability Maturity Model' is defined as a tool to assess an organization's ability to accomplish a defined task or set of tasks. Typically a numeric rating system is used for a high-level comparison and analysis purposes. The concept of a capability maturity model originated with the Software Engineering Institute (SEI) as a means of assessing the capability of software contractors to complete large software design and development projects successfully. SEI published 'Managing the Software Process' in 1989 and

URISA GIS Management Institute®

GIS Capability Maturity Model – September 2013

continues to refine the software capability maturity model. The Software CMM is 'process focused' in that it is based on how an organization performs the individual processes that are involved in software design and development.

Since the development of the SEI CMM, the capability maturity model concept has been applied in other areas, including:

- System engineering
- Project management
- Risk management
- Information technology services

The typical capability maturity model is based on an assessment of the subject organization's maturity level based on the characteristics of the organization's approach to individual defined processes. These processes are usually defined as:

- Level 1 – Ad hoc (chaotic) processes - typically in reaction to a need to get something done.
- Level 2 – Repeatable processes – typically based on recalling and repeating how the process was done the last time.
- Level 3 – Defined process – the process is written down (documented) and serves to guide consistent performance within the organization.
- Level 4 – Managed process – the documented process is measured when performed and the measurements are compiled for analysis. Changing system conditions are managed by adapting the defined process to meet the conditions.
- Level 5 – Optimized processes – The defined and managed process is improved on an on-going basis by institutionalized process improvement planning and implementation. Optimization may be tied to quantified performance goals.

The GIS Management Institute® chose to adopt the SEI maturity model assessment rating system for the Execution Ability portion of the GIS Capability Maturity Model.

GIS Maturity Assessments

In 2001 Gaudet, Annulis, and Carr published the 'Workforce Development Model for Geospatial Technology.' Although not an organizational maturity or capability assessment, it does provide a systematic approach to defining the core job functions (defined as roles) of a GIS organization and the competencies associated with each of the functions.

In 2007 the States of Georgia and Texas began collaborative development of a State GIS Maturity Assessment. This assessment focuses on a number of typical state GIS program and project related components. These components fall into seven broad categories:

- Geospatial Coordination and Collaboration
- Geospatial Data Development
- GIS Resource Discovery and Access
- Statewide Partnership Programs
- Participation in Pertinent National Partnership Programs and Initiatives
- Geospatial Policies, Standards, Guidelines, and Best Practices
- Training, Education, and Professional Networking Activities

Within these seven categories, state GIS organizations assess their development in 56 specific detailed characteristics based on their current implementation of each characteristic:

- 1.00 pt – Fully Implemented
- 0.75 pt. – In progress with full resources available to complete implementation
- 0.50 pt. – In progress with partial resources available for implementation
- 0.25 pt. – Planned – with resources assigned
- 0.00 pt. – Not planned with no resources assigned

Because the State GIS Maturity Assessment seems focused on the typical coordination function of many state's GIS, it seem unsuitable for municipal, county, and other agency types of GIS with an enterprise operations focus and business end-user responsibilities.

URISA GIS Management Institute®

GIS Capability Maturity Model – September 2013

The GIS Management Institute® chose to adopt a modified form of GIS Maturity Assessment rating system for the Enabling Capability portion of the GIS Capability Maturity Model:

☐ 1.00 Fully implemented

☐ 0.80 In progress with full resources available to achieve the capability

☐ 0.60 In progress but with only partial resources available to achieve the capability

☐ 0.40 Planned and with resources available to achieve the capability

☐ 0.20 Planned but with no resources available to achieve the capability

☐ 0.00 This desired, but is not planned

☐ Not Applicable (This is a non-numeric response that requires an explanation of why this component should not be considered in assessing the operation.)

Why develop an Enterprise GIS Capability Maturity Model?

GIS in an enterprise environment is a highly complex system. Indeed, many of the processes that have had the CMM approach applied to them in the past are themselves interdependent components of an enterprise GIS. Because of this complexity, it seems useful to think about the ideal capability of an enterprise GIS operation in theoretical terms and then analyze and measure individual GIS operations against this theoretical ideal state.

The purpose of this proposed model is to provide a means for any enterprise GIS operation to gauge its maturity against a variety of standards and/or measures, including:

- A theoretical ideal end state of GIS organizational development
- The maturity level of other peer GIS organizations, either individually or in aggregate
- The maturity level of the subject organization over time
- The maturity level of the organization against an agreed target state (perhaps set by organizational policy, budget limitations, etc.)

What is meant by 'maturity' in relation to enterprise GIS operations?

Maturity for the proposed model indicates progression of an organization towards GIS capability that maximizes the potential for the use of state of the art GIS technology, commonly recognized quality data, and organizational best practices appropriate for agency business use. The URISA GIS Capability Maturity Model assumes two broad areas of GIS operational development: enabling capability and execution ability.

To clarify, maturity does not indicate old age. Maturity also does not necessarily mean that an organization excels at every aspect of GIS operations. Just like a mature person may have well developed athletic and math abilities, but intermediate cooking ability, and poor mechanical abilities, a mature GIS operation may excel at some of the characteristics inherent in GIS operations, but be less developed in others. However, this model assumes that there is a developmental ideal for GIS operations that any agency strives to achieve. This is similar to the classic Greek ideal of striving to excel at all of the intellectual, mechanical, and physical aspects of life.

It is recognized that agencies vary by size, business focus, goals, strategy, financial resources, and many other characteristics. While the Model assumes progression towards a theoretical state of capability and maturity, it is recognized that other valid comparisons include against 'best' actual capability and practices and 'average' actual capability and practices.

What are the characteristics of enterprise GIS operations that are used to assess an agency's maturity level?

As indicated above, the GIS Capability Maturity Model is based on an assessment of both enabling capability and execution ability. Briefly, enabling capability can be thought of as the technology, data, resources, and related infrastructure that can be bought, developed, or otherwise acquired to support typical enterprise GIS operations. Enabling capability includes GIS management and professional staff. However the ability (execution capability) of the staff to utilize the enabling technology at its disposal is subject to a separate assessment as part of the model.

URISA GIS Management Institute®

GIS Capability Maturity Model – September 2013

The components of the GIS CMM and the assessment categories

The GIS Capability Maturity Model assumes that mature agencies have more well developed enabling technology and resources, and that their processes and practices maximize the effectiveness of their GIS infrastructure. Enabling capability includes technology components, data, professional GIS staff, an appropriate organizational structure, and other resources and infrastructure. Execution ability is the ability of the staff to maximize the use of the available capability, relative to a normative ideal.

In the following GIS CMM questionnaire, the questions are categorized by enabling capability and execution ability. For each question, the respondent is asked to self-assess their organization, provide comments, and describe documents and other evidence to support the initial self-assessment. Once the GMI accreditation program is fully operational, assessments will be subject to peer-review.

The enabling capability assessment scale is modeled after the State GIS Maturity Assessment. Because GIS enabling capability to some degree is dependent on resource availability, the modified State GIS Maturity Assessment Scale (with its resource-commitment focus) is well suited to indicating capability.

The execution ability assessment scale is modeled after the typical CMM process-based five-level scale. Because the execution ability of a mature GIS organization depends on how well it performs in key process areas, the typical CMM assessment scale (with its focus on process execution sophistication) is well suited to indicating ability.

The GIS CMM Questionnaire and the assessment process

Once agencies complete the questionnaire, they will have a benchmark resource for future self-assessments. Agencies are encouraged to be as objective as possible in their self-assessment. Small GIS operations should recognize that progression toward optimal capability and maturity may be difficult. But in any case an accurate assessment will identify weaknesses and development priority areas.

Agencies that complete a self-assessment are encouraged to submit it to the URISA GIS Management Institute®. Once the questionnaires are compiled and analyzed, the analysis will provide information for each agency to compare itself with. The GIS Management Institute® will publish an annual report on GIS capability and maturity based on the surveys submitted.

Review and Development Committee Membership

2011 Washington GIS Managers Task Force:

- Greg Babinski, GISP, King County (WA) GIS Center, Finance & Marketing Manager
- Steve Beimburn, City of Seattle (WA) GIS Manager
- Don Burdick, GISP, City of Bellingham (WA) GIS Manager
- Amy Esnard, GISP, Multnomah County (OR) GIS Manager
- George Horning, King County (WA) GIS Center Manager
- Tami Griffin, Thurston County (WA) GIS Manager
- Ian Von Essen, Spokane County (WA) GIS Manager

2012-2013 GMI Committee Members:

- | | |
|--|--|
| • Greg Babinski (Chair) | • Dianne Haley, DMH GIS Consulting CEO |
| • Jochen Albrecht, Professor, Hunter College | • Valrie Grant, GeoTechVision Enterprises, GIS Consultant |
| • Mohammed Al Zifin, City of Dubai (UAE) IT Director | • Kevin Mickey, Indiana University, Geospatial Technologies Education Director |
| • Carl Anderson, Spatial Focus, Senior GIS Consultant | • Nancy Obermeyer, Professor, Indiana University |
| • Penny Baldock, Department for Families & Communities (South Australia) GIS Manager | • Hilary Perkins, City of Maryland Heights (MO), Planner |
| • Eric Bohard, Clackamas County (OR) Technology Manager | • Martin Roche, Geo Planning Services, CEO |
| • Keri Brennan, URISA Education Manager | • Cy Smith, State of Oregon GIO |
| • Clare Brown, New Orleans Regional Planning Commission | • Rebecca Somers, GIS Management Consultant |
| • Al Butler, City of Ocoee (FL) CIP Manager | • Dr. Chi Hong Sun, Taiwan GIS Center CEO |
| • David DiBiase, Esri Education Director | • Reed Tomlinson, Map Art Systems, CTO |
| • Peirce Eichelberger, gDBMS, GIS Manager | • Wendy Nelson, URISA Executive Director |

Enabling Capability Components

For each question in the 'Enabling Capability' section, read the brief description. Check the implementation category

- ☐ **1.00 Fully implemented**
☐ **0.80 In progress with full resources available to achieve the capability**
☐ **0.60 In progress but with only partial resources available to achieve the capability**
☐ **0.40 Planned and with resources available to achieve the capability**
☐ **0.20 Planned but with no resources available to achieve the capability**
☐ **0.00 This desired, but is not planned**
☐ **Not Applicable (This is a non-numeric response that requires an explanation of why this component should not be considered in assessing the operation.)**

Comments:

Enabling Capability (EC) Component	Characteristics	URISA GMCM Competency Category	Assessment, Comments, and Documentation
EC1. Framework GIS Data Complete assessment for each data layer: a. Geodetic Control b. Cadastral c. Orthoimagery d. Elevation e. Hydrography f. Administrative Units g. Transportation	Does the agency have access to adequate framework GIS data to meet its business needs? For the GISCMM, framework data corresponds to jurisdiction-wide common base layers as defined by the agency to meet its business needs. For reference, refer to the NSDI framework data layers (see http://www.fgdc.gov/framework/). <i>See also EC2, below)</i>	44. Apply QA/QC best practices 73. Recognize geospatial data as a capital asset 74. Manage the asset lifecycle: a. Establish and maintain an up-to-date asset inventory b. Procure and upgrade assets c. Implement and periodically audit security procedures for assets such as work spaces, equipment, computer networks, data, and software d. Implement computer system back-ups and periodically test reliability of backup procedures e. Implement sound data management procedures	<u>Assessment</u> <input type="checkbox"/> 1.00 Fully implemented <input type="checkbox"/> 0.80 In progress with full resources available to achieve the capability <input type="checkbox"/> 0.60 In progress but with only partial resources available to achieve the capability <input type="checkbox"/> 0.40 Planned and with resources available to achieve the capability <input type="checkbox"/> 0.20 Planned but with no resources available to achieve the capability <input type="checkbox"/> 0.00 This desired, but is not planned <input type="checkbox"/> Not applicable (explanation required) <u>Comments:</u> Does your agency use recognized professional standards for this component? Does your agency use a formal internal standard for this component? <u>Describe Documentation</u>
EC2. Framework GIS Data Maintenance Complete assessment for each data layer: a. Geodetic Control b. Cadastral c. Orthoimagery d. Elevation e. Hydrography f. Administrative Units g. Transportation	Are data stewards defined for each framework GIS data layer and the data is maintained (kept up to date) to meet business needs? <ul style="list-style-type: none"> Refer to EC6 for description of the ideal data environment. There could very likely be multiple stewards The Enterprise GIS responsibility is that there are no gaps in coverage In performing the assessment, every framework component should be covered 	44. Apply QA/QC best practices 73. Recognize geospatial data as a capital asset 74. Manage the asset lifecycle: a. Establish and maintain an up-to-date asset inventory b. Procure and upgrade assets c. GIS Capability Maturity Model – September 2013

Enabling Capability (EC) Component	Characteristics	URISA GMCM Competency Category	Assessment, Comments, and Documentation
EC23. GIS Financial Plan	Does the GIS-organization have a financial plan that includes a funding model (where the money is coming from) and that also projects future episodic costs for equipment, imagery, and other data replacement?	67. Develop and manage a long term financial plan	<p><u>Assessment</u></p> <p><input type="checkbox"/> 1.00 Fully implemented</p> <p><input type="checkbox"/> 0.80 In progress with full resources available to achieve the capability</p> <p><input type="checkbox"/> 0.60 In progress but with only partial resources available to achieve the capability</p> <p><input type="checkbox"/> 0.40 Planned and with resources available to achieve the capability</p> <p><input type="checkbox"/> 0.20 Planned but with no resources available to achieve the capability</p> <p><input type="checkbox"/> 0.00 This desired, but is not planned</p> <p><input type="checkbox"/> Not applicable (explanation required)</p> <p><u>Comments:</u></p> <p>Does your agency use recognized professional standards for this component?</p> <p>Does your agency use a formal internal standard for this component?</p> <p><u>Describe Documentation</u></p>

Execution Ability Components

For each question in the 'Execution Ability' section, read the brief question and description. Check the implementation category that best describes your agency's current status. Feel free to include any clarifying comments or questions.

- ☐ **Level Five: Optimized processes**
☐ **Level Four: Managed and measured processes**
☐ **Level Three: Defined processes**
☐ **Level Two: Repeatable processes**
☐ **Level One: Ad-hoc processes**

Comments:

Execution Ability Component	Characteristics	URISA GMCM Competency Category	Assessment, Comments, and Documentation
EA1. New Client Services Evaluation and Development	<p>How does the GIS operation evaluate new agency business needs for GIS services and develop plans to respond to new client service requests?</p> <ul style="list-style-type: none"> This component should include a timeline/turn-around response focus. Are new services evaluated against the agency strategic plan? Are new services evaluated against ROI criteria...does it make financial sense? Level 5 – optimized process – requires looking at existing services also and evaluating them to provide optimized services. 	<p>46. Monitor stakeholder satisfaction 48. Adopt a customer service orientation 50. Understand and apply the geospatial technology components of projects (as outlined in the Department of Labor's Geospatial Technology Competency Model) to accurately establish scope, resources, schedule and quality requirements for project success 54. Pursue goals tactfully in context of particular organizational cultures and governance structures 59. Prepare Statements of Work (SOW) defining project objectives and requirements 63. Develop service level agreements</p>	<p><u>Assessment</u> <input type="checkbox"/> Level Five: Optimized processes <input type="checkbox"/> Level Four: Managed and measured processes <input type="checkbox"/> Level Three: Defined processes <input type="checkbox"/> Level Two: Repeatable processes <input type="checkbox"/> Level One: Ad-hoc processes <u>Comments:</u> <p>Does your agency use recognized professional best practices for this component?' Does your agency use a formal internal practice or procedure for this component?</p> <p><u>Describe Documentation</u></p> </p>
EA2. User Support, Help Desk, and End-User Training	<p>How does the GIS operation support end users, including user guides, help documentation, training, and ad-hoc help-desk and/or on-site support?</p> <ul style="list-style-type: none"> This component should include a timeline/turn-around response focus <i>This should include a 'train-the-trainer program.</i> 	<p>44. Apply QA/QC best practices 48. Adopt a customer service orientation</p>	<p><u>Assessment</u> <input type="checkbox"/> Level Five: Optimized processes <input type="checkbox"/> Level Four: Managed and measured processes <input type="checkbox"/> Level Three: Defined processes <input type="checkbox"/> Level Two: Repeatable processes <input type="checkbox"/> Level One: Ad-hoc processes <u>Comments:</u> <p>Does your agency use recognized professional best practices for this component?' Does your agency use a formal internal practice or procedure for this component?</p> <p><u>Describe Documentation</u></p> </p>

URISA GIS Management Institute®
GIS Capability Maturity Model – September 2013

Execution Ability Component	Characteristics	URISA GMCM Competency Category	Assessment, Comments, and Documentation
EA3. Service Delivery Tracking and Oversight	How does the GIS unit monitor and evaluate client service delivery?	44. Apply QA/QC best practices	<p><u>Assessment</u></p> <p><input type="checkbox"/> Level Five: Optimized processes <input type="checkbox"/> Level Four: Managed and measured processes <input type="checkbox"/> Level Three: Defined processes <input type="checkbox"/> Level Two: Repeatable processes <input type="checkbox"/> Level One: Ad-hoc processes</p> <p><u>Comments:</u></p> <p>Does your agency use recognized professional best practices for this component?' Does your agency use a formal internal practice or procedure for this component?</p> <p><u>Describe Documentation</u></p>
EA4. Service Quality Assurance	<p>How does the GIS operation ensure the quality of services provided to clients?</p> <ul style="list-style-type: none"> <i>This should also recognize the quality that can be provided may be dependent upon the time available to meet the client's needs</i> 	<p>44. Apply QA/QC best practices</p> <p>48. Adopt a customer service orientation</p>	<p><u>Assessment</u></p> <p><input type="checkbox"/> Level Five: Optimized processes <input type="checkbox"/> Level Four: Managed and measured processes <input type="checkbox"/> Level Three: Defined processes <input type="checkbox"/> Level Two: Repeatable processes <input type="checkbox"/> Level One: Ad-hoc processes</p> <p><u>Comments:</u></p> <p>Does your agency use recognized professional best practices for this component?' Does your agency use a formal internal practice or procedure for this component?</p> <p><u>Describe Documentation</u></p>
EA5. Application Development or Procurement Methodology	<p>How does the GIS operation develop custom GIS applications?</p> <ul style="list-style-type: none"> <i>Do GIS applications align with and support business needs?</i> <i>How does the GIS Operation preform requirements development and development execution strategy, including build vs. buy decision?</i> <i>How does the GIS Operation manage GIS application development when in-house programming is not included within the GIS operation?</i> <i>This should also recognize the quality that can be provided may be dependent upon the time available to meet the client's needs</i> 	<p>44. Apply QA/QC best practices</p> <p>50. Understand and apply the geospatial technology components of projects (as outlined in the Department of Labor's Geospatial Technology Competency Model) to accurately establish scope, resources, schedule and quality requirements for project success</p> <p>59. Prepare Statements of Work (SOW) defining project objectives and requirements</p>	<p><u>Assessment</u></p> <p><input type="checkbox"/> Level Five: Optimized processes <input type="checkbox"/> Level Four: Managed and measured processes <input type="checkbox"/> Level Three: Defined processes <input type="checkbox"/> Level Two: Repeatable processes <input type="checkbox"/> Level One: Ad-hoc processes</p> <p><u>Comments:</u></p> <p>Does your agency use recognized professional best practices for this component?' Does your agency use a formal internal practice or procedure for this component?</p> <p><u>Describe Documentation</u></p>

Execution Ability Component	Characteristics	URISA GMCM Competency Category	Assessment, Comments, and Documentation
EA6. Project Management Methodology	<p>How does the GIS operation manage projects for which it is responsible?</p> <ul style="list-style-type: none"> Projects could be either executed in-house or by an outside contractor. 	<p>8. Establish clear performance expectations • •</p> <p>9. Maintain individual and organizational accountability</p> <p>49. Apply project management knowledge and best practices</p> <p>50. Understand and apply the geospatial technology components of projects (as outlined in the Department of Labor's Geospatial Technology Competency Model) to accurately establish scope, resources, schedule and quality requirements for project success</p> <p>59. Prepare Statements of Work (SOW) defining project objectives and requirements</p>	<p><u>Assessment</u></p> <p><input type="checkbox"/> Level Five: Optimized processes</p> <p><input type="checkbox"/> Level Four: Managed and measured processes</p> <p><input type="checkbox"/> Level Three: Defined processes</p> <p><input type="checkbox"/> Level Two: Repeatable processes</p> <p><input type="checkbox"/> Level One: Ad-hoc processes</p> <p><u>Comments:</u></p> <p>Does your agency use recognized professional best practices for this component?' Does your agency use a formal internal practice or procedure for this component?</p> <p><u>Describe Documentation</u></p>
EA7. Quality Assurance and Quality Control	<p>How does the GIS operation assure a reasonable and appropriate level of quality for projects and for ongoing GIS system operation, to meet defined business needs?</p> <ul style="list-style-type: none"> System operations include database maintenance and spatial data warehouse processes. Data is a key enterprise GIS component for effective QA/QC. Perhaps there are several processes against which this maturity component should be applied. 	<p>44. Apply QA/QC best practices</p>	<p><u>Assessment</u></p> <p><input type="checkbox"/> Level Five: Optimized processes</p> <p><input type="checkbox"/> Level Four: Managed and measured processes</p> <p><input type="checkbox"/> Level Three: Defined processes</p> <p><input type="checkbox"/> Level Two: Repeatable processes</p> <p><input type="checkbox"/> Level One: Ad-hoc processes</p> <p><u>Comments:</u></p> <p>Does your agency use recognized professional best practices for this component?' Does your agency use a formal internal practice or procedure for this component?</p> <p><u>Describe Documentation</u></p>
EA8. GIS System Management	<p>How does the GIS operation manage the core GIS systems that it is responsible for?</p> <ul style="list-style-type: none"> GIS system management includes system administration, database administration, network administration, system security, data backup, security, and restore processes, etc. If these functions are managed within the GIS Operation, there should be defined procedures/best practices. But if the functions are provided outside the GIS operation, these procedures and best practices should form the basis for well-defined service level agreements. 	<p>45. Ensure continuity of geospatial operations</p> <p>71. Understand enterprise geospatial architecture</p> <p>72. Ensure that geospatial technology infrastructure meets organization needs</p> <p>73. Recognize geospatial data as a capital asset</p> <p>74. Manage the asset lifecycle:</p> <ol style="list-style-type: none"> Establish and maintain an up-to-date asset inventory Procure and upgrade assets Implement and periodically audit security procedures for assets such as work spaces, equipment, computer networks, data, and software Implement computer system back-ups and periodically test reliability of backup procedures Implement sound data management procedures 	<p><u>Assessment</u></p> <p><input type="checkbox"/> Level Five: Optimized processes</p> <p><input type="checkbox"/> Level Four: Managed and measured processes</p> <p><input type="checkbox"/> Level Three: Defined processes</p> <p><input type="checkbox"/> Level Two: Repeatable processes</p> <p><input type="checkbox"/> Level One: Ad-hoc processes</p> <p><u>Comments:</u></p> <p>Does your agency use recognized professional best practices for this component?' Does your agency use a formal internal practice or procedure for this component?</p> <p><u>Describe Documentation</u></p>
Execution	Characteristics	URISA GMCM Competency Category	Assessment, Comments, and Documentation

URISA GIS Management Institute®
GIS Capability Maturity Model – September 2013

Ability Component			
EA9. Process Event Management	<p>How does the GIS operation manage GIS system process events?</p> <ul style="list-style-type: none"> • Typical process events include planned hardware and software upgrades, unplanned hardware failure and data loss and restore events. • This should include well defined change management best practices, for both routine/batch processes, and for significant system upgrades/modifications. 	<p>49. Apply project management knowledge and best practices</p>	<p><u>Assessment</u></p> <p><input type="checkbox"/> Level Five: Optimized processes <input type="checkbox"/> Level Four: Managed and measured processes <input type="checkbox"/> Level Three: Defined processes <input type="checkbox"/> Level Two: Repeatable processes <input type="checkbox"/> Level One: Ad-hoc processes</p> <p><u>Comments:</u></p> <p>Does your agency use recognized professional best practices for this component?' Does your agency use a formal internal practice or procedure for this component?</p> <p><u>Describe Documentation</u></p>
EA10. Contract and Supplier Management	<p>How does the GIS operation manage its purchasing and contracting processes to ensure the best value for the supplies and services that it acquires?</p>	<p>58. Prepare, negotiate, monitor, administer, and remediate contracts</p> <p>59. Prepare Statements of Work (SOW) defining project objectives and requirements</p> <p>60. Prepare competitive solicitations including project rationale and objectives, existing geospatial technology assets, desired services, and final deliverables</p> <p>61. Prepare proposals including understanding of need, technical approach and proposed technology, final deliverables, schedule, budget, and relevant qualifications</p> <p>62. Prepare objective selection criteria and scoring mechanism to fairly evaluate proposals</p> <p>63. Develop service level agreements</p>	<p><u>Assessment</u></p> <p><input type="checkbox"/> Level Five: Optimized processes <input type="checkbox"/> Level Four: Managed and measured processes <input type="checkbox"/> Level Three: Defined processes <input type="checkbox"/> Level Two: Repeatable processes <input type="checkbox"/> Level One: Ad-hoc processes</p> <p><u>Comments:</u></p> <p>Does your agency use recognized professional best practices for this component?' Does your agency use a formal internal practice or procedure for this component?</p> <p><u>Describe Documentation</u></p>
EA11. Regional Collaboration	<p>How does the GIS operation manage regional collaboration to ensure that opportunities to share in the development and operation of data, infrastructure, and applications are pursued, and that the agency's GIS is leveraged to benefit other potential local partners?</p>	<p>46. Monitor stakeholder satisfaction</p> <p>51. Identify collaborative opportunities to achieve project goals</p> <p>23. Develop and maintain relationships with other organizations to promote mutually advantageous partnerships and best practices</p>	<p><u>Assessment</u></p> <p><input type="checkbox"/> Level Five: Optimized processes <input type="checkbox"/> Level Four: Managed and measured processes <input type="checkbox"/> Level Three: Defined processes <input type="checkbox"/> Level Two: Repeatable processes <input type="checkbox"/> Level One: Ad-hoc processes</p> <p><u>Comments:</u></p> <p>Does your agency use recognized professional best practices for this component?' Appendix 6.2: GIS Capability Maturity Model—Town of Clarkstown

Metrics

Organization Legal Name	Town of Clarkstown
Version	Current
Organization common name	Town of Clarkstown
Organization type	City
Organization size	>1000K Population
Name of Country/State/Province/Department	New York
Name of superior jurisdiction (Country Name)	United States
Subscriber admin username	Clarkstown
Name of person responsibleforthis survey	William Withington
Job title of person responsible for this survey	GIS Coordinator
Email address of person responsible for this survey	w.withington@clarkstown.org
Name of person validating metrics	Jose Simoes
Job title of person validating metrics	Principal Town Planner
Email of person validating metrics	j.simoes@clarkstown.org
Address line 1	10 Maple Avenue
Address line 2	
City	New City
State/Province	NY
Zipcode/Postal Code	10956
Country	United States
Website url	http://www.town.clarkstown.ny.us/
Population of jurisdiction	87000
Indicate date of census or population estimate	2010
Jurisdiction or Business Service Area	106
Jurisdiction Service Area Units of Measure	square km
Total Number of Property Parcels	28000
Total Number of Street Addresses	30000
Total Number of Utility Customers	0
Route type	Transit
Total route units	km
Total route length	0
Business Use Case: Please provide a concise narrative description of the purpose and mission of the organization that is supported by the GIS operation covered by this survey.	The mission of the Town of Clarkstown Planning Department, GIS program is to support the activities of the Town and its citizens by using geographical data to (1) inform decisions, (2) improve service processes and systems, and (3) expand the use and utility of shared information.
Total Number of Employees Working for the Organization	350
Organization currency	₹ (AMD)
Total Annual Organization Budget	99400000
Year Enterprise GIS Development Began	2008
Total Number of GIS Professional Staff	1
GIS Managers	1
GIS Managers Equivalent	0.30000
GIS Programmers	0
GIS Programmers Equivalent	0.15000
GIS DBA's	0
GIS DBA's Equivalent	0.15000
GIS Analysts	0
GIS AnalystsEquivalent	0.20000
GIS Technicians	0
GIS TechniciansEquivalent	0.20000
Other GIS Staff	0
Other GIS StaffEquivalent	0.00000
Total Number of GIS staff who have any recognized GIS Certification	0
Annual GIS Staff Labor Budget	100000
Annual GIS Hardware Budget	2000
Annual GIS Software Budget	50000
Annual GIS Contractors and Consultants Budget	0

Organization Legal Name	Town of Clarkstown
Annual GIS Data Acquisition Budget (Includes Imagery)	0
Annual GIS Training and Professional Development Budget	1000
Other GIS Budget	0
Total GIS Budget	153000
GIS Organizational structure (Comments)	One person program within Planning Department
Organizational Placement of GIS Management and Main GIS Support Unit (Comments)	Planning Department
Do you participate in regional GIS consortia?	False
GIS Comments	N/A
Imagery resources	NYS Office of Information Technology Services, GIS Program Office
Latest year of acquisition	2016
Describe Imagery Accuracy	4' horizontal accuracy
Describe Imagery Resolution	6" resolution
Last 10 years actual imagery update cycle	3
Next 5 years planned imagery update cycle	2
Describe Vector GIS Data Resources	Vector data is gathered from various State, County, and Local sources. Majority of data is obtained from County or generated internally.
Data acquisition	
Describe Data Accuracy	Accuracy of data is generally very good to excellent.
Describe Data Maintenance Cycle	As needed.
Is Full Metadata Maintained?	False
GIS Data storage capacity (TB)	1.2 TB
GIS Data storage strategy	Increase as needed.
GIS Application Server Strategy	Upgrade as needed.
GIS Operating System	Windows 2008 R2
Primary GIS software solution	ESRI
Secondary GIS software solution	
Database software solution	SQL
Other key software components	
Is your software is under full maintenance?	True
Total Number of Internal GIS Users Supported	32
Number of Desktop GIS Users Supported	12
Number of Mobile GIS Users Supported	0
Number of Web Mapping GIS Users Supported	350
Total annual internal web mapping user sessions	4751
Total annual internal web mapping hits	
Do you conduct internal customer satisfaction surveys?	False
Describe how you validate GIS customer satisfaction	Project based - follow up conversations prior, during, and post project.
Do you provide in-house training to end-users?	True
Describe GIS Training for end-users	Departmental requests for training are scheduled as needed.
If your GIS provide helpdesk support to end-users?	False
Describe end user GIS helpdesk support	Support is on ad-hoc basis, and is prioritized based on need
Do you provide 24x7 GIS system support?	False
If no, what is the supported system availability?	8a-4p, M-F
Actual Annual GIS system availability (%) during business hours	100
Do you provide external (public) web mapping application access?	True
Total annual external (public) GIS Based web mapping User sessions	2100
Total annual external web mapping map hits	
Do you conduct external customer satisfaction surveys?	False
Do you provide public access to GIS data?	False
If yes, are there any restricted data sets?	
If no, describe the policy basis for not providing public access.	Access is granted via non-disclosure agreements.
Do you charge for public access for GIS data?	False
If yes, what do you charge?	
If No, describe how the public accesses your GIS data.	Data is viewable via view only webmap and hardcopy mapping.
Please indicate any other clarifying comments about your organization:	
Please indicate any comments or suggestions about this survey itself, for future improvement:

Business Use Case: Please provide a concise narrative description of the purpose and mission of the organization that is supported by the GIS operation covered by this survey.	The mission of the Town of Clarkstown Planning Department, GIS program is to support the activities of the Town and its citizens by using geographical data to (1) inform decisions, (2) improve service processes and systems, and (3) expand the use and utility of shared information.	OUR MISSION: Provide access to geospatial data and analysis for City staff, partners and the public OUR GOALS: Improve GIS Enterprise System Capability Expand the Impact of Shared Information Support Data Informed Decisions Improve Business Process Enhance Local Government Transparency The Geographic Information System (GIS) Division's primary function is to provide mapping and spatial analysis support to City departments. The City of Salinas GIS is being developed to make information easily accessible in a manner that will assist other City departments make informed decisions on City operational and planning activities. A secondary goal of the Division is to be able to offer GIS services to other public and private entities at a reasonable cost. Some of the many tasks the GIS Division is working on are the development of databases necessary to achieve compliance with National Pollutant Discharge Elimination System (NPDES) requirements, providing support for the General Plan Update, Alisal Vibrancy Plan, Parking, Construction, Urban Greening Plan, Pavement and Sidewalks Management, etc.

Appendix 7.1: Departmental Interview Reports

ASSESSOR

Primary Contact: James Molinaro

Telephone: 639-2131

Interviewees: James Molinaro

Mission Statement:

The Assessor is responsible for producing the most accurate, equitable assessment/tax rolls for the Town in compliance with New York State Real Property Law on an annual basis.

Department Responsibilities:

- Assist customers in developing parcel perimeters list.
- Confirm data based on requests (e.g. garbage districts) from customers and other departments.
- Maintain assessment/tax roll annually
 - Review Exemption applications.
 - Update address information.
 - Update ownership information from property sales.
 - Update parcels based on subdivisions and merges.
 - Update property inventory through field collected data.
 - Work to address grievances through annual process.

GIS Overview:

The Assessor has been using the PAS system by Software Consulting Association (SCA) to maintain tax roll data. The PAS system has the ability to view GIS data consistent with Rockland County and New York State GIS data formats. Presently, the PAS system makes use of some Rockland County GIS data-- primarily parcel boundaries.

The Department anticipates significant benefits by incorporating mobile technology to assist in carrying out departmental responsibilities. Efficiencies can be gained by using a mobile application to collect and update property inventory in the field. This would include the ability to link digital photos taken in the field to property information and reports. Also of importance is the use of GIS tools to assist in improving the integrity of the Assessor databases as well as utilizing analytical tools to compare assessments. Some of this effort may be more associated with creating a coordinated records management program to assemble parcel history into a central repository and the linking to a GIS parcel layer.

The Assessor also sees a need for change detection analysis in order to find discrepancies in the Town's assessment role. This type of project has the potential to not only update the Assessor's inventory database, but to generate increased tax revenue on properties that, for whatever reason, have been modified without the Assessor's knowledge.

Exchange of information with other Town departments is primarily done in digital or paper formats (e.g. building permit and certificate of occupancy, etc.). There is an interest in the sharing of information and improving the efficiency of the Department where possible through the use of technology. Utilizing GIS, producing photos in digital format, and converting current hardcopy files to a digital format are all of interest.

Existing Resources:

- Staff: 8
 - 0 have GIS experience
 - 0 have AutoCAD experience
- Digital Data:
 - Tax Roll
 - Acreage, address, deed, exemptions, frontage/depth, owner, parcel id, special districts
 - Utilizing Rockland County GIS data (e.g. parcels, etc.) within the PAS system
- Software:
 - Microsoft Office
 - PAS system
- GIS &/or CAD Software:
 - iMap application
 - Pictometry
- Internet/Intranet Access: Yes/Yes
- Map Data Frequently Used:
 - Easements (D)
 - Parcels (D)
 - Tax Maps (H/D)
 - Tax Map Index (Old and New) (H)

Notes: H = Hardcopy, D = Digital

- Non-Map Geographically Referenced Data:
 - Deeds – CD
 - Garbage collection confirmation
 - Grievances
 - Monthly Building Department reports – certificate of occupancy, building permits, searches
 - Perimeter mailing lists
 - Photos – Digital
 - Property Cards
 - Subdivision maps

Data Flow Analysis:

- Data Flow Process:

- 5217 Reports: Provides change in ownership, parcel id, address, and limited sales information.
- Addressing: Coordinated with Rockland County 911 office; update paper reports based on new address information.
- Building Permits & Certificate of Occupancy: Information initiated by Building Department; summary reports provided monthly.
- Exemptions (e.g. STAR): Application prepared by property owner; reviewed and entered by staff if approved.
- Grievances: Based on taxpayer; tax payer files with Assessor's office; Assessor provides clerical functions for the Board of Assessment Review; edit assessment data in PAS as needed, based on comments from Board of Assessments Review; complaints recorded on paper, and sometimes later summarized in digital for reporting.
- Issue stickers for trash cans to residents based on valid address; verify eligibility for replacement stickers and changes in number of stickers; all based on valid resident address.
- Property Cards: NY State forms
- Property Inventory: Field collected by staff and update computer file; digital pictures taken and placed in file.
- Property Ownership: CD provided on monthly basis from County Clerk; contains deed information, entered into PAS system.
- Subdivisions & Mergers: Based on subdivision maps provided by the Town Planning Department and filed maps with the County Clerk. Mergers are based on written requests by property owners; coordinated with Rockland County Planning and Sewall Mapping.
- Tax Maps: Provided by Rockland County Planning Department annually in paper format; digital provided more frequently; coordinated with Rockland County and Sewall Mapping.
- Data Flow Interaction with Other Departments:
 - Attorney
 - Board of Assessment Review
 - Building Department
 - County Agencies: Planning, Finance, Clerk, 911
 - DEC
 - Planning
 - Police
 - Receiver of Taxes/Town Clerk
 - State Agencies: ORPS
 - Supervisor

Future:

- Goals (listed in priority order):

- Conduct town-wide change detection analysis utilizing aerial photography and Pictometry software.
- Incorporate mobile data collection, including photographs, into inspection workflow and link to parcel file.
- Obtain software that allows digital sketch of floor plans onto property cards.
- Access to parcel history into one centralized digital location thereby improving accessibility and efficiency. Convert paper records to digital and have ability to organize by parcel and link for searching. Link photographs, plans, and other documents. Include: subdivision name, filing dates, approval dates, dedication dates, easement information, etc.
- Convert microfilm to digital and make searchable by parcel ID.
- Listing of Proposed GIS Queries/Applications:
 - GIS Data Viewing & Mapping
 - General access to GIS data layers
 - Increase use of Pictometry
 - Digital sketch software
 - Mobile Data Collection
 - Field collection of data using mobile devices with wireless upload capability
- GIS Functionality Required:
 - Input
 - Edit
 - Analysis
 - Query
 - Output
- Description of Priority Applications:
 - Access to existing parcel data (e.g. Building Permits, etc.)
 - Convert hardcopy records to digital for more efficient searching and cross-referencing capabilities. This includes existing files (subdivisions, site plans, As Builts)
 - Provide general access to GIS data
 - Provide training for Pictometry and iMap
- Additional Data Required to be Converted to Digital:
 - Applications scanned and linked
 - Data to be joined to existing GIS parcel file
 - Land records need to be scanned and accessible
 - Link photographs to parcels
 - Special districts
- Required GIS Data Layers or Digital Databases:
 - Administrative
 - Fire districts, schools districts, sewer districts, water districts, zip code, zoning districts
 - Basemap

- Municipal boundaries, orthophotography (historical and current), roads
- Environmental
 - Flood zones, hydrography, water bodies
- Land Records
 - Building permits, cadastral, centroids, certificate of occupancy, demolitions, easements, historical records, prior approvals, rights-of-way, subdivisions, tax parcels, variances, violations
- Planimetric
 - Buildings, driveways, parking lots, road pavement, sidewalks
- Transportation & Land Use
 - Generalized land use, parks/open space, street centerlines, street jurisdictions, vacant land

Additional Comments:

- Explore ways to have digital maps archived and accessible

TOWN ATTORNEY

Primary Contact: Lino Sciaretta

Telephone: 639-2065

Interviewees: Lino Sciaretta

Mission Statement:

The mission of the Town Attorney is to provide legal advice to Town officials and departments.

Department Responsibilities:

- Advises the Town Board on legal issues.
- Advises with respect to Special Districts such as: Water District, Sewer District, Sanitation District, and Ambulance District.
- Defends the Town against lawsuits.
- Defends the Town against Tax Certiorari lawsuits.
- Handles Abandonments of Town Roads.
- Handles Amendments to Official Map.
- Liaison to Boards and Commissions of the Town.
- Prepares Amendments to the Town Code.
- Prepares and advises on proposed inter-municipal agreements with various State, County, Town and Villages, and municipal agreement with non-government entities for the benefit of the Town.
- Prepares and advises regarding documents dealing with the sale or acquisition of personal and real property by the Town.
- Prepares and reviews Adopt-a-Road program documents.
- Prepares legal documents and advises with respect to Eminent Domain proceedings.
- Prepares Local Laws.
- Prepares resolutions concerning matters affecting the Town for Town Board meetings.
- Prosecutes violators of the Town Code.
- Reviews all documents and advises Boards, agencies and departments processing proposed documents on subdivision and site plans.
- Reviews and prepares documents dealing with Amendments to the Zoning Local Law.
- Reviews and prepares documents dealing with Special Permits.
- Reviews and prepares documents dealing with Zone Changes.
- Reviews bonding documents.

- Reviews personnel matters and personnel contracts.

GIS Overview:

The Department envisions little benefit from incorporating GIS technology. The only applicable use would be to access tax parcel boundaries and aerial imagery.

Existing Resources:

- Staff: 8
 - 0 have GIS experience
 - 0 have AutoCAD experience
- Digital Data:
 - Various databases
- Software:
 - Business Automation Services (BAS) Integrated Property System (IPS) software system (no GIS integration)
 - Microsoft Office
- GIS &/or CAD Software:
 - iMap application
 - PublicStuff complaint management software
- Internet/Intranet Access: Yes/Yes
- Map Data Frequently Used:
 - As Built Drawings (H)
 - Easements (D)
 - GML Map (D)
 - Official Map (H/D)
 - Parcels (D)
 - Surveys (H)
 - Tax Maps (H/D)
 - Tax Map Index (Old and New) (H)
 - Zoning Map (H/D)

Notes: H = hardcopy, D = digital

- Non-Map Geographically Referenced Data:
 - Building Permit applications
 - Complaint Reports
 - Field Correction Notice
 - Owner Cards
 - Search Report

Data Flow Analysis:

- Data Flow Process:

-
- Data Flow Interaction with Other Departments:
 - Assessor
 - Building Department
 - Comptroller
 - DEC
 - Highway
 - Insurance and Claims
 - Planning
 - Planning Board
 - Police
 - Supervisor
 - Town Board
 - Town Clerk
 - Zoning Board

Future:

- Goals (listed in priority order):
 - Accessibility to current owner information
- Listing of Proposed GIS Queries/Applications:
 - GIS Data Viewing and Mapping
 - iMap application
- GIS Functionality Required:
 - Input
 - Output
- Description of Priority Applications:
 - Provide general access to GIS data with iMap application.
- Additional Data Required to be Converted to Digital:
 - None
- Required GIS Data Layers or Digital Databases:
 - Administrative
 - Census districts, fire districts, GML buffers, schools districts, sewer districts, water districts, zip code, zoning districts
 - Basemap
 - Municipal boundaries, orthophotography (historical and current), roads
 - Environmental
 - Hazardous materials, hydrography, flood zones, water bodies, wetlands
 - Land Records
 - As-Builts, average density, building permits, cadastral, centroids, certificate of occupancy, complaints, demolitions, easements, historical records, prior approvals, rights-of-way, site plans, subdivisions, tax parcels, variances, violations
 - Planimetric

- Buildings, driveways, parking lots, road pavement, sidewalks
- Transportation & Land Use
 - Generalized land use, parks/open space, street centerlines, street jurisdictions, vacant land
- Utilities
 - Catch basins, cell towers, fire hydrants, sanitary sewers, street lights, water lines and mains, utility poles

BUILDING DEPARTMENT

Primary Contact: Erik Asheim

Telephone: 639-2090

Interviewees: Erik Asheim

Mission Statement:

The Building Department oversees the building permit and certificate of occupancy (C.O.) process. Inspectors are responsible for fire code, building code, and zoning code enforcement.

Department Responsibilities:

- Architecture and Historic Review Board
- Enforce Building Code
- Issue Demolition Permits
- Issue violations and summonses
- Perform property searches and develop reports for customers
- Receive, record, and respond to complaints
- Receive, review, and issue building permit applications
- Responsible for the overall code and zoning enforcement of the Town. This entails investigation and complaint resolution as it pertains to the building and zoning code. The focus is on quality of life, appearance, building and zoning matters, safety hazards, and nuisances. Emphasis is on voluntary compliance when possible.

GIS Overview:

Overall, the Building Department expresses great interest in trying to incorporate all existing data into the digital environment. Much of this effort may involve creating a coordinated records database, assembling parcel history into a central repository, and then linking to a GIS parcel layer.

Over the last several years, the Department has migrated from the previous Software Consulting Association (SCA) Building System software to the Business Automation Services (BAS) Integrated Property System (IPS) software system. This SQL-based software product has the ability to display information from Google Maps, but is not capable of displaying Town GIS information. The core parcel information is derived from the Assessor's PAS database program which is licensed from SCA.

Exchange of information with other Town departments is primarily done in a paper or email format. Complaints are logged by, or directed to and from, the Department via complaint tracking software (PublicStuff).

Existing Resources:

- Staff: 18

- 0 have GIS experience
 - 0 have AutoCAD experience
- Digital Data:
 - Building Permit database. Basic GIS viewing tools utilizing Google Maps
 - Cell Tower database
 - Complaint database
 - Photographs
 - Registry of all Business for Code Enforcement. Used to issue Certificate of Compliance.
- Software:
 - Business Automation Services (BAS) Integrated Property System (IPS) software system (no GIS integration)
 - Microsoft Office
- GIS &/or CAD Software:
 - iMap application
 - PublicStuff complaint management software
- Internet/Intranet Access: Yes/Yes
- Map Data Frequently Used:
 - As Built Drawings (H)
 - Condominium maps and unit numbers
 - GML Map (D)
 - Official Map (H/D)
 - Parcels (D)
 - Surveys (H)
 - Tax Maps (H/D)
 - Tax Map Index (Old and New) (H)
 - Zoning Map (H/D)

Notes: H = hardcopy, D = digital

- Non-Map Geographically Referenced Data:
 - Building Permit applications
 - Complaint Reports
 - Field Correction Notice
 - Owner Cards
 - Property Cards (1954, mid-1970s, mid 1980s)
 - Search Report

Data Flow Analysis:

- Data Flow Process (Building):
 - Boards (Town, Planning, etc.) – Folder submitted to Department for review.
 - Building Permits – applications prepared by customer
 - Certificate of Occupancy – Officer sign-off and prepared by clerical staff.

- Complaints – Receiving and responding to resident calls and/or walk-ins, and other department personnel. These departments are usually Highway, DEC, or the Supervisor's office. Deputy Attorney references the Building Department logbook every day for complaints.
- Inspection Card – Inspectors record progress of inspections.
- Search Report – prepared by staff by searching through existing hard copy data (e.g. property cards from 3 separate time periods).
- Data Flow Process (Code Enforcement):
 - Complaints – Receiving and responding to resident calls and/or walk-ins, and other department personnel. These departments are usually Highway, DEC, or the Supervisor's office. Deputy Attorney references the Building Department logbook every day for complaints. Complaints forwarded to Code Enforcer for investigation, enforcement actions if necessary, and/or resolution. Complaints prioritized. Interaction with other departments for status and resolution. Memos, faxes, emails, and letters generated. Follow-up with appropriate department(s) and then resident. Field data collected and update computer file. Digital photos taken and placed in file.
- Data Flow Interaction with Other Departments:
 - Assessor
 - Attorney
 - County Agencies: Health, Highway, Drainage, Attorney
 - DEC
 - Highway
 - Planning
 - Planning Board
 - Police
 - State Agencies: DEC
 - Supervisor
 - Town Clerk
 - Zoning Board

Future:

- Goals (listed in priority order):
 - Consolidate parcel history into digital database to make it more efficient for property searches. Convert paper records to digital and have ability to organize by parcel and link for searching. Link digital photos and other documents including Site/Subdivision/As-Built plans. Include subdivision name, filing dates, approval dates, dedications dates, easement information, etc.
- Listing of Proposed GIS Queries/Applications:
 - 3-D Analysis – Ability to view Site Plans in 3-D for accessibility and site distance concerns with emergency vehicles, and the viewing of elevation and slope information

- Ability to view status of parcels (e.g. Building Permit, violations, etc.) via web-based mapping application
- Parcel History – (e.g. prior approvals, inspections, violations, variances, etc.)
- GIS Functionality Required:
 - Input
 - Edit
 - Analysis
 - Query
 - Output
- Description of Priority Applications:
 - Convert hardcopy records to digital for more efficient searching and cross-referencing capabilities
- Additional Data Required to be Converted to Digital:
 - Land records to be scanned and accessible via parcel number
 - Land Use data to be joined to parcels
- Required GIS Data Layers or Digital Databases:
 - Administrative
 - Census districts, fire districts, GML buffers, sewer districts, school districts, water districts, zip code, zoning districts
 - Basemap
 - Municipal boundaries, orthophotography (historical and current)
 - Emergency
 - Fire incidents, hazardous materials, truss locations
 - Environmental
 - Flood zones, hydrography, soils, water bodies, wetlands
 - Land Records
 - As-Built, average density, building permits, cadastral, centroids, certificate of occupancy, complaints, demolitions, easements, historical records, prior approvals, rights-of-way, site plans, subdivisions, tax parcels, variances, violations
 - Planimetric
 - Buildings, driveways, parking lots, road pavement, sidewalks
 - Topography
 - Contours
 - Transportation & Land Use
 - Condos, dry cleaners, generalized land use, parks/open space, restaurants, senior citizen facilities/nursing homes, service stations/garages, street centerlines, street jurisdictions, taverns/bars, vacant land
 - Utilities
 - Catch basins, cell towers, fire hydrants, sanitary sewers, street lights, utility poles, water lines and mains

- Additional Comments:
 - Work product is confidential in the event of enforcement action and is therefore not subject to FOIL.

DEPARTMENT OF ENGINEERING & FACILITIES MANAGEMENT

Primary Contact: Dennis Letson

Telephone: 639-2111

Interviewees:

Dennis Letson, Director

Christopher Wagner, First Deputy Director – Engineering

Mission Statement:

The Department of Engineering & Facilities Management is responsible for the protection of the inhabitants against such activities that would impair, damage, destroy, or infringe upon the natural resources and environment.

Department Responsibilities:

- Municipal engineering functions
 - Design, repair, and replacement of municipal infrastructure
 - Floodplain Administration
 - Erosion/sediment control
 - Infrastructure inventory, inspections, and improvements
 - Land disturbance
 - SEQRA Technical Staff
 - Technical reviews for subdivisions and site plans prior to development
- Solid waste management
 - Garbage/bulk pickup
 - Maintenance/monitoring of Landfill
 - Recycling
- Sanitary sewer maintenance

GIS Overview:

The Department of Engineering & Facilities Management has more staff members with digital mapping experience than any other department. Many have experience in AutoCAD, and numerous staff have GIS classroom and/or practical experience.

The Department is very enthusiastic about continuing to leverage existing GIS efficiencies by streamlining workflows and increasing data acquisition. Some of this effort may involve creating a coordinated records database, assembling parcel history into a central repository, and then linking to a GIS parcel layer.

The Department spends a great deal of time receiving and recording complaints. These are generally associated with solid waste and environmental issues. Complaints are recorded using a complaint management system (PublicStuff). This software unfortunately was not integrated with the previous complaint management system (Lucity). While PublicStuff is useful for the

complainant, it is functionally lacking for Town staff in regards to historical information retrieval, reporting, budgeting, inventory tracking, etc. As a former user of Lucity software, DEC is enthusiastic to link the two systems and once again benefit from a more robust data management system.

Existing Resources:

- Staff:
 - DEC – 10
 - Sewer Department – 4
 - Solid Waste – 2
 - 6 have GIS experience
 - 5 have CAD experience
- Digital Data:
 - Sewer maps (raster scans in PDF format)
 - Several summary complaint reports
 - Subdivisions scans
 - Utilizing Rockland County GIS data (e.g. parcels, hydrology, planimetrics, topography, orthoimagery, etc.)
- Software:
 - Microsoft Office
- GIS &/or CAD Software:
 - AutoCAD Civil 3D, HydroCAD, Land FX
 - ESRI software
 - iMap application
 - Lucity infrastructure and complaint management software
 - Public Stuff complaint management software
- Internet/Intranet Access: Yes/Yes
- Map Data Frequently Used:
 - As Built Drawings (H)
 - Catch Basins (D)
 - Comprehensive Sewer District Maps (H/D)
 - Easements (D)
 - Floodplains (D)
 - Garbage Pick-up/Recycling/Bulk Pickup/Yard Waste Districts (H)
 - Hydrant Map (H/D)
 - Official Map (H/D)
 - Parcels (D)
 - Soils (D)
 - Stream Maps (D)
 - Subdivision/Site plan development maps (H)
 - Tax Maps (H/D)
 - Tax Map Index (Old and New) (H)
 - Water District Map (H/D)

- Wetlands (D)
- Zoning Map (H/D)

Notes: H = hardcopy, D = digital

- Non-Map Geographically Referenced Data:
 - Application for clearing, filling, or excavation of land
 - Building permit/certificate of occupancy log-in sheet
 - Building permit checklist
 - Building permit tracking/status report
 - Building sewer permit application
 - Bulk collection of non-compliance report
 - Certificate of occupancy checklist
 - Certificate of occupancy summary sheet
 - Complaint referrals – from other departments
 - Complaint reports
 - Floodplain development permit application
 - Land disturbance permits
 - Leaf bag distribution list
 - Planning Board referrals – subdivision and site plans
 - Pool building Permit tracking/status report
 - Pump stations and districts
 - Recycling box distribution list
 - Residential pool permit application
 - Return of Escrow tracking/status report
 - Subdivision files
 - Subdivision tracking/status report (building permit process, escrow, fees)
 - Tree removal permits
 - Town Board referrals – technical reviews
 - ZBA – referrals and applications

Data Flow Analysis:

- Data Flow Process:
 - As a result of municipal engineering functions, inspections are made and reports generated. Development inspections for Planning Board approved subdivisions and site plans.
 - Boards (Town, Planning, etc.) – folder submitted to Department for review.
 - Building Permits and Certificate of Occupancy – Information initiated by Building Department. Referrals sent to Department and must be inventoried, recorded, processed, and returned. Checklists are prepared and tracking/status reports are generated.
 - Complaints – prepared by staff and entered via complaint management software. Most complaints are generated from phone calls. Complaints vary but are generally related to garbage, recycling, and bulk pickup; drainage; or sewer

related. Complaints related to garbage, recycling, and bulk pickup are faxed to carter for response. Interaction with Assessor's office for verification of stickers.

- SEQRA applications prepared.
- Subdivisions and site plans supplied in hardcopy format. These must be reviewed with comments supplied to other departments and Boards. Original source material is later filed.
- Data Flow Interaction with Other Departments:
 - Assessor
 - Attorney
 - Building Department
 - Comptroller
 - County Agencies: Drainage, Health, Planning, etc.
 - Federal and State Agencies: NYSDEC, ACOE, etc.
 - Highway
 - Planning
 - Planning Board
 - Police
 - Supervisor
 - Town Board

Future:

- Goals (listed in priority order):
 - Integrate PublicStuff and Lucity software (complaint tracking)
 - Ongoing stormwater conveyance mapping
 - Digital data submissions code revision
 - Coordinate violation tracking with other departments
 - Access to Assessor owner data
 - Create digital recycling and garbage districts
 - Convert sewer to house connection permits to digital format
 - Map all pump stations and collection network
 - Centralize parcel history into one digital location thereby improving accessibility and efficiency. Convert paper records to digital and have ability to organize by parcel and link for searching. Link photographs and other documents, plans, etc. Include subdivision name, filing dates, approval dates, dedication dates, easement information, etc.
- Listing of Proposed GIS Queries/Applications:
 - 3-D Analysis – Ability to view elevation data in 3-D for various applications, including: present and proposed views (e.g. stream channels, drainage system, sewer system) and site plans
 - Cadastral Records
 - Parcel History – (e.g. prior approvals, inspections, violations, variances, etc.)

- Ability to view status of parcels (e.g. Building Permit, violations, etc.) by linking parcel status to GIS parcel data
 - GIS Data Viewing and Mapping
 - View administrative districts: Sewer, garbage, recycling, and bulk pick-up
- GIS Functionality Required:
 - Input
 - Edit
 - Analysis
 - Query
 - Output
- Description of Priority Applications:
 - Access to existing parcel data (e.g. Building Permits, etc.)
 - Convert hardcopy records to digital for more efficient searching and cross-referencing capabilities. This includes existing files (subdivisions, site plans, As-Builts, etc.)
 - Integrate Lucity and PublicStuff
- Additional Data Required to be Converted to Digital:
 - Data to be joined to existing GIS parcel file
 - Develop sub-basin watershed layer
 - Drainage system mapping
 - Land records need to be scanned and accessible
 - Link photographs to parcels
 - Map pump stations and collection network
 - Sewer system mapping
 - Update and maintain outfalls mapping and inspections
- Required GIS Data Layers or Digital Databases:
 - Administrative
 - Fire districts, GML buffers, Official Map, school districts, sewer districts, water districts, zip code, zoning districts
 - Basemap
 - Municipal boundaries, orthophotography (historical and current)
 - Emergency
 - Hazardous materials
 - Environmental
 - Flood zones, hydrography, impervious surface data, soils, water bodies, watersheds, wetlands
 - Land Records
 - As-Builts, average density, building permits, cadastral, centroids, certificate of occupancy, complaints, demolitions, easements, historical records, land use, prior approvals, rights-of-way, site plans, subdivisions, tax parcels, variances, violations
 - Planimetric
 - Buildings, driveways, parking lots, road pavement, sidewalks

- Topography
 - Contours
- Transportation & Land Use
 - Dry cleaners, generalized land use, parks/open space, service stations/garages, street centerlines, street jurisdictions, vacant land
- Utilities
 - Collection network, drainage network, fire hydrants, manholes, outfalls, pump stations, sanitary sewer network, utility poles, water mains

HIGHWAY DEPARTMENT

Primary Contact: Frank DiZenzo

Telephone: 639-5799

Interviewees:

Frank DiZenzo, Superintendent of Highways

Kim Termine, Confidential Assistant to the Superintendent of Highways

Mission Statement:

The Highway Department is primarily responsible for the transportation needs of the public by providing a safe and well-maintained street network. Also, within the last year the Department took over the responsibilities of the former Consolidated Lighting Department, and is now responsible for overseeing the street lighting and traffic signalization within the Town.

Department Responsibilities:

- Adopt-A-Road program
- Adopt-A-Spot program
- Coordinate the design and location of new street lighting with Orange and Rockland
- Coordinate the design and location of new traffic signalization with the contracted engineer and/or other Town departments
- Coordinate the maintenance of existing overhead street lighting
- Coordinate the maintenance of existing traffic signalization with the contracted engineer
- Drainage maintenance and installation including catch basins and piped easements
- Guide rail installation and maintenance
- Permits for block parties
- Permits for driveways
- Permits for road openings and closings
- Pothole repair
- Road resurfacing
- Seasonal leaf and brush pickup
- Sign installation and maintenance
- Snow and ice control
- Street sweeping
- Tree removal and trimming

GIS Overview:

The Department spends a great deal of time receiving and recording complaints. These are generally associated with solid waste and environmental issues. Complaints are recorded using a complaint management system (PublicStuff). This software unfortunately was not integrated with the previous complaint management system (Lucity). While PublicStuff is useful for the

complainant, it is functionally lacking for Town staff in regards to historical information retrieval, reporting, budgeting, inventory tracking, etc. As a former user of Lucity software, DEC is enthusiastic to link the two systems and once again benefit from a more robust data management system.

The Highway Department is very enthusiastic about using GIS software and data to increase efficiency in daily workflows. There is great interest in viewing logged complaints in a web-based map. There is also interest in expanding the use of Lucity software to include budgeting and reporting.

Additionally, the Department would like to incorporate asset management software into its workflow to assist in the management of lighting and traffic signalization assets.

Existing Resources:

- Staff: 71
 - 0 have GIS experience
 - 1 has AutoCAD experience
- Digital Data:
 - Complaint/work order reporting
 - County GIS data (e.g. parcels, roads, orthoimagery, etc.)
 - Town data (easements, Official Map, etc.)
- Software:
 - Microsoft Office
- GIS &/or CAD Software:
 - iMap application
 - Lucity infrastructure and complaint management software
 - Public Stuff complaint management software
 - Truck Tracking vehicle tracking software
- Internet/Intranet Access: Yes/Yes
- Map Data Frequently Used:
 - As Built Drawings (H)
 - Bus shelter (D)
 - Catch Basins (D)
 - Commuter lots (D)
 - Comprehensive Sewer District Maps (H/D)
 - Drainage Study (1974) (H/D)
 - Easements (D)
 - Floodplains (D)
 - Garbage Pick-up/Recycling/Bulk Pickup/Yard Waste Districts (H)
 - Hydrant Map (H/D)
 - Official Map (H/D)
 - Orange and Rockland Service maps (1992) (D)
 - Parcels (D)

- Plow Routes (H/D)
- Soils (D)
- Stream Maps (D)
- Subdivision/Site plan development maps (H)
- Tax Maps (H/D)
- Water District Map (H/D)
- Wetlands (D)

Notes: H = hardcopy, D = digital

- Non-Map Geographically Referenced Data:
 - Adopt-A-Road database
 - Adopt-A-Spot database
 - Applications for clearing, filling, or excavation of land
 - Complaint reports
 - Complaints referrals – from other departments
 - Dig Safe NY – email notification of underground digging inquiries
 - Floodplain development permit applications
 - Planning Board referrals – subdivisions and site plans
 - Stop and Street Sign Installation Tracking database
 - Street light and traffic signal complaints
 - Street Name file
 - Subdivision files
 - Trash Can Locations database
 - Town Board referrals – technical reviews

Data Flow Analysis:

- Data Flow Process:
 - Accident Data – Reports forwarded from Insurance and Claims Department. If involving a guardrail, monies are owed for repair. Improved accident data would lead to improvement in collection of funds for repair. Insurance and Claims Department is notified.
 - Adopt-A-Road and Adopt-A-Spot Programs
 - Building Permits and Certificate of Occupancy – Information initiated by the Building Department. Referrals sent to Department in hardcopy format and must be inventoried, recorded, processed, and returned. Checklists are prepared and tracking/status reports are generated.
 - Complaints/Work Order System – Prepared by staff as complaints are filed with the Department. Most complaints are generated from phone calls, emails, or via a citizen engagement mobile application. Complaints are entered into complaint management software (PublicStuff). If a complaint is deemed valid, it is entered into PublicStuff as a work order. Complaints vary but are generally yard waste pickup, pot holes, and signage. Complaints not related to Highway matters are flagged as such and forwarded to the appropriate department within the

software. Although PublicStuff is user friendly for users in general, it is not a robust management/reporting software. As such, it is advised that it be integrated with Lucy in order to allow management the ability to generate reports and to track inventory and other resources.

- Dig Safe NY – The Department subscribes to a service that provides information on addresses where inquiries are made about the potential for digging. The Highway Department subscribes because they must make inquiries themselves prior to any digging to place a sign within a right-of-way. Information is forwarded to DEC.
- Receive complaints from residents about street lighting
 - From resident via phone, email, complaint application
 - From Police Department
 - Receive reports from Vendor about maintenance activities
 - Tax Maps provided by Assessor annually in paper format
 - New Lighting
 - Insurance and Claims Department requests bids for work
 - DEC inspects and recommends action
 - Highway performs work or contracts work
- Receive complaints from residents about traffic signals
 - From resident via phone, email, complaint application
 - From Police Department
- Road Opening Permit Application
- Street Naming – Town Clerk provides resolution for adopted streets.
- Truck Tracking – A GPS-based tracking system allowing truck locations to be viewed in the office. The system incorporates GIS street centerline data as a base layer. The system provides reports on trucks.
- Data Flow Interaction with Other Departments:
 - Attorney
 - Building Department
 - Comptroller
 - County Agencies: Drainage, Health, Planning, etc.
 - DEC
 - Federal and State Agencies: NYSDEC, ACOE, etc.
 - Insurance and Claims
 - Orange and Rockland
 - Planning
 - Planning Board
 - Police
 - Town Board
 - Town Clerk
 - Supervisor

Future:

- Goals (listed in priority order):
 - Create digital layer for street lighting and traffic signals
 - Integrate street lighting and traffic signal inventory information with Lucy
 - Integrate Lucy and PublicStuff
 - Develop additional GIS data (e.g. trash can locations, bus shelters, street signs, yard waste/deputy districts, etc.)
 - Develop R.O.W. data layer that references street width from Rockland County Tax Map
 - Improve Permit system by allowing permit history to be recorded
 - Access to complete subdivision and/or site plan applications
 - Explore ways of collecting data in field using GPS technology (e.g. pot holes, paving, signage, etc.)
 - Keep street and address information up-to-date in Lucy
 - Develop web application for Complaints
 - Link easements to site plans
- Listing of Proposed GIS Queries/Applications:
 - Explore opportunities for inclusion of lighting and traffic signal information into Lucy
 - Explore opportunities for reporting and budgeting in Lucy
 - GIS Data and Mapping
 - Complaint database mapping – location, history, type, etc.
 - Work Order Database integration – create function that moves PublicStuff database information into Lucy
- GIS Functionality Required:
 - Input
 - Edit
 - Analysis
 - Query
 - Output
- Description of Priority Applications:
 - Convert hardcopy records to digital for more efficient searching and cross-referencing capabilities. This includes existing files (subdivisions, site plans, As-Builts, etc.)
 - Create street lighting and traffic signal databases for inclusion into Lucy
 - Integrate Lucy and PublicStuff
- Additional Data Required to be Converted to Digital:
 - Bus shelters
 - Guard rails
 - Outfalls
 - Street lights
 - Street signs
 - Traffic signals
 - Trash can locations

- Yard Waste Pickup areas
- Required GIS Data Layers or Digital Databases:
 - Administrative
 - Fire districts, GML buffers, Official Map, schools districts, sewer districts, water districts, zip code, zoning districts
 - Basemap
 - Municipal boundaries, orthophotography (historical and current)
 - Emergency
 - Hazardous materials
 - Environmental
 - Flood zones, hydrography, impervious surface data, soils, water bodies, watersheds, wetlands
 - Land Records
 - As-Built, building permits, cadastral, centroids, certificate of occupancy, complaints, easements, rights-of-way, site plans, subdivisions, tax parcels, violations
 - Planimetric

 - Topography
 - Contours
 - Transportation & Land Use
 - Generalized land use, parks/open space, senior citizen facilities/nursing homes, street centerlines, street jurisdictions, vacant land
 - Utilities
 - Collection network, drainage network, fire hydrants, manholes, outfalls, pump stations, sanitary sewer network, utility poles, water lines and mains

OFFICE OF INSURANCE & CLAIMS

Primary Contact: Robert Berdy

Telephone: 639-2048

Interviewees: Robert Berdy

Mission Statement:

The mission of the Office of Insurance and Claims is to manage municipal risk, including loss control and loss transfer.

Department Responsibilities:

Coordinate insurance coverage, review contractors and permit applicant insurance, and assist in the defense of claims filed against the Town.

GIS Overview:

The Department currently benefits from incorporating GIS information into daily workflow. Information is primarily accessed from other departments in hardcopy format as well as in digital format in the form of a Town web-based mapping application (iMap)

Existing Resources:

- Staff: 1
 - 0 have GIS experience
 - 0 have AutoCAD experience
- Digital Data:
 - Photographs
- Software:
 - Microsoft Office
 - iMap
- GIS &/or CAD Software:
 - None
- Internet/Intranet Access: Yes/Yes
- Map Data Frequently Used:
 - County Highway Map (H)
 - Official Map (D)
 - Tax Maps (H)

Notes: H = hardcopy, D = digital

- Non-Map Geographically Referenced Data:
 - Complaints
 - Internal Investigations and/or Claims

Data Flow Analysis:

- Data Flow Process:
 - Complaints: Receiving and responding to resident calls and/or walk-ins, and other department personnel. Interactions with other departments for status and resolution. Field data collected and updated computer file. Digital pictures taken and placed in file.
 - Intersections Claims: Traffic accidents and/or pedestrian incidents
 - Personal Injury Claims
 - Property Claims: Notified of possible damage to property (e.g. fallen tree, sewer backup, etc.)
 - Property Inventories: Develop and/or obtain a list of insurable Town properties with assets
- Data Flow Interaction with Other Departments:
 - Attorney
 - Building
 - Code Enforcer
 - DEC
 - Highway
 - Planning
 - Police
 - Recreation and Parks
 - Safety
 - Supervisor
 - Town Clerk

Future:

- Goals (listed in priority order):
 - Maintain efficiencies by continuing to incorporate digital mapping into office functions.
- Listing of Proposed GIS Queries/Applications:
 - GIS Data Viewing and Mapping
 - General access to GIS data layers (iMap)
- GIS Functionality Required:
 - Input
 - Query
 - Output
- Description of Priority Applications:
 - Creation and access to central repository of photos
 - Provide general access to GIS data
- Additional Data Required to be Converted to Digital:
 - Crosswalks
 - Easements
 - Guard rails
 - Link photographs to parcels

- Retaining walls
- Street lights
- Traffic signals and traffic signs
- Trails
- Required GIS Data Layers or Digital Databases:
 - Administrative
 - Fire districts, schools districts, sewer districts, water districts, zip code, zoning districts
 - Basemap
 - Municipal boundaries, orthophotography (historical and current), roads
 - Emergency
 - Hazardous material sites
 - Environmental
 - Flood zones, hydrography, water bodies, wetlands
 - Land Records
 - Building permits, cadastral, centroids, complaints, easements, pools, rights-of-way, tax parcels
 - Planimetric
 - Buildings, catch basins, driveways, manholes, parking lots, road pavement, sidewalks
 - Transportation & Land Use
 - Crosswalks, driveway permits, generalized land use, guard rails, parks/open space, street centerlines, street jurisdictions, traffic signals, traffic signs, vacant land

Additional Comments:

- Work product is confidential, thereby, not subject to FOIL.

POLICE – 911 COMMUNICATIONS GROUP

Primary Contact: Richard Cummings

Telephone: 639-5872

Interviewees: Richard Cummings

Mission Statement:

The primary responsibility of the Communications Group is to maintain and make accessible all data related to Public Safety.

Department Responsibilities:

Dispatchers are responsible for fielding calls for service and directing all emergency and non-emergency police services in the Town. In addition to police related services, Dispatchers directly dispatch all medical emergency response of the Town's Volunteer Ambulance Corps and Paramedic Services. The Communications Center is in direct contact with Federal, State, County and Local Emergency Service Agencies to direct and coordinate response to any public safety contingency within the Town of Clarkstown as well as mutual aid service to other jurisdictions; this includes Fire Services, Highway Departments, Utility Companies, Building Inspectors and a myriad of support services both public and private.

All Emergency 911 and non-emergency calls for service from landline phones of residences and businesses in the Town of Clarkstown are answered directly by Clarkstown Police Dispatchers. Currently all cellular 911 calls are transferred through the Rockland County Communications Center to the Clarkstown Communications Center for direct dispatch of emergency services.

Clarkstown Police Dispatchers are EMD certified and provide pre-arrival telephone medical instructions based on Emergency Medical Dispatch protocols. Dispatchers give callers the instruction needed to perform medical assistance such as childbirths, cardiac incidents, severe lacerations, etc.

GIS Overview:

The Communications Group is heavily reliant on GIS for their Computer Aided Dispatch (CAD) operations. Their system is mature and stable and functioning properly. Thus, there is not an immediate need to change of platforms or procedures and there is no need for additional GIS services at this time. Databases are typically updated on an annually, but are updated on an as needed basis if necessary.

Existing Resources:

- Staff: 28
 - 1 has GIS experience
 - 0 have AutoCAD experience
- Digital Data:

- NewWorld Records
- Software:
 - Microsoft Office
- GIS &/or CAD Software:
 - ESRI desktop software
 - ESRI GIS Server
 - NewWorld Computer Aided Dispatch e911 software
- Internet/Intranet Access: Yes/Yes
- Map Data Frequently Used:
 - Address Points (D)
 - Ambulance Districts (D)
 - Bus Shelters (D)
 - Cell Towers (D)
 - Common Names (D)
 - EMS Districts (D)
 - Exit Ramps (D)
 - Fire Districts (D)
 - Mile Markers (D)
 - Municipal Boundaries (D)
 - Mutual Aid Districts (D)
 - Orthoimagery (D)
 - Paramedic Areas (D)
 - Parks – County (D)
 - Parks – State (D)
 - Parks - Town (D)
 - Planimetric – Buildings (D)
 - Planimetric - Driveways (D)
 - Police Areas (D)
 - Tax Parcels (D)
 - Tow Zones (D)
 - Rail (D)
 - Rail Overpasses (D)
 - Roads – Bergen County (D)
 - Roads – Rockland County (D)
 - Roads – Westchester County (D)
 - Traffic Control Points (D)
 - Water – Hudson River (D)
 - Water – Lakes (D)
 - Water - Streams (D)

Notes: H = hardcopy, D = digital

- Non-Map Geographically Referenced Data:
 - Car Titles

- Criminal History
- Drivers
- National Crime Information Center (NCIC) – Federal/State
- NewWorld Records
- Pistol Permits
- Stolen Property information
- Vehicle Registration
- Warrants

Data Flow Analysis:

- Data Flow Process:
 - Typically, calls to the Communications Group are reviewed and pre-arrival instructions and alerts are input into the system. Addresses are also verified during this process. As calls are received they are prioritized and information is relayed to the appropriate Police, EMS, or Fire unit. Reports are then written and submitted to a supervisor. Once approved, the reports are sent to a Records Management Officer and the information is merged into the system.
- Data Flow Interaction with Other Departments:
 - American Red Cross
 - Assessor
 - Better Business Bureau
 - Building Department
 - Data Processing
 - DEC
 - Department of Homeland Security
 - Federal Aviation Administration
 - Federal Bureau of Investigation
 - Federal Communications Commission
 - Highway Department

 - Rockland County Planning Department, GIS Division

- Town Clerk
- Town of Haverstraw Police
- Town of Orangetown Police
- Town of Ramapo Police
- Town of Stony Point Police
- United States Marshals Service
- United States Postal Service

Future:

- Goals (listed in priority order):
 - The main goal for Dispatch is to upgrade the Computer Aided Dispatch. The anticipated date for this is unknown.
- Listing of Proposed GIS Queries/Applications:
 - It may be beneficial for digital records already in the CAD records system containing important Officer and Dispatch information to be georeferenced and incorporated into existing mapping applications (CAD, in-patrol car digital mapping, etc.)
- GIS Functionality Required:
 - Input
 - Edit
 - Analysis
 - Query
 - Output
- Description of Priority Applications:
 - Upgrade Computer Aided Dispatch (TBD).
- Additional Data Required to be Converted to Digital:
 - None at this time
- Required GIS Data Layers or Digital Databases:
 - Administrative
 - Ambulance districts, EMS districts, fire districts, Mutual Aid districts, paramedic areas, police areas, school districts
 - Basemap
 - Municipal boundaries, orthophotography (historical and current)
 - Emergency
 - Bridges, dams, flood inundation zones, hazardous materials, mile markers, radio towers, rail crossings, utility substations
 - Environmental
 - Hydrography, water bodies
 - Land Records
 - Address points, cadastral, rights-of-way, tax parcels
 - Planimetric
 - Buildings, driveways, parking lots, road pavement, sidewalks
 - Topography

- Contours
- Transportation & Land Use
 - Bus shelters, parks/open space, rail features, street centerlines, street jurisdictions,
- Utilities
 - Cell towers, fire hydrants, water mains

POLICE – EMERGENCY MANAGEMENT

Primary Contact: James McCormick

Telephone: 639-5878

Interviewees: James McCormick

Mission Statement:

The mission of the Clarkstown Police Department is to work in partnership with the Clarkstown community in order to provide the most professional and ethical police service, protect life and property, bring to justice those who violate the law, reduce fear of crime, and promote the quality of life so that the Town of Clarkstown continues to be one of the safest and most desirable places in the Country to live, raise a family, and conduct business.

Department Responsibilities:

GIS Overview:

The Emergency Management Coordinator (EMC) is extremely interested in furthering his use of GIS technologies, both through data development and through application development. The EMC has long been a consumer of GIS technologies, albeit through third party vendors or through Rockland County GIS (RCGIS). Currently, the EMC is focused on using GIS to consolidate several workflows to increase infrastructure management efficiencies while in the field. To this end, he would like to utilize existing data and applications, while exploring the possibility of developing new data and utilizing new application technologies.

Existing Resources:

- Staff: 12
 - 1 has GIS experience
 - 0 have AutoCAD experience
- Digital Data:
 - NewWorld Records
- Software:
 - Microsoft Office
- GIS &/or CAD Software:
 - DisasterLAN (DLAN)
 - Everbridge emergency callout system
 - iMap applications
 - Pictometry
 - Rockland County Emergency Map application
- Internet/Intranet Access: Yes/Yes
- Map Data Frequently Used:
 - Address Points (D)

- Ambulance Districts (D)
- As Built Drawings (H)
- Bus Shelters (D)
- Catch Basins (D)
- Cell Towers (D)
- Common Names (D)
- Comprehensive Sewer District Maps (H/D)
- Easements (D)
- EMS Districts (D)
- Exit Ramps (D)
- Fire Districts (D)
- Hydrant Map (H/D)
- Mile Markers (D)
- Municipal Boundaries (D)
- Mutual Aid Districts (D)
- Orthoimagery (D)
- Paramedic Areas (D)
- Parcels (D)
- Parks – County (D)
- Parks – State (D)

- Water District Map (H/D)
- Water – Hudson River (D)
- Water – Lakes (D)
- Water - Streams (D)
- Wetlands (D)

Notes: H = hardcopy, D = digital

- Non-Map Geographically Referenced Data:
 - Applications for clearing, filling, or excavation of land
 - Building sewer permit application
 - Car Titles
 - Criminal History
 - Dig Safe NY – email notification of underground digging inquiries
 - Drivers
 - Floodplain development permit applications
 - National Crime Information Center (NCIC) – Federal/State
 - NewWorld Records
 - Pistol Permits
 - Pump stations and districts
 - Stolen Property information
 - Vehicle Registration
 - Warrants

Data Flow Analysis:

- Data Flow Process:
 - Because the Emergency Management Coordinator receives information from so many entities, it is impossible to list all processes here. In general, data and information is received from an entity in many different formats (hard copy, digital on disk, digital online, digital on storage device, etc.). Once gotten, the information is stored in either digital or hard copy (or both) format. As time permits, information is processed into existing plans or documents, or is entered into existing databases for future use.
- Data Flow Interaction with Other Departments:
 - American Red Cross
 - Assessor
 - Attorney
 - Bergen County Office of Emergency Management
 - Brega Transportation
 - Building Department
 - Businesses housing Hazardous Materials
 - Columbia Gas Transmission LLC
 - Community Centers
 - CSX Transportation

- Transport of Rockland
- United States Marshals Service
- United States Postal Service
- United States Secret Service
- Village of Nyack Water Department 9
- Westchester County Office of Emergency Management

Future:

- Goals (listed in priority order):
 - Coordinate with RCGIS for more data access via RCGIS web tools and web mapping.
 - Data development:
 - Critical Incident Command System (ICS) infrastructure features
 - TBD
 - Floor plans
 - Plow areas (by Deputy)
 - Site plans
 - Stormwater Conveyance flow direction
 - Street Lights
 - Street Signs
 - Street speed limit
 - Telephone Poles
 - Traffic Light Transfer Switches
 - Application development:
 - ICS infrastructure management software
 - All-in-one viewer: incorporate RCGIS, ICS, Town, DLAN data and functionality into single application – mobile and desktop
- Listing of Proposed GIS Queries/Applications:
 - GIS Data Viewing and Mapping
 - View and edit ICS-related features – mobile and desktop
 - Rockland County Emergency Map Application – work with RCGIS to improve data content and accessibility
- GIS Functionality Required:
 - Input
 - Edit
 - Analysis
 - Query
 - Output
- Description of Priority Applications:
 - Coordinate with RCGIS to improve data content and accessibility
 - Data development (see Goals/Data development above)
- Additional Data Required to be Converted to Digital:
 - See Goals/Data development above

- Required GIS Data Layers or Digital Databases:
 - Administrative
 - Ambulance districts, EMS districts, fire districts, GML buffers, Mutual Aid districts, Official Map, paramedic areas, police areas, school districts, sewer districts, water districts, zip code, zoning districts
 - Basemap
 - Municipal boundaries, orthophotography (historical and current)
 - Emergency
 - Bridges, dams, flood inundation zones, hazardous materials, mile markers, radio towers, rail crossings, truss locations, utility substations
 - Environmental
 - Flood zones, hydrography, impervious surface data, soils, water bodies, watersheds, wetlands
 - Land Records
 - Address points, As-Builts, average density, building permits, cadastral, centroids, certificate of occupancy, complaints, demolitions, easements, historical records, land use, prior approvals, rights-of-way, senior citizen facilities/nursing homes, site plans, subdivisions, tax parcels, variances, violations
 - Planimetric
 - Buildings, driveways, parking lots, road pavement, sidewalks
 - Topography
 - Contours
 - Transportation & Land Use
 - Bus shelters, generalized land use, parks/open space, rail features, service stations/garages, street centerlines, street jurisdictions, vacant land
 - Utilities
 - Catch basins, cell towers, collection network, drainage network, fire hydrants, manholes, outfalls, pump stations, sanitary sewer network, street lights, utility poles, water lines and mains

PLANNING

Primary Contact: Jose Simoes

Telephone: 639-2070

Interviewees:

Jose Simoes, Town Planner

James Creighton, Senior Planner

Mission Statement:

The Planning Department is responsible for all administrative functions associated with the Planning Board, Technical Advisory Committee, and Zoning Board of Appeals; and to provide information relating to Town planning and land use to the public.

Department Responsibilities:

Review and approve land subdivisions, site developments, and certain special permit applications, to propose and prepare the Town's Comprehensive Plan, and to recommend to the Town Board or Zoning Board of Appeals on those matters referred to the Planning Board by said Boards.

The Technical Advisory Committee (TAC) acts as the professional staff to the Board. It reviews and recommends on the technical aspects of applications for land subdivision, site development, and special permits, as well as other matters referred to the Board.

The State Environmental Quality Review Act (SEQRA) is legislation intended to incorporate the consideration of environmental factors into the planning, review, and decision-making processes of State, regional, and local government agencies at the earliest possible time. All development proposals are subject to the SEQR review process. The Planning Department and Department of Environmental Control act as Technical staff for the Planning Board for SEQR.

After the SEQR process is begun, applications are filed with the Planning Department as necessary with distribution made to all involved and public agencies. The matter is scheduled for TAC for Town staff review and when found to be ready is placed on the agenda for the Planning Board.

The Planning Department also oversees the Zoning Board of Appeals (ZBA), which considers variances from the zoning ordinance, appeals of the decisions of the Building Inspector, special permit applications, and requests for zoning interpretations. The board consists of seven members appointed by the Town Board.

GIS Overview:

The Planning Department has been an avid user of GIS for the past decade and constitutes several "power users" in Town. Uses typically include ad hoc map production, analysis, project

planning, and recently an interactive web-based Major Projects mapping application. The Department will continue to use GIS as it has historically, but will also seek to use GIS more intensively for modeling (sustainable development, transportation, etc.) in the future. As such, there is a real need for development of transportation related information (riderships, sidewalks, accident data, etc.) and for energy use and emissions information.

The Department is also open to exploring how GIS could be incorporated into their project tracking process. Some of this effort may be more associated with creating a coordinated records management program to assemble parcel history into a central repository and then linking to a GIS parcel layer.

Exchange of information with other Town departments is primarily done in a paper format (e.g. building permit and certificate of occupancy, etc.). There is interest in the sharing of information and improving the efficiency of the Department where possible through the use of technology. Utilizing GIS, producing digital photos, and online applications are all of interest.

Existing Resources:

- Staff: 6
 - 3 have GIS experience
 - 0 have CAD experience
- Digital Data:
 - Rockland County GIS data (e.g. parcels, orthoimagery, etc.)
- Software:
 - Microsoft Office
 - PAS system
- GIS &/or CAD Software:
 - ESRI software
 - iMap application
 - Planning Board Major Projects application
 - Rockland County GIS Geoportal
- Internet/Intranet Access: Yes/Yes
- Map Data Frequently Used:
 - GML Buffer Map
 - Official Map (H/D)
 - Official County Stream Map (D)
 - Site Plans (H/D)
 - Subdivisions (D)
 - Tax Map Index (Old and New) (D)
 - Tax Parcels (historical and current) (D)
 - Zoning Map

Notes: H = hardcopy, D = digital

- Non-Map Geographically Referenced Data:

- Property Cards
- Site plan files
- Special Permits
- Subdivision files since 1950's
- Zone Changes

Data Flow Analysis:

- Data Flow Process:

- Meeting Minutes – prepared by Planning Board secretary. Typed in Word and then circulated in email and paper format.
- Parcel/Project information – application submitted by owner/applicant.
- Photographs – taken by staff in field with digital camera and loaded to computer. Saved on server.
- Site plans – Hard copy submitted by engineers and/or licensed surveyor.
- Subdivision plans – Hard copy submitted by engineers and/or licensed surveyor.
- Receive referrals from Highway and DEC
- Resolutions – prepared by Planning Board secretary. Typed in work and then circulated in email and paper format.

- Data Flow Interaction with Other Departments:

- Architecture and Historic Review Board
- Assessor
- Attorney
- Building Department
- Comptroller
- DEC
- Fire Inspector
- Highway Department
- New York State Department of Environmental Conservation
- New York State Department of Transportation
- New York State Thruway Authority
- Orange and Rockland
- Parks Board
- Palisades Interstate Park Commission
- Planning Board
- Police
- Recreation Committee
- Rockland County Department of Health
- Rockland County Drainage Agency
- Rockland County Highway Department
- Rockland County Planning Department
- Rockland County Sewer District No. 1

- School Districts
- Supervisor
- Technical Advisory Committee
- Town Board
- Town Clerk
- Traffic and Traffic Fire Safety Advisory Board
- United States Army Corps of Engineers
- United Water
- Zoning Board

Future:

- Goals (listed in priority order):
 - Secure data license agreement with Rockland County GIS that provides access to entire County datasets.
 - Continue to update Stormwater Conveyance database.
 - Update Land Use data.
 - Create database of Planning Projects, both active and inactive. Include status, year filed project type (commercial, industrial, residential).
 - Create emissions database that includes natural gas, electric, and water consumption for commercial and residential parcels.
 - Develop or update databases related to transportation, including traffic studies, public transportation ridership, sidewalks, bike lanes, lighting, traffic control devices, striping and paint, accident data (auto and pedestrian), other road infrastructure, etc.
 - Determine whether project tracking can be automated.
- Listing of Proposed GIS Queries/Applications:
 - GIS Data Viewing and Mapping
 - General access to GIS data layers
 - View administrative districts: Sewer, garbage, recycling and bulk pickup, yard waste
 - Cadastral Records
 - Ability to view status of parcels – Building permits, violations, etc. – by linking docs to parcel database
 - Parcel History: prior approvals, subdivisions, site plans, inspections, violations, variances, etc.
 - Land Planning
 - GML Referral process
 - Sustainable Development Study
 - Tracking
 - Transportation Planning
 - 3-D Analysis
 - Ability to view elevation and building data in 3-D for various applications, including: present and proposed views and site plans.

Would be beneficial in providing visuals to Planning Board and ZBA to assess visual impact.

- GIS Functionality Required:
 - Input
 - Edit
 - Analysis
 - Query
 - Output
- Description of Priority Applications:
 - Access to existing parcel data (Building permits, etc.)
 - Convert hardcopy records to digital for more efficient searching and cross-referencing capabilities. This includes existing files.
 - Data development (emissions, land use, stormwater, transportation, etc.).
 - Develop parcel-based analysis tool to visualize greenhouse emissions.
 - Provide general access to GIS data.
- Additional Data Required to be Converted to Digital:
 - Data to be joined to existing GIS parcel file
 - Link digital photos to parcel file
- Required GIS Data Layers or Digital Databases:
 - Administrative
 - Fire districts, GML buffers, Official Map, school districts, sewer districts, water districts, zip code, zoning districts
 - Basemap
 - Municipal boundaries, orthophotography (historical and current)
 - Emergency
 - Hazardous materials
 - Environmental
 - Flood zones, hydrography, impervious surface data, soils, water bodies, watersheds, wetlands
 - Land Records
 - As-Builts, cluster subdivisions (average density), building permits, cadastral, centroids, certificate of occupancy, complaints, demolitions, easements, historical records, land use, owner, prior approvals, rights-of-way, site plans, square footage of structure, subdivisions, tax parcels, variances, violations, year built
 - Planimetric
 - Buildings, driveways, parking lots, road pavement, sidewalks
 - Topography
 - Contours, digital terrain model (DTM), slope
 - Transportation & Land Use
 - Dry cleaners, generalized land use, parks/open space, service stations/garages, street centerlines, street jurisdictions, vacant land
 - Utilities

- Aquifers, cell towers, collection network, drainage network, fire hydrants, manholes, outfalls, pump stations, sanitary sewer network, utility poles, water lines, water mains, wells

-

Additional Comments:

- Planning Department should work with Town Clerk to enter minutes digitally into same software Town Clerk uses from Business Automation Services (BAS) Clerk Base.

RECREATION & PARKS

Primary Contact: Elaine Apfelbaum

Telephone: 639-6200

Interviewees:

Elaine Apfelbaum, Superintendent

Chip Connington, Senior Recreation Supervisor

Larry Berkowitz, Network Specialist

Ruth Metz, Information Clerk – Recreation

Mission Statement:

The Parks Board and the Recreation Commission sponsors and conducts recreational activities, events, and services for the residents of the Town.

Department Responsibilities:

Sponsors and conducts a year-round program of activities, events, and services for the children and adults of the community under full-time professional supervision.

The Town Park system incorporates about 700 acres of park land, four Community Centers, three outdoor pools, three picnic areas, two picnic shelters, twelve ballfields, one soccer field, two bocci ball courts, two tennis courts, one wheel park, eight playgrounds, and seven outdoor basketball courts.

GIS Overview:

The Department anticipates benefit from GIS in the form of data development. Development of park related furniture (picnic tables, benches, grills, etc.) location and geocaching locations will be beneficial for inventory/property management.

Existing Resources:

- Staff: 48
 - 0 have GIS experience
 - 0 have CAD experience
- Digital Data:
 - Community Pass (Resident application information)
- Software:
 - Community Pass
 - iMap
 - Microsoft Office
- GIS &/or CAD Software:
 - None
- Internet/Intranet Access: Yes/Yes
- Map Data Frequently Used:

- County Highway Map (H)
- Tax Maps (D)

Notes: H = hardcopy, D = digital

- Non-Map Geographically Referenced Data:
 - Complaints
 - Hardcopy book of residents by Last Name and by Street Name 9twice/year). Created from existing database.
 - Permits
 - Registrations
 - Tax List – based on property address – for labeling of brochures

Data Flow Analysis:

- Data Flow Process:
 - Complaints: Receive and respond to resident complaints and other department calls. Interact with other departments for status and resolution.
 - Permits: Applications completed and submitted. Permits required for use of Town recreation and park facilities (e.g. community centers, ball fields, etc.)
 - Registration: Resident completes and submits applications. Proof of residency is verified against Town source information. Information logged into Community Pass system for various programs.
- Data Flow Interaction with Other Departments:
 - Assessor
 - Attorney
 - Building
 - DEC
 - Highway
 - Insurance & Claims
 - Planning
 - Police
 - Supervisor

Future:

- Goals (listed in priority order):
 - iMap training
 - Create updated Town maps of current recreation and park facilities
 - Map Parks infrastructure/furniture and incorporate into GIS database
- Listing of Proposed GIS Queries/Applications:
 - Cadastral Records
 - Verify address and owner name
 - View recreation and park property, easement, and vacant land information
 - View complaint location, history, type, status, etc.

- GIS Data Viewing and Mapping
 - General access to GIS data layers
- GIS Functionality Required:
 - Input
 - Analysis
 - Query
 - Output
- Description of Priority Applications:
 - Create maps of park facilities for Park publications/brochures
 - iMap training
 - Public Stuff/Lucity
- Additional Data Required to be Converted to Digital:
 - Geocache locations
 - Park furniture
 - Trails
- Required GIS Data Layers or Digital Databases:
 - Administrative
 - Schools districts, zip code, zoning districts
 - Basemap
 - Municipal boundaries, orthophotography (historical and current), roads
 - Environmental
 - Flood zones, hydrography, water bodies, wetlands
 - Land Records
 - Cadastral, centroids, complaints, easements, pools, rights-of-way, tax parcels
 - Planimetric
 - Buildings, parking lots, road pavement
 - Transportation & Land Use
 - Generalized land use, parks/open space, street centerlines, street jurisdictions, trails, vacant land

Additional Comments:

- Would benefit from having detailed Town maps of the following:
 - Street map
 - Vacant land map
 - Recreation and Parks map
 - Form to submit to GIS for corrections found

SUPERVISOR

Primary Contact: George Hoehmann

Telephone: 639-2050

Interviewees: Robert Alberty

Mission Statement:

The Supervisor is the Chief Executive, Operational and Fiscal Officer of the town of Clarkstown.

Department Responsibilities:

Oversee executive, operational, and fiscal operations of the Town.

GIS Overview:

The Supervisor's Office understands the value of increased information sharing across departments. As such, the Office seeks to leverage existing GIS applications – increasing use of the Town's 311 Request application and the iMap application. There is also great interest in exploring GIS options to coalesce information across departments, thereby increasing the overall efficiency of the Department. In addition, there is interest in using web-based GIS applications in public meetings to assist in describing projects and to effectively answer questions.

Existing Resources:

- Staff:
 - 4 have GIS experience
 - Staff are familiar with the ability to access GIS maps and will occasionally utilize them. One staff member uses the 311 Request system for constituent complaints.
 - 0 have CAD experience
- Digital Data:
 - Access to complaint tracking software
 - This is an area where the Supervisor's Office will seek improvement in data collection and retention in conjunction with other departments.
- Software:
 - Microsoft Office
- GIS &/or CAD Software:
 - iMap application
 - 311 Request application
- Internet/Intranet Access: Yes/Yes
- Map Data Frequently Used:
 - Official Map (D/H)
 - Zoning Map (D/H)

Notes: H = hardcopy, D = digital

- Non-Map Geographically Referenced Data:
 - Complaints

Data Flow Analysis:

- Data Flow Process:
 - Constituent calls are received by staff via phone or email. Information is inconsistently logged into existing complaint tracking system. Staff work together to answer inquiries or to direct constituents to appropriate departments as needed.
- Data Flow Interaction with Other Departments:
 - Constituent Complaint resolution
 - Building Department
 - DEC
 - Highway
 - Police

Future:

- Goals (listed in priority order):
 - Training on use of current complaint tracking system.
 - Layering of GIS data (school location, firehouse, polling sites, etc.) should be incorporated into existing complaint tracking system to allow staff to reference relevant information related to constituent requests.
- Listing of Proposed GIS Queries/Applications:
 - Develop interactive web-based mapping application for use in Town Board meetings
 - Develop shared map-based application for the Assessor, Building Department, DEC, and Supervisor that provides relevant departmental data. This location based application would, for example, make permit and work order information available for constituent service requests at specific locations or addresses.
 - Integrate Lucity and 311 Request applications
 - Investigate possibility of creating interactive web-based applications for public use (e.g. Drainage Project Locations, Polling Locations, Zoning, etc.)
 - Provide general access to GIS data
 - Provide training for iMap and 311 Requests
- GIS Functionality Required:
 - Input
 - Output
- Description of Priority Applications:
- Additional Data Required to be Converted to Digital:
 - Not at this time
- Required GIS Data Layers or Digital Databases:
 - Administrative

- Fire districts, Official Map, schools districts, ward districts, zip code, zoning districts
- Basemap
 - Municipal boundaries, orthophotography (historical and current)
- Environmental
 - Flood zones, hydrography, water bodies, wetlands
- Land Records
 - Cadastral, complaints, easements, historical records, land use, rights-of-way, tax parcels
- Transportation & Land Use
 - Generalized land use, parks/open space, street centerlines, street jurisdictions, vacant land

Additional Comments:

Responsiveness to constituents can only be enhanced with increased access and understanding of the various uses of GIS mapping.

TOWN CLERK/RECEIVER OF TAXES

Primary Contact: Justin Sweet

Telephone: 639-2007

Interviewees: Justin Sweet

Mission Statement:

The Town Clerk is responsible for keeping the Town records and providing access to the public.

The Town Clerk, acting as the Receiver of Taxes, is responsible for the collection and disbursement of Town and County Real Estate Taxes and School Taxes and the proper record keeping of such.

Department Responsibilities:

Official Town documents are kept in this office and are available to the public. These include minutes of all Town Board and various commission meetings, agreements, resolutions, Town code, and local laws. The vital statistics or records of births, deaths, and marriages occurring in Clarkstown are also available through this office.

This office issues marriages licenses, hunting and fishing licenses, dog licenses, handicap parking permits, and train station permits.

Also, the Town Clerk is the records officer for freedom of information requests and the mail drop for the Ethics Board.

Finally, the Town Clerk is responsible for the receiving of taxes. These responsibilities include the collection and disbursement of Town Taxes, the collection and disbursement of County Real Estate Taxes, and the collection and disbursement of School Taxes.

GIS Overview:

Presently, the Clerk has no digital mapping applications. The Department envisions limited direct benefit from incorporating GIS technology.

Existing Resources:

- Staff: 5
 - 0 have GIS experience
 - 0 have AutoCAD experience
- Digital Data:
 - Various databases – birth and death certificates, dog licenses, marriage licenses, hunting and fishing licenses, handicap permits, racing and wagering, election inspectors
- Software:

- Microsoft Office
 - Business Automation Services (BAS) Clerk Base
 - Business Automation Services (BAS) iTax
 - DECAL – NY Conservation System
- GIS &/or CAD Software:
 - None
- Internet/Intranet Access: Yes/Yes
- Map Data Frequently Used:
 - Election districts
 - Ward districts

Notes: H = hardcopy, D = digital

- Non-Map Geographically Referenced Data:
 - Assessment rolls
 - Births
 - Deaths
 - Dog licenses
 - Handicap permits
 - Hunting and Fishing
 - Hydrant applications
 - Marriage licenses
 - Racing and Wagering
 - Tax Bills
 - Water Extension applications
 - Zone change and Special Permit applications

Data Flow Analysis:

- Data Flow Process:
 - Disbursement of Tax funds to Rockland County and School Districts
 - FOIL applications. Filed. Forwarded to the appropriate department if unable to be completed by the Town Clerk.
 - Handicap permits – medical form provided by resident
 - Hydrant applications filed by United Water. Copy forwarded to Fire Inspector, and then to DEC. Returned to Clerk to be added to Town Board agenda.
 - Minutes – track minutes of various boards
 - Water extension – receive petitions which are forwarded to appropriate department
 - Zone Change and Special Permit applications filed. Copy sent to Town Attorney and Supervisor. Referred to Town Board and the Planning Board.
- Data Flow Interaction with Other Departments:
 - Attorney
 - Building Department
 - County: Board of Elections, County Clerk, Planning Department

- Comptroller
- DEC
- Fire Inspector
- Planning
- Police
- Supervisor
- Town Board

Future:

- Goals (listed in priority order):
 - Improvement in responses to FOIL requests
- Listing of Proposed GIS Queries/Applications:
 - GIS Data Viewing & Mapping
 - General access to GIS data layers (e.g. election districts, ward districts, etc.)
- GIS Functionality Required:
 - Input
 - Output
- Description of Priority Applications:
 - Provide general access to GIS data
- Additional Data Required to be Converted to Digital:
 - None
- Required GIS Data Layers or Digital Databases:
 - Administrative
 - Election districts, Legislative districts, Ward districts
 - Basemap
 - Municipal boundaries
 - Land Records
 - Address, ownership
 - Transportation & Land Use
 - Street centerlines

Appendix 7.2: Stakeholder Survey Form & Survey Results

GIS Strategic Plan - Stakeholder Survey

Responding Department:

Employee Name:

I would be interested in participating in the Plan as a Stakeholder:

☐ YES

☐ NO

My experience with GIS is (select as many as apply):

- ☐ User of Maps
- ☐ Use GIS based web applications
- ☐ Received analytical support from GIS
- ☐ User of ArcGIS desktop software
- ☐ All of the above
- ☐ None of the above
- ☐ Other - Please describe below:

Below is a list of critical issues facing Clarkstown's GIS. Please indicate what you think are the most pressing issues by ranking the list from Most Critical to Least Critical (Use each description only once):

	Most Critical	More Critical	Critical	Less Critical	Least Critical
Not enough standard maps	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Not enough data in the system	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Not enough analytical information available	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Not enough GIS training available	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Not integrated with my primary business software application	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

I have a GIS project(s) need or idea and I am describing it below:

Most Critical

More Critical

Critical

Less Critical

Appendix 7.3: GIS Strategic Plan Departmental Interview Results

Need ID	Identified Needs/Comments
AS1	I would like to integrate my older databases to become compatible with GIS technology.
AS2	I would like to use GIS data and imagery to find pools, decks, outbuildings, and additions that have been added or deleted between 2000 and 2016.
AS3	I would like to use GIS to look for landuse inconsistencies.
AS4	Is it possible to link digital subdivision and site plan maps to parcel boundaries in GIS?
AS5	Is it possible to use GIS on mobile devices to collect data in the field and upload later to a database?
AT1	Better imagery would be nice.
BU1	I would like to digitize my current files and link the information to tax parcel boundaries. This would include site plans, as-builts, subdivisions, permits, etc.
BU2	We need to convert our filing system from the old parcel ID to the new parcel ID.
EF1	I need access to Assessor 'Owner Address' data.
EF2	I would like a process in place that addresses funding multi-departmental GIS projects.
EF3	I would like to be able to use GIS to map and analyze complaints for my department. This capability was removed when the PublicStuff 311 complaint system was implemented.
EF4	I would like to better understand how GIS integration can help me manage inventory and infrastructure. Specifically, I would like to be able to keep track of lighting that the Town is responsible for.
EF5	I would like to digitize my current paper files and link the information to tax parcel boundaries. This would include site plans, as-builts, subdivisions, permits, etc.
EF6	I would like to map garbage districts.
EF7	I would like to map recycling districts.
EF8	I would like to see Residential and Commercial parcel data by district for Recycling, Sanitation, Water and Lighting districts.
EF9	I would like to see violation tracking coordinated with other departments.
EF10	It would be beneficial to convert our sewer to house connection information to digital format. Permits are currently on file in paper format.
EF11	The current complaint system does not allow my department to effectively manage work orders or look at older records.
EF12	The digital data submission code revision, which among other things, requires that site plans and as-builts be submitted digitally, needs to be approved by the Town Attorney and codified.
EF13	We need to continue with drainage mapping and data collection to satisfy our MS4 requirement.

HW1	I would like to be able to manage Town maintained street lights with asset management software.
HW2	Map plow routes and Deputy ownership of routes.
HW3	I would like to integrate Lucity and PublicStuff
HW4	I would like to develop additional data (trash can locations, bus shelters, street signs, yard waste districts, deputy districts, etc.)
HW5	Develop R.O.W. data layer that references street width from Rockland County Tax Map
HW6	Improve Permit system by allowing permit history to be recorded.
HW7	Access to complete subdivision and/or site plan applications.
HW8	Explore ways of collecting data in field using GPS technology.
HW9	Keep street and address information up-to-date in Lucity.
HW10	Link easements to site plans.
HW11	Develop a web application for complaints.
IC1	Can we incorporate Street View into iMap?
PL1	A data layer for Planning projects that includes status, year filed, project type, etc. would be useful.
PL2	Can a GIS analysis tool be made to estimate greenhouse emissions by parcel?
PL3	Consistently update the landuse layer.
PL4	Digitize Planning Minutes books and minutes.
PL5	Digitize ZBA information and link to tax parcel.
PL6	Flood zone and water rise projections?
PL7	In preparation for the 2020 Comprehensive Plan, is it possible to make or find emissions data?
PL8	Is it possible to use GIS to implement Project tracking in a documented, automated system?
PL9	More data from adjacent towns would be helpful.
PL10	Need to access site plans from iMap
PL11	Trainings to make basic maps.
PL12	We need transportation data -- traffic studies, ridership, sidewalks, bike lanes, lighting, striping, road furniture, accident data (auto and pedestrian).
PDD1	I would like a better data update process with NewWorld.
PDEM1	Attach posted speed limit to existing GIS street data.
PDEM2	GPS all street signs, telephone poles, street lights.
PDEM3	I would like to explore the possibility of integrating GIS into a mobile Emergency Management mobile application.
PDEM4	Rockland County GIS currently has an Emergency Map Application. Is it possible to integrate their application with data from DLAN and ICS?
PDEM5	Map stormwater flow direction.
PDEM6	Map Traffic Light Transfer Switches.
RP1	I would like standardized maps to use as handouts

RP2	The ability to bring up the current property owner information when using GIS to locate a property.
SU1	Can I see a map of drainage project locations?
SU2	Can the Town have web mapping at Town Hall meetings?

Appendix 7.4.1: Shared Solutions Matrix Table

Shared Solution	Description
Core capabilities	
Addresses and locations	Develop tools for finding a location based on many different inputs, integration of unit level address data, and address identification based on a in-field location.
Integration with regional and external data sets	Integrate best available public, commercial, or external partner regional data with Clarkstown's internally maintained data.
End user data maintenance	Implement appropriate ways to leverage end user knowledge in maintaining GIS data, while ensuring data integrity is maintained.
Standardized spatial relationships	Identify families of relationships and develop resources to share and apply these under multiple circumstances, including the relationships between who is served, where they are located, and how they access services.
Facility management	Implement capabilities to leverage structure level data for managing internal space, building maintenance activities, energy usage, and public safety pre-planning.
Plan objectives/regulations and implementation tracking	Develop methodologies and data models to capture the objectives of Town Comprehensive Plan and GIS Strategic Plan.
Real time data feeds	Develop tools for integrating real time data, from a variety of sources with the GIS (e.g. vehicle locations, stream gauges).
Secure interdepartmental sharing of analytical information	Access and utilize data from various systems to a central Town information resource. Develop methods to securely share or aggregate confidential data.
Measuring change	Model data and develop query tools so that both location and time can be captured and analyzed.
Information sharing and collaboration	
All-purpose situational awareness resource	Create staff resource to facilitate internal information sharing across departments and the region.
Service Oriented Architecture (SOA)	Library of GIS services linking GIS systems into existing business processes.
Public facing applications	Develop services to help residents and visitors to Clarkstown better access Town services and resources.
Mobile GIS	Develop solutions to leverage GIS in the field.
Document storage	Digitize existing paper documents into indexable storage format.
Document Retrieval	Integrate documents, memos, plans, and reports via mapping interface.
Paper maps	Share data via traditional paper maps and map books or the electronic equivalent.
Decision making approaches	
Facilities and program location evaluation and selection	Develop tools and data for evaluating locations of new facilities and programs.
Demographics	Develop solutions to provide demographic information to support the decision making process.
Transit and parking	Develop solutions that relate transit, parking, and land use together for analytical purposes.
Vehicle routing	Develop solutions to manage routing of field activities and optimize routes.

Walkability and bikeability	Develop solutions to measure walkability and bikeability, prioritize walking infrastructure improvements, design routes, and generate walking/biking service areas.
Visualization	Implement visualization resources to provide a qualitative view of Clarkstown, including oblique imagery (Pictometry), 360 degree street level imagery (Google Street View), 3D models, overhead aerial photos (orthophotography), etc.
Natural resources and the environment	Integrate key natural resource information and analysis into the GIS infrastructure.
Integration/Deployment	
Commercial Off-the-Shelf (COTS)	Use existing software solutions as standalone or integrated solutions for GIS software and applications.

Appendix 7.5: Needs & Return on Investment Matrix

Needs & Return on Investment

P = Primary Benefit

S = Secondary Benefit

DEPARTMENT COMMENTS																	
Transparency																	
Time Savings/Cost Reduction

Appendix 7.5.1: Return on Investment Matrix Table

Return on Investment	Description
Analytic Capacity	Identify trends and implications through qualitative and quantitative methods.
Customer Service/Satisfaction	Increased level of service and satisfaction can have value in the areas of economic, social, and political ROIs.
Decision Making	Faster access to relevant information creates a more reliable and accurate basis for decisions.
Design & Planning Capacity	Address development issues that have long-term implications for the community and the wider environment.
Interdepartmental Communication	Reduce costly errors by providing quick access to relevant information across departments.
New Products & Services	Provide previously unavailable benefit.
Reduce Risk	Understand risk exposure and methods to use data and analysis to lower existing or future risk.
Regulatory Compliance	Compliance with federal or state regulations or mandates can avoid financial penalty.
Reporting	Timely reporting of accurate and complete data from an infrastructure management solution can capture a larger portion of federal funding.
Resource & Asset Management (Capital Improvement)	Decision support tools model Capital Improvement Plans and Work Plans based on available budgets, potential activities, and current conditions of infrastructure.
Resource & Asset Management (Operations)	Proactive asset management reduces annual reactive incidents and lowers maintenance costs, keeping assets in good repair without impacting public safety or level of service.
Revenue Growth	Identify areas where revenue can be increased.
**Shared Services	Costs shared across departments reduces financial burden.
Staff/Workflow Effectiveness	Increased level of interpretation and communication or more valuable work product is a result of better and more accessible information.
Staff/Workflow Efficiency	Reduction in staff time and resources needed to conduct current operations and functions.
Time Savings/Cost Reduction	"Time is money". Eliminate redundant data collection, data creation, work requests, information requests, work flows, etc.
Transparency	Civic engagement as a service to the public fosters confidence and can reduce publically generated work requests for information.

**Shared Services in this instance refers to data, applications, etc. that can be used by more than one department.

Business & Economic Development Advisory Committee REPORT

Introduction

The Clarkstown Business & Economic Development Advisory Committee (“Committee”) was established on February 4, 2019. The Committee was formed and charged with the long term goal of developing a strategic, pro-growth economic plan for the town.

Supervisor Hoehmann established the committee in order for the town to be proactive in understanding and adapting to changes in the broader economy that will impact the town’s competitiveness today and into the future.

Clarkstown is Rockland County’s economic engine, accounting for sixty percent of the commercial rateables in Rockland County. The two major malls that call Clarkstown home account for at least 25% of the total sales tax collected countywide. From a tax assessment perspective, retail locations account for nearly \$44 million in real estate taxes for the Town of Clarkstown and the school districts within the town.

Although the discussion surrounding recent trends in retail was the spark that led to its creation, the **Committee’s** mission is to provide the town with a blueprint on how to attract new businesses, as well as how to retain existing ones by encouraging their expansion and growth.

The committee was asked to incorporate the following ideas into their approach in developing recommendations:

- Improving the way the town promotes and facilitates various approval processes for those seeking to do or expand business in Clarkstown;
- A comprehensive look at trends in the retail sector and how they inform the sustainability and long-term growth of retail in Clarkstown;
- The development of a marketing plan to reach emerging retailers who are looking for an ideal environment to shape their business spaces to attract consumers that live in the metropolitan area;
- The formulation of a framework for an economic development plan to be incorporated into the town’s Comprehensive Plan, which is set to begin work in 2020.

These broad subject areas served as the basis by which the committee arrived at its ultimate recommendations.

Membership

The Clarkstown Business & Economic Development roster is below. The membership represents a cross-section of individuals whose expertise and leadership made their inclusion in the committee essential to the task of developing a robust approach to economic development:

Chair—Howard Hellman, Chair, All Bright Electric

- Robert Alberty, Director of Finance, Town of Clarkstown
- Raja Amar, President, Portables Unlimited
- Kathleen Brennan, Aluf Plastics
- Donald Franchino, Councilman, Town of Clarkstown
- Mark Glasel, Associate Broker, Triforce Commercial Real Estate
- Walter Goldman, President, Goldkap Consulting Group/Business Expense Advisors
- Brion Hayman, President, Gateway Building Services
- Risa Hoag, President, Nanuet Chamber of Commerce
- Alice Lenna, New City Chamber of Commerce
- Rob Mayer, President of Autopro LLC
- Valerie Moldow, Nanuet Chamber of Commerce
- Albert T. Moroni, Chief of Staff, Town of Clarkstown
- Rene Rodriguez, President, New City Chamber of Commerce
- Al Samuels, President, Rockland Business Association
- Michael Shilale, Principal, Michael Shilale Architects, LLP
- Joe Simoes, Town Planner, Town of Clarkstown
- Phyllis Tucker, Director of Operations & Marketing, Rockland Economic Development Corporation

Subcommittee Structure

In addition to the meetings that were held for the entire membership of the Committee, the members met numerous times over the course of the past six (6) months as members of subcommittees.

Subcommittees were created to foster an environment where members could engage in the kind of focused discussion that would be necessary to produce recommendations that were tested and well developed before bringing them to the broader group for discussion.

The subcommittees that were developed and implemented were:

- Data & Analytics
- Retail, Hospitality & Entertainment
- Permitting & Business Processes

- Marketing & Communications

The **Data & Analytics** subcommittee was focused on identifying and outlining the significant trends that are currently defining **not only Clarkstown's** current and future business landscape, but those shaping all other aspects of the town. Understanding how important people (as employees and consumers) are to the success of local business, the Data & Analytics group examined the foundational attributes that make Clarkstown a strong marketplace for businesses today, while also exploring how changing demographic trends fit into existing zoning for residential and commercial properties.

Compiling and analyzing data is a critical aspect of formulating any successful plan. The same can be said for putting together an economic development plan that weighs the needs and desire of two key constituencies: businesses and the residents of the Town of Clarkstown. The goal is to not only make the environment for business more amenable, but to grow the residential base by which businesses can grow and thrive. In short, this group looked at the current zones that the town has and ways they can be changed to encourage smart growth and development for business and residents.

The **Retail, Hospitality & Entertainment** group examined how Clarkstown can position itself competitively as an ideal location for a retail sector that continually **reinvents itself to meet the ever shifting needs and tastes of today's consumers**. One pernicious trend is the concept that people wish to buy *experiences* over tangible things.

The town has been recently successful in partnering with developers with an eye toward recreating retail spaces to incorporate entertainment features and venues that will serve as a magnet for regional tourism. A key ingredient in sustaining growth in tourism is encouraging a hospitality sector that makes Clarkstown a destination to shop, play and stay.

For existing and potential businesses large and small it is important for the town make licensing and permitting as easy to understand and navigate as possible. It was with that goal in mind the **Permitting & Business Processes** subcommittee was formed. A major part of helping business thrive in Clarkstown is ensuring that legal requirements and the permitting process is easy to understand, reasonably predictable and has the flexibility to at times expedite processes for businesses looking to get started or seeking to renovate or expand quickly. Town offices and officials that interact with businesses need to view business owners and their agents as their customer.

Hot Retail Trends

- Showroom Stores
- E-Tailers' desire for limited brick and mortar
- Alternative store formats (i.e. **Macy's** Backstage and Nordstrom Rack)
- **Smaller, "independent"** retailers
- Customer Experience and Entertainment
- Mass Customization
- Highly Personalized Interactions
- Heightened focus on Corporate policies on Sustainability & Social Responsibility

How can Clarkstown aggressively position itself in the region as an ideal place to start a new business? The **Marketing & Communications** team focused on framing out a marketing, messaging and persuasion plan that will lure targeted businesses through the promotion of the positive attributes that Clarkstown has to further stimulate economic development. Developing the proper narrative requires understanding what makes the businesses we have successful and sharing those successes with entrepreneurs who are seeking the right home for their business.

As subcommittee members met and discussed their area of focus as a group, they were tasked with reporting their thoughts to the broader committee membership to serve as the basis of all of the recommendations contained in this report.

Recommendations

As the subcommittees reported to the larger group and pointed discussions occurred on what recommendations would be made to the Supervisor, a number of themes emerged. These thematic elements provide a dynamic blueprint for the emergence of not just an economic development *plan* but a course of *action*. These four elements can initially be viewed as sequential, but over time each element is essential to the strength of the other. These four areas are: information, communication, outreach and sustained effort.

Each of these four areas is critical and the committee put forth the following recommendations that fit into each area.

Information

The key to any successful plan is having the right information to make informed decisions. It applied not only to the committee's work, but as the foundation of key recommendations that have emanated from their work.

- **Continue gathering key, high-level demographic information to tell the “Clarkstown Story”**—What are the types of data that tell the Clarkstown story? With Census-level data as a base and the comprehensive plan as its mission, the town needs to continuously gather data that will set it apart from the communities in Rockland and the region as a place where people not only want to live, but create or grow a business.
- **Simplify how businesses can learn about and understand Clarkstown's laws and procedures**—Businesses should not have to dig through the town code and decipher what is and isn't allowed from a zoning, licensing and permitting perspective. The town should have a task force charged with examining how best to explain the procedures, timelines and costs associated with securing needed approvals so businesses can move at a reasonable speed towards their goals.
- **Digitize commonly used forms and allow for electronic submission when possible**—In this day and age, businesses and residents expect quick access to information and the ability to apply for government services with the ease they've come to expect with nearly every other aspect in their life.
- **Commercial Asset Identification**—Working within the scope of the town's GIS capabilities, the town should work toward not only gathering information on the commercial spaces it has available, but on spaces that could be potentially developed.
- **Filming Asset Identification and Development of Procedures**—The town is ideally situated within the boundaries set by the unionized professionals in New York's film industry for their industry's geographic standard. What this means is the town has the opportunity to significantly expand its relationship with film scouts and others who are constantly looking for locales that can provide the shot they are looking for and in a location that is easy to get to.
- **Exploring the applicability of establishing certain economic development agencies and programs**—A town of this size and importance to the region should explore the possibilities of establishing incentive programs and other district-level organizations to further enhance its ability to attract new businesses. A thorough examination of the applicability of establishing Business Improvement Districts and other agencies to support emerging sectors should be produced and contemplated.
- **Survey Research**—Town and local business leaders would each benefit greatly from partnering together to engage in various survey research, ranging from the

informal to more formal, scientific methods. Information, especially opinions, never remains static. Designing various methods and avenues by which the town can periodically engage local business leaders and residents on issues related to quality of life and the business environment would be valuable.

Communication

With the right information in hand, developing clear, concise and compelling messages are vitally important to the success of attracting and retaining businesses.

- **Completely redesigning the town's business website**—The current website needs a complete overhaul with the goal of creating a one stop shop for all businesses to learn about what makes Clarkstown a great place to do business. It needs to have visually engaging information displaying the **town's assets**, its laws and procedures and who its key partners are in ensuring that a new business can thrive here. It should provide easy access for completing forms online and simplifying the process of obtaining and submitting information.
- **Design a slogan and corresponding logo for Clarkstown's economic development effort**—This committee has discussed a few concepts in this regard, but the key thought is to take the initiative to brand the town in a way that, over time, elicits a recognition by people across the region and state. This is a wonderful opportunity **to unlock the creativity of the town's residents and business leaders** and put forward a positive, clear cutting image for the town.
- **Line up successful business owners and have them tell their story**—There are few things more compelling than a genuine, third-party endorsement. We need to listen to the stories of our business owners and entrepreneurs. **What has made them successful? How does being here make them successful? That's** the story that potential new business owners need to see, read and hear. These success stories should be told through a variety of media including the new website, television (on Clarkstown's channel) and on social media through testimonial videos and through press releases.
- **Educate residents of the town about the importance of having a robust local economy**—The more commercial rateables the town produces, the easier the tax burden is on the property taxpayer. Clarkstown residents are key partners in helping the town create the right narrative for business. The communications sub-committee should work with the town to develop ways to disseminate the information and recommendations by the overall committee to the residents so that it is viewed through an unbiased lens.
- **Speak the language of business**—The town needs to ensure that key departments, such as the Planning and Building Departments have personnel that can help guide business owners through various processes with a posture of openness and understanding to the needs of business, rather than emphasizing potential constraints.

- **Host quarterly business forums**—A significant part of any sustained communications effort is enabling a consistent venue for open discussion. The town, in partnership with local chambers of commerce and other business groups, needs to be a key facilitator for continued discussion. Meetings should be broadcast live on social media and recorded for Clarkstown’s television channel.

Outreach

Having a well-informed, persuasive message is half the battle. Those messages need to reach the right people in a variety of ways to make an impact.

- **Develop a marketing plan**—The town needs to promote itself across different kinds of media with a well-developed plan to reach sector-specific targets. The town needs to understand not only what methods might be employed to disseminate the message, but also the costs associated with those methods.
- **Utilize Social Media**—A free and effective start to engaging in some basic outreach efforts would be the establishment of a presence among the various social media outlets.
- **Develop an E-newsletter for local business**—The town should produce a business-focused e-newsletter to keep local businesses and entrepreneurs informed, highlight new and existing businesses and to encourage an ongoing dialogue.

Sustained Effort

All of the recommendations to this point cannot come to fruition without a sustained effort on the part of the town. To this end, the committee suggests the following:

- **Continue the work of the Clarkstown Business & Economic Development Advisory Committee**—The recommendations that the committee has made here are a blueprint. There is much work to be done and the committee feels that this group could be a real asset in helping guide the town toward accomplishing many of the goals described in this report.
- **Establish an Economic Development Office**—The committee feels strongly that the establishment of an Economic Development office is absolutely critical to the success of the town’s ability to attract and retain businesses.
- **Or, alternatively, hire a qualified consultant to carry out recommendations** —The town may consider seeking requests for proposals from qualified professionals or firms who have a proven track record in the realm of economic development.

Focus on: Taxes

- **Reexamine the Homestead/Non-Homestead Property Tax System**

It is well-known that the property tax burden for commercial and residential property owners is often cited as an obstacle for growth in the Hudson Valley region. For Clarkstown business owners, the property tax burden is more pronounced, as the Town long ago adopted the Homestead Tax Option for the assessment and collection of local property taxes. The proportion of property taxes paid between Homestead (i.e. residential) and Non-Homestead (i.e. commercial) properties is volatile, with Non-Homestead property taxpayers seeing their costs rise over time. In the past twelve (12) years, the Non-Homestead school tax rate has increased 46% and 35% for town taxes. There is also inequity between the two property classes when it comes to services. **Commercial properties do not have the ability to utilize the Town's refuse contract for garbage or bulk pick-up, for example.**

The committee feels very strongly that this current taxing regime needs to be thoroughly reexamined.

- **Increase the Percentage of Sales Tax Revenue Rockland County Shares with Clarkstown and other Municipalities**

Simply stated, for all of the economic activity that Clarkstown generates—which accounts for 25% of the sales tax receipts in the county—the share the town gets back from Rockland County is incredibly low. In fact, Rockland County shares much less of its sales tax when compared to other similar counties in the metropolitan region. Rockland County retains 93.7% of its sales tax revenue, as compared to other similar counties. Nassau County retains 82.4% of the sales tax revenue, Westchester County 73% and Orange County retains 73.6%.

The County of Rockland has the sole power to change the percentage of sales tax it shares. An increase in sales tax revenue sharing would provide Clarkstown with a much needed boost in revenues to help lower the property tax burden on the residents and businesses of Clarkstown. The committee will advocate with town officials to the County Executive and County Legislature for an increase of the sales tax revenue.

Focus on: Zoning

The committee gave a lot of thought to issues related to zoning and the pivotal role it plays in defining Clarkstown as not only a place to do business, but as a place to live. Proposing any changes in local zoning is always a thorny issue that few people would choose to rush into carelessly. However, the committee believes that the town can make **some surgical changes to its zoning that will benefit the town's economic environment, while also maintaining the town's wonderful quality of life.**

- **Review and Redefine business zones**—The current commercial zones are cumbersome for business development. They are also outdated, in light of the changing nature of how businesses utilize space. For example, a business that produces goods at a given site may not be able to sell their product on the premises, based upon existing zoning regulations. The town should work towards redesigning commercial zones that are modern, flexible and inviting to developers.
- **Streamline and Expedite the Land Use Approval Process**—The town should seek ways to streamline the land use approvals process and review existing timeframes and shorten them wherever possible. One example where **this could be accomplished involves the town’s Architectural & Historical Review Board (“AHRB”).** Currently, applicants must initially go to the Planning Board to receive preliminary approval and then wait for the AHRB to review and approve a project before going back to the Planning Board for final approval. Instead, preliminary and final approval should be done jointly. The town should also consider increasing the frequency of meetings to speed up the approval process without compromising the importance of a thorough review.
- **The Town should also look at modifying residential zones to meet the needs of two critical demographic groups: seniors and millennials—**The need for seniors to downsize and age in place in Rockland continues to increase while young professionals are seeking a place to grow a young family. This phenomenon is not only a town issue, but a regional one. If the town were to allow studio apartments as small as 450 square feet, the town would be producing an environment conducive for the development of affordable housing for those two key groups.
- **Look to the Nanuet Transit Oriented Development as a model**—The committee is excited by the potential that the Nanuet Transit Oriented Development represents for Clarkstown, and believes that a number of elements are transferrable to the other hamlet centers in Clarkstown.

Palisades Mall Expansion

The committee feels strongly that the strength of the **town’s economy and the** continued success of the Palisades Mall are intrinsically linked. The committee is hopeful that that it can serve as a powerful force in helping to facilitate a strategy between the town and the Palisades Mall that will enable the mall to leverage the space it has in a manner consistent with established law.

Throughout the pendency of the committee’s work, meetings were conducted and information exchanged that make it clear that the Palisades Mall is seeking to utilize the vacant space on the fourth floor and to potentially expand. Both goals are in **furtherance of the Mall’s mission to become more diverse in its offerings, especially** as it relates to expanding entertainment offerings to buttress existing retail.

We encourage and applaud these efforts.

Executive Summary

When you cultivate a stronger relationship with local business owners and business leaders the rest will follow. One overarching takeaway from this process was the need for the town to better facilitate and foster ongoing discussions with businesspeople in the town in order to capture what they feel makes Clarkstown a successful place to do business and what the town can do to make that experience better.

In the view of the committee, this requires a daily and strategically sustained approach to not only enhancing existing relationships, but being proactive in seeking opportunities that will attract new businesses, generating new rateables and jobs. Equally as important to relationship building is the design and implementation of an aggressive, but targeted marketing plan, especially as it relates to attracting dynamic, new retailers. In order to accomplish both, the town should either create an Office of Economic Development or contract with a dedicated consultant or firm for the same purpose.

With an economic development leader or team in place, Clarkstown can reach its true potential in creating sustainable economic development by taking a broader approach in attracting different kinds of businesses beyond retail. This will require zoning that is more flexible for business than it is today. The zones for business are both too narrowly defined (i.e. types of uses) while also being too numerous for potential entrepreneurs to understand and navigate.

For businesses to be successful, the town needs to reimagine and reshape the environment in which business can continue to thrive. A major piece of that is the importance of remaining a powerful magnet for consumers that are irresistible to **businesses of all kinds. The town's push for Transit Oriented Development in Nanuet is a great start, but allowing for the further development of reasonable density (such as studio apartments) in the town's hamlet centers** is an important way to attract young professionals.

The committee feels very strongly that it should continue to serve the town in an advisory role and help the town make the incremental steps necessary to achieve the larger goals to make Clarkstown a marketable entity for job creators.

2021 CLIMATE ACTION PLAN

*Local Actions for
Reducing Greenhouse
Gas Emissions*

Created for the
Town of Clarkstown

*Member of the New York State
Climate Smart Communities Program*

Prepared by Joshua D. Rotbert

Table of Contents

<i>Introduction</i>	1
<i>Current Projects and Initiatives Overview</i>	5
<i>Focus Areas and Goals</i>	17
<i>Directing Future Action</i>	22

I. Introduction

Given widespread scientific consensus that greenhouse gas (GHG) emissions are contributing to significant global climate change, the Town of Clarkstown is joining an increasing number of local governments in New York State who are committed to addressing GHG emissions at the local level. Clarkstown recognizes the risk that climate change poses to communities throughout the region. This plan represents a first step toward the development of projects and policies that will work to reduce overall GHG emissions in the Town.

This report represents Clarkstown's initial steps towards improving air quality, lowering energy costs, enhancing transportation and accessibility, and reducing the community's carbon footprint—steps, which not only produce immediate positive impacts within the local environment, but will also come to benefit town residents in tangible social and economic ways for years to come. While the Town of Clarkstown cannot address the global scale of climate change alone, the policies and practices outlined in this plan can help local government work to reduce its contribution of harmful GHG emissions that emerge from a range of sources within the community.

Benefits of Climate Action Planning

- *Local job creation and economic development through the support of local businesses*
- *Improved public health/reduced health disparities*
- *Improved air quality and quality of life*
- *Opportunities to showcase and leverage local research and innovation related to climate mitigation and adaptation*
- *Reduced utility and operational costs for homes, businesses, and government*
- *Improved risk management and resilience to the impacts of climate change*
- *Diversified energy supply, providing greater resiliency and reliability*
- *Healthier, more comfortable homes*
- *Improved water quality and ecosystems*
- *A more educated and empowered population with the tools to take action at home, at work, and in their community*
- *Opportunities for leadership and recognition*

Why a Climate Action Plan?

Many cities, in both the US and around the world, are experiencing firsthand that the implementation of climate mitigation strategies, such as improving building energy efficiency and developing public transit, have a positive impact on both local and regional communities.

A variety of studies have shown that climate action leads to economic opportunity. In fact, 91 percent of the 110 global cities tracked by the Carbon Disclosure Project and the C40 Cities Climate Leadership Group state that the development of tangible climate action has created economic opportunities. This kind of action makes these communities more attractive for businesses, largely in the sectors related to energy efficiency and the development of non-motorized transportation infrastructure.

The strategies and actions outlined in this document seek to reduce Clarkstown's dependence on nonrenewable fossil fuels, prioritize sustainable uses of land and water, reduce waste, and prioritize the development of alternative transportation solutions. If implemented, these actions will not only work to reduce the Town's overall GHG emissions, but also enhance its economic vitality, resilience, and viability as a healthy, livable community.

In contrast to these benefits, there are also significant costs associated with inaction. These include, but are not limited to, increased utility expenses, reduced air quality due to ongoing fossil fuel combustion, increased abnormal weather and climate events, the potential costs imposed by future carbon-use regulations, as well as the economic cost of a continued dependence to fossil fuel sources given the potential of future economic and climatic instabilities.

In addition to reducing the Town's contribution to climate change (i.e. mitigation) it is important to recognize how climate change will continue to impact our community and how we will adapt (i.e. adaptation). This Climate Action Plan identifies the preliminary steps that the Town has taken to adequately respond to the future impacts of climate change, including the integration of climate adaptation into planning and decision making.

Call for Local Climate Action

In pursuit of advancing the benefits of this Climate Action Plan for community stakeholders, this plan addresses the direct impacts of climate change on lives of local community members. First and most importantly, the effects of climate change will have an immediate impact on the health, safety, and economic prosperity of Town residents.

Even with robust municipal wastewater and drainage infrastructure, Town residents in low-lying areas near local surface water bodies are particularly vulnerable to flooding and other

storm related damage in light of an increase in the frequency and severity of extreme weather events attributed to climate change. These weather events also bring with them the possibility of prolonged periods of extreme high and low temperatures, which significantly tax local power grids and emergency services. These factors, combined with the risks posed by wind, ice, and other external forces on the physical buildings and infrastructure of the Town, make climate change and the extreme weather events that follow a significant source of concern for Clarkstown residents.

In addition to ensuring the health and safety of local communities, ensuring effective steps are taken to reduce GHG emissions will provide a wealth of benefits to town residents. Beyond the immediate improvements in air quality and benefits to the local ecosystems, the focus of the directives outlined within this plan work to increase economic vitality and enact positive change in the quality of life of local residents. This positive shift begins with increased efficiency in energy consuming products and the adoption of renewable energy sources that will produce measurable energy savings on the individual scale. With a reduction in overall energy consumption, and the switch to cheaper, renewable energy sources, Clarkstown residents will reap the financial benefits of lower utility costs, through a reduction in overall energy expenditure. These new renewable energy sources also form the basis for the development of an entirely new industry, one whose need for a strong and reliable workforce provides additional economic benefits to town residents.

In accordance with the New York State Climate Smart Communities program, the Town of Clarkstown recognizes the adverse impacts and risks that climate change poses to our community. By choosing to act now—aided by the initiatives and actions identified in this Climate Action Plan—Clarkstown is taking a proactive leadership role in promoting sustainable practices aimed not just at addressing climate change, but in providing tangible and lasting benefits to its residents.

To develop feasible reduction and mitigation programs and policies, this Climate Action Plan identifies key areas for action within local government operations, as well as local community activities. It analyzes the major sources of emissions from four major focus areas, and sets objectives and strategies that both the Town and the community can eventually work toward to achieve tangible progress in mitigation efforts. These focus areas include:

- **Built Environment:** Relates to the efficiency standards required of local buildings and facilities within the Town, as a significant amount of local emissions are associated with energy use within residential, commercial, and industrial structures
- **Transportation:** Relates to the fuel efficiency of vehicular traffic associated with the Town, as well as policies that enable transit oriented development, as the largest share of emissions in the town appears to be as a result of vehicular traffic

- **Power Supply:** Relates to the development and incentivization of renewable energy sources through various projects and programs, as current consumption patterns rely heavily on fossil fuel sources
- **Environmental Conservation:** Relates to ongoing land management practices that seek to preserve natural ecosystems, as the resiliency of local communities is directly related to the health of the local environment

These focus areas were inspired by current mitigation projects and initiatives that the Town is currently implementing. Subsequent sections of this plan further identify these projects, as well as identify where future planning and development work may take place.

II. Membership within Climate Change Initiatives

Clarkstown's participation in a number of key state, regional, and national initiatives demonstrates the Town's commitment to the ongoing development more sustainable and resilient communities. The collaboration and partnerships forged from these initiatives work to foster policies, programs, and legislation that works to directly address both the effects of—and contributions to—future negative climate impacts.

New York Rising Community Reconstruction (NYRCR) Plan Participation

To further develop climate resiliency and adaptation throughout its communities, the Town of Clarkstown currently participates in the New York Rising Community Reconstruction (NYRCR) Program. The NYRCR is an initiative funded by the New York State Department of State that aids in the development of resilient and sustainable communities. As part of this New York Rising Program, the consulting firm AKRF, Inc. worked with the Town to develop a Plan, which identifies areas which are most vulnerable to storm damage and identify funding to address these issues.

The strategies developed within the NYRCR Plan consider many of the emergency, disaster recovery, long-term resiliency, and economic development needs that either remain unmet or that can be further strengthened. Although not every strategy presented in the NYRCR Plan has a specific corresponding project, the strategies remain important guides to developing additional resiliency measures to help strengthen the future of the community. To support these goals, this plan outlines the following strategies:

- Develop initiatives and financial assistance programs to better protect residents, businesses, and commercial centers from future storm damage and to allow them to recover more quickly;
- Ensure access to and improve resiliency of critical health and social service facilities and safe havens during and after storm events;
- Improve regional coordination with neighboring communities and local and state agencies for watershed management to better mitigate flooding and plan for future disasters;
- Improve stormwater infrastructure and drainage systems using green infrastructure practices where possible and cost-effective;
- Preserve open spaces and restore natural resources to better support flood mitigation;
- Promote resilience and flood management best practices through land-use planning, policy, and regulation;

- Provide education, outreach and implementation assistance regarding pre-storm preparedness (including proper maintenance of waterbodies and stormwater runoff mitigation on private properties), storm protection procedures and post-storm recovery initiatives to protect from future flooding; and
- Restore and protect critical infrastructure and transportation assets.

New York State Climate Smart Communities (CSC)

Climate Smart Communities (CSC) is a New York State program that supports local governments in leading their communities to reduce greenhouse gas emissions, adapt to the effects of climate change, and thrive in a green economy. The benefits of participating include leadership recognition, free technical assistance, and access to grants. Local governments participate by signing a voluntary pledge and using the CSC framework to guide progress toward creating attractive, healthy, and equitable places to live, work, and play.

As a registered community, Clarkstown has made a commitment to act by passing the CSC pledge—a concrete step in developing more local climate action. With information about more than 100 climate mitigation and adaptation actions, the CSC program is a valuable resource to the Town of Clarkstown, in its efforts to address climate change.

ICLEI – Local Governments for Sustainability

The Town of Clarkstown, along with more than 1,200 local governments, including over 600 in the United States, has joined ICLEI – Local Governments for Sustainability. International Council for Local Environmental Initiatives (ICLEI) is an association for local governments to share knowledge and successful strategies toward increasing local sustainability. Its members represent forward-thinking local governments who are working to make their communities more livable, prosperous, equitable, and environmentally sound. ICLEI provides a framework and methodology for local governments to identify and reduce greenhouse gas emissions, organized along Five Milestones:

- Conduct an inventory and forecast of local greenhouse gas emissions;
- Establish a greenhouse gas emissions reduction target;
- Develop a climate action plan for achieving the emissions reduction target;
- Implement the climate action plan;
- and, Monitor and report on progress

Clarkstown’s membership in this program lays out an important framework to direct future action. The policy recommendations found here have the potential to enhance the Town’s ability to be environmentally cognizant, while maintaining a firm commitment to economic prosperity.

Clean Cities Coalition

Funded through the United States Department of Energy, the primary mission of this network is to encourage private and public sector businesses to transition transportation fleets into using alternative fuels and alternative fuel vehicles. Its goal is also to inform all citizens of the benefits associated with implementing policies, practices and the usage of technologies that reduce regional greenhouse gas emissions. As a signatory on the Empire Clean Cities Coalition, the Town of Clarkstown is dedicated to supporting greenhouse gas emission reduction through the application of innovative technology.

III. Current Projects and Initiatives Overview

In support of ongoing mitigation efforts, this section outlines a range of current projects and initiatives, which demonstrate a clear potential to increase resiliency and sustainability within the Town of Clarkstown. Each project or initiative has also informed the development of one or more of the climate action focus areas with significance to the Town.

Developing these actions has been an ongoing process within the Town of Clarkstown's overall planning process, as highlighted by the Town's membership and involvement in the various climate change initiatives previously outlined. Town Planners, along with representatives from other Town Departments, first attended an initial training workshop held by the consulting firm of Vanasse Hangen Brustlin, Inc. (VHB). VHB is funded by the New York State Department of Environmental Conservation to help communities attain their goals as Climate Smart Communities. Planners participated in a series of workshops with VHB and have begun to identify ways to enhance sustainability and resiliency, and reduce overall GHG emissions through ongoing programs and policies.

Built Environment

The following projects and initiatives concern the planning and regulation of physical spaces within the Town of Clarkstown. Each example works to make current and future land uses more sustainable, and further enhance the resiliency of both public and private facilities.

Transit Oriented Development

Recent zoning changes to key sites in and around transit infrastructure within the Town of Clarkstown, would see compact development projects near the Nanuet train station. Overall project vision would see the transformation of a tired, rundown 38-acre section of Nanuet that encircles the train station, into a multi-family residential hub with ground-level commerce and walkable streets.

In line with the success of other regional TOD developments, project plans include: a new multimodal transit station on the existing line; mixed-use retail, office and workforce residential units; multi-use pedestrian paths; and walkable, pedestrian-friendly storefronts. Improved walkability in the neighborhood will provide new workforce housing on the commuter rail system, encourage public transit use with both the commuters and regional shoppers, create jobs and strengthen the economic base of both the downtown and the Shops at Nanuet.

Other Zoning Initiatives

Several of Clarkstown's zoning districts offer incentives to developers willing to build in a more sustainable fashion or mitigate impacts beyond minimum requirements. The Neighborhood Shopping, Commercial Office and Commercial Office Support zoning districts allow for an increase in buildable square footage if the developer agrees to mitigate stormwater runoff to an extent greater than currently required. The Neighborhood Shopping district also offers a development bonus to projects which obtain LEED certification. Similarly, the Transit Oriented Development and Hamlet Commercial zoning districts recently adopted within the Nanuet Hamlet Center offer additional bonus residential unit capacity for LEED Certified developments. These measures work to support and attract new developments in the town by providing a means by which developers can increase business potential through valuable environmental incentives. The passive economic benefits of LEED certification are also felt by local developers, who will see a significant increase in energy efficiency, leading to a reduction in energy costs over the long-term.

Transportation

Projects and initiatives in this sector concern the planning and regulation of transportation infrastructure within the Town of Clarkstown. These projects have the potential to make current and future life more sustainable, by providing realistic transportation alternatives and development patterns to local residents.

Complete Streets Initiatives

A successful Complete Streets project involves the redevelopment of public space to better suit the needs of all forms of transportation and use cases. The development of the current Complete Streets initiative within the Town of Clarkstown, has emerged out of the 2010 Traffic Calming Program, which sought to redevelop streetscapes to be more bicycle and pedestrian friendly. Both programs utilize a set of established tools, to aid in the renewed design, engineering, and construction of public infrastructure that is simultaneously more resilient and sustainable. The following list sets forth a variety of the tools used to accomplish this:

- **Speed reduction/diversion of through-traffic:** travel lane narrowing, speed humps, turning traffic or through traffic prohibitions, pavement markings, curb extensions/neckdowns, curb installations, driver speed feedback sign, chicanes, roundabouts, neighborhood traffic circles, and the strategic use of trees/vegetation.
- **Walkability improvements:** sidewalks, curb ramps, crosswalks, shared use paths, side paths, and/or walkable shoulders. These are based on existing/projected future use and connections, and take into account user age and mobility requirements.

- **Bicycle improvements:** bike-able shoulders, shared lane markings/sharrows, shared use paths/side paths, or bike lanes.
- **Safety improvements:** curve warning improvements, road diets, turning lanes, striped shoulders, turn prohibitions to reduce vehicular or pedestrian conflicts, high crash location mitigation, etc. May be used in conjunction with walkability, bike improvement, and speed reduction tools such as intersection conversions to roundabouts.
- **Improved access to transit:** on-street bike racks, benches, shelters, way finding/signage.

Power Supply

The following projects and initiatives concern the supply and delivery of power to Town residents, businesses, and industry. Each example works increase energy diversity, using more efficient and reliable sources, through innovative delivery mechanisms.

Community Choice Aggregation (CCA)

Community Choice Aggregation (CCA) enables municipalities to join together to aggregate the buying power of residents, giving them more options in how they purchase electricity. By pooling local demand, municipalities can negotiate more favorable terms, designate preferred generation sources, and select a more preferable default energy service company for the community. This new service can often empower local municipalities to select 100% renewable electricity for their residents and small businesses, at a fixed and often lower price than they've historically paid for the same power.

Currently the Town of Clarkstown, along with other towns in the county participate in a CCA program, known as "Rockland Community Power." This program, and others like it, seek to launch and implement CCA programs in order to secure clean, less expensive electricity for residents and small businesses across NY State.

Solar Permitting Law

The adoption of this legislation aims to promote the accommodation of solar energy systems and equipment throughout the Town of Clarkstown. It assigns a variety of regulations to the development of these systems, to ensure their smooth and efficient operation within the Town. This legislation also specifies a variety of design and engineering guidelines, to both support the development of future projects, while minimizing the potential negative impacts of these projects.

Solar energy is an essential renewable energy resource, whose consumption can offset GHG emissions. Most importantly, energy generated from solar energy systems has the potential to be sold back into the grid, providing its users with an added fiscal benefit. The use of solar

energy generation equipment for the purpose of providing electricity and energy for heating and/or cooling is a priority within the Town's current and long-term sustainability goals.

Landfill Solar Field Project

The Landfill Solar Field project features a 2.3-megawatt system, which consists of roughly 4,300 solar panels on a 13-acre portion of a former landfill site. It was also the first megawatt-scale municipal Photovoltaic (PV) Array system to be constructed in New York State. As of 2017, it generates approximately 3 million-kilowatt hours annually, which is enough power to supply about 200 homes, and covers about one-third of the current electric needs for the Town of Clarkstown.

The solar project is a public/private partnership with OnForce Solar, who invested \$6 million to install, operate, and maintain the solar installation pursuant to a 20-year Power Purchase Agreement. In addition, OnForce Solar received a multi-million-dollar grant from NYSERDA through Governor Cuomo's NY-Sun initiative. Continuing current success, this particular solar array is expected to save local taxpayers as much as \$4 million over the next 30 years by

Figure 1 – Site Photo of the Onforce Solar Array in West Nyack

producing electricity to be sold back to the utility grid.

The Town had the assistance of the following agencies for this project: H2M Architects & Engineers, the Rockland County Solid Waste Management Authority, the New York State Energy Research and Development Authority (NYSERDA), the New York State Department of Environmental Conservation (NYSDEC), Orange and Rockland Utilities, Rockland County Trade Unions, and the New York Power Authority (NYPA).

Sourced from renewable solar energy, this project will continue to offset GHG emissions and reduce the Town's carbon footprint by eliminating dependence on fossil fuel utility sources, and continue to keep energy costs down for local residents.

Germonds Park Parking Lot Solar Canopies

One of the main public recreation facilities within the Town of Clarkstown, Germonds Park is home to a range of amenities. To accommodate the influx of visitors from throughout the region, this park is equipped with expansive parking lots. The Town is seeking grant funding for the construction of solar canopies within the Germonds Park parking lot to fully utilize an otherwise single-use open area.

These canopies will not only provide much needed shade for cars parked there during the day, but work to enhance renewable energy resources by providing additional solar energy generation capabilities to support the Town's growing energy needs. Funding for this project is being sought through NYSERDA's Net Zero Energy for Economic Development Program, which awards funds for the development of energy resources that put local communities on the path toward Net Zero GHG emissions.

Figure 2 – Design visualization of the Germonds Park parking lot depicting five rows of parking lot solar canopies in the initial construction phase

LED Street Light Program

The Town of Clarkstown has completed a \$2.9 million project to retrofit the bulk of active high-pressure sodium streetlights with energy-efficient light-emitting diodes, or LEDs. Cost savings from the eco-friendly project are expected to reach over \$10 million throughout the next decade, by reducing energy consumption through a substantial increase in efficiency and active lifetime expectancy. The implementation of this new energy-efficient streetlight system will reduce the town's energy bill by an estimated \$500,000 annually. In addition to enormous cost-savings, this project will work to reduce the Town's overall greenhouse gas emissions by nearly 1,000 metric tons of CO₂ equivalent (MTCO₂e) per year.

Figure 3 – Utility worker retrofitting existing streetlamps with next-generation LEDs

Electric Vehicle Charging Stations

With growing evidence that electric vehicles—powered by renewable energy sources—can substantially reduce GHG emissions, many communities are developing the infrastructure to support this change. The Town of Clarkstown has recently followed suit, by installing electric charging stations at Town Hall. Also, stations have been installed at the Palisades Center Mall and the Shops at Nanuet. These charging stations not only provide a benefit to electric vehicle owners, but provide a boost to local businesses. The average time required to fully charge an electric vehicle is around 30 minutes, and with these chargers located strategically near a key shopping and business center, those looking to recharge their car also have the opportunity to patronize local shops.

Figure 4 – EVgo electric vehicle recharging stations located near the Shops at Nanuet, along the I-95 corridor

Municipal Energy Audit

The Town of Clarkstown has made the overhaul of municipal energy expenditures a priority, from the purchase of updated energy efficient office equipment and appliances, to the acquisition of hybrid-electric and high-efficiency fleet vehicles. Actively monitoring energy usage in all Town facilities, municipal holdings have undergone a comprehensive energy audit in an effort to decrease waste and increase the efficiency of Town buildings and equipment. As a result of these studies, many municipal buildings and equipment have been retrofitted with a variety of new energy-saving technologies. In addition, there has been a concerted effort to purchase materials and products for future public infrastructure projects based on their energy efficiency and cost reduction potential.

Environmental Conservation

Open Space Acquisition

The Town of Clarkstown has adopted a set of Open Space Guidelines, that guide the acquisition of property aimed at protecting environmentally sensitive resources, farms, historic and cultural places, rivers and streams and watersheds. As of 2021, over 220 acres [11] have been protected, with additional open space land and resources throughout the Town continuing to be proposed and evaluated for acquisition into Clarkstown’s existing parks, recreation, and open space system.

These acquisitions are mainly intended to increase recreational spaces, protect valuable natural resources, maintain the semi-rural character of the Town, and to maintain and improve

a higher quality of life for local communities. This program also has the potential to offset some of the Town's GHG emissions. Large natural areas act as carbon sinks, absorbing atmospheric GHG and storing it in organic material. As a Town committed to reducing its impact on global climate change, maintaining a substantial and healthy stock of protected natural areas is essential. In addition to its effect on GHG emissions, Open Space areas are most often covered in pervious surfaces. This has the added benefit of making the Town more resilient to flooding and other extreme precipitation events, as an increase in pervious surfaces will enable excess water to be absorbed safely.

Tree Preservation

In line with efforts to maintain healthy Open Spaces, a 2006 Local Law was enacted to prevent the clear-cutting and indiscriminate removal of trees within the Town. The clear-cutting of trees contributes to flooding problems and other negative environmental impacts, from erosion, to noise and light pollution, to air quality. Trees also work to offset existing GHG emissions, and their removal constitutes an overall increase in harmful GHG emissions town-wide. The law provides for the replanting of trees identical or similar in type to the ones cut, and requires a permit to remove more than five at a time.

The Town of Clarkstown has a vital interest in the planting and preservation of trees within its territorial boundaries. Trees stabilize the soil on slopes, thereby preventing erosion, siltation and flooding—all significant concerns to local property owners. They also control water pollution, purify the air by generating oxygen, mitigate noise disruption and reduce residential energy consumption by providing shade. In performing these functions, trees not only work to offset some of the town's GHG emissions, but also contribute to an overall increase in property values.

The destruction and removal of trees also have substantial municipal costs beyond the direct costs of removal. The wanton removal of trees directly affects drainage control remediation efforts, impairs the value of all property, and has a deleterious effect on the health and general welfare of the citizens of Clarkstown. This law establishes standards for the protection of these valuable natural resources and provides a workable method of determining under what circumstances a tree may reasonably be removed.

Toward this end, the Town Board of the Town of Clarkstown has implemented these tree regulations for the following purposes:

- To preserve the semirural appearance of the Town by encouraging owners of existing homes, vacant lands and commercial parcels to save or replace mature tree species when developing;

- To control and regulate the indiscriminate removal, cutting and destruction of trees in order to regulate and prevent soil erosion, surface runoff and aesthetic blight;
- To preserve existing woodlands and maintain tree buffers;
- To promote air pollution mitigation;
- To preserve wildlife habitat and ecosystem protection;
- To serve as noise buffers, climate moderation, and foster energy conservation;
- And to safeguard the ability of woodlands and forests to offset some of the town's GHG emissions.

IV. Focus Areas and Goals

This section of the report provides information about how our community can potentially engage with additional climate-conscious policies and programs. The array of projects currently being implemented by the Town of Clarkstown have informed the development of many of the recommendations found below.

The goals and targets contained within this plan are based on common-sense approaches to emissions reductions. In response to the success of current Town projects and initiatives, and in an effort to address growing concerns regarding the detrimental effects of climate change, this Climate Action Plan (CAP) specifies action on four focus areas: *built environment; transportation; power delivery; and environmental conservation*. In addition to these focus areas, the CAP recommends the pursuit of ongoing outreach and education efforts that can help build awareness and increase community participation in the potential outcomes and goals of this plan.

Climate Action Plan Initial Framework and Goals

In developing this CAP, the Town of Clarkstown also referred to the New York State Climate Smart Communities (CSC) Climate Action Plan Template, along with the CSC Climate Action Planning Guide. Both documents were developed through the CSC Regional Coordinator Pilot Program, meant to assist local governments in developing strategic plans for reducing GHG emissions.

Using data from various sources, which include the New York State Energy Research and Development Authority's (NYSERDA) Cleaner Greener Communities Regional Level GHG Reporting Template, specific focus areas were identified to help coordinate action across four key governance sectors.

- **Built Environment**
- **Transportation**
- **Power Supply**
- **Environmental Conservation**

These four focus areas set out a framework for future documenting and coordinating efforts. This will potentially include work that can estimate the implementation timeframe, costs, and impacts of particular projects, as well as identify the potential leaders and partners associated with each solution.

Community GHG Inventory Assessment & Reduction Targets

This preliminary Climate Action Plan is a critical component of a comprehensive approach to reducing the Town of Clarkstown's total GHG emissions. The development of future GHG reduction targets is tied to specific projects and actions identified through future documenting and coordinating efforts within the four focus areas. Specific reduction targets and their associated timelines can only be developed after consideration of the Town's energy needs is completed in conjunction with an ongoing dialogue with relevant stakeholders and partners. It also requires that current emissions are measured and quantified, to both outline areas for improvement, but also to measure the success of future reduction actions.

Outlining the path towards developing GHG reduction goals are a variety of preliminary actions that can be undertaken by the Town:

- An inventory of existing GHG emissions produced within the community
- Potential GHG reduction targets and timeframes developed with relevant stakeholders through means such as consensus building and cost/benefit analysis
- Sourcing/developing project proposals that seek to reduce, or mitigate, GHG emissions
- Local plans and policies that work to improve the strength and resiliency of local infrastructure, roads, power systems, and social services for vulnerable communities

Conducting a comprehensive community GHG inventory is the first, and most important component of this process. It identifies the specific sources of emissions from community activities and establishes a baseline from which future emissions reductions and progress can be measured. New York State conducted regional greenhouse gas (GHG) emissions inventories in 2010 to determine a baseline for future reduction efforts statewide. The GHG emissions for Rockland County were sourced from this regional GHG inventory, the data for which is listed in **Figure 2**.

FIGURE 2	
ROCKLAND COUNTY GHG EMISSIONS BY SECTOR - 2010	
GHG Emissions Sectors	Metric Tons of CO₂ Equivalent (MTCO₂e)
Transportation	1,383,329
Residential	760,408
Commercial	535,781
Industrial	441,962
Energy Supply	168,068
Solid Waste	127,214

Figure 3 shows the breakdown of GHG emissions by sector, and highlights the major sources of emissions within Rockland County. The built environment (combined totals from the residential, commercial and industrial sectors) is the County's largest source of GHG emissions, comprising approximately 51% of total 2010 community emissions. The GHG emissions in this category come from fossil fuels used in heating, cooling, and in powering lighting, appliances, and machinery. Improving the efficiency of buildings, and the electricity consuming products within them will significantly reduce their impact.

Transportation is another significant category, and accounts for 40% of GHG emissions in the County. Improving vehicle efficiency and reducing vehicle use through public transit, walking and cycling will also reduce transportation-related emissions. Although emissions directly related to solid waste appear low (4%), this number does not take into account the GHG emission impact of manufacturing and transporting the non-biodegradable materials that end up in our solid waste stream.

Source: New York State Energy Research and Development Authority (NYSERDA)

Climate Action Plan Focus Areas

In order to work toward developing GHG reduction goals, this Climate Action Plan identifies the most important GHG emissions sources as resulting from local government operations, industrial activity, as well as individual and community-wide activities within the Town of Clarkstown. Categorizing these sources within a specific set of focus areas, begins to outline a range of potential objectives and strategies that local government officials and community members can implement together to achieve measurable greenhouse gas reductions. To better ensure the success of this effort, a diverse range of sources have been targeted for improvement, based on their feasibility, cost, and reduction potential. While the policy options and strategies outlined have been chosen to reduce GHG emissions in Clarkstown, they also have the potential to provide tangible benefits to local residents.

Built Environment

Policy proposals in this area work to reduce GHG emissions from existing buildings, and ensure that new buildings meet the highest performance standards. The focus of these proposals is on advancements in the efficiency of lighting, HVAC, insulation, and other power consumption categories. These technological improvements play a central role in helping Clarkstown reach its GHG Emissions reduction targets. Although the initial cost of switching to more efficient appliances and fixtures is borne by local residents themselves, a return on this initial investment is recouped over time due to measurable reductions in energy cost and overall consumption. In addition, these newer technologies can be more durable, therefore saving valuable maintenance costs over the long term.

Transportation

The main policy goals in this sector seek to reduce the intensity of fuel consumption, improve vehicular efficiency, and reduce total GHG emissions from all vehicular traffic associated with the Town of Clarkstown. Policy options include promoting the purchase and use of vehicles with improved efficiency standards, capital investment in more efficient public transportation vehicles, and more efficient routing. In particular, electrification of transportation solutions in this sector holds great promise in both reducing GHG emissions, and reducing the petroleum dependency. Additional investments in public transit, commuter rail, and Transit Oriented Development plans appear to offer additional opportunities to reduce GHG emissions, while providing very significant co-benefits to local residents.

Power Delivery

Initiatives in this sector work to introduce zero- or low-carbon sources of power, such as renewable energy, while maintaining the current reliability standards of the electric grid. Policy

options include those that facilitate the decentralization of energy production through renewable energy technologies that utilize solar or wind energy. These policies, combined with capital investments in the improvement and maintenance of the current energy infrastructure (e.g. transmission and distribution network upgrading, energy storage and distribution) have the potential to further reduce GHG emissions. The most important current development with the Town of Clarkstown is associated with community choice aggregation—a program which gives a large number of consumers the choice of where to source their power. Introducing additional options for consumers to access renewable energy has the potential to shift overall power usage patterns in the town over the long term.

Environmental Conservation

The main objective of initiatives in this area work to improve land management in order to maximize the carbon uptake of trees, plants, and other vegetation. This sector is unique in that the passive preservation and improvement of natural carbon sinks work to offset the harmful effects of other GHG emission sources. In addition to their ability to offset GHG emissions, the preservation of a thriving natural ecosystem will also work to mitigate some of the harmful physical effects of a changing climate.

Reduction Feasibility

While further analysis is needed to determine exactly how much each of these sectors can contribute to overall reduction figures within each focus area category, it is clear that no single policy or focus area proposal can deliver on substantial emission reduction targets alone. A combination of policies and plans must be developed to ensure meaningful reduction across all categories. A diverse portfolio of policies will do much to reduce emissions from many different GHG sources throughout our economy at a far greater rate than one single area alone.

While continued improvements in energy efficiency technologies will not entirely mitigate the issue of GHG emissions, they do make appreciable progress towards achieving reasonable GHG reduction goals and moving towards eliminating current dependence on finite fossil-fuel resources. The Town of Clarkstown will need to continue to advance low-carbon energy supply-side policies and infrastructure investments, particularly focusing on policies that provide significant co-benefits to local residents in the form of economic development, job creation, quality of life amenities, and improved environmental conditions.

V. Directing Future Action

As a single municipality attempting to address a global problem, maximizing the more tangible and economic oriented benefits associated with GHG mitigation policies will be necessary to maintain public support for GHG reduction investments. Creating the clean energy economy requires clear public policies, significant public and private investment, and a comprehensive outline to guide future action.

To develop and achieve future GHG reduction goals, and reap the benefits from those changes, the Town of Clarkstown is now committed to a variety of future actions. Preliminary steps include the formation of committees and task forces to address key sustainability and resiliency topics, as well as political mobilization to further the enactment of these objectives.

This plan forms the basis for several new, forward-thinking planning and development goals currently being set out in the Town's most recent Comprehensive Plan update (2021). These include topics that address the four major sustainability and resiliency sectors previously outlined in this plan.

The first major area where future action will occur is in relation to the Town's built environment. Enacting cogent programs and policies, which regulate the efficiency standards of buildings and other facilities throughout the Town, is a major next step toward effective action. Developing policies that directly address GHG emissions from current Transportation modes in use throughout the Town is another key step. This includes the expansion of electric vehicle infrastructure, as well as changes to land use that would enable Transit Oriented Development to flourish. The energy needs of Town residents, businesses, and industries can also be met by the continued development and incentivization of renewable energy sources. Finally, ongoing land management efforts that seek to preserve natural ecosystems are a priority for the Town. Not only do these practices work to improve the quality of life for local residents—they can also have a significant impact in the Town's overall carbon footprint.

While the Town of Clarkstown has made definitive strides in addressing its contributions to climate change—the success of future projects and policies require that local government continue to work in partnership with other local municipalities to design regional solutions, and pursue other active and financially supportive partners in helping achieve common goals.

Covid-19 and NYC Metro Region Residential Sales Trends

A brief look at the geography and temporal patterns of home-buying in NYC and the surrounding metropolitan region prior to and during the pandemic.

Press coverage of 2020 NYC Metro real estate trends has been confusing and at times contradictory.

CONTEXT

Since March 2020, there has been considerable, sometimes conflicting, press coverage of the NYC metropolitan region ("NYC Metro") residential real estate market's performance in response to Covid-19, and reported NYC resident relocation to the surrounding suburbs.

Much of the coverage to date has relied upon a mix of qualitative information and observations obtained through interviews with real estate brokers, home buyers, moving companies and other industry stakeholders, as well as quantitative samples that describe activity in select NYC Metro markets and/or for select housing typologies.

To assess Covid-19's broader impact on the NYC Metro housing market, the NYC Department of City Planning ("DCP") analyzed geospatial and temporal patterns of home listings and sales data, prepared and provided by Zillow Group, Inc. ("Zillow"), to examine residential trends throughout the NYC Metro prior to and since the pandemic.

***New Yorkers Are Fleeing to the Suburbs:
'The Demand Is Insane'***

Yes, the suburbs are booming, but NY is not dead, real estate professionals insist

The Housing Market Around New York City Is Booming

Reports of NYC's real estate market crash have been greatly exaggerated

Home sales in the New York suburbs are past their pandemic peak

Real Estate
The Suburban Real Estate Boom Is Only Continuing

Shifts in urban and suburban real estate markets are happening nationally.

CONTEXT

Reports of city residents relocating to their suburbs in response to Covid-19 are not unique to NYC. In February 2021, Zillow released its [2020 Urban/Suburban Report](#), a housing market analysis exploring the pandemic's impact on real estate markets in cities and their suburbs. The report found that urban and suburban housing markets were generally performing in alignment through the end of 2020, but for a few select urban markets that were adversely impacted, including New York City and San Francisco.

Using Zillow's data, DCP performed a comparable analysis of residential inventory and sales trends by NYC Metro subregion in 2019 and 2020. For detailed definitions of the geographies and metrics covered in this report, please refer to the Appendix.

It is important to note that **this report does not capture rental activity or the effects of temporary relocations.** It provides a snapshot of the effects of Covid-19 on the NYC Metro's for-sale housing market and is **representative solely of the inventory posted on Zillow.** It therefore does not represent all housing inventory available for sale or reflect the overall distribution of housing in the NYC Metro.

2020 Urban/Suburban Market Report

NYC Metro Subregions

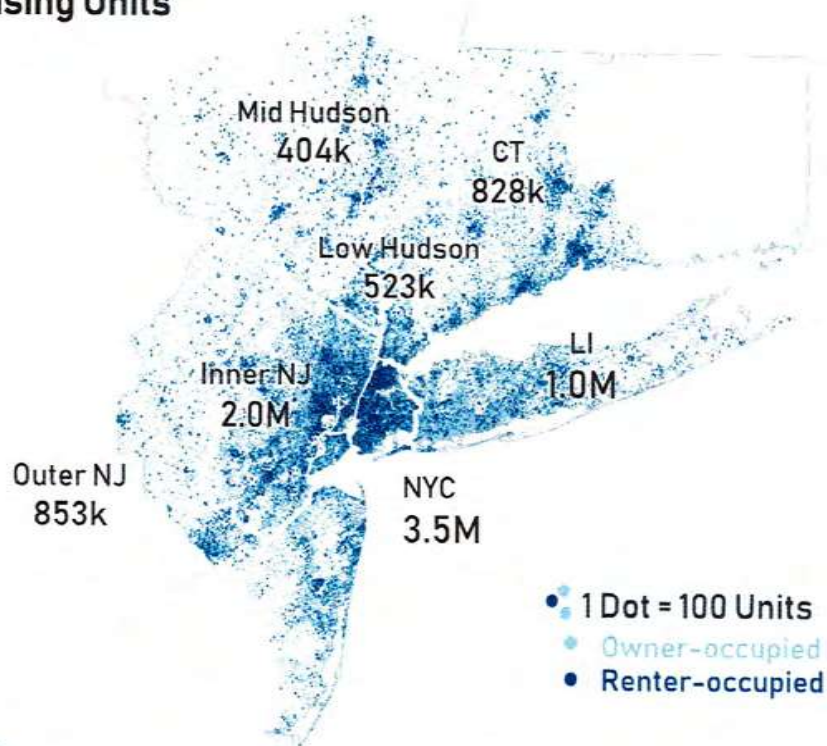

The NYC Metro represents the five NYC boroughs and surrounding 26 counties in New York, New Jersey, and Connecticut

Residential sales data capture a portion of market activity and are more representative of suburban locations.

CONTEXT

There is considerable variation within NYC Metro housing markets, and sales represent differing shares of each subregion's overall housing stock. In NYC, just one-third of homes are owner-occupied, whereas on Long Island 80% of the homes are owner-occupied. Therefore, home sales are more broadly representative of residential real estate activity on Long Island than in NYC. Furthermore, owner-occupied housing represents a variety of home typologies, including single-family homes, condominiums and co-operatives in multifamily buildings that can range from below-market rate to luxury. This diversity of housing stock can be found in areas throughout the NYC Metro.

Housing Units

An interconnected regional housing ecosystem ensures the vitality of both NYC and its surrounding suburbs.

CONTEXT

The availability of homes at different prices, types, and tenures (i.e., rent and own) is important for accommodating a range of NYC Metro residents' housing preferences, promoting the affordability of the region's housing stock, and supporting the NYC Metro's overall economic competitiveness by attracting and maintaining a diverse workforce. Despite the temporary effects of Covid-19, such as wide-scale remote work and office closures, NYC remains the region's economic engine and still holds the greatest concentration of NYC Metro jobs. NYC relies on a housing market that extends well beyond its physical boundaries as a city, sharing a dynamic exchange of residents with its suburbs who come to NYC to pursue access to economic opportunity and to use cultural and natural assets, as well as institutional and other services.

Key Insights: Residential sales trends in NYC and the NYC Metro suburbs since Covid-19

In 2020, more supply and softer demand has led to an unusual (and potentially temporary) reprieve in pressure on NYC's for-sale housing market.

NYC's housing market was under pressure for years prior to Covid-19, in part due to the city's disproportionate role in accommodating the NYC Metro's workforce growth*. While this recent slack offers a reprieve from pre-existing strain, it is important to note that sales represent a smaller portion of the city's diverse housing stock and its ability to house a dynamic population. It is also difficult to ascertain the lasting effects of this temporary disruption, particularly as central business districts remain closed or under-occupied.

Conversely, Covid-19 has exacerbated pressure on the housing market in the surrounding suburbs, further threatening the affordability of the NYC Metro region.

In the decade leading up to Covid-19, the NYC Metro suburbs were building less housing, especially in Connecticut, the Hudson Valley, and Long Island, and accommodating less of the NYC Metro's overall population, economic, and housing growth*. With less new construction, and now a decreasing supply of available housing for purchase, the NYC Metro suburbs are less well equipped to accommodate increases in demand that are in turn exacerbating regional housing pressures.

*DCP, [The Geography of Jobs Second Edition](#), 2019

In 2020, inventory was down nation-wide while prices were up. Total sales, however, were down in the NYC Metro, but not in the U.S. overall.

As documented in Zillow's [recent study of U.S. residential sales trends in 2020](#), U.S. inventory, or the number of homes available for purchase on Zillow, was significantly down throughout 2020 and even more so by the end of the year. Inventory was also down in the NYC Metro, but less than the U.S. overall. Median list prices were up in the NYC Metro, consistent with national trends, but total closed sales in 2020 were down. Zillow reported no significant shift in cumulative sales in 2020 versus 2019, despite accelerating sales by the year's end. This suggests that Covid-19 disproportionately negatively impacted sales activity in the NYC Metro as compared to the U.S. overall.

*Both years represent January through November, the most recently available data for home sales in 2020. Zillow estimates no significant shift in cumulative sales at the national level, however, precise numeric estimates were not available for the U.S. in total.

Source: Zillow, 2021; "How a Faster market Enabled More Home Sales in 2020, Despite Falling Inventory" <https://www.zillow.com/research/market-speed-sales-inventory-2020-28762/>

There were fewer homes available to buy in the NYC Metro throughout 2020, versus 2019.

According to Zillow, there was less inventory available, as represented by the number of homes listed for sale*, in the NYC Metro in each month of 2020 than in comparable months of 2019. NYC Metro inventory was lowest in June 2020, following roughly two months of State-issued restrictions on non-essential business activity. Inventory rebounded somewhat, as the gap between 2019 and 2020 lessened through the fall and winter, but inventory remained consistently below 2019 levels.

NYC Metro Inventory (For-sale Listings, thousands) by Month, 2019 vs. 2020

While NYC's inventory increased moderately since 2019, the more significant trend over the past two years was decreasing inventory in the surrounding suburbs.

There was a slight uptick in NYC's for-sale inventory leading up to and since the pandemic, with the city's inventory peaking in November 2020. However, the more observable patterns were the shifts in the for-sale inventory in the rest of the NYC Metro. The rest of the NYC Metro experienced more dramatic seasonal fluctuations in 2019 and less inventory overall when compared to pre-Covid-19 levels. December 2020 inventory was the lowest for the NYC Metro of any month in 2019 or 2020.

NYC Metro Inventory (For-sale Listings, thousands) in NYC vs. Rest of Metro, January 2019 to December 2020

NYC had 7% more homes available for purchase, while there were 19% fewer homes available for purchase in the rest of the NYC Metro.

To adjust for seasonal fluctuations and monthly shifts, annual average inventory* illustrates how many homes were available for purchase on average during a given year. There was less inventory, or fewer homes listed for sale on Zillow, on average in 2020 than in 2019 everywhere but NYC. While inventory was down everywhere, by as much as 25% in Outer New Jersey, the Hudson Valley subregions experienced a slightly less drastic decline in inventory than other NYC Metro suburbs.

**Inventory (Listings, thousands) by NYC Metro Subregion
2020 Annual Average**

**Change in Inventory (Listings, thousands) and
Percent Change in Inventory, 2019 Avg. – 2020 Avg.**

Covid-19 exacerbated the trend of lessening inventory in areas outside of NYC, which experienced the opposite effect.

In months prior to the pandemic, inventory in most of the NYC Metro fell marginally below inventory levels in the prior year. Government-ordered business restrictions caused inventory to drop across the NYC Metro in the spring. As activity resumed in June, inventory grew in non-NYC subregions, when compared to their June lows, but still fell below pre-Covid-19 levels by the end of 2020. NYC had more homes listed for purchase in the months leading up to Covid-19, notably after the city's housing completions peaked following mid-decade gains in new construction*. Following spring declines, NYC inventory levels were even higher by December, but seemingly leveled off.

Year-on-Year Percent Change in Inventory, October 2019 to December 2020

There were fewer homes sold in 2020 throughout the NYC Metro, but NYC experienced the most significant decline in total sales.

Cumulative home sales, or the total number of homes sold in January through November* (the latest available data), were lower in 2020 than in 2019 for the NYC Metro overall. Southwest Connecticut is the only subregion where sales were higher, with more than 4,600 additional homes sold in 2020, an increase of 18%. Meanwhile, cumulative sales were down everywhere else in the NYC Metro in 2020, ranging from as much as 24% down in NYC** to 2% down in the Outer New Jersey and Mid Hudson Valley subregions.

Cumulative Home Sales, January through November (thousands)

	2019	2020	Net Change	% Change
NYC	45.2	34.3	-10.9	-24%
Long Island	38.0	34.2	-3.8	-10%
Low Hudson	14.5	13.3	-1.2	-8%
Mid Hudson	14.1	13.8	-0.3	-2%
Inner NJ	64.4	61.7	-2.7	-4%
Outer NJ	42.2	41.5	-0.7	-2%
CT	26.1	30.7	+4.6	+18%
NYC Metro	244.5	229.5	-15.0	-6%

*Home sales represent the most recent data available (i.e., through November 2020) due to lags in sales reporting.

**According to Zillow, NYC sales transactions are typically longer than suburban counterparts and the national average. Therefore, declines may be due in part to extended lag.

Source: Zillow, 2021

Sales activity accelerated after economies reopened in the summer. By the year's end, sales were up everywhere over the previous year, except in NYC.

In the six months prior to Covid-19, monthly home sales first fell slightly below and then slightly above monthly home sales in the previous years (i.e., versus late 2018 and early 2019). This pattern was generally consistent across NYC Metro subregions. Pandemic-induced restrictions on real estate activity heavily affected sales region-wide in the spring and early summer. Sales increased as activity resumed in mid-June, most significantly in southwest Connecticut—the only subregion with more cumulative home sales in 2020. Outside of NYC, where sales remained down, home sales accelerated through the fall, but not enough in total to compensate for spring and summer declines.

Year-on-Year Percent Change in Home Sales, October 2019 to November 2020

Median list prices vary by location. Counties located furthest from the center of the NYC Metro commanded lower prices, upholding the premium on access to the core.

While median list prices represent the composition of inventory for sale in a given month (rather than general home values) and can vary throughout the year, the more significant variation is the observable difference across NYC Metro counties and subregions. As of December 2020, Manhattan inventory commanded the highest median list price, representing the dominance of luxury homes at the NYC Metro's center, and most urbanized area. Meanwhile counties further from the core*—be they rural like Sullivan County, NY and Sussex County, NJ, or suburban like New Haven County, CT—commanded lower median list prices.

Prior to Covid-19, NYC Metro prices were up over the previous year, or stable. Since the summer, list prices have increased in most parts of the NYC Metro.

By observing a weighted median list price* for each NYC Metro subregion, a few general patterns emerge. In the six months prior to Covid-19, prices were either higher or somewhat unchanged (e.g., NYC, Lower Hudson Valley, Connecticut) as compared to the previous year. During the spring, prices either dipped or remained unchanged — though consistently higher than 2019 prices. Since the summer, price growth accelerated but leveled off by December in most parts of the NYC Metro. Unlike other subregions, NYC and Lower Hudson Valley prices increased since the summer but remained slightly below 2019 through the end of the year.

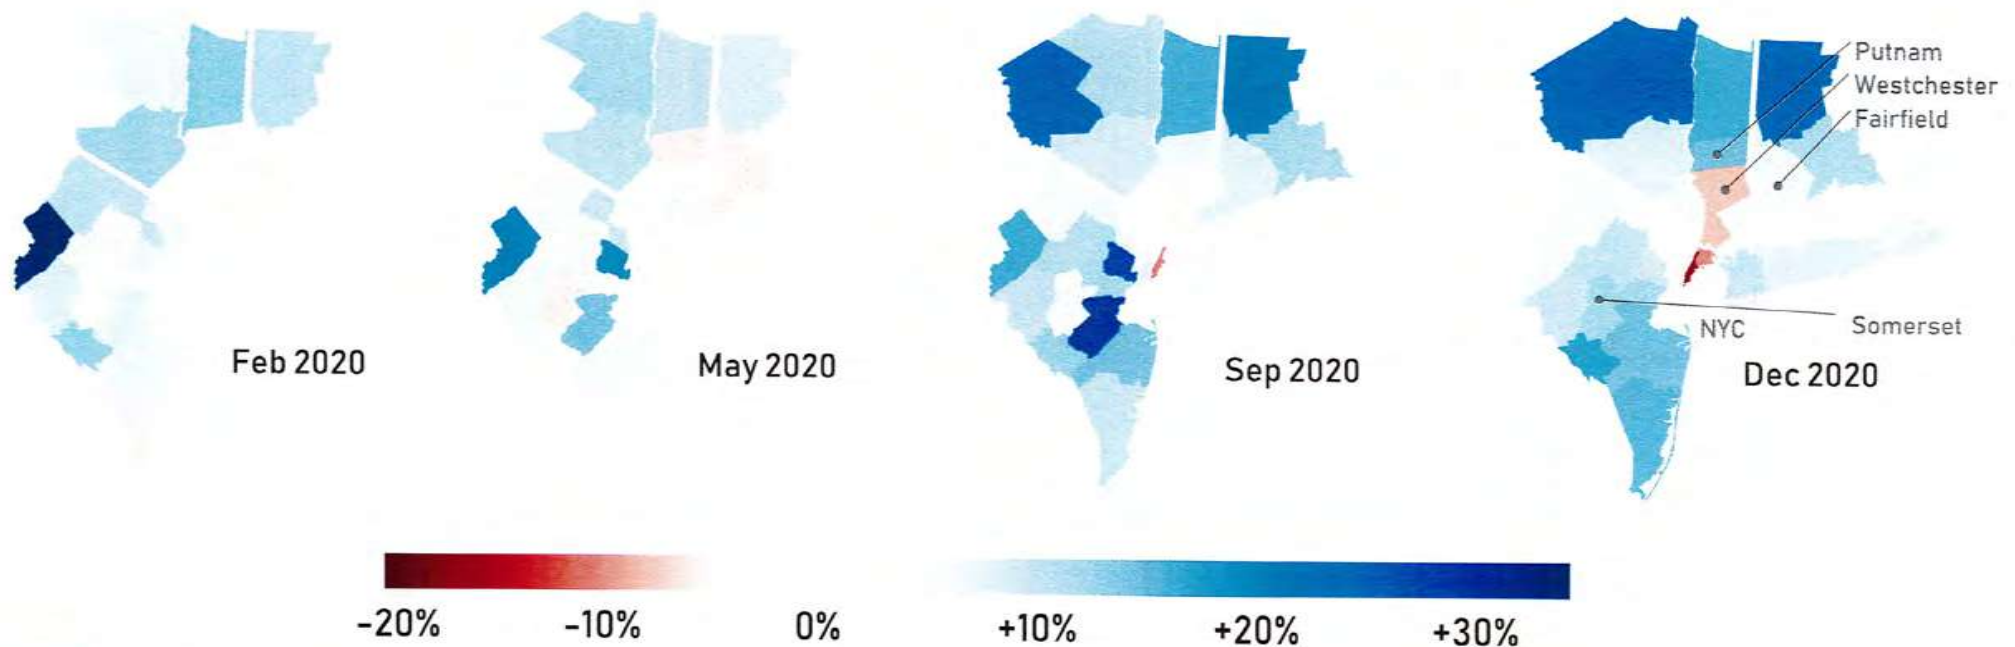

Year-on-Year Percent Change in Median List Price, October 2019 to December 2020

Some counties reversed their pre-pandemic price trends, from up to down or down to up over the previous year. In other counties, price growth simply accelerated.

There are three key trends distinguishing county-level behavior. First, NYC boroughs and Westchester County, NY switched from commanding higher median list prices year-on-year pre-Covid-19 (February 2020) to increasingly lower median list prices year-on-year since Covid-19. Second, counties like Putnam, NY, Fairfield, CT, and Somerset, NJ experienced the opposite shift, where prices were down year-on-year pre-Covid-19 and then up year-on-year after activity resumed in the summer. And lastly, other counties experienced higher prices (especially in rural New York and Connecticut counties) as the year progressed.

Year-on-Year Percent Change in Median List Price, Select Months by NYC Metro County

The confluence of depressed inventory with increasing demand and higher prices suggests a troubling direction for NYC Metro housing availability and affordability.

As documented in DCP's 2019 [The Geography of Jobs Second Edition](#), the NYC Metro was building less new housing in the decade after the 2008 recession than in the years prior. So, even before Covid-19, lagging new construction and a mismatch between housing and job growth had exerted pressure on the NYC Metro's housing availability and affordability. Since the pandemic, the NYC Metro has seen home sales (a proxy for demand) accelerate, higher list prices, and inventory (a proxy for supply) remain down. This suggests that Covid-19 has exacerbated pre-existing pressure on the NYC Metro's housing market and represents a troubling pattern should inventory not keep pace.

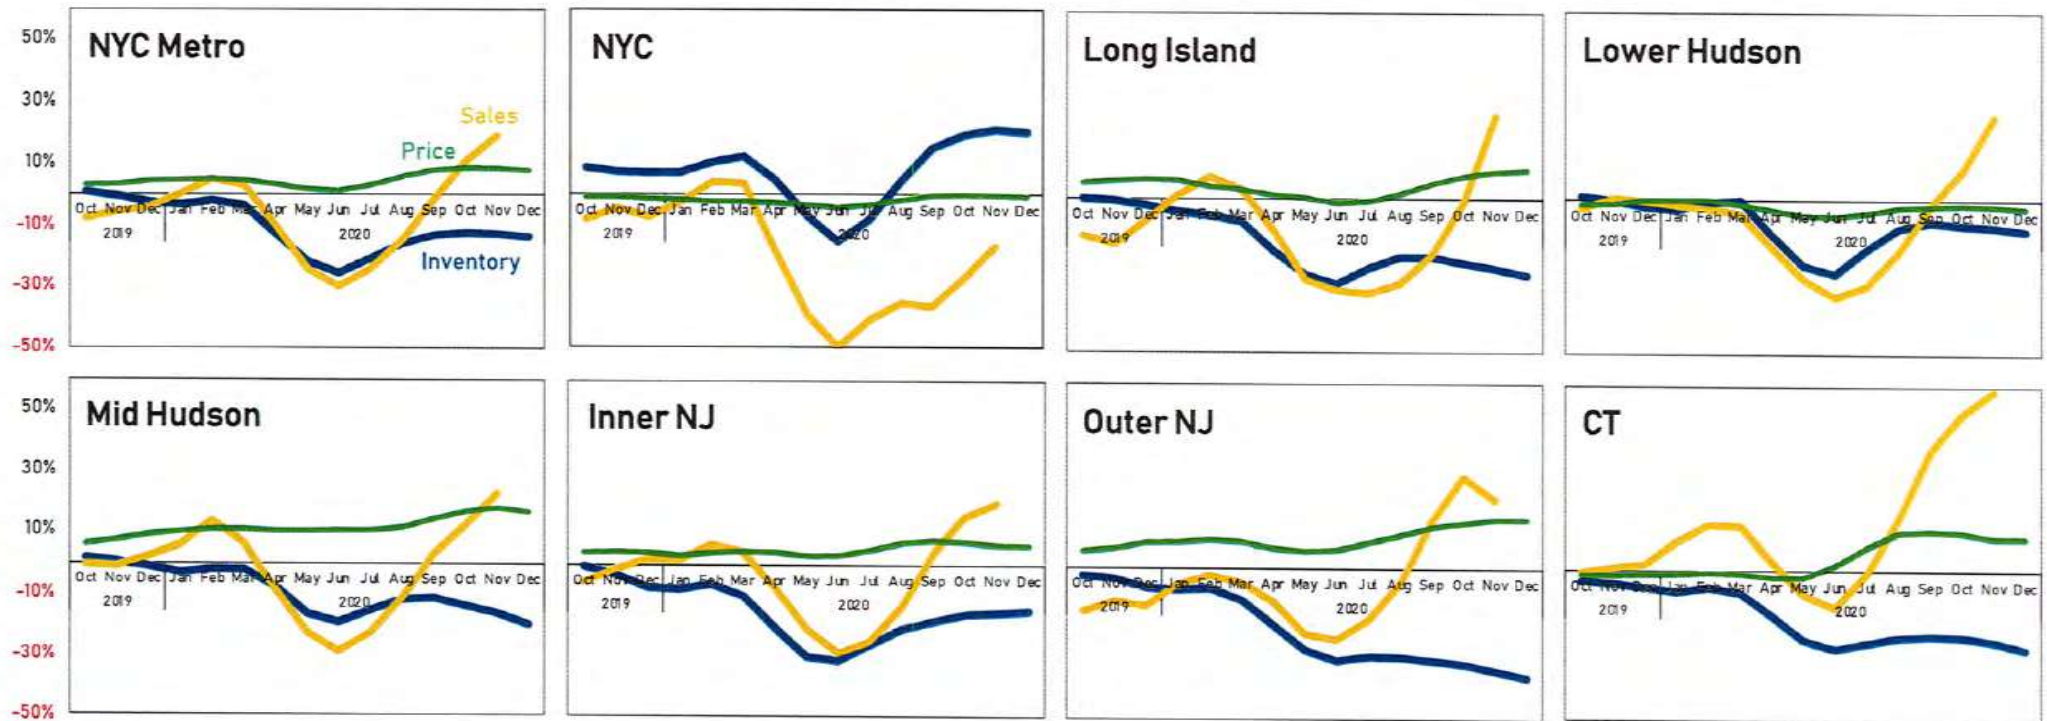

Year-on-Year Percent Change in Inventory, Sales, and Median List Price in the NYC Metro

Everywhere but NYC, sales and prices were up (or stable) while inventory remained down, suggesting increased pressure on suburban NYC Metro housing markets.

Comparing the three indicators by NYC Metro subregion underscores the pressure on the suburban markets outside of NYC to accommodate the demand for housing in the NYC Metro. By the end of 2020 in non-NYC subregions, the growth of sales (i.e., a proxy for demand) accelerated, prices were higher (or stable in the Lower Hudson Valley), and inventory was down year-on-year. In NYC, however, there is greater flexibility to accommodate demand, with stable prices and increased inventory.

Year-on-Year Percent Change in Inventory, Sales, and Median List Price* by NYC Metro Subregion

Implications of NYC Metro residential sales trends pre- and since Covid-19

- Covid-19 catalyzed divergent residential sales trends in NYC and its suburbs, yet it is difficult to determine the lasting effects of this extraordinary disruption. In NYC, some of the market's softening reflects the impact on housing located close to central business districts, which contain not only offices but also major cultural institutions and other attractions that are currently closed or under-occupied. These closures have triggered a relaxation, likely temporary, of the considerable pressure on the limited supply of centrally located housing in NYC that was so evident in the years prior to Covid-19. However, demand and prices remain strong in other NYC locations, and long-term challenges of housing a diverse and growing population remain—the pandemic has further underscored the importance of the City's ongoing commitment to promoting housing equity, availability, and affordability.
- NYC disproportionately supplies a range of housing options for the region, including rental housing, housing that accommodates smaller households, and housing for different household configurations, like roommates or other non-family arrangements. NYC Metro suburban markets also make important contributions to the region's housing supply, but many have done less in recent years to accommodate the housing needs of a diverse and growing region. With the increased pressures that Covid-19 has placed on demand, shrinking inventory and rising prices are a warning sign that suburban areas are falling further behind in their efforts to support the NYC Metro's housing needs.
- The vitality of the NYC Metro is dependent upon the symbiotic relationship between NYC and its suburbs. Covid-19 further emphasizes that for the NYC Metro to continue to prosper, the suburbs must also flexibly and equitably accommodate housing demand. Failure to do so threatens a prosperous and equitable future for all NYC Metro residents.

An aerial photograph of a city, likely New York City, showing a dense urban landscape with numerous buildings and streets. A large, prominent building is visible in the lower right quadrant of the image.

Appendix | Geographies

The NYC metropolitan region, or the “NYC Metro”, represents New York City (“NYC”) and the 26 surrounding counties in portions of New York, northern New Jersey, and southwest Connecticut. This definition of the region is a generally accepted modification of the U.S. Census Bureau combined statistical area (CSA) for New York-Newark-Bridgeport, however, this study excludes select counties in western Pennsylvania. The NYC Metro roughly represents the NYC commuter shed and does not represent a regulatory or other jurisdictional boundary. The “subregion” geography defined in this brief represents aggregations of U.S. counties, and, apart from NYC, similarly do not represent jurisdictional boundaries. Counties and subregions discussed in this research brief are defined and referred to as follows, seen on the map to the right.

- **NYC** – Bronx, Brooklyn (Kings County), Manhattan (New York County), Queens, and Staten Island (Richmond County) boroughs
- **Long Island (“LI”)** – Nassau and Suffolk counties
- **Lower Hudson Valley (“Low Hudson”)** – Putnam, Rockland, and Westchester counties
- **Mid Hudson Valley (“Mid Hudson”)** – Dutchess, Orange, Sullivan, and Ulster counties
- **Inner New Jersey (“Inner NJ”)** – Bergen, Essex, Hudson, Morris, Middlesex, Passaic, Somerset, and Union counties. “Inner” refers to those counties closest to the center of the region, particularly as it relates to the commuter shed.
- **Outer New Jersey (“Outer NJ”)** – Hunterdon, Mercer, Monmouth, Ocean, Sussex, and Warren counties. “Outer” refers to areas furthest from the center of the region, with more limited commuter transit access to the center.
- **Southwest Connecticut (“Connecticut” or “CT”)** – Fairfield, Litchfield, and New Haven counties.

Appendix | Definition of Terms and Methodology Notes

- **Inventory:** The count of unique homes listed for sale on Zillow.com in the indicated month. For-sale listings reported in a given month can be carried over from previous months. For-sale listings remain in inventory until those listings are removed or the status is changed (e.g., from “for sale” to “sale pending”). Inventory includes a mix of single-family houses, condominiums, and co-operative units.
- **Sales:** The count of arm’s length transactions on unique housing units that closed in the indicated month. Sales data lag inventory and price data in this brief by one month. Completed sales may lag purchase or pending activity due to the length of time between pending and closing. Changes in status (i.e., to “sold”) are also reliant upon the owner of the listing making that adjustment on Zillow’s website, and therefore might not reflect the actual date or month of completed transactions.
- **Median List Price:** The median price of homes listed for sale (inventory) on Zillow.com in the indicated month by the indicated geography. In this research brief, those geographies include County, Subregion, and Metro Region. Median list price is a metric that mostly reflects the composition of homes for sale at a moment in time and may be subject to distortions due to low inventory volume. Therefore, it can fluctuate more dramatically and may not point to true home value changes within markets.

Median list price data for counties were provided to DCP by Zillow. However, medians cannot be aggregated to report subregional and regional totals, and therefore DCP estimated figures for these composite geographies. The estimated figures are intended to illustrate trends and are for comparison purposes only. Exact figures may not reflect the true median for composite geographies.

DCP estimated subregional and regional median list price in each month using an average of counties’ median list prices weighted by each county’s share of the subregion’s (or region’s) inventory. The most reliable data are, however, the county-level figures as calculated by Zillow. The table on the following page shares the year-on-year percentage change in median list price for each NYC Metro county. That table most accurately reflects the list price shifts within NYC Metro subregions.

VI. Town Board Resolutions

(51-2019)
Concerning the Title and Duties of the Special Board

WHEREAS, the Town Board of the Town of Clarkstown adopted Resolution No. 598-2009 on December 15, 2009 to reconstitute the composition of the Special Board to carry out the objectives of the Comprehensive Plan, as amended by Resolution Nos. 273-2010, 316-2012, 116-2013, 260-2014, 121-2016, 362-2018 and 448-2018, adopted on May 18, 2010, July 10, 2012, June 10, 2014, March 8, 2016, June 26, 2018 and August 21, 2018, respectively, and

WHEREAS, the Town Board wishes that, in addition to implementing the Comprehensive Plan, the Special Board, heretofore known as the Comprehensive Plan Implementation Special Board, review and update the Comprehensive Plan;

NOW, THEREFORE, be it

RESOLVED, that henceforth the Special Board will be known as the Comprehensive Plan Special Board and that, in addition to implementing the Comprehensive Plan, the Board will review and update the Comprehensive Plan, and be it

FURTHER RESOLVED, that the members of the Comprehensive Plan Special Board, who all serve without compensation, shall continue to be as follows:

George Hoehmann, Chairman
 Jose Simoes, Vice Chairman
 Shirley Thormann
 Rudolph Yacyshyn
 Dennis Letson
 Charles Maneri
 Thomas M. Mascola (or designee)
 James Creighton
 William Withington
 Daniel Caprara
 Gilbert J. Heim

Comprehensive Plan Update – SEQRA Accepting of Draft Scoping Document

WHEREAS, the Town of Clarkstown's Comprehensive Plan was adopted by the Town Board on November 24, 2009 by Resolution No. 582-2009, and

WHEREAS, over ten years have passed since the adoption of the Comprehensive Plan, and

WHEREAS, the Comprehensive Plan Special Board, consisting of ten members and authorized by the Town Board on February 11, 2020 by Resolution No. 84-2020, have been meeting regularly to prepare for the Comprehensive Plan update, and

WHEREAS, under the provisions of New York State Town Law §272(a)(8), the "town comprehensive plan may be designed to also serve as, or be accompanied by, a generic environmental impact statement pursuant to the state environmental quality review act statute and regulations," and

WHEREAS, the update of the Comprehensive Plan will be prepared as a Generic Environmental Impact Statement (GEIS) pursuant to the aforementioned State Law and State Environmental Quality Review Act ("SEQRA"), and

WHEREAS, the Planning Department has prepared the Draft Scoping Document structured upon the goals and objectives adopted under the current Comprehensive Plan, and

WHEREAS, the proposed Scope for Comprehensive Plan Update includes potential impacts to land use, community services, infrastructure, traffic, parking and community character, and

WHEREAS, the adoption a municipality's land use plan is classified as a Type I action under 6 NYCRR Part 617.4 (b)(1), and

WHEREAS, the Town Board is Lead Agency under the provisions of the SEQRA, as it is the only involved agency that can undertake the passage of the proposed legislation, and

THEREFORE BE IT RESOLVED that the Town Board issues a Positive Declaration under the provisions of SEQRA for the Comprehensive Plan Update.

THEREFORE BE IT FURTHER RESOLVED that the Town Board directs the Planning Department to distribute the Draft Scoping Document to all interested or involved agencies, and establishes a public comment period to receive comments on the Scoping Document, through the months of May and June of 2020, during which residents will be asked to participate in teleconferences and to submit comments via the Town's website and other various means of communication.

CompPlan2020@clarkstown.org

1.0 Introduction

This Scoping Outline is intended to serve as the foundation for the identification of all potentially significant adverse environmental impacts associated with the proposed action and possible mitigation measures thereto. It is also intended to eliminate consideration of any impacts that are irrelevant or non-significant.

2.0 Description of the Proposed Action.

The Comprehensive Plan 2020 Update will revise the Town's current Comprehensive Plan, which was adopted in 2009, to reflect the changes in land use goals and priorities that have arisen over the past 10 years as the Town and region continue to change. As was done for the 2009 Plan, this updated Plan will be structured as a Generic Environmental Impact Statement (GEIS) as permitted by New York State Town Law §272(a)(8) and the provisions of SEQRA. The Comprehensive Plan update will revise the current 2009 Comprehensive Plan document, and thus remain structured around the seven topic chapters of Economic Development; Environmental Resources; Health, Safety & Welfare; Historic & Cultural Resources; Housing; Recreation, Parks & Open Space and Transportation. However, it is possible that as development of the updated Plan continues, new topic chapters may be added. The goals and objectives of the currently adopted Plan will be examined, and the update will illustrate the work that has gone into realizing these goals, and the progress that has been made on each one so far. As the Town receives input from the community throughout the upcoming public participation period, some goals and objectives will be revised and/or expanded upon, new goals will be added, and some be removed if necessary. Since the updated plan will also be structured as a GEIS, the plan will then study the impacts associated with the new goals and objectives, and provide suggested mitigation for any adverse impacts foreseen.

3.0 Potential Significant Environmental Impacts

1. Impact on Land
2. Impact on Water
3. Impact on Air
4. Impact on Plants and Animals
5. Impact on Aesthetic Resources
6. Impact of Open Space and Recreation
7. Impact on Transportation
8. Impact on the Use and Conservation of Energy
9. Noise and Odor Impact
10. Impact on Public Health
11. Impact on Growth & Character of Community or Neighborhood
12. Unavoidable Adverse Impacts
13. Irreversible and Irretrievable Commitment of Resources

4.0 General Scoping Considerations

Unless otherwise directed by this Scoping Document, the provisions of 6 NYCRR 617.10 apply to the content of the DGEIS and are incorporated by reference.

The DGEIS will assemble relevant and material facts, evaluate reasonable alternatives, and be analytic but not encyclopedic. The DGEIS will address only those potential significant adverse environmental impacts that can be reasonably anticipated and/or have been identified in the scoping process. The DGEIS should not contain more detail than is appropriate considering the nature and magnitude of the proposed action and the significance of its potential impacts. Highly technical material will be summarized and, if it must be included in its entirety, will be referenced in the statement and included in an appendix.

5.0 DGEIS Contents

The DGEIS will identify the existing environmental conditions, potential impacts of the action, and proposed mitigation measures as appropriate for each of the major issues identified in this Scoping Document.

- I. Executive Summary
- II. Background
 - A. History of Clarkstown's Comprehensive (Master) Planning
 - B. Studies, Research, and Analysis Performed
 - C. Subcommittees of the Special Board

RESOLUTION ADOPTED AT TOWN BOARD MEETING JANUARY 26, 2021
RESOLUTION NO. (49- 2021)

Comprehensive Plan Update – SEQRA Acceptance of Amended Final Scoping Document

WHEREAS, the Town of Clarkstown's Comprehensive Plan was adopted by the Town Board on November 24, 2009 by Resolution No. 582-2009, and

WHEREAS, over ten years have passed since the adoption of the Comprehensive Plan, and

WHEREAS, the Comprehensive Plan Special Board, consisting of ten members and authorized by Town Board Resolution No. 84-2020 on February 11, 2020, has been meeting regularly to prepare for the Comprehensive Plan update, and

WHEREAS, under the provisions of New York State Town Law §272-a(8), the "town comprehensive plan may be designed to also serve as, or be accompanied by, a generic environmental impact statement pursuant to the state environmental quality review act statute and regulations," and

WHEREAS, the update of the Comprehensive Plan will be prepared as a Generic Environmental Impact Statement (GEIS) pursuant to the aforementioned State Law and State Environmental Quality Review Act ("SEQRA"), and

WHEREAS, the Planning Department has prepared the Draft Scoping Document structured upon the goals and objectives adopted under the current Comprehensive Plan, and

WHEREAS, the proposed Scope for Comprehensive Plan Update includes potential impacts to land use, community services, infrastructure, traffic, parking and community character, and

WHEREAS, the adoption a municipality's land use plan is classified as a Type I action under 6 NYCRR Part 617.4 (b)(1), and

WHEREAS, the Town Board is Lead Agency under the provisions of the SEQRA, as it is the only involved agency that can undertake the passage of the proposed legislation, and

WHEREAS, the Town Board issued a Positive Declaration under the provisions of SEQRA for the Comprehensive Plan Update, and

WHEREAS, the Town Board directed the Planning Department to distribute the Draft Scoping Document to all interested or involved agencies, and established a public comment period to receive comments on the Scoping Document, through the months of May and June of 2020, during which residents were asked to participate in four teleconferences held on June 4th, June 11th, June 15th and June 22nd, 2020 and submit comments via the Town's website and other various means of communication, and

WHEREAS, the Planning Department received hundreds of comments via phone and Facebook Live at the four TeleTown Hall Comprehensive Plan teleconferences, and via mail, email and the Comprehensive Plan Update website, which will be addressed within the framework of the Comprehensive Plan Update, and

WHEREAS, the Rockland County Planning Department provided comments on the Draft Scoping

Document in a letter dated May 13, 2020, which have been addressed in the Final Scoping Document, and

WHEREAS, the Planning Board reviewed and accepted the Draft Scoping Document at their regular meeting of June 10, 2020, and

WHEREAS, the Rockland County Sewer Department provided comments on the Draft Scoping Document in a letter dated June 23, 2020, which did not require changes to the Scoping Document, and

WHEREAS, the Town Board accepted the Final Scoping Document of the Draft Generic Environmental Impact Statement for the Clarkstown Comprehensive Plan 2020 Update: Focused on the Future on July 30, 2020, and

WHEREAS, the Comprehensive Plan Update was originally structured to cover issues of sustainability and resiliency within the existing Environmental Resources section of the Plan, and

WHEREAS, based upon the public comments received it was decided to create a new section in the Comprehensive Plan titled, Sustainability and Resiliency, to more thoroughly cover this topic and better organize its associated goals and objectives, and

WHEREAS, after further review of the goals & objectives of the Comprehensive Plan, both existing and proposed, it was determined that the Records and Asset Management Information System currently under development by the Town's GIS Coordinator will serve as a means to accomplish some of the Goals of the Comprehensive Plan, and

WHEREAS, neither the Sustainability and Resiliency section nor the Records and Asset Management Information System were included in the adopted Final Scoping Document, and

WHEREAS, an Amended Final Scoping Document has been prepared and provided to the Town Board which includes the aforementioned new sections, and

THEREFORE BE IT RESOLVED that the Town Board accepts the Amended Final Scoping Document of the Draft Generic Environmental Impact Statement for the Clarkstown Comprehensive Plan 2020 Update: Focused on the Future.

Amending Resolution No. 84-2020 Comprehensive Plan Implementation Special Board

WHEREAS, the Town Board of the Town of Clarkstown adopted Resolution No. 598-2009 on December 15, 2009 to reconstitute the composition of the Special Board to carry out the objectives of the Comprehensive Plan, as amended by Resolution Nos. 273-2010, 316-2012, 116-2013, 260-2014, 121-2016, 362-2018, 448-2018, 51-2019, and 84-2020, adopted on May 18, 2010, July 10, 2012, June 10, 2014, March 8, 2016, June 26, 2018, August 21, 2018, January 22, 2019, and February 11, 2020 respectively, and

WHEREAS, the Town Board wishes to remove Dennis Letson as a voting member of the Comprehensive Plan Implementation Special Board and add Christopher Wagner as a voting member, and

WHEREAS, the Town Board wishes to appoint Jeffrey Gilles as a voting member of the Comprehensive Plan Implementation Special Board;

NOW, THEREFORE, be it

RESOLVED, that the composition of the special board shall be as follows:

George Hoehmann, Chairman
Jose Simoes, Vice Chairman
Rudolph Yacyshyn
Christopher Wagner
Charles Maneri
Leslie Kahn (or designee)
James Creighton
William Withington
Daniel Caprara
Gilbert J. Heim
Jeffrey Gilles

Secretary to the Board:
Victoria Dauksza

Body

WHEREAS, the Town of Clarkstown's Comprehensive Plan was adopted by the Town Board on November 24, 2009 by Resolution No. 582-2009, and

WHEREAS, over ten years have passed since the adoption of the Comprehensive Plan, and

WHEREAS, the Comprehensive Plan Special Board, consisting of ten members and authorized by Resolution No. 84-2020 has been meeting regularly to prepare for the Comprehensive Plan update, and

WHEREAS, under the provisions of New York State Town Law §272(a)(8), the "town comprehensive plan may be designed to also serve as, or be accompanied by, a generic environmental impact statement pursuant to the state environmental quality review act statute and regulations," and

WHEREAS, the Town Board directed the Comprehensive Plan Special Board to update the Comprehensive Plan as a Generic Environmental Impact Statement (GEIS) pursuant to the aforementioned State Law and State Environmental Quality Review Act ("SEQRA"), and

WHEREAS, the adoption a municipality's land use plan is classified as a Type I action under 6 NYCRR Part 617.4 (b)(1), and

WHEREAS, the Town Board is Lead Agency under the provisions of the SEQRA, as it is the only involved agency that can undertake the passage of the proposed legislation, and

WHEREAS, the Town Board issued a Positive Declaration under the provisions of SEQRA for the Comprehensive Plan Update, and

WHEREAS, the Planning Department prepared the Draft Scoping Document structured upon the goals and objectives adopted under the current Comprehensive Plan, and

WHEREAS, the proposed Scope for Comprehensive Plan Update included potential impacts to land use, community services, infrastructure, traffic, parking and community character, and

WHEREAS, the Town Board directed the Planning Department to distribute the Draft Scoping Document to all interested or involved agencies, and established a public comment period to receive comments on the Scoping Document, through the months of May and June of 2020, during which residents were asked to participate in four teleconferences held on June 4th, June 11th, June 15th and June 22nd, 2020 and submit comments via the Town's website and other various means of communication until the end of 2020, and

WHEREAS, the Planning Department received hundreds of comments via phone and Facebook Live at the four TeleTown Hall Comprehensive Plan teleconferences, and via mail, email and the Comprehensive Plan Update website, which will be addressed within the framework of the Comprehensive Plan Update, and

WHEREAS, the Rockland County Planning Department provided comments on the Draft Scoping Document in a letter dated May 13, 2020, which have been addressed in the Final Scoping Document, and

WHEREAS, the Planning Board reviewed and accepted the Draft Scoping Document at their regular meeting of June 10, 2020, and

WHEREAS, the Rockland County Sewer Department provided comments on the Draft Scoping Document in a letter dated June 23, 2020, which did not require changes to the Scoping Document, and

WHEREAS, the Town Board accepted the Final Scoping Document of the Draft Generic Environmental Impact Statement (DGEIS) for the Clarkstown Comprehensive Plan 2020 Update: Focused on the Future on July 30, 2020, and

WHEREAS, the Comprehensive Plan Update was originally structured to cover issues of sustainability and resiliency within the existing Environmental Resources section of the Plan, and

WHEREAS, based upon the public comments received it was decided to create a new section in the Comprehensive Plan titled, Sustainability and Resiliency, to more thoroughly cover this topic and better organize its associated goals and objectives, and

WHEREAS, after further review of the goals & objectives of the Comprehensive Plan, both existing and proposed, it was determined that the Records and Asset Management Information System currently under development by the Town's GIS Coordinator will serve as a means to accomplish some of the Goals of the Comprehensive Plan, and

WHEREAS, neither the Sustainability and Resiliency section nor the Records and Asset Management Information System were included in the adopted Final Scoping Document, and

WHEREAS, an Amended Final Scoping Document was prepared and provided to the Town Board which includes the aforementioned new sections, and

WHEREAS, that the Town Board accepted the Amended Final Scoping Document of the Draft Generic Environmental Impact Statement for the Clarkstown Comprehensive Plan 2020 Update: Focused on the Future on January 26, 2021 by Resolution No. 49-2021, and

WHEREAS, the Special Board, consistent with Section 272-A(6)(b) of the Town Law, conducted several town-wide mailings, held five teleconferences and created a public outreach website in order to assure full opportunity for citizen participation in the preparation of the Comprehensive Plan Update, which resulted in the collection of over 700 comments, and

WHEREAS, the Special Board has prepared a Draft Comprehensive Plan Update in the form of a Draft GEIS, copies of which have been provided to the Town Board.

THEREFORE BE IT RESOLVED, that the Draft Comprehensive Plan Update/DGEIS is hereby accepted and deemed complete, and be it

FURTHER RESOLVED, that the Planning Department is hereby directed to file, distribute and publish the "Notice of Completion" in accordance with 6 NYCRR Part 617.12(b)(1) and 617.12(c), and be it

FURTHER RESOLVED, that the Planning Department is hereby directed to distribute the Draft Comprehensive Plan Update/DGEIS to the Rockland County Planning Department, the Town of Clarkstown Planning Board and other interested agencies, as identified in the Final Amended Scoping Document, in accordance with NYCRR 617(b) and 617.12(b)(1), and other municipalities and governmental bodies as may be required by section 239-l and 239-m of the General Municipal Law and other applicable provision of the law, and to post the document on the Town's Comprehensive Plan Update website, and be it

FURTHER RESOLVED, that a public hearing pursuant to Section 272-a of the Town Law and 6 NYCRR 617.9(a)(4)(ii), shall be held at the Auditorium/Room 301 of the Town Hall of the Town of Clarkstown, at 10 Maple Avenue, New City, Rockland County, New York, in the Town of Clarkstown, and/or via telephone, on June 1, 2021, at 7:00 p.m., and public comments on the Draft Comprehensive Plan/DGEIS will be accepted for at least 10 days following the public hearing, and be it

FURTHER RESOLVED that the Town Attorney prepare notice of such statutory hearing and that the Town Clerk cause the same to be published no less than 14 days in advance of the public hearing date in the newspaper of general circulation and posted in the manner provided by 6 NYCRR 617.12(c) and file proof thereof in the Office of the Town Clerk.

Comprehensive Plan Update Final GEIS Acceptance of Document & Distribution Under The Provisions of SEQRA

WHEREAS, the Town of Clarkstown's Comprehensive Plan was adopted by the Town Board on November 24, 2009 by Resolution No. 582-2009, and

WHEREAS, over ten years have passed since the adoption of the Comprehensive Plan, and

WHEREAS, the Comprehensive Plan Special Board, consisting of ten members and authorized by Resolution No. 84-2020 has been meeting regularly to prepare for the Comprehensive Plan update, and

WHEREAS, under the provisions of New York State Town Law §272(a)(8), the "town comprehensive plan may be designed to also serve as, or be accompanied by, a generic environmental impact statement pursuant to the state environmental quality review act statute and regulations," and

WHEREAS, the Town Board directed the Comprehensive Plan Special Board to update the Comprehensive Plan as a Generic Environmental Impact Statement (GEIS) pursuant to the aforementioned State Law and State Environmental Quality Review Act ("SEQRA"), and

WHEREAS, the adoption a municipality's land use plan is classified as a Type I action under 6 NYCRR Part 617.4 (b)(1), and

WHEREAS, the Town Board is Lead Agency under the provisions of the SEQRA, as it is the only involved agency that can undertake the passage of the proposed legislation, and

WHEREAS, the Town Board issued a Positive Declaration under the provisions of SEQRA for the Comprehensive Plan Update, and

WHEREAS, the Planning Department prepared the Draft Scoping Document structured upon the goals and objectives adopted under the current Comprehensive Plan, and

WHEREAS, the proposed Scope for Comprehensive Plan Update included potential impacts to land use, community services, infrastructure, traffic, parking and community character, and

WHEREAS, the Town Board directed the Planning Department to distribute the Draft Scoping Document to all interested or involved agencies, and established a public comment period to receive comments on the Scoping Document, through the months of May and June of 2020, during which residents were asked to participate in four teleconferences held on June 4th, June 11th, June 15th and June 22nd, 2020 and submit comments via the Town's website and other various means of communication until the end of 2020, and

WHEREAS, the Planning Department received hundreds of comments via phone and Facebook Live at the four TeleTown Hall Comprehensive Plan teleconferences, and via mail, email and the Comprehensive Plan Update website, which will be addressed within the framework of the Comprehensive Plan Update, and

WHEREAS, the Rockland County Planning Department provided comments on the Draft

Scoping Document in a letter dated May 13, 2020, which have been addressed in the Final Scoping Document, and

WHEREAS, the Planning Board reviewed and accepted the Draft Scoping Document at their regular meeting of June 10, 2020, and

WHEREAS, the Rockland County Sewer Department provided comments on the Draft Scoping Document in a letter dated June 23, 2020, which did not require changes to the Scoping Document, and

WHEREAS, the Town Board accepted the Final Scoping Document of the Draft Generic Environmental Impact Statement (DGEIS) for the Clarkstown Comprehensive Plan 2020 Update: Focused on the Future on July 30, 2020, and

WHEREAS, the Comprehensive Plan Update was originally structured to cover issues of sustainability and resiliency within the existing Environmental Resources section of the Plan, and

WHEREAS, based upon the public comments received it was decided to create a new section in the Comprehensive Plan titled, Sustainability and Resiliency, to more thoroughly cover this topic and better organize its associated goals and objectives, and

WHEREAS, after further review of the goals & objectives of the Comprehensive Plan, both existing and proposed, it was determined that the Records and Asset Management Information System currently under development by the Town's GIS Coordinator will serve as a means to accomplish some of the Goals of the Comprehensive Plan, and

WHEREAS, neither the Sustainability and Resiliency section nor the Records and Asset Management Information System were included in the adopted Final Scoping Document, and

WHEREAS, an Amended Final Scoping Document was prepared and provided to the Town Board which includes the aforementioned new sections, and

WHEREAS, that the Town Board accepted the Amended Final Scoping Document of the Draft Generic Environmental Impact Statement for the Clarkstown Comprehensive Plan 2020 Update: Focused on the Future on January 26, 2021 by Resolution No. 49-2021, and

WHEREAS, the Special Board, consistent with Section 272-A(6)(b) of the Town Law, conducted several town-wide mailings, held five teleconferences and created a public outreach website in order to assure full opportunity for citizen participation in the preparation of the Comprehensive Plan Update, which resulted in the collection of over 700 comments, and

WHEREAS, the Special Board prepared a Draft Comprehensive Plan Update in the form of a Draft GEIS, copies of which were provided to the Town Board, and

WHEREAS, the Draft Comprehensive Plan Update/DGEIS was deemed complete and accepted on April 20, 2021, and

WHEREAS, the Planning Department filed, distributed and published the "Notice of Completion" in accordance with 6 NYCRR Part 617.12(b)(1) and 617.12(c), and

WHEREAS, the Planning Department distributed the Draft Comprehensive Plan Update/DGEIS to the Rockland County Planning Department, the Town of Clarkstown Planning Board and other interested agencies, as identified in the Final Amended Scoping Document, in accordance with NYCRR 617(b) and 617.12(b)(1), and other municipalities and governmental bodies as may be required by section 239-l and 239-m of the General Municipal Law and other applicable provision of the law, and to post the document on the Town's Comprehensive Plan Update website, and

TB August 10, 2021ACCEPTANCE OF DOCUMENT COMPREHENSIVE PLAN UPDATE FINAL
GEIS

WHEREAS, a public hearing pursuant to Section 272-a of the Town Law and 6 NYCRR 617.9(a)(4)(ii), was held at the Auditorium of the Town Hall of the Town of Clarkstown, at 10 Maple Avenue, New City, Rockland County, New York, in the Town of Clarkstown, on June 1, 2021, at 7:00 p.m., and public comments on the Draft Comprehensive Plan/DGEIS were accepted for 21 days following the public hearing, and

WHEREAS, the Special Board has prepared a Draft Final Comprehensive Plan Update in the form of a Final GEIS, copies of which have been provided to the Town Board, and

WHEREAS, comments on the Draft Comprehensive Plan Update/DGEIS were received and addressed individually in the FGEIS (and Draft Final Comprehensive Plan Update) and changes were made to the document as appropriate, and

THEREFORE BE IT RESOLVED, that the FGEIS is hereby deemed complete and accepted, and be it

FURTHER RESOLVED, that the Planning Department is hereby directed to file, distribute and publish the "Notice of Completion" in accordance with 6 NYCRR Part 617.12(b)(1) and 617.12(c), and be it

FURTHER RESOLVED, that the Planning Department is hereby directed to distribute the FGEIS (and Draft Final Comprehensive Plan Update) to the Rockland County Planning Department, the Town of Clarkstown Planning Board and other interested agencies, as identified in the Final Amended Scoping Document, in accordance with NYCRR 617(b) and 617.12(b)(1), and other municipalities and governmental bodies as may be required by section 239-l and 239-m of the General Municipal Law and other applicable provision of the law, and to post the document on the Town's Comprehensive Plan Update website, and be it

FURTHER RESOLVED, that the Town Board will afford agencies and the public a time period not less than 10 calendar days in which to consider the FGEIS before issuing its written findings statement.

1.0 Introduction

This Scoping Outline is intended to serve as the foundation for the identification of all potentially significant adverse environmental impacts associated with the proposed action and possible mitigation measures thereto. It is also intended to eliminate consideration of any impacts that are irrelevant or non-significant.

2.0 Description of the Proposed Action.

The Comprehensive Plan 2020 Update will revise the Town's current Comprehensive Plan, which was adopted in 2009, to reflect the changes in land use goals and priorities that have arisen over the past 10 years as the Town and region continue to change. As was done for the 2009 Plan, this updated Plan will be structured as a Generic Environmental Impact Statement (GEIS) as permitted by New York State Town Law §272(a)(8) and the provisions of SEQRA. The Comprehensive Plan update will revise the current 2009 Comprehensive Plan document, and thus remain structured around the seven topic chapters of Economic Development; Environmental Resources; Health, Safety & Welfare; Historic & Cultural Resources; Housing; Recreation, Parks & Open Space and Transportation. However, it is possible that as development of the updated Plan continues, new topic chapters may be added. The goals and objectives of the currently adopted Plan will be examined, and the update will illustrate the work that has gone into realizing these goals, and the progress that has been made on each one so far. As the Town receives input from the community throughout the upcoming public participation period, some goals and objectives will be revised and/or expanded upon, new goals will be added, and some be removed if necessary. Since the updated plan will also be structured as a GEIS, the plan will then study the impacts associated with the new goals and objectives, and provide suggested mitigation for any adverse impacts foreseen.

3.0 Potential Significant Environmental Impacts

1. Impact on Land
2. Impact on Water
3. Impact on Air
4. Impact on Plants and Animals
5. Impact on Aesthetic Resources
6. Impact of Open Space and Recreation
7. Impact on Transportation
8. Impact on the Use and Conservation of Energy
9. Noise and Odor Impact
10. Impact on Public Health
11. Impact on Growth & Character of Community or Neighborhood
12. Unavoidable Adverse Impacts
13. Irreversible and Irretrievable Commitment of Resources

4.0 General Scoping Considerations

Unless otherwise directed by this Scoping Document, the provisions of 6 NYCRR 617.10 apply to the content of the DGEIS and are incorporated by reference.

The DGEIS will assemble relevant and material facts, evaluate reasonable alternatives, and be analytic but not encyclopedic. The DGEIS will address only those potential significant adverse environmental impacts that can be reasonably anticipated and/or have been identified in the scoping process. The DGEIS should not contain more detail than is appropriate considering the nature and magnitude of the proposed action and the significance of its potential impacts. Highly technical material will be summarized and, if it must be included in its entirety, will be referenced in the statement and included in an appendix.

5.0 DGEIS Contents

The DGEIS will identify the existing environmental conditions, potential impacts of the action, and proposed mitigation measures as appropriate for each of the major issues identified in this Scoping Document.

- I. Executive Summary
- II. Background
 - A. History of Clarkstown's Comprehensive (Master) Planning
 - B. Studies, Research, and Analysis Performed
 - C. Subcommittees of the Special Board
 - D. Public Participation Process
 - E. State Environmental Quality Review Act
- III. History of Land Use
- IV. Vision Statement (Proposed Action)
- V. Comprehensive Plan Goals & Objectives
 - A. Economic Development
 - B. Environmental Resources
 - C. Health, Safety & Welfare
 - D. Historic & Cultural Resources
 - E. Housing
 - F. Recreation, Parks & Open Space
 - G. Transportation
 - H. Sustainability & Resiliency

- VI. Implementation
 - A. Policy Changes
 - B. Critical Environmental Area Designation
 - C. Infrastructure Improvements
 - D. Town Official Map Changes
 - E. Inter-Municipal Agreements
 - F. Zoning Text Amendments
 - G. Land Use Changes
 - H. Records and Asset Management Information System
- VII. Evaluation of Potential Impacts of Goals & Objectives
 - A. Impact on Land
 - B. Impact on Water
 - C. Impact on Air
 - D. Impact on Plants and Animals
 - E. Impact on Aesthetic Resources
 - F. Impact of Open Space and Recreation
 - G. Impact on Transportation
 - H. Impact on the Use and Conservation of Energy
 - I. Noise and Odor Impact
 - J. Impact on Public Health
 - K. Impact on Growth & Character of Community or Neighborhood
 - L. Unavoidable Adverse Impacts
 - M. Irreversible and Irretrievable Commitment of Resources
- VIII. Analysis of Alternatives
 - A. No update to Comprehensive Plan
 - B. Adoption of Committee Recommendations & Plans Independently of Each Other
- IX. Conclusion
- X. Appendix

The appendices will include a list of all underlying studies and reports relied upon in preparing the DGEIS, technical exhibits and studies background information relevant to the proposed action such as the adopted Scoping Document and other relevant SEQR documents, and relevant correspondence.

GEORGE HOEHMANN, SUPERVISOR

FRANK BORELLI, COUNCILMAN

MICHAEL GRAZIANO, COUNCILMAN

DONALD FRANCHINO, COUNCILMAN

PATRICK CARROLL, COUNCILMAN

LESLIE KAHN, TOWN ATTORNEY

JUSTIN SWEET, TOWN CLERK

ROCKLAND & ORANGE REPORTING

2 Congers Road, Suite 2

New City, New York 10956

(845) 634-4200

1 Proceedings

2
3 SUPERVISOR HOEHMANN: Good evening. The
4 special Town Board meeting for the
5 comprehensive plan for June 1st is called to
6 order. I ask everyone to please rise for the
7 salute to the flag. I'm going to ask
8 Councilman Borelli to lead us in the Pledge.

9 (Whereupon, the Pledge of Allegiance was
10 recited.)

11 SUPERVISOR HOEHMANN: I'm going do ask
12 our Town Clerk to please call the roll.

13 THE CLERK: Supervisor Hoehmann?

14 SUPERVISOR HOEHMANN: Present.

15 THE CLERK: Councilman Borelli?

16 COUNCILMAN BORELLI: Present.

17 THE CLERK: Councilman Carroll?

18 COUNCILMAN CARROLL: Present.

19 THE CLERK: Councilman Franchino?

20 COUNCILMAN FRANCHINO: Present.

21 THE CLERK: Councilman Graziano? We
22 have a quorum.

23 SUPERVISOR HOEHMANN: Thank you. I know
24 Councilman Graziano is going to be joining
25 us. So let the record reflect that right

1 Proceedings

2 now, we have four of the five Council
3 Members, but Councilman Graziano will be
4 joining us shortly on the line.

5 So again, just a quick notice that we
6 read at all of our Town Board meetings. The
7 pandemic has created many challenges for all
8 of us, including our government, and across
9 the state is conducting public meetings. We
10 appreciate your understanding and cooperation
11 as we navigate through these difficult times.
12 The Town is utilizing multiple technologies
13 to provide the public with access to
14 participate in all public meetings.

15 Technology is not always perfect, and we
16 may experience occasional issues that are
17 beyond our control during the meeting. If
18 you experience a dropped call, audio issue,
19 or busy signal, please hang up and try
20 dialing back at either (845)639-2150, that's
21 (845)639-2150, or (845)207-0875,
22 (845)207-0875. The minutes for this meeting
23 will be posted on the Town's website for
24 additional reference.

25 If you have any questions that were not

1 Proceedings

2 addressed during the meeting, please feel
3 free to contact my office at (845)639-2050,
4 (845)639-2050. In the event you are having
5 difficulty hearing and using the
6 teleconference option, please join the
7 webinar where the audio may be clearer. And
8 if you are on the line, please press zero so
9 you can ask a question or comment.

10 And what I'd like to do at this time is
11 just outline the order of business for this
12 evening. We do have a court stenographer
13 that's present to take down verbatim comments
14 because this is our, our special presentation
15 where we will be taking public comment on the
16 comprehensive plan, and the Town Board will
17 not be entertaining other information at this
18 meeting. This is really for the purpose of
19 the comprehensive plan, to take public
20 comment. That's why this special meeting was
21 arranged.

22 We will be acknowledging public comment
23 in general. There will be a presentation
24 from our Town Planner on the comprehensive
25 plan and the efforts that they've worked to

1 Proceedings

2 date, and what is changing in the
3 comprehensive plan. And then we'll open it
4 up for public comment.

5 I do want to recognize that Councilman
6 Graziano is on the call and has joined us.
7 And at this point, I'm going to turn it over
8 to our Town Planner to make his presentation,
9 after which we will take public comment.

10 MR. SIMOES: Thank you, Supervisor, for
11 that introduction. I'll try to speak as
12 loudly as possible for everyone here and
13 listening at home. So I'll jump right into
14 it. As was mentioned, this is a meeting of
15 the Town Board.

16 SUPERVISOR HOEHMANN: Just, Mr. Simoes,
17 for the record, people that are on the
18 webinar will be able to see these slides?

19 MR. SIMOES: Correct. They are -- they
20 can see this at home, yes.

21 SUPERVISOR HOEHMANN: Right. So if
22 you're on the webinar at this point, you can
23 view the slides that the folks in the
24 auditorium are seeing. Thank you,
25 Mr. Simoes.

1 Proceedings

2 MR. SIMOES: That's correct. So we
3 will, we will be accepting comments on the
4 draft comprehensive plan update. But really,
5 almost more importantly, is the draft generic
6 environmental impact statement. I'll go into
7 it later in the presentation. But our
8 comprehensive plan is both a comprehensive
9 plan and an environmental impact statement.

10 It's not typically done that way. It is
11 a section of town code that allows us to do
12 that. There's maybe 50 municipalities in the
13 state. We found it's the most efficient way
14 to analyze the potential impacts of the plan
15 is to do it in concert with developing a
16 plan.

17 So let's, let's start with just some
18 background. The comprehensive plan was
19 adopted in 2009. As I mentioned, it's
20 structured as a generic environmental impact
21 statement. We actually received two awards
22 for that plan, one in 2011 from Pace
23 University Land Use Law Center, and 2012 from
24 the New York Planning Federation. So as I
25 mentioned, it's a bit unique that it's an

1 Proceedings

2 environmental impact statement. And I think
3 that's the reason why these two organizations
4 recognized our work in 2009.

5 Just to step back a little bit, the Town
6 has been doing master plans, as they were
7 called in the past, since the 50s and 60s,
8 and have done updates throughout the years.
9 In 2009, we pretty much did an overhaul in
10 terms of developing our comprehensive plan.

11 So the Board, the Town Board established
12 a comprehensive plan special board. So a
13 cross section of Town staff, different
14 municipal boards, land use boards, and
15 citizens who helped us develop that original
16 plan. And they were also tasked with
17 implementing the goals of the plan. And now
18 they're helping us develop the update.

19 So, public outreach. We developed a
20 dedicated website called Comp Plan 2020 that
21 was specifically designed to gather input
22 from the public. There were seven
23 interactive maps that people could go on and
24 actually drop a pin on a geographic location
25 and give us a comment. They could also just

1 Proceedings

2 send a generic comment, you know, a general
3 comment to the, to the email that's shown
4 here, Comp Plan 2020 at Clarkstown dot org.

5 We had Facebook sessions in conjunction
6 with, similar to this tele town sessions on
7 various, various dates throughout, in June.
8 So you'll -- here listed are the four dates
9 we had in June. I -- basically, we did a
10 reverse call to every phone number that we
11 had in the town by the Board. I think I sat
12 in earlier with each one of the Council
13 Members here, and we, and we got questions
14 and comments from people. Everything was
15 recorded. And then we compiled all of that
16 information, all the comments we received.

17 I also received comments by mail.
18 People came in person and dropped off
19 letters. We even had phone calls where we
20 would just record exactly what they wanted to
21 put in as a comment. We had an E-newsletter
22 and town-wide mailings announcing each one
23 these teleconference workshops. And it was
24 that, that same format that the Supervisor
25 often uses, where we basically call out, and

1 Proceedings

2 if you want to stay on the line, you stay on
3 the line, and you provide comments.

4 We received over 700 comments. And I
5 think they were -- there's a whole chart in
6 the plan itself, that thousands of people
7 participated. I think, you know, given that
8 we were in the midst of doing this, doing
9 this in the midst of Covid, we were concerned
10 about participation. And I think we had more
11 participation than ever between the website
12 and the calls home.

13 And a lot of people, you know, I'm
14 excited about the comp plan. Or maybe people
15 were just captive audiences and had nothing
16 better to do than pick up the phone and find
17 out about the comp plan. But we got a lot,
18 you know, I think we got a lot of
19 participation this year and last year because
20 of this.

21 So every comment was reviewed,
22 categorized, and addressed. Sometimes the
23 comments were already in the current plan.
24 Sometimes they proposed a change in the plan.
25 Or we made a note that a comment wasn't

1 Proceedings

2 applicable, but sent it to the right
3 department to deal with. Maybe it was a
4 property maintenance issue. Or some of the
5 comments were about how to implement the
6 plan. So that was duly noted as well.

7 So the original plan had seven goals and
8 objectives. And as I said, it was an
9 overhaul. It was a very comprehensive
10 comprehensive plan. We dealt with economic
11 development; environmental resources; health,
12 safety, and welfare; historic and cultural
13 resources; housing; recreation, parks, and
14 open space; and transportation. And those
15 were the original seven themes. And we
16 thought at that time, what more could we
17 cover? But we found another category to put
18 in here, and that was sustainability and
19 resiliency, and I'll explain that a little
20 further on in the presentation.

21 So goals and objectives. Some of them,
22 like I said, they were goals that we just
23 continued. Some of them, we made tweaks to
24 the text. We actually changed the goals
25 outright. Sometimes we moved goals. We

1 Proceedings

2 moved some of the goals that were
3 environmental, for example, to resiliency and
4 sustainability. Or we removed a goal. We
5 accomplished the goal, we took it out of the
6 plan, or we had a brand new goal.

7 So I'm not going to go through each one
8 the these. I'm going to try to speed
9 through. I'll just kind of point out we had
10 several goals that were continuing. You'll
11 see here, see them here on the screen for
12 economic development. I'm going to really
13 highlight the ones we're changing or we're
14 adding.

15 So we had quite a few continuing goals
16 for economic development. We had some text
17 changes dealing with a couple of the goals.
18 You know, expanding commercial and industrial
19 developments in areas that are best served by
20 the Town's existing infrastructure. You
21 know, recognizing the Palisades Mall
22 referendum. And then we really need to look
23 at parking requirements, not just with Covid,
24 but just emerging technologies.

25 And also working to ensure that a

1 Proceedings

2 variety of housing options exist within the
3 town. We have spent a good past ten years
4 really looking at senior housing. We heard
5 from a lot of folks saying what about
6 millennial housing, what about the younger
7 folks? So that recognizes, you know, that
8 comment. We changed the goal of economic, of
9 continuing our economic development office to
10 recognize that now we have an office of
11 intergovernmental relations that does that
12 job of attracting new businesses and
13 assisting businesses already established in
14 the community.

15 And these are some of the new goals.

16 And we heard quite a lot from folks about
17 this first new goal of looking at new zoning
18 to permit housing in underutilized retail
19 areas, and other ways to reuse and repurpose
20 vacant or underutilized commercial spaces.
21 Retail has, was going down before Covid. It
22 went down even further with Covid. A lot of
23 people were saying what's going to happen
24 with these spaces? So, you know, it can't --
25 we have to do something with underutilized

1 Proceedings

2 retail. Housing is a potential idea. But
3 there's other, other, other uses.

4 And that is embodied in the next goal,
5 accommodating new and upcoming commercial and
6 industrial uses. Hi-tech, data centers,
7 biotechnology. We saw a lot of our
8 pharmaceutical biotech in our town expand,
9 actually, during Covid for obvious reasons.

10 The film industry. I was just hearing a
11 report as I was driving in about how the
12 Hudson Valley is becoming the new Hollywood.
13 There's a lot of demand for film, for filming
14 in the Hudson Valley. We should take
15 advantage of that.

16 Satellite offices. It's a whole
17 different atmosphere out there. A different,
18 different workplace with Covid, and even
19 before. Consumer trends, delivery and pickup
20 services. And then, you know, the impact of
21 Covid just in general.

22 And then another idea that came out was
23 implementing transfer and development rights.
24 What that means is taking development from
25 one part of the town, from one area and

1 Proceedings

2 putting it in another. And the map on the
3 screen shows an example where you have
4 somebody who owns two pieces of property, one
5 next to a residential area, one in an
6 established industrial area.

7 What if we take -- they could be, they
8 could build in one area. And then that
9 industrial area near the residential area, we
10 could have them shift that, move that
11 development potential over to an area that's
12 farther away from residents and already
13 developed. And then that area becomes green
14 space and protected. So even though this is
15 more of a, it's a mechanism, it's something
16 we really have to study. So it was a, it's a
17 new goal of the economic development section.

18 Environmental resources. A lot of the
19 goals, original goals of the environmental
20 resources are remaining or continuing. There
21 are just a few here on the screen. I guess
22 that I won't go through all of them.
23 Everyone can kind of take a look and read
24 them. You know, I'll just mention, you know,
25 wetland open space protection, critical

1 Proceedings

2 environmental areas. These are areas we've
3 worked on, we're going to continue to work
4 on.

5 We made some text changes, protecting
6 and conserving both the sources and supply of
7 potable water and natural features that adds
8 water quality. We have done quite a lot of
9 work with our storm water consortium. And we
10 want to -- we have referenced in this section
11 of the plan to the Rockland County task force
12 on water resources management and a lot of
13 work they did that we want to try to
14 implement in the town.

15 Another text change is dealing with
16 required storm water management to an higher
17 extent than is currently applicable where
18 development is proposed in watersheds with
19 experienced flooding. We have, we have
20 actually passed legislation that reduces
21 storm water runoff by ten percent. So that
22 recognizes that. And again, our work with
23 the storm water consortium.

24 We actually have enacted limits on total
25 development coverage in almost all of our

1 Proceedings

2 zoning districts. There are just a handful
3 of zoning districts that do not have limits
4 on development coverage. And that's why
5 we've changed this goal to recognize that we
6 need to continue to enact those limits.

7 We have changed continue to enforce
8 regulations controlling dust and other
9 airborne pollutants due to operations within
10 the town to recognize that we really need to
11 work with the Department of Environmental
12 Conservation regarding air emissions.

13 We have an original goal of detailing
14 flora and fauna surveys. During development
15 of, even during the reviews of development
16 proposals, this takes it a step further and
17 actually recognizes we also have to worry not
18 only of the species that are at risk, but
19 invasives. There are quite a few invasives
20 that even, that we have to work with, that we
21 have to deal with. I know our Department of
22 Engineering clears out invasives, invasive
23 plants out of our parks on a regular basis.
24 So it's something we have to, we have to look
25 out, look out for.

1 Proceedings

2 We reworded protecting the views of
3 wooded and natural areas to protecting the
4 actual wooded and natural areas. Hindsight,
5 we really want to protect the woods, not just
6 how they work. So it kind of recognizes that
7 we want to be able to protect wooded and
8 natural areas from the removal, from their
9 removal.

10 Implementing design standards for future
11 commercial construction we've changed to
12 implement design standards for future
13 construction. We took out commercial
14 essentially to broaden it, saying it doesn't
15 matter whether it's commercial or
16 residential. We need design standards for
17 all types of development.

18 We received quite a few comments from
19 people, you know, issues about noise, dust,
20 and odor, but also light pollution. So
21 you'll see that in a few of these goals.
22 We've added light pollution as something we
23 have to be on the lookout. We have to, you
24 know, maybe create a stronger legislation to
25 control for light pollution in the town and

1 Proceedings

2 review it more thoroughly as developments
3 come in.

4 Again, this is another section where we
5 added light pollution in addition to noise,
6 dust, and odors that we have to see about
7 mitigating light pollution. And we moved
8 implementing programs for environmentally
9 sound building design. We've moved that to
10 that new section I mentioned, sustainability
11 and resiliency.

12 And again, in terms of managing and
13 removing, we want to manage and remove
14 invasive flora species, both terrestrial and
15 aquatic. Again, I mentioned our Department
16 of Engineering deals with this on a daily
17 basis. And we've made it a goal in the plan.

18 Moving on to health, safety, and
19 welfare. These goals were continuing.
20 Providing efficient service of, provision of
21 emergency services and instituting zoning
22 that reduces flooding issues. We brought in
23 the goal of ensuring the Town building and
24 fire codes are current and enforced, to
25 ensure that zoning, building, and fire codes

1 Proceedings

2 are current and enforced, and ensure that the
3 conditions of site subdivision landscape and
4 tree preservation plans are also enforced.

5 We changed the goal of continuing to
6 develop zoning and building regulations that
7 reduce or restrict odors, noise, commercial
8 traffic, and other negative environmental
9 impacts on residential areas. We received a
10 lot of comments supporting this goal. And we
11 broadened that to deal with roadway issues,
12 implement roadway changes as well. It's not
13 just the building, buildings that become an
14 issue. It's also traffic, which also add to
15 odors, sound, light pollution, again,
16 commercial traffic, and other negative
17 impacts. So it recognizes that it's just not
18 building, it's traffic that's a problem that
19 we have to address.

20 We moved the goal of encouraging income
21 adjusted housing for emergency service
22 volunteers to the housing section because it
23 has to do with housing. We made some, we
24 added some information on creating an
25 inventory of historic resources and improving

1 Proceedings

2 the maintenance of publicly owned historic
3 properties, looking at some of our recent
4 acquisitions. And we've changed this goal to
5 expand upon legislation.

6 So we've already enacted legislation to
7 ensure historic properties are not destroyed.
8 We want to expand upon that legislation. And
9 we removed this goal of developing zoning
10 that encourages and protects the safety of
11 pedestrian and bicycle traffic because it's
12 thoroughly covered in the transportation
13 section of the plan.

14 So, historic and cultural resources.
15 Again, so this is recognizing a name change.
16 We've gone from the Historic Review Board to
17 the Architectural Historic Review Board.
18 Essentially, the goal stays, is remaining the
19 same. This -- the goal here is to
20 communicate, promote, and educate Clarkstown
21 residents on historical and cultural
22 resources within the town. So historic, that
23 covers historic ribbing and cultural
24 resources.

25 Moving on to housing. We received

1 Proceedings

2 comments that supported the goal of having
3 apartments over businesses, particularly in
4 hamlet centers, having it set aside for
5 workforce and volunteer housing. And in
6 particular, expanding initiatives to
7 safeguard neighborhoods from inappropriately
8 scaled development. That was a big, a goal
9 that a lot of folks supported.

10 We changed the goal of creating a
11 comprehensive database of affordable housing
12 units, potential affordable housing units to
13 the Town creating an inventory of existing
14 residentially zoned institutional properties.
15 And this was recognized in the first plan.
16 Really, those are the large tracts of land
17 that are left in the town. And if the Town,
18 the Town would get involved in actually
19 acquiring those properties, which we actually
20 have in the past few years.

21 Plan for and develop additional
22 subsidized affordable units for seniors was
23 expanded to recognize that we need to have
24 housing for all income levels, lifestyles,
25 and levels of care, not just independent

1 Proceedings

2 living. Not just, you know, subsidized -- we
3 need a range, and we heard from a lot of
4 folks about this comment. And create a
5 mechanism to provide tax relief for volunteer
6 emergency service personnel was moved to
7 health, safety, and welfare. And again, we
8 had a section on creating environmentally
9 sound building design. That moved over to
10 sustainability and resiliency.

11 Some of the continuing goals for parks
12 and rec, you can see here, really deal with
13 expanding a lot of our parks and providing
14 facilities, new facilities or renovating
15 facilities we have in existence. We've
16 recognized in our inter and intra town trails
17 the New York-New Jersey Trail Conference.

18 We have some goal removals here. We
19 have upgraded the pool at Germonds, the
20 playground at Zukor Park, and we completed
21 the trail around Congers Lake. And looking
22 at the priorities for the next few years, the
23 Town is not looking at creating a regulation
24 sized ice rink. Instead, the Town, we
25 received a lot of comments. I never realized

1 Proceedings

2 how popular pickleball was until we had these
3 calls. So pickleball courts was probably
4 mentioned in every call that we had.

5 Continuing to upgrade the equipment and
6 infrastructure at all of our town parks to
7 make them safe. In the height of Covid, we
8 had a lot of senior programs. We heard from
9 a lot of folks that wanted to keep those
10 going. And then lastly, construct a fixed
11 performance area for town concerts and
12 events. I believe we're looking at that at
13 Germonds Park.

14 Transportation. A lot of transportation
15 goals were slightly tweaked, but pretty much
16 the same. Try to reduce air pollution
17 related to motorized traffic.

18 What you'll see is we basically added
19 Complete Streets program to each one of these
20 goals. And Complete Streets means looking at
21 a roadway not just for vehicular traffic, but
22 to have it function for all people of all
23 ages and abilities, and all modes of
24 transportation. So whether we're talking
25 about walking, or biking, or pushing a

1 Proceedings

2 stroller, or taking a bus or a car, you know,
3 whether you're young or you're disabled, or
4 you need help crossing a street, that you can
5 get from Point A to Point B. And we
6 worked -- we had a task force. I know
7 Councilman Borelli has headed up our Complete
8 Streets task force, have worked for a year,
9 for a few years now. So each one of these
10 goals, like I said, are staying pretty much
11 the same. What we're doing is implementing
12 Complete Streets, looking at everything
13 holistically.

14 So I'm going to just speed through
15 these. Again, you know, walking
16 environments, cycling environment, different
17 transportation options in our hamlet centers,
18 and creating a mixed use development that
19 allows for walking and biking, and are well
20 served by public transportation. That really
21 speaks to our Nanuet transit oriented
22 development zoning.

23 We had to recognize some changes of
24 names. Tappan Zee Bridge is now the Governor
25 Mario M. Cuomo Bridge.

1 Proceedings

2 And we are working towards, towards --
3 we are working with our local municipal
4 planning organization, our MPO, NYMTC,
5 New York Metropolitan Transportation Council.
6 They had given us a grant for \$850,000 to
7 actually study Route 303 and Route 304. So
8 this recognizes that, that work that
9 hopefully will happen and kick off relatively
10 soon.

11 Again, Complete Streets and how that
12 will help lower vehicle crashes and minimize
13 conflicts between travel modes.

14 And lastly, the new section that we have
15 is sustainability and resiliency. It's
16 structured around four overarching goals.
17 Create a town committee on sustainability and
18 resiliency.

19 Develop programs to reduce greenhouse
20 gas emissions, we already have. We've done
21 quite a lot to do, to reduce our greenhouse
22 gas emissions, between our LED street
23 lighting and environmentally sound building
24 design, which was built into our code.

25 Mini-Trans, you know, I think we're the

1 Proceedings

2 only town that actually has a public
3 transportation system, a public
4 transportation that we offer. We have
5 electric vehicle charging legislation. And
6 we also have one here right in Town Hall, and
7 two sites that have developed so far at the
8 two major malls.

9 SUPERVISOR HOEHMANN: And Exit 14.

10 MR. SIMOES: Oh, there's another one.
11 Okay. Power supply, the solar landfill, 2.5
12 megawatts, correct?

13 SUPERVISOR HOEHMANN: 2.36.

14 MR. SIMOES: 2.36 megawatts that we
15 generate from our solar landfill. And just
16 recently, we started the Community Choice
17 Aggregation. And in terms of environmental
18 conservation open space acquisition, well
19 over 200 acres that we've acquired since the
20 program started.

21 The third goal is to develop programs to
22 educate Clarkstown residents on issues of
23 sustainability and resiliency.

24 And lastly, to increase the town's
25 resiliency to the effects of climate change.

1 Proceedings

2 So dealing with creating micro grids,
3 renewable energy, energy storage. We do have
4 a tree fund that people pay into. We plant,
5 we plant trees extensively throughout the
6 town. Flood mitigation projects, whether
7 it's Klein Avenue, Cranford Drive, or West
8 Nyack, drought protection and water
9 conservation.

10 So, how do we, how do we make all this
11 happen? We have an implementation section in
12 the original plan. It's a lot of the same
13 mechanisms we used the first time around,
14 between policy changes or using the State
15 Environmental Quality Review Act to designate
16 critical environmental areas, investing in
17 our infrastructure, making changes on our
18 official app, working with other towns on
19 agreements. And they're kind of the meat and
20 potatoes of any comp plan is changes to our
21 zoning and land use changes.

22 And we've added here records and asset
23 management information systems. A lot of
24 information was being asked from the Town
25 during Covid. We had, we had a, we had a lot

1 Proceedings

2 at our fingertips. We could do more to
3 provide the town and, you know, residents,
4 businesses with information via our website.
5 And that will require an investment on the
6 Town's part, on the software that pulls that
7 data and provides it to the public. And also
8 to all the departments so they can
9 communicate with each other more effectively
10 and efficiently. So that's that, a new way
11 of implementing the goals here in the plan.

12 So as I mentioned in the beginning, this
13 is not only a comp plan, but a generic
14 environmental impact statement. So there is
15 a potential for impact with any of these
16 changes that we're looking to accomplish.
17 The list of potential impacts are here.
18 Land, water, air, plants and animals,
19 esthetic resources, open space and
20 recreation, transportation, energy, noise and
21 odor, public health, growth and community
22 character. There are unavoidable adverse
23 impacts and irreversible and irretrievable
24 commitment of resources.

25 The plan goes through each one of these

1 Proceedings

2 impacts, potential impacts. And as I said,
3 kind of the beauty of having a comp plan and
4 environmental impact statement is that
5 particular goals of the plan mitigate other
6 goals in the plan. So when we're saying we
7 want to provide more housing, that has an
8 impact, right. It uses up, it uses up water,
9 it uses up energy.

10 And what we have is in another part of
11 the comp plan is the resiliency section and
12 sustainability section. Or even in the
13 environmental section, where we're talking
14 about trying to make buildings more energy
15 efficient, or make transportation more
16 efficient, or conserve, conserve water. That
17 helps to mitigate the potential impacts of a
18 particular goal.

19 So every goal, the potential impact of
20 every goal was analyzed and matched up with
21 another goal in the plan that mitigates, that
22 mitigates that. So it kind of goes, it's
23 circular. But we wanted to be sure that
24 everything was encapsulated in the plan, just
25 like we did the first time.

1 Proceedings

2 So again, this is generic. So I want
3 to, I want to emphasize that. What that
4 means is nothing is site specific, right.
5 There's ways, there's two environmental
6 levels here. When you're, when it's generic,
7 we're talking in broad conceptual terms and
8 goals for the Town of what we want to study
9 and what we want to do.

10 The site specific is when we get into
11 the nuts and bolts of the particular change
12 we made, or the infrastructure improvement
13 that we do when we, you know, if we widen a
14 roadway, what is the particular environmental
15 impact of widening a road. Or building, you
16 know, or allowing a particular size of a
17 building, or a particular use. Those site
18 specific environmental impact statements or
19 impact analysis has to happen as we know
20 exactly what's going to get developed, or
21 what's going to be changed.

22 So again, this is kind of in broad
23 terms. So it's built into the plan as to how
24 we would address potential impacts. But the
25 specifics of it, you know, how much, how much

1 Proceedings

2 water usage we're going to have for a
3 particular development, that happens when we
4 actually have a development. Or when we
5 actually make a zone change that adds
6 whatever, whatever, you know, whatever to the
7 town in terms of potential impact, that's
8 when we study it.

9 And I just want to emphasize, it's the
10 same way we did it with the first comp plan.
11 We had particular goals. Then we did the
12 legislation. And then we went down into that
13 legislation, did the specific impacts of that
14 legislation, analyzed that, and then the Town
15 knew exactly what, you know, what the impacts
16 were and how they would be mitigated.

17 So with that said, the next steps here,
18 we're here tonight to get comment. And I
19 just want to mention, it's not -- if there's
20 a question to clarify something, that's fine.
21 It really shouldn't be too much of an
22 exchange. We just, we get the comment. And
23 every comment that is being, that's going to
24 be given to us tonight, it has to be
25 cataloged and answered specifically.

1 Proceedings

2 So if anyone were to look up their
3 comment -- and I received about ten, ten
4 emails and letters. So that's also, that
5 will also be here in the final plan. Every
6 comment will be categorized and a specific
7 answer given back.

8 So people have given us 700 comments.
9 They've been giving us comments on how to
10 develop the plan. Now, you know, they should
11 be able to see in the plan -- we have, like I
12 said, a massive database that points to where
13 we put a particular comment or how we
14 addressed it. We -- any comments now will
15 have a specific answer. You know, we
16 answered your comment on Page 17 of the
17 document. We changed this word, or added a
18 sentence. We'll drill down that, that
19 thoroughly on every comment that we received.
20 So it's important to get every comment and to
21 get the person's name and address. So the
22 court stenographer is here to pick that up.

23 If we conclude tonight, the Board, the
24 Town Board will be able to close the public
25 hearing and provide at least another ten days

1 Proceedings

2 for comment. So people can go on the
3 website, and they can look at the document.
4 They can make comments through the website.
5 Really via the email here, which is Comp Plan
6 2020 at Clarkstown dot org. And like I said,
7 it will be addressed in the final document,
8 which then the Board will adopt. And you
9 know, they'd be able to adopt a findings
10 statement that I prepare, looking at all the
11 impacts of potential mitigation. And then
12 adopt the plan. And then we move on from
13 there in terms of implementing it.

14 SUPERVISOR HOEHMANN: So, Mr. Simoes, I
15 want to thank you for your efforts. And I do
16 want to just again, going in kind of the
17 direction that you're talking about, so
18 tonight is not about zone changes or site
19 specific properties. Tonight is about taking
20 public comment. And the comp plan itself is
21 really the underpinning of our zoning,
22 correct?

23 MR. SIMOES: Correct.

24 SUPERVISOR HOEHMANN: So essentially,
25 the comprehensive plan document becomes

1 Proceedings

2 something that municipalities are supposed to
3 do every ten years. We're pretty close to
4 our ten-year mark on this. We're about 11
5 years. We're going into our 12th year now.

6 So presumably, within the next few
7 months, we'll be able to adopt what our final
8 comprehensive plan is. And then based upon
9 that, if there's a zone change that's
10 proposed or contemplated, or a developer
11 comes in and says gee, Town, I would like to
12 do X on this location, it has to be something
13 that would generally be consistent with the
14 comprehensive plan. And that's why there's
15 all this public outreach and, you know, very
16 proud of that.

17 We have a lot of, lot of folks who have
18 been talking about concerns about could we
19 really get to more public participation. And
20 I would argue that we have more public
21 participation in this comprehensive plan than
22 we did on the plan that we adopted in 2009,
23 and we were very proud of that. It was
24 award-winning.

25 But thousands of people participated

1 Proceedings

2 through the various webinars. 700 comments.

3 It's a significant amount of public input
4 that's taken place.

5 So tonight is really a benchmark in time
6 where we're really able to get comment from
7 the public. And that's really what tonight
8 is about. Not a dialogue, not a back and
9 forth, because it has to be specific what the
10 public comment is. And then essentially,
11 that gets addressed. Every specific comment.
12 And we'll leave a period of time for people
13 to continue to make comment where they can,
14 where they can write in and submit additional
15 information.

16 And we'll tell you, I received many of
17 those ten comments as well that were
18 submitted. There was one resident who sent a
19 very detailed letter. About three pages,
20 Joe. And with a lot of points. And that
21 will be categorized, and it will be looked
22 at, and to see if there's anything that, you
23 know, how that would be addressed.

24 So tonight is really making sure that
25 we're giving the public the opportunity to

1 Proceedings

2 comment on the document and offer additional
3 information one last time. And then for
4 another period of time. And at that point,
5 the Town Board, if we choose to close the
6 public hearing tonight, if we believe we've
7 heard from folks, you know, in the meeting,
8 we could close it tonight, leave the period
9 open for public comment, you know, written
10 comment submitted to the Town. And then
11 ultimately, after additional work is done, we
12 would bring this back for final adoption at a
13 future Town Board meeting somewhere out.

14 Joe?

15 MR. SIMOES: That's right. I just want
16 to add a couple things. Like I said, we have
17 received comments from the public. We also
18 have received comments from the County
19 Planning Department. By and far, mostly
20 formatting, or sentence structures, or just
21 adding, clarifying and adding information.

22 I was, you know, even though there were
23 35 comments, I appreciate their comments
24 because they were very thorough. They go
25 through. They missed, you know, they pointed

1 Proceedings

2 out that I missed a period somewhere at the
3 end of a sentence, and that's fine.

4 We also had the Town Planning Board also
5 review this. They only had one comment,
6 really, for the Town Board, and I'll mention
7 it because, you know, there might be some
8 folks who are concerned with some of the
9 goals, particular with residential
10 development.

11 They recommended that we use the same
12 approach that we have in the past with any
13 type of zoning changes that deal with
14 residential, to have, to consider a cap.
15 Which we have, I think the last three pieces
16 of legislation dealing with senior housing
17 and Nanuet TOD, the Town did that. And
18 frankly, it makes my life a little easier
19 when I do an environmental analysis to know
20 what the number is. So that was the, that
21 was the one, one suggestion the Planning
22 Board had. And I would say, I would support
23 having some kind of reference to that in the
24 plan.

25 Other than that, I just want to mention

1 Proceedings

2 we did the last time, and I'd like to do it
3 again, is for folks who are giving us
4 comments, if they send an email, I get their
5 email. But if they're here tonight and this
6 is the only way they're going to, the only
7 forum that they're going to provide their
8 comments, to please send, provide their email
9 on the sign in sheet. Or just email us
10 somehow so that we can email them and say
11 hey, the final plan is here, you know, take a
12 look at it.

13 So we emailed every email that we
14 received from those 700 comments. We did
15 email them again. And I did receive comments
16 from folks saying thank you, I saw my
17 comment, I saw that you added it. Or they
18 said, you know, I know you considered
19 pickleball, but what about tennis courts.

20 So we did get, we did get that feedback
21 again from folks. And I don't want to keep
22 that, keep that going. So please provide
23 your email, if possible.

24 SUPERVISOR HOEHMANN: I'm going to just
25 ask if there's any comments from the Town

1 Proceedings

2 Board before we get to the public? Pat,
3 Frank?

4 COUNCILMAN BORELLI: I just want to
5 compliment the Planning Department and all
6 the people that put a lot of hours into this.
7 It's obviously well done. And I'm sure we'll
8 win another award. You know, the Supervisor
9 was on the first committee. He wasn't on
10 this one, so maybe not.

11 But I do want to thank everybody who
12 worked hard to put this together. It's
13 important to have a foundation for our zoning
14 because it's really what protects our town
15 from being used in a disadvantaged way to
16 our, to benefit to our public. So thank you.

17 COUNCILMAN CARROLL: And I just echo
18 Councilman Borelli. There's some silver
19 linings of everyone being stuck at home for
20 the last year and a half or so. The fact
21 that we had such participation virtually on
22 the webinars for the comprehensive plan
23 review I think was one of those silver
24 linings. There's a lot of input. And I look
25 forward to hearing more tonight. I think we

1 Proceedings

2 all need to have a voice to be heard in order
3 to fully have a plan that we can all look
4 forward to in the future of Clarkstown. So I
5 look forward to hearing from you. And thank
6 you, Joe, and your people.

7 SUPERVISOR HOEHMANN: And I know
8 Councilman Graziano and Councilman Franchino
9 are on the line. Would either like to offer
10 comment?

11 COUNCILMAN FRANCHINO: (inaudible) hear
12 me. Again, I want to thank Joe. That was an
13 excellent presentation. I'm excited for the
14 future of the Town of Clarkstown, and look
15 forward to the comp plan and the impact.
16 Your team did an excellent job and touched on
17 all the topics that I think people in the
18 town are look for. So thank you again.

19 SUPERVISOR HOEHMANN: And Council
20 Graziano?

21 COUNCILMAN GRAZIANO: Basically, the
22 same thing. Joe did an excellent job. This
23 must be a tremendous amount of work, the time
24 you put into it. And I think that it
25 benefits all of Clarkstown. Save the

1 Proceedings

2 changes. And I thank Joe and his team,
3 really, for a good plan going forward. So
4 thank you.

5 SUPERVISOR HOEHMANN: Thank you. So at
6 this point, we're going to open up for public
7 comment. And if there's anybody that's on
8 the line, please press zero to get in the
9 queue to offer your public comment. And
10 we'll start with Mr. Samuels. You wanted to
11 make a comment from the RBA. If you come
12 forward and just offer your name and address
13 for the record.

14 MR. SAMUELS: Thank you, Supervisor. My
15 name is Al Samuels. I'm president and CEO of
16 the Rockland Business Association. And I
17 also have some comments to make that come
18 from the fact that I have served on the
19 Governor's Regional Economic Development
20 Council since its inception 11 years ago. I
21 served on the executive committee.

22 I first want to say, Joe Simoes, you
23 made a comment at the beginning of your
24 presentation that this is a very
25 comprehensive comprehensive report. I

1 Proceedings

2 support that. I've been reading
3 comprehensive reports for over three decades.
4 I will tell you this is one of the better
5 ones.

6 And not to put any pressure on any of
7 you, but it will also be the first
8 comprehensive report coming from a town in
9 Rockland post Covid. You have the
10 opportunity to set a standard for your
11 colleagues in the other towns, and to provide
12 them with a guide. And I think that this can
13 do that. I'm very impressed with this.

14 As a result, I only have two comments to
15 add at the end other than this. My interest
16 is economic development, of course. And I am
17 very happy to see that you are continuing
18 your economic development department. I will
19 comment that Clarkstown was the first
20 township in Rockland County to create such a
21 department. Orangetown followed. So it's
22 something that we in the RBA have perhaps
23 been advancing for a decade or more. And I'm
24 happy to say that 40 percent of our townships
25 now do this. And maybe your colleagues will

1 Proceedings

2 follow in the other three.

3 Something that we had added in
4 opportunities that were given to us by the
5 Supervisor. I had the privilege of serving
6 on the 2008 strategy report team. He honored
7 me by allowing me to be on his transition
8 team relative to economic development, among
9 other things. But also the council or task
10 force that he created more recently that made
11 certain recommendations, not the least of
12 which was that there should be a, an
13 elimination of the prohibitions for the
14 Palisades Center for expansion.

15 You approached all of these things in a
16 reasonable manner. You covered the bases to
17 allow full public support. We take note of
18 that. It gives credibility to what is being
19 presented and what I hope will be passed.

20 We're very pleased to see that you're
21 looking to provide for mixed use development
22 in areas of Clarkstown. One of the things
23 that came across in the Regional Council is
24 that mixed use developments are a way
25 forward. And that Clarkstown is embracing

1 Proceedings

2 that, we're happen to see that. We think
3 that it provides great opportunity at both
4 Palisades Center and Shops at Nanuet, as well
5 as other properties which are also willing,
6 you know, to take a look at for this purpose.

7 So all of it is positive. Two things
8 that, I won't say concern me, but probably
9 the most difficult infrastructure issue that
10 we have in Rockland is water. And
11 development anywhere has to be considered in
12 terms of where we get our water, how do we
13 get our hour, how will we get our water as we
14 move forward, and to protect against running
15 out of enough water to provide. One of the
16 benefits you have is that you're coming out
17 first with this plan. I think that you have
18 a reasonable approach to it. But,
19 Mr. Simoes, in terms of the things that you
20 should be looking at, and I know you are, I
21 think the issue of water is very critical.

22 And then the other that I might mention
23 is that we have seen that programs or
24 processes where people can exchange
25 properties. You have to make sure that

1 Proceedings

2 they're rock solid in terms of preventing
3 against unintended consequences of any
4 developer, groups of developers, individual
5 or other organizations can prostitute the
6 process to create density. And I know that
7 you want to protect against that. And I do
8 recommend it.

9 Those are my only two recommendations,
10 and I think it's a terrific project. Thank
11 you.

12 SUPERVISOR HOEHMANN: Thank you. Thank
13 you for your comment. So, Town Attorney,
14 just some clarification. So we're taking
15 public comment. Typically, we limit to three
16 minutes. Is that the recommendation here?

17 MS. KAHN: I think this is a, we're
18 considering this a public hearing and taking
19 public comment. So I would --

20 SUPERVISOR HOEHMANN: No limit?

21 MS. KAHN: No limit.

22 SUPERVISOR HOEHMANN: Okay. All right.
23 So we're treating this as a public hearing,
24 so there -- we'll leave it, not the
25 three-minute limit, but I'm going to ask

1 Proceedings

2 folks to try and be concise. We have a lot
3 of folks here. If there's anyone on the line
4 that wishes to comment, please press zero.

5 Is there anyone else wishing to speak on
6 the comprehensive plan? Yes, please come
7 forward and just identify yourself for the
8 record. Please give your name and address so
9 our court stenographer can take it down.

10 MS. KING: I wrote it down already.

11 SUPERVISOR HOEHMANN: And an email would
12 be great, if you could just --

13 MS. KING: Didn't I give that to you?

14 SUPERVISOR HOEHMANN: What's that? Oh,
15 great. For the stenographer, she needs a
16 name and address.

17 MS. KING: The name and address is on
18 there as well.

19 COUNCILMAN BORELLI: For the
20 stenographer, she can't see it.

21 MS. KING: Oh. My name is Emily King.
22 I am a lifelong resident. Address is 80 Saw
23 Mill Road, New City. I am now the Democratic
24 Committee person for Election District 37.
25 And I have three comments.

1 Proceedings

2 Basically reaffirming Mr. Samuels in
3 terms of water being probably the -- going
4 forward for all of Rockland County, all of
5 Clarkstown for the next 20 years, that's
6 going to be a pivotal issue. Not just how
7 much, will we have enough, but the quality of
8 water, what's in it and how it gets there.

9 And that leads to the question of
10 enforcement of code. I've been watching for
11 a few years now. And it seems like
12 Clarkstown has a reputation for a place where
13 you can just go ahead and do what you want,
14 and then get a permit. And maybe get the
15 permit and maybe not. And maybe be called on
16 it. And maybe go to court. And maybe get
17 fined.

18 Or maybe do what we call a civil
19 compromise. Which is an insidious thing.
20 Because if it only costs you X amount to take
21 down a hundred trees, then, you know, it's
22 worth it because your property value went up
23 by X amount.

24 We need to establish a reputation for
25 place where you cannot break the code. From

1 Proceedings

2 the get go. Not pay for it afterwards like a
3 naughty child who didn't ask Mom. You know.

4 It's too easy to decide that your
5 mountainside needs to be a lawn, as we have
6 seen in New City on the corner of Central
7 Highway and South Mountain Road. Yes, we're
8 going after him now, and we're dealing with
9 engineers and stuff like that. But it should
10 never have happened in the first place.
11 People go ahead and do it because they think
12 they can get away with it. And we need to
13 change that.

14 In terms of open land use, I grew up
15 right next to Davenport Preserve. My parents
16 helped found it in a way, you know, make sure
17 that it happened. The people there were
18 their lifelong friends. They passed away,
19 left their property. Davenport Preserve is a
20 nature preserve, not a park.

21 If you -- if I may, if I could read this
22 without my glasses. The premises shall
23 forever be held to the original agreement.
24 The premises shall forever be held as a
25 nature preserve for scientific, educational

1 Proceedings

2 and esthetic purposes, including public
3 recreational activities, which are compatible
4 with a primary intent, and shall be kept
5 entirely in its natural state for the benefit
6 of the people of the United States, the state
7 of New York, including all surrounding
8 property owners.

9 And it allows for trails. And it was
10 very nice that they put in for making trails.
11 But what I would like to say is I think it
12 would be really good if not just as a
13 hearing, but if we would create, for example,
14 we are friends of Davenport Preserve. We
15 know Davenport Preserve like the back of our
16 hands. We've walked through it all of our
17 lives.

18 There's five or six families, that we
19 would like to be included in the process of
20 where those trails are going to go. We don't
21 want them to be mountain bike trails. We
22 don't want them to be ATV trails. You know,
23 if people want to go and look and see where
24 the birds are, and the deer, and the coyotes,
25 and the foxes, great. But the land is there

1 Proceedings

2 for the animals.

3 And we were talking about preserving
4 fauna as well as flora. There are a lot of
5 scary invasive plants. It would be nice to
6 be able to go through with people who know
7 what the native plants are, and what the
8 invasive species are. And say that patch,
9 that scary thing called devil's walkingstick,
10 that's got to go. You know, so that we can
11 collaborate rather than just come to a
12 hearing and say this is that.

13 And we'd like the formation of a
14 committee to include the people around it who
15 really know about that area. And I'm sure
16 there are other areas of interest in
17 Rockland County, in Clarkstown that would
18 have a similar kind of neighborhood interest.
19 So a neighborhood committee that is involved
20 in the development of, of what should be
21 public access. It belongs to Clarkstown.
22 Happy to have people come visit. But it
23 needs to be in on a scale and keeping with
24 the founders' ideas, and what the native
25 fauna and flora require.

1 Proceedings

2 That's basically -- oh, in terms of
3 water. And I listened to Ramapo's CP. And
4 they had decided to divide Ramapo into wards.
5 And the ward that they started with was the
6 one that's continuous with New City. Which
7 has a lot of open land. And they would like
8 to develop it in a large scale.

9 We -- that watershed is our watershed.
10 That's where our water starts. It starts in
11 those swamps on Route 202 in the, in the
12 wetlands behind Concklins. We share that.
13 You can't just decide that that's Ramapo and
14 has nothing to do with us. So we'd also like
15 to see some sort of coordination maybe
16 through Rockland County.

17 But we can't just say, you know, this is
18 New Jersey, this is New York, and never the
19 twain shall meet. It's, it's really
20 important that we collaborate and influence
21 Ramapo, because they didn't seem to care what
22 anybody said in their meeting. They had a
23 lot of very articulate people talking about
24 water, talking about development. And in the
25 end, they just went well, we're just going to

1 Proceedings

2 move on. And it was shocking. So I hope
3 that you guys can take that into
4 consideration.

5 I think the consequences of code
6 infringement is something we seriously need
7 to change here. We can't just keep
8 postponing, you know, somebody shows up for a
9 case, doesn't show up for a case, and it gets
10 postponed for another month, and another six
11 months, and, you know, another three years.
12 You know, we don't have time for that. The
13 water here is not drinkable. And nobody
14 wants to talk about that. But you know,
15 it's -- if we can protect the sources, it's
16 better than trying to talk a international
17 corporation into filtering it better. Thank
18 you very much.

19 SUPERVISOR HOEHMANN: Thank you for your
20 comment. Just going to wait to see who is on
21 the sign in list. We'll try to go down the
22 line.

23 MS. BALDASARE: Thank you, Emily.

24 SUPERVISOR HOEHMANN: Again, if there's
25 anyone on the line wishing to speak, please

1 Proceedings

2 press zero. So in the audience, Mr. Samuels,
3 you were first. Mr. Gillespie, you're next.
4 Would you like to come forward? Ms. King,
5 you were third. I apologize, Mr. Gillespie.
6 We took you out of order. After that will be
7 Zeeba Rasheed.

8 MR. GILLESPIE: No, thank you,
9 Mr. Hoehmann. I was just look for a
10 clarification. Mr. Simoes's presentation had
11 answered that. Thank you.

12 SUPERVISOR HOEHMANN: Okay. Now, so
13 just for the record, you live at 29 Highview
14 Avenue, Nanuet, correct?

15 MR. GILLESPIE: That is correct, sir.

16 SUPERVISOR HOEHMANN: Great, thank you.
17 Zeeba Rasheed is next.

18 MS. RASHEED: Yes, hi. Hello, everyone.
19 My name is Zeeba Rasheed, and I'm a real
20 estate developer, asset manager. My interest
21 in Rockland County is doing part of the
22 comprehensive plan. And I'm an
23 environmentally sustainable developer, so
24 I've -- I hope to fit in very well.

25 I -- regarding Emily's comments about

1 Proceedings

2 code enforcements, I've had a residential
3 property under contract a few months ago. I
4 couldn't close. I still cannot close because
5 I have encroachment problems from the
6 neighbors. And because they have owned the
7 property for hundreds of years, and they can
8 come over the property and use it as they
9 please. So we are facing that situation.

10 My third comment is regarding the TDR.
11 TDR, transfer development rights. We would
12 like to know a little bit more about them,
13 and how do you intend to create the different
14 transfers. Usually in New York City, it's
15 the air rights. That's what we call TDRs.
16 But here it's, I guess it's created for,
17 because of the low density. But I'm
18 interested to know more about it. Thank you.

19 SUPERVISOR HOEHMANN: And just for the
20 record, you didn't put an address. So what's
21 your address?

22 MS. RASHEED: Right now it's 440 East
23 79th Street, New York City.

24 SUPERVISOR HOEHMANN: Great, thank you.

25 MS. RASHEED: Thank you.

1 Proceedings

2 SUPERVISOR HOEHMANN: Okay, Jacqui

3 Drechsler is next. And then Dolores

4 Baldasare would be after that. And if

5 there's anyone on the line wishing to speak,

6 please press zero.

7 MS. DRECHSLER: Hi there. I'm Jacqui

8 Drechsler at 116 Sierra Vista Lane in Valley

9 Cottage. And I do, I would like to put my

10 sister's name on the list at some point, but

11 it's not here to do it.

12 So it is a comprehensive plan. And

13 Mr. Simoes, you're rather brilliant. It's so

14 comprehensive that I haven't really gotten

15 through it. And so I'm very concerned that

16 you're considering possibly closing this out

17 tonight.

18 If you've had 700 people that sent in

19 comments originally, and thousands of people

20 that seem to be active with this, I

21 personally would ask that the comment period

22 be open not for ten days after you close it

23 potentially tonight, but for 30 days.

24 Because I'd like to know where all of those

25 thousands of people are that may want to

1 Proceedings

2 comment. They're certainly not here.

3 I just believe that this needs to be
4 open a little bit more. It's, it's an
5 incredibly detailed long plan. And I need
6 more time with it. I certainly do. I do
7 appreciate that some of the comments that my
8 sister made and I made were addressed to some
9 degree. But you know, tonight's been -- it's
10 just a little concerning.

11 So I think it's on Page 90 of your plan.
12 And it might be on your transportation. It's
13 all about air quality and cutting down on
14 vehicular traffic so that there's not as much
15 air pollution, not as much light pollution,
16 not as much runoff coming from roads,
17 roadways and parking lots.

18 And yet, when you think about all of the
19 development that's going on here in
20 Rockland County, the potential for all of the
21 development and all of the housing units,
22 call it what you will, senior assisted, over
23 55, most of those people will be having cars.
24 They're not taking Mini-Trans. They're
25 probably still working and commuting.

1 Proceedings

2 So you're talking, say, I don't even
3 know the actual number of all the units that
4 you're thinking of putting into this town.
5 Is it 800, is it 1600? There's, like, ten
6 different, ten different projects, right?
7 About ten different projects. I don't know
8 the total number for all of those things.
9 But then you can double that with cars. And
10 I don't see how that contributes to lowering
11 the air pollution that's specifically from
12 vehicles that you say that you address in
13 this plan.

14 So that's one question I have. And
15 maybe there's something I'm not seeing. But
16 that's something that concerns me a lot,
17 especially -- I was on an air quality
18 commission with the DEC. And it was back in
19 2016 up in Albany. And the DEC is changing
20 their air quality emissions and standards.
21 But I don't see how we're really doing enough
22 on that here in this county.

23 I'm concerned about this traffic study,
24 that you got a grant for 850,000 to study
25 traffic on 303 and 304. And I hope to God

1 Proceedings

2 it's not to allow more trucks, to widen the
3 roads to allow more trucks, because it's
4 already feeling like we're on the Thruway.

5 And I know my sister was instrumental in
6 getting trucks off of Oak Tree Road and
7 decoupling the big tandem tractor-trailer
8 trucks coming through Rockland County many,
9 many years ago. And we really need to make
10 sure that we have less trucks on our roads.

11 So I hope that that study isn't about
12 widening these roads to allow for more
13 traffic.

14 Okay. So interestingly enough, the
15 other day I read an article by Rick
16 Tannenbaum, who you all know because he
17 usually does come to meetings. And it was on
18 the possibility of warehouses coming to a
19 town near you. And warehouses are known for
20 huge, huge amounts of emissions. And your
21 comprehensive plan does not take this
22 possibility into account.

23 We're talking massive emissions from
24 diesel because it's not likely that we're
25 moving to these, you know, huge trucks are

1 Proceedings

2 going to be electric. I know they're
3 starting to think about it. But this is a
4 very serious issue because this kind of
5 pollution gets deep into the lungs. It
6 really affects children and elderly people,
7 anybody who has asthma or any other lung or
8 heart problem.

9 So maybe, you know, I think it's under
10 the Rockland Business Journal, under the
11 commercial section, was this article by Rick
12 Tannenbaum. And it's just something I think
13 that you might need to address to make sure
14 that there are going to be some very
15 stringent standards if, should this be
16 happening in the future.

17 So I do have a few other comments here.
18 I'm very concerned about the transportation
19 issues in Rockland. I know that we have the
20 Mini-Trans. I'm concerned about all of the
21 quote, seniors, end quote, who, you know,
22 these, these communities are not walking
23 communities. They're not, you know, in like
24 big repurposed buildings where there's
25 shopping, and there's dining, and there's

1 Proceedings

2 living, and there's green space.

3 So these people are going to be maybe,
4 if they're not driving to the store, then
5 they'll be using Mini-Trans to the store. So
6 you know, it's going to be another hit on the
7 resources of Clarkstown. Which, you know, we
8 need to accommodate people.

9 But that is -- and the other biggest
10 thing, of course, is the water issue. And
11 you know, my sister and I have gone to many,
12 many meetings through ROSA up at Ramapo. And
13 you know, you know that we are big water
14 fighters and conservationists. Do you all
15 know that about us? Yeah. Okay.

16 So this is, like, one of the most
17 important issues facing our future as a
18 county. We all have to work together. We do
19 not want to go back to the possibility of
20 desalinated water here in Rockland County,
21 okay.

22 And we are paying the highest water
23 rates. We have water that we can't drink.
24 And we have a lot of people who are going to
25 be flushing, and showering, and

1 Proceedings

2 dishwasher-ing and, you know, it's huge.

3 Laundry. It's a huge amount of resources
4 that we, we need to conserve.

5 So this lady who spoke before me had,
6 you know, some very strong thoughts about
7 that. And I applaud her for saying what she
8 said. Then there's the land use issues here.
9 So she's talking about a land use issue in
10 New City. I'm talking about a land use issue
11 in Valley Cottage, the same thing.

12 If there aren't laws that can be truly,
13 that truly hold people accountable, and
14 everything is I'm going to do this and then
15 I'll pay a fine later, if I even get a fine,
16 that is not setting a good example for all of
17 the other people who would like to, you know,
18 get away with that. There are so many people
19 in Rockland County who do follow the rules.
20 And it takes years and years for them to get
21 approvals to do certain things.

22 So I think there needs to be some
23 equity, you know, parity on, on zoning and on
24 who is allowed to do what. And you cut down
25 a hundred trees and so what, big deal. It's

1 Proceedings

2 a big deal.

3 So I would love it if, I would love it
4 if you would somehow be planning for housing
5 for our volunteers. Our county survives
6 because of our volunteers, our EMTs, our
7 firemen, our mental health workers. Mental
8 health workers don't get paid enough to be
9 working here in this county.

10 We need to have some assisted housing
11 for them, okay. I really feel this is a
12 priority. I know that in Orangeburg, they
13 have Homes for Heroes. Well, I feel that our
14 volunteers are our heroes, and we need to be
15 doing something for them to keep them here
16 and to be, to be getting more talented people
17 to come to Rockland. So maybe that works for
18 apartments over businesses. I don't know.

19 I'm a little concerned about the fact
20 that we say that there's sustainable
21 building, but I don't see it. I don't see
22 permeable paving, and I don't see green
23 fruits. I don't see, I don't see anything
24 that leads me to think that any developer in
25 Rockland County is doing any sort of

1 Proceedings

2 sustainable building. If there is someone
3 who is doing it, I would love to take a tour,
4 so.

5 On that note, there are more comments I
6 would like to make. However, I'm going to
7 leave time for other people to speak. I will
8 send in written comments as well. It might
9 not be in the order that I said tonight.

10 But I do hope that you're not going to
11 close this out tonight. And that if you are
12 closing it out, that you will extend this for
13 at least 30 days. You know what, there are
14 people who are here tonight who only just
15 knew about the meeting tonight, okay.

16 Because we're not all on the web, looking at
17 every thing that's coming up in our town.
18 And people need more time. This is a huge
19 document to digest.

20 I do appreciate the work that went into
21 it. I do appreciate the fact that you did
22 reference people's comments, although not by
23 name. And I do hope that we will have more
24 time to add into it. Thank you very much.

25 SUPERVISOR HOEHMANN: Thank you for your

1 Proceedings

2 comment. And Dolores Baldasare?

3 MS. BALDASARE: Jacqui, I mostly echo --

4 SUPERVISOR HOEHMANN: Sorry. If you
5 could just please come up, state your name
6 and address.

7 MS. BALDASARE: I was going to yield to
8 you.

9 SUPERVISOR HOEHMANN: That's --

10 MS. BALDASARE: Yeah, sorry about that.
11 My name is Dolores Baldasare. I'm a
12 Rockland County resident.

13 SUPERVISOR HOEHMANN: Just, if you could
14 give your address for the record.

15 MS. BALDASARE: Oh. 252 Treetop Circle,
16 Nanuet, New York. I've been here, up here
17 for 20 years. I was going to say very, very
18 brief things. I'm being very
19 uncharacteristic tonight.

20 Number one, I'm mostly pleased with what
21 I've heard and the little that I've read. So
22 that's a great thing. Number two, I'm
23 planning to be brief. And number three, for
24 a place that's so conservation conscious, I'm
25 freezing. I really, I echo much of --

1 Proceedings

2 SUPERVISOR HOEHMANN: I'm going to
3 deviate once with just a comment. So we're
4 looking, we're looking at all of our systems
5 in the building. This has nothing to do to
6 the comprehensive plan. And people will know
7 that it's quite a bit of money. But
8 eventually, we're going to have a plan to, a
9 project to fix the heating and cooling,
10 because you come here sometimes and staff are
11 wearing jackets in the office. Again, this
12 has nothing to do with comprehensive plan.
13 I'm taking a little privilege and just
14 commenting it is cold tonight.

15 MS. BALDASARE: Yeah. I wasn't
16 intending to be snarky. That was more humor
17 than anything.

18 And I would just want to say that I
19 support very much what Emily, and Jacqui, and
20 I think Zeeba got up to say. And I think to
21 be brief, while I have the floor, I would
22 just want to urge that while I hear economic
23 development and I do understand its value, we
24 are at a point in our, in this climate
25 catastrophe where even as late as today, I

1 Proceedings

2 think it was the BBC, it was -- you know, I
3 was listening to it on radio, so I didn't
4 read it. But it was something to the effect
5 of while I wasn't expecting the temperature
6 to increase, go by 1.5 degrees in even my
7 lifetime, there is a 40 percent chance it's
8 going to happen in the next five or ten
9 years.

10 Please, I implore anybody everywhere,
11 not just in this county, all over this globe
12 to get real with it. And that has got to be
13 the focus over economic development, over
14 money. It's a big deal. And it sounds like
15 that is very much being taken into
16 consideration.

17 SUPERVISOR HOEHMANN: Thank for your
18 time. Al Osterlitz is next. Is there anyone
19 else in the audience wishing to speak? So
20 we'll put the, we'll put the sign in sheet
21 back down, and if you can come up and sign
22 in.

23 MR. OSTERLITZ: Al Osterlitz, New City.
24 My comment is basically about recreation.
25 And the lack of recreation in Ward Four that

1 Proceedings

2 I see in the plan coming up. There's lots of
3 things that have happened within the last few
4 months on West Clarkstown Road in particular.
5 The transfer of ownership of multiple
6 properties, and the development of another
7 property, or redevelopment of another
8 property on West Clarkstown Road.

9 West Clarkstown Road is not in
10 Clarkstown School District proper. It's in
11 East Ramapo School District. The facilities
12 in East Ramapo School District as far as
13 recreation are really, I'll use a Yiddish
14 term, a shanda. It's, it's disgusting.

15 There's one park on Pascack which needs
16 to be upgraded to a facility, a modern
17 facility that accommodates everybody. Plus
18 there's more that needs doing in the East
19 Ramapo village, East Ramapo School District
20 to bring it on par with the rest of
21 Clarkstown. You go into Germonds Park, you
22 go over to Zukor, the Clarkstown area of
23 Zukor, you go over to the lakes, Congers Lake
24 and see what's over there, and it's 21st
25 century. You go back into East Ramapo

1 Proceedings

2 section of Clarkstown, we're in the 1950s.

3 Basically, that's my, my comments and my
4 upset with this plan, that it doesn't show
5 enough for recreation in that area of
6 Clarkstown.

7 SUPERVISOR HOEHMANN: Thank you for your
8 comment. Before we get to the folks in the
9 audience, there is one person on the line
10 that we'll take on. And if there's anyone
11 else on the line, please press zero. I'm
12 going to bring Mr. John Errico live. You
13 have a comment about sound, the sound
14 barrier. Mr. Errico, go ahead.

15 MR. ERRICO: Hi, everybody. (inaudible)
16 to speak tonight. I just wanted to speak.
17 There was an issue that a couple of my West
18 Nyack residents had a meeting within the last
19 week about my property bumped up against 59
20 on Foxwood Road in West Nyack. And my
21 property is the first backyard that does not
22 have a sound barrier. And the (inaudible)
23 behind me is they, they had this project
24 better they built a sound barrier. And so my
25 only, my only thought is they probably just

1 Proceedings

2 ran out of money and time, for there's no
3 reason to stop where they did.

4 And so many of my residents and I are
5 very tired of being woken up in the middle of
6 the night because of truck noises that are so
7 close, and can be minimized by extending the
8 sound barrier. Which, from my understanding
9 is, the Town, the State comes in and does a
10 project that creates a disturbance, then they
11 come to that town and they should also fix
12 the problem. And for the last 25 years,
13 there has been no initiative to try and
14 continue this law. I have spoken, I've
15 called the department (inaudible) and I was
16 basically laughed at and said that this would
17 never be something that would be continued
18 again, basically for lack of funding.

19 But you know, speaking of all of the,
20 what's going on with the mall and the
21 increase in traffic, and also maybe the
22 federal infrastructure bill that is, that is
23 being pushed, you know, so many of my West
24 Nyack neighbors feel that there should be
25 this project to continue that sound barrier

1 Proceedings

2 along 59. And basically, you know, having
3 all of our kids stop being woken up every
4 night from these loud truck noises that are
5 only going to increase in the future. Thank
6 you.

7 SUPERVISOR HOEHMANN: Great. And if you
8 could just give your address for the record.

9 MR. ERRICO: Sure. John Errico, and I
10 live at 146 Foxwood Road in West Nyack.

11 SUPERVISOR HOEHMANN: Great, thank you.
12 And we're taking your comments under the
13 comprehensive plan. But I'd ask you to call
14 my office at 639-2050. I know that in the
15 past, I think back in 2016 or 2017, we did
16 have a meeting with the New York State DOT
17 concerning expansion of the sound barrier
18 throughout the entirety of the Thruway in
19 Clarkstown. And they told us no, that they
20 didn't have available funding. The sound
21 barrier, it would be something that would be
22 on state property and funded by the State.
23 So we'll have a follow up. And I do agree
24 with you, if there's federal infrastructure
25 dollars, or through the American Rescue Plan,

1 Proceedings

2 we do anticipate there might be some dollars,
3 hopefully the State will reconsider this.
4 And I'm happy to follow up with you and any
5 of your neighbors about it. But we have
6 requested in the past. But it's, I think
7 twice since I've been supervisor in last five
8 years. And both times, the DOT has said no,
9 that they didn't have available funding.
10 Hopefully that will change. But thank you,
11 and please call my office. I'm happy to,
12 happy to follow further with you as well.

13 Okay. We'll go to -- if there's anyone
14 else on the line that wants to speak, please
15 press zero. I'm going to ask Jacqueline to
16 please come forward. And then followed --
17 Jocelyn, I'm sorry. And then followed by
18 Roberto Johnson. Is there anyone else in the
19 audience wishing to speak? Okay. And if you
20 could just again state your name and address
21 for the record.

22 MS. DeCRESCENZO: Hello. My name is
23 Jocelyn DeCrescenzo, and I live at 116 Sierra
24 Vista Lane in Valley Cottage, New York. And
25 I really appreciate being able to speak here

1 Proceedings

2 tonight on these different subjects.

3 Mr. Simoes, the work that was done is
4 pretty tremendous. It's kind of staggering.
5 Unlike my sister, I haven't actually been
6 able to read through most of it, or any of
7 it, actually. But I do understand that
8 things seem to be zig zagging in a slightly
9 different direction now, which makes me
10 really happy.

11 Even listening to Mr. Samuels before, I
12 was kind of shocked by his approach to water
13 and to development here. It seems to be a
14 little bit different than it has been in the
15 past. And that was, you know, really a nice
16 things to hear, unless I misunderstood. I
17 might have misunderstood that. I don't know.
18 I hope I didn't.

19 And you know, actually, speaking of the
20 DOT, since you've been talking about the
21 New York State DOT and how the DOT has
22 actually said no to the chairman, to the
23 Supervisor Hoehmann twice on this issue,
24 actually I have said no twice to the New York
25 State DOT. Once as part of the coalition to

1 Proceedings

2 end the expansion of Route 303. The New York
3 State DOT wanted to make 303 from New Jersey
4 all the way to wherever it ends, I guess by
5 9W, they wanted to make it an eight-lane
6 highway in both -- an eight-lane highway,
7 four lanes in each direction, and taking
8 property by eminent domain.

9 And I was so glad I had an opportunity
10 to be on that because I learned a lot about
11 the New York State DOT and what their aim is.
12 Their goal is faster trucks, more trucks,
13 bigger trucks. Faster cars, more cars,
14 bigger cars. So this doesn't really jive
15 with Clarkstown's idea of being a safe,
16 gentle place that's forested and safe for
17 children to grow up in.

18 The other thing that I said no to the
19 DOT on when I was living in Orangetown, which
20 was at about the same time, was the matter of
21 tandem trailers sort of barreling through
22 Orangetown at all hours of the day or night,
23 especially when children were coming on and
24 off their school buses. And so there was an
25 agreement that the New York State DOT made

1 Proceedings

2 that tandem trailers coming either across the
3 Tappan Zee Bridge -- now the Mario M. Cuomo
4 Bridge, unfortunately -- that they would have
5 to decouple in Nyack. They'd have to
6 uncouple themselves, and not be able to
7 rampage through the villages here. Because
8 now I know all about turning radius and mud
9 flaps and all sorts of things I never wanted
10 to know. But I know about it.

11 So I'd like to know what that 850,000 is
12 going to go for, and if that is actually
13 being given to the Town of Clarkstown by the
14 New York State DOT. I'd like to know where
15 the funding is coming from for that and for
16 what purpose.

17 I'd also like to get on to the subject
18 of water, which is terribly important.
19 Without clean potable water, we have nothing.
20 Without our aquifers being safe, we have
21 nothing.

22 Rockland County is a really unique and
23 special place. It's not, you know, talking
24 about the general DEIS, there is nothing
25 general about Rockland County. And there's

1 Proceedings

2 nothing general about our water. We have a
3 very specific supply. We were cut out of all
4 the water possibilities many, many years ago.
5 And the only water we have is from Lake
6 DeForest and a few other sources.

7 And so the cleanliness and quality of
8 our water is probably one of the most
9 important issues that we face. And we can't
10 have it be sucked up. I mean, literally
11 sucked up from our aquifers and wells into
12 housing developments that are enormous, that
13 are, you know, privately owned, basically,
14 that don't take into account people who might
15 need housing like our EMTs and people who
16 help other people in times of need.

17 So I'm really concerned about that. My
18 sister and I and a huge amount of people,
19 actually, turned out for the PSC meetings.
20 There were over 1,600 people who came to that
21 one night to make their comments about Suez
22 and the desalination process that Suez
23 misleadingly wanted the PSC to grant them the
24 right to do.

25 Now, we're still paying for a failed

1 Proceedings

2 desalination plant on, in Haverstraw Bay.

3 And we have, we paid the highest water rates
4 anywhere I think in the country, actually.

5 Not just New York State, but in the country.

6 And we have the lousiest service and the
7 lousiest water.

8 And I'm very concerned about that.

9 Whatever Suez says they'll sign off on gets
10 done. And that's just not right. We have
11 limited resources here. And they need to be
12 shared carefully with us. They can't just be
13 sucked up like that. It's just, it's really
14 not fair. And that pisses me off, quite
15 frankly.

16 The other aspect that I want to talk
17 about tonight briefly is the matter of the
18 trees on, on West Hook. And the destruction
19 that took place there without any oversight
20 from the Town of Clarkstown, who owns that
21 property. And it's as somebody said before,
22 it was like a naughty child doing something
23 knowing they're going to get into trouble,
24 but thinking oh, it's okay, I'll pay the
25 price a little bit later, it won't be so bad.

1 Proceedings

2 And it is so bad. Because our trees are
3 what sequester carbon and help us with all
4 the atmospheric pollution from our vehicles
5 that is only getting worse and worse.

6 Rockland County has the highest asthmatic
7 rate, I think -- well, I'm not sure where,
8 exactly. I don't know the statistics. But
9 we have a very bad problem in Rockland County
10 with our air quality.

11 So I think we have to be really, really
12 careful about how we allocate resources, and
13 where they're allocated, and for what reason.
14 And we only have this one county. If we chip
15 away at it as much as it has been done, it's
16 no longer going to be Rockland County. It's
17 just going to be one big strip mall with a
18 lot of apartment buildings. And that's the
19 really sad thing to think about.

20 I would like to be able to put in
21 comments. I don't know if ten days is enough
22 for me to be able to look through the work
23 that has been done so diligently. I need
24 more time than that. And I'm sure there are
25 other people who also would need more time.

1 Proceedings

2 It's a very difficult subject to understand.

3 There's so many levels of complexity.

4 So I would like more time. I think, you
5 know, having 30 extra days from now would be
6 a wonderful thing. That would give me time
7 to really appreciate what's been, the work
8 that's been undertaken, and to maybe ask some
9 questions in a timeframe that's good for me.
10 So I'd appreciate that. Thank you so much.

11 SUPERVISOR HOEHMANN: Thank you for your
12 comment. Mr. Johnson, you're next.

13 MR. JOHNSON: Hey, everyone. So, Joe, I
14 just want to thank --

15 SUPERVISOR HOEHMANN: So I'm sorry,
16 Mr. Johnson. I'm sorry. Just for the
17 record. We know who you are, but we do have
18 a court stenographer. So just your name and
19 your address.

20 MR. JOHNSON: Oh, yeah. Yeah. So I'm
21 Roberto Johnson.

22 MS. KING: And you're a lot taller than
23 we are.

24 MR. JOHNSON: Can you hear me now?

25 SUPERVISOR HOEHMANN: Yes.

1 Proceedings

2 MR. JOHNSON: I live at 97 West Burda
3 Place, New City. I'm actually right up there
4 by West Clarkstown. And West Clarkstown is
5 one of my concerns. And I think I'll just
6 try to jump in with the comprehensive plan,
7 some of the suggestions that Joe was asking
8 for.

9 And I kind of chime in with what
10 everyone else said. I think a lot of people
11 already mentioned the real big concerns.
12 Water is a big concern. Traffic is a big
13 concern.

14 I love trees. I have giant trees on my
15 property. I refuse to cut them down. The
16 neighbors complain. I have a gumball
17 machine, a gumball tree, and it sheds all the
18 time.

19 But, Joe, just a couple of questions. I
20 mean, just a couple of notes. I did read the
21 plan online. But I got a little confused
22 because, you know, I knew, I knew it was a
23 work in progress. A working document, so to
24 speak. And so I was trying to figure out
25 what I should take from the information that

1 Proceedings

2 I was able to read.

3 But with regard to development limits on
4 some areas, I would ask that we could look at
5 when we say some areas, that there just be a
6 standard for the whole town. Because there
7 are just so many different small
8 neighborhoods or regions of Clarkstown that I
9 think -- I know there are some areas that are
10 more, have more water, have, you know, more
11 forest area. And there are some areas that,
12 like I heard the gentleman who called, who
13 spoke online and said that he was having
14 issues on 59 with his backyard and the sound
15 barriers. So I would just say that when we
16 look at areas, that we look at those areas
17 with the same understanding that no area is
18 more, I guess valuable than another area, or
19 gets more consideration than another area.

20 And the reason why I mentioned that is
21 because where I live, up there on, near West
22 Clarkstown Road, West Burda actually -- at
23 the north end of West Burda is West
24 Clarkstown Road. And at the, I should say
25 the west area, the west part of -- the east

1 Proceedings

2 part of West Burda is, is crossed by West
3 Clarkstown Road. And then the east -- down
4 the end is West Clarkstown Road.

5 So West Clarkstown Road is in a C, runs
6 in a C. And basically, West Burda is between
7 both. Both ends. And so I deal with the
8 traffic issue. And I deal with the issue of
9 garbage because people use my road, my street
10 to get down to the Palisades Parkway.

11 So I'm going to be very interested in
12 the traffic study. And I would hope that
13 that could be an open process. I know I had
14 a recent meeting not too long ago with my
15 councilperson and some other people. And we
16 talked about that actual study being done.
17 And I would think that we could have some
18 town residents be part of that. I know
19 sometimes it's just you put a little mat down
20 across the road and you count the axles that
21 go over it. But I don't think that's
22 sufficient if that's the plan. I don't know
23 how a traffic study is done, but I'd love to
24 be a part of that.

25 The other issue would be for me, would

1 Proceedings

2 be the idea you mentioned, the sustainability
3 and resiliency. And you mentioned about the
4 impact. And part of the impact obviously is
5 the impact, you know, goes to many different
6 areas.

7 But the area that I'm concerned about is
8 the character of the community. And I think
9 that what we should also be mindful of is
10 that there's a certain sense that within a
11 town, there's community equity, because it's
12 the people who live in the town who actually
13 make the town a vibrant place.

14 And so when developers look at a place
15 to develop, they most -- and if I were a
16 developer, I know I would, I would look for a
17 place that looks like it's vibrant, that
18 there are hardworking people. There are
19 people who are, in essence, have a large
20 stake in the community. And you know, that
21 makes it more prosperous for a developer,
22 particularly someone building housing
23 because, you know, if they're going to get
24 market value for their rentals, they're
25 obviously going to need to have a place

1 Proceedings

2 that's safe. They're going to have to --
3 there's going to have to be a place that, you
4 know, has wide open spaces, that has
5 convenience. And renters, you know, they're
6 going to want that.

7 But I am concerned about the density
8 issue. And so the idea of rental properties
9 is one thing. But right now in Clarkstown,
10 we have an issue with illegal rentals. And
11 that's one of the main issues in my
12 particular neck of New City.

13 And those illegal rentals cause an awful
14 lot of pain because a lot of our residents
15 are cleaning up the trash that is being
16 tossed. And I don't know who is doing it.
17 But there are a lot of people who, in
18 essence, don't come out, and we all try to
19 get together as neighbors, and come out and
20 do a little cleaning.

21 And that gets me to the point of code
22 enforcement. With the, with the
23 comprehensive plan, I came in a little late.
24 I don't know if there's going to be some
25 money allocated for more enforcement and more

1 Proceedings

2 stringent fines. I mean, at the end of the
3 day, I don't see an impact now.

4 This is an issue that I personally have
5 been dealing with for three years. There has
6 been some movement. I did call the Town
7 Attorney. And I did, you know, get some
8 action in terms of getting people to clean up
9 their yards and that sort of thing.

10 But I found that the code enforcement
11 office is very small. And you know, it takes
12 a while for them to get around to your
13 complaint. The system that is in place is
14 kind of, I don't know, it's hard for people
15 who might not be fundamentally savvy when it
16 comes to the digital age.

17 And then I wanted to mention the, this
18 issue that I have with West Clarkstown Road.
19 It's a county road. But we're constantly
20 getting the buck passed when it comes to the
21 County's obligation to be a little more
22 forceful.

23 Residents in my area had a meeting with
24 Sheriff Falco. Sheriff Falco explained that
25 it's a holistic, it's a holistic obligation,

1 Proceedings

2 you know, County, Town, and others. And I
3 think that we need to have the Town really
4 get some movement on taking care of West
5 Clarkstown Road. Because it's too small.
6 It's too much traffic. It's -- the area is
7 getting dense.

8 And I, for one, will try to comment more
9 online. I don't want to take up too much
10 more time. But I also want to echo what
11 everybody else said. I don't think it would
12 be fair to vote tonight, or to close the
13 matter tonight because I don't see the entire
14 quorum.

15 SUPERVISOR HOEHMANN: They're online.

16 MR. JOHNSON: Oh, no, I get that. But I
17 think that, you know, we also have a quorum
18 in terms of the residents, you know what I
19 mean. And you can obviously tell that, you
20 know, it's a difficult time. People are
21 still coming out of the pandemic. And I
22 think a little extra time for those who are
23 assembled, you know, maybe we can go back,
24 talk to our neighbors, get them to, you know,
25 pay attention and give a little more extra

1 Proceedings

2 effort in this area.

3 And then one last thing about the water.

4 I personally would like to see a notation. I
5 do read my monthly mailers from the Town,
6 whatever I get. You know, George, I got more
7 pictures of you on my refrigerator than I
8 need to talk about.

9 But in any event, the, the idea of water
10 testing, you know, maybe a mailer could go to
11 the residents because I contacted the
12 Department of Health. And the Department of
13 Health gave me instructions. And I got my
14 water tested free because I mean, I guess
15 last year somewhere, there was an issue with
16 one of the wells. I think there were, like,
17 nine wells that service Clarkstown. So one
18 of the wells had some kind of problem with
19 it. And I was personally concerned.

20 So I called the Department of Health.
21 They led me to Suez. Suez came out. They
22 took my water and they tested it. And they
23 sent me the results. And I think, you know,
24 maybe more residents should have, you know,
25 should be aware of that. So that's it.

1 Proceedings

2 SUPERVISOR HOEHMANN: We'll put in the
3 news this week. Thank you. Is there anyone
4 else wishing to comment? Is there anyone
5 else online wishing to comment?

6 So again, the purpose of tonight was
7 really to get public comment. Joe, just for
8 clarification, the plan's been out for about
9 30 days?

10 MR. SIMOES: The plan was adopted
11 April 20th, and it's been out since, since
12 then.

13 SUPERVISOR HOEHMANN: A month and a
14 half. It's been out for public review for a
15 month and a half?

16 MR. SIMOES: It's been out for public
17 review for approximately about a month.
18 Yeah. So it was adopted in a public hearing
19 on April 20th, distributed within --

20 SUPERVISOR HOEHMANN: Today is June 1st.

21 MR. SIMOES: Yeah. Distributed within a
22 few days after April 20th. So I can, I can
23 confidently say we've had it out for at least
24 30 days.

25 SUPERVISOR HOEHMANN: So a minimum, a

1 Proceedings

2 minimum of 30 days. So the plan tonight was
3 to take public comment, and if we had a crush
4 of public comment, to continue. But, you
5 know, I think the point is that we would have
6 a public comment period that would still
7 continue. We were talking about ten days.
8 So I'm open to extending that. But I don't
9 think there's a need to, you know, prolong
10 this to another date for a public hearing
11 because there's been ample time for people to
12 review, and we'll give ample time for people
13 to comment. Do other Members of the Board
14 feel this way?

15 COUNCILMAN BORELLI: I'd go a little
16 longer, like you mentioned. Maybe two weeks
17 or ten days.

18 COUNCILMAN CARROLL: I mean, as long as
19 there's an ability for people to review and
20 submit written comment, which actually might
21 be more effective, talking about a
22 comprehensive comprehensive plan. You know,
23 a couple weeks, even three weeks if needed.

24 COUNCILMAN BORELLI: Yeah, sure.

25 COUNCILMAN CARROLL: I think that should

1 Proceedings

2 be sufficient.

3 SUPERVISOR HOEHMANN: Don, Pat, what do
4 you guys think? I'm sorry, Don and Mike?

5 COUNCILMAN FRANCHINO: If you extend it
6 out two weeks, if you're going to go two
7 weeks, it might go right to the end of the
8 month. And that's the end of the public
9 comment period.

10 SUPERVISOR HOEHMANN: Yeah. Today is
11 June 1st. So how about what Pat was saying,
12 three weeks? So put it out to June.

13 COUNCILMAN FRANCHINO: Okay.

14 SUPERVISOR HOEHMANN: What do you think,
15 Mike Graziano, Councilman Graziano? He was
16 on, I could see.

17 All right, so three weeks. We think
18 that's sufficient time to put out, you know,
19 obviously I think we want to make sure that
20 we get as much comment before we're going to
21 get into the summer months, because Joe, you
22 have ample work that's going to have to take
23 place with the comments. Everything that was
24 commented tonight, every comment, you have to
25 go through and categorize. It is a good bit

1 Proceedings

2 of work that's going to take place from this
3 tonight.

4 MR. SIMOES: Correct.

5 SUPERVISOR HOEHMANN: So if people are
6 okay with that, what I can then do is I'll
7 entertain a motion to close the public
8 hearing and extend the public comment for
9 three weeks.

10 COUNCILMAN BORELLI: I'll make the
11 motion.

12 SUPERVISOR HOEHMANN: Joe?

13 MR. SIMOES: I'll just have a comment
14 afterwards.

15 SUPERVISOR HOEHMANN: Sure. So motion
16 by Councilman Borelli, seconded by Councilman
17 Carroll. All those in favor, signify by
18 saying aye?

19 (Response of aye was given.)

20 SUPERVISOR HOEHMANN: Opposed? Motion
21 carries by a vote. Okay. Joe, you had a
22 comment.

23 MR. SIMOES: So just to be clear, so
24 until June 22nd.

25 SUPERVISOR HOEHMANN: June 22nd we'll

1 Proceedings

2 close the public comment.

3 MR. SIMOES: Close, close of, close of

4 day, right?

5 SUPERVISOR HOEHMANN: Close of --

6 5:00 p.m., June --

7 MR. SIMOES: 5:00 p.m., June 22nd.

8 SUPERVISOR HOEHMANN: Or can we just

9 clarify, if somebody mails something in, it's

10 postmarked, right?

11 MR. SIMOES: That's fine. That's fine.

12 SUPERVISOR HOEHMANN: Right. Three,

13 three weeks for public comment.

14 MR. SIMOES: Correct.

15 SUPERVISOR HOEHMANN: Keeping in mind

16 it's been out for over 30 days. People have

17 commented in that 30-day period. We've got a

18 bunch of comments.

19 MR. SIMOES: That's correct.

20 SUPERVISOR HOEHMANN: Okay.

21 MR. SIMOES: I wanted to -- and I said I

22 didn't want to, an exchange back and forth,

23 but I heard a few questions that I -- I did

24 want to answer one question or inquiry about

25 the Route 304, 303 study.

1 Proceedings

2 SUPERVISOR HOEHMANN: I was going to ask
3 you to do that.

4 MR. SIMOES: Yeah, so that \$850,000 that
5 I mentioned is an earmark from the New York
6 Metropolitan Transportation Council, NYMTC,
7 that does all the transportation studies of
8 all the state roads in the region. And that
9 will be structured the same as the 303
10 sustainable development study. So if you've
11 gone down Route 303 in Orangetown and you've
12 seen what they've kind of, they reconstructed
13 the road there to try to make it really more,
14 more safe for the driver and also for just
15 people kind of walking or accessing. They
16 have, you know, a nice, nice medians and
17 such.

18 That original study was supposed to
19 extend into Clarkstown all the way to 9W.
20 And it stopped at the border. So we're
21 looking to have that same, that same study
22 and treatment kind of continue up 303. It's
23 not just a, you know, let's just widen the
24 road, four lanes. That's not, that's not
25 what the project is about. It's to take that

1 Proceedings

2 same concept of reconstructing the road and
3 make it safer, extend that up 303, and to do
4 the same thing on 304.

5 We went to the state. There was a rash
6 of pedestrian fatalities on 304. I remember
7 304 just in, just in a few years. And we
8 pointed it out to the State. And something
9 really needs to be done on 304. So both
10 those roads are being done.

11 Route 59 has just concluded. I went on,
12 there was a seminar or a webinar just last
13 week. The work they've been doing over 59,
14 we want to take what they did in Ramapo a
15 step further and actually have modeling of
16 the road. Not just sketches and what may or
17 may not happen, but actually a model so we
18 can really study what should be done and what
19 can be done.

20 SUPERVISOR HOEHMANN: And just to
21 amplify that, we've -- this has been a
22 significant issue. We partnered with
23 Assemblyman Zebrowski. We pushed hard. And
24 we were able to get the State to finally,
25 once and for all, actually agree with some

1 Proceedings

2 funding. It's been pushed off because of
3 Covid. But really, there's been significant
4 safety issues.

5 And you know, this entire Town Board
6 supports the State really doing something
7 with both of these roadways because, you
8 know, we've had far too many people -- I
9 think we've had 11 fatalities between the two
10 highways since 2015. It's been a problem.
11 It's just kind of been ignored by the State.

12 And so the first step is getting NYMTC
13 to provide the funding for the studies. And
14 the studies will move to capital projects.
15 And capital projects lead to funding. So
16 it's something that's, you know, probably
17 going to take a lengthy period of time.

18 But this is not money that's given to
19 the Town of Clarkstown. NYMTC is earmarking
20 this. They'll do a study. And it's
21 something that my administration's been
22 working with our Assemblyman to try and
23 effectuate since the last series of
24 fatalities that took place in 2018. So
25 that's, that's kind of where the study is.

1 Proceedings

2 And hopefully, there will be some significant
3 findings from it that will help improvement
4 with safety, as well as improvement with
5 drainage and what have you.

6 So, Joe, nothing else to clarify? That
7 was the only comment? Okay, great.

8 So I want thank everybody for their
9 public comment. I want to thank everybody
10 for their participation. And we'll put word
11 out as the process moves forward. Public
12 comment is open for another three weeks. And
13 I'll entertain a motion to close the public
14 hearing. Close the meeting, rather. Close?

15 Moved by Councilman Carroll, seconded by
16 Councilman Borelli. All those in favor,
17 signify by saying aye?

18 (Response of aye was given.)

19 SUPERVISOR HOEHMANN: Opposed? Motion
20 carries. Thank you, everybody. Have a greet
21 evening.

To: <compplan2020@clarkstown.org>

Hi,

I'm a new resident to Clarkstown; my wife and I bought our first house in Congers late 2020.

Looking at the plan is very exciting. I think the focus on developing mixed use is extremely important. There's a clear shortage of housing when values rise as high as they've gotten. The economic benefits of bringing in new residents, especially young professionals who will spend a good portion of their money, is something that often goes unsung. I love hearing about building up local 'downtowns' with a focus on walkability and transport.

One personal recommendation: don't sleep on the Congers downtown. I see a lot of potential there if we could just get some more residents!

Keep up the good work!

To: <compplan2020@clarkstown.org>

Good evening,

I have started to review the plan. As a tennis enthusiast, I am disappointed that there is no discussion of upgrading and ideally adding to the two town tennis courts that are currently available in Congers. There are really no public options for tennis players in the town. Further, the high school tennis courts are often not available to the public on weekends, even during the summer months.

While pickle ball courts will certainly be a welcome addition, there remains a large and vibrant tennis community in the town. We are often forced to travel outside the county to play.

I do hope you consider my request. I would be happy to answer any questions you may have.

Regards,

Mona Parker

Cc: Supervisor@Clarkstown.org <supervisor@clarkstown.org>

My comment is as follows:

Clarkstown seems to have subsidized senior housing, assisted living, and Atria. Where, oh where, is affordable unsubsidized senior housing - particularly of the fact that 31,727 people are over the age of 55, representing 36% of the Town population.

Atria can be eliminated as affordable unsubsidized senior housing, since their rental rates are exorbitant: a 344-389 sq. ft. studio starts at \$6,095; a 536-6 ft. 1 bedroom starts at \$6,695; and only one 762-927 sq. ft. two bedroom starts at \$8,795.

Schimp Farm's property has been proposed as senior housing and it seems to be taking years to get a shovel in the ground.

Please consider the senior population when plans for Clarkstown are finalized.

To: compplan2020@clarkstown.org <compplan2020@clarkstown.org>

I like to suggest the recreation and parks office be moved to the Germonds pool area. It would be a central location for ALL Clarkstown residence. And since we have to renew our pool passes every year and drive a long way, it should be central for everyone. I come from the corner of West Nyack and it's a long way to travel.

The office can also service the pool entrance at the same time and the zukor office can become another class room facility for more senior activity.

Subject: [CompPlan2020] zoning update

To: <compplan2020@clarkstown.org>

I would like for the town to consider zoning modifications on two parcels of land in central nyack. 65.7-3-73 also known as 70 route 59 to multi use and 65.7-3-75 to commercial shopping. These parcels would conform to present uses in the area.

Hi Sabrina,

Several parts of the Comprehensive Plan discuss the importance of continuing our Open Space acquisition program. Farmland protection is part of the Open Space program. The Town contributed to the acquisition of Cropsey Farm in order to ensure that the farming operation there would continue. We also acquired the Traphagen property (which is surrounded by Germonds Park) and worked with the Farm Alliance to conduct farming there. We tried it for a year with the farmer living on site but we had upkeep issues with the house and ended the contract after a year. We are working on restoring the houses there and work with Heritage of West Nyack on bringing farming to that location. Rockland Country Day School is another acquisition that came with an organic garden that used to be run by the school there. We're working to have the buildings rented and potentially bring back farming in that location (hopefully with Cornell Cooperative).

All of these initiatives will help with agritourism, air quality and food sovereignty as you have mentioned, along with educating our residents about the Town's history.

If this information isn't already highlighted in the Comprehensive Plan, we will look to add it in the final document.

Joe

On Fri, May 14, 2021, 1:45 PM sabrina tenteromano <sabrina.tenteromano@gmail.com> wrote:

Ok, thank you, I appreciate you reaching out to him! I do have some specific questions about planning that, with respect to the supervisor, I think would be better answered by you, especially since you are working on developing the Comprehensive Town Plan update.

Can you perhaps share your thoughts on the viability of expanding current agricultural sites or reviving former sites (under the ownership of the Town or ones that can be purchased by the Town) and integrating this into the Comprehensive Town Plan? Do you see a connection between agriculture and community benefits in Clarkstown? Can this be expanded on in the Comprehensive Town Plan update to generate revenue, create agritourism jobs, improve air quality (currently D rated), and food sovereignty?

I really appreciate your expertise on this.

Cheers,
Sabrina

Hi Mr. Simoes,

7/28/202

Town of Clarkstown Mail - Re: [CompPlan2020] Graduate Student Video Essay on Rockland's Food System

I am a Rockland resident pursuing a Masters of Science in Sustainability at City College. I am creating a video essay on Rockland's food system and would love the opportunity to interview you about the County's agrarian history, modern utility, and future in Rockland from a planning perspective. I'm interested in conveying through an ethnographic approach that leveraging our County's agricultural history and potential for expanded agritourism can bring substantial community benefits. I'm also interviewing Cropsey and Dr. Davies farms.

Do you have some time to speak, on video if you're comfortable, this weekend? I'm happy to meet locally—perhaps right in New City at Kevin Landau Park?—, or set up a Zoom call that can be recorded. Whatever works best for you.

Very much looking forward to your reply!

Cheers,
Sabrina

TOWN PLANNING DEPT.

Re: TB Referral - Comprehensive Plan Update

Dear Supervisor Hochmann and the Honorable Town Board:

At the May 13, 2021 meeting the Comprehensive Plan update was discussed by the Planning Board. The Planning Board expressed concern regarding the possibility for unrestricted residential development associated with the goal of permitting apartments over businesses in the hamlet centers and the expansion of residential uses in areas that are currently zoned for retail uses.

The Planning Board recommends that any future legislation allowing this type of housing include a unit cap in an effort to avoid overburdening local resources and the local school districts.

Thank you for the opportunity to review and comment on the Comprehensive Plan Update.

Sincerely,

Edward J. Guardaro
Acting Chairman

Joe--

I got the attached in the mail yesterday. Since I noticed Paul was not directly copied into it, I forwarded it to him this morning just to make sure he saw it. He asked if you had seen it. I assume you have, but, as with Paul, just want to make sure.

Kathleen

Re: GENERAL MUNICIPAL LAW REVIEW: Section 239 L and M

Map Date:

Date Review Received: 4/23/2021

Item: *TOWN OF CLARKSTOWN - COMPREHENSIVE PLAN UPDATE (C-3073T)*

Update to the 2009 Town Comprehensive Plan. The Plan also serves as a Draft Generic Environmental Impact Statement.

Throughout the Town

Reason for Referral:

County and State highways, parks, and facilities; County streams; Long Path Hiking Trail. Towns of Haverstraw, Orangetown, & Ramapo; Villages of Chestnut Ridge, Haverstraw, New Square, Nyack, South Nyack, Spring Valley, and Upper Nyack

The County of Rockland Department of Planning has reviewed the above item. Acting under the terms of the above GML powers and those vested by the County of Rockland Charter, I, the Commissioner of Planning, hereby:

****Recommend the following modifications***

As noted in the Vision Statement, the update to Clarkstown's 2009 Comprehensive Plan works to address the evolving needs of the Town which have arisen since the Plan was originally published. The Plan is aptly titled Focused on the Future, as it serves as a vision for the Town, acknowledging the past and offering direction for the future. Our department concurs, and applauds the Town for undertaking an update of this vital land use document. The goal of the Comprehensive Plan is to develop and enhance existing planning guidelines across a range of eight themes: economic development; environmental resources; health, safety, and welfare; historic and cultural resources; housing; recreation, parks, and open space; transportation; and the newly developed sustainability and resiliency. These topics are addressed in Section V of the draft document.

In addition to the Comprehensive Plan update, the document is structured as a Draft Generic Environmental Impact Statement (DGEIS). As an on-going interested party for the State Environmental Quality Review Act (SEQRA) process, our department has reviewed the DGEIS together with our NYS General Municipal Law (GML) review of the Comprehensive Plan. Our SEQRA comments are incorporated with the GML conditions below:

TOWN OF CLARKSTOWN - COMPREHENSIVE PLAN UPDATE (C-3073T)

- 1 Within the Background section of the Plan, it is noted that a Special Board was created to prepare the 2009 Plan (page 8). After its adoption, the Board was retained to implement the Plan's goals and objectives. The Special Board was also tasked with managing this update to the 2009 Comprehensive Plan. It should be stated in this section if the Board will continue to carry out the goals of the update after its adoption, or if the Board will be dissolved.
- 2 On pages 8-9, different studies that were used by the Special Board during the creation of the 2009 Plan are listed. One of them is the unadopted 2001 Comprehensive Plan for Rockland County titled "River to Ridge: A Plan for the 21st Century." In 2011, the County officially adopted a Plan titled "Rockland Tomorrow: Rockland County Comprehensive Plan." The list of studies and reports available for the Comprehensive Plan Update should be updated to include this Plan.
- 3 Starting on page 11, and continuing throughout the document, when referring to something that is found in the Appendix, the Plan will state "See Appendix" in parenthesis. However, the Appendix is currently 2,335 pages, and is broken up into ten sections, three of which are reserved for future correspondence and public hearing minutes related to the adoption of the Plan. As this is a very long document, the references to the Appendix in the main body of the document should also refer to a specific section or page to help readers navigate to the correct page with ease. In addition, in the Table of Contents for the Appendix, it would be beneficial to state what page each section begins on. It may also be helpful to give the page number for each of the studies found in Section V, as many of these documents are very long and are what comprise a majority of the Appendix.
- 4 The first full paragraph on page 21 should include a reference to Chart 2, as that is where the information being discussed originates.
- 5 Section V covers the goals and objectives for the eight central topics of the Plan. Subsection a) details information on economic development within the Town (beginning on page 20). Of the ten goals listed at the end, only five are actually discussed in the body of the subsection. Each of the goals and/or objectives should be further explained within the subsection so that more information can be provided as to what they are and why they are important enough to the Town to be considered a goal of the Plan. For example, one of the goals not discussed is to "Implement new programs and continue those already in place to beautify the Town, making it an attractive place in which to live and conduct business." More information should be provided within the body of the Economic Development subsection that details programs that are already in place to preserve and enhance the beauty of the Town. Examples of potential new programs should also be included to help guide the future of the beautification of the Town in relation to economic development.

This comment is also true for the seven additional central topics covered in Section V. While we encourage the Town to continue to develop goals such as the establishment of stream protection corridors (found in the goals for the Water Resources portion of the Environmental Resources subsection), it is important to establish the meaning behind each one and detail their importance in the main body.

- 6 A major topic discussed within the body of the Economic Development subsection is Route 303, found on page 22. However, no goal/objective is established for this roadway. Two of the studies prepared for the Town recommended that Route 303 be considered for infrastructure improvements, as it is a prime area for commercial and industrial development. The Town has further considered designating the area as "the Congers Corporate Corridor," to increase recognition. Without listing these ideas as a goal, it signifies the Town is not serious in considering the Route 303 corridor as an area for economic development. By establishing a goal dedicated to the Route 303 area, it will ensure that future consideration and attention is given towards providing methods to improve the area and increase recognition of the development opportunities offered. The Town should consider implementing an overlay zone, similar to the Route 303 Overlay Zoning District established by the Town of Orangetown. This overlay zone was designed to promote safety and control traffic, protect and buffer the viewshed of the natural areas, preserve the nearby parks and open space, promote the economic viability and commercial development of the Route 303 corridor, and protect the surrounding residential areas. By creating something similar, the Town will help to establish the economic viability of the area while preserving the aesthetic resources of the corridor.

TOWN OF CLARKSTOWN - COMPREHENSIVE PLAN UPDATE (C-3073T)

7 The last goal of the Economic Development subsection (found on page 26) is the potential implementation of a transfer of development rights program. Within this goal, it is mentioned that this program could increase development in targeted areas, while decreasing density in areas selected for conservation. It should be clarified if this program will only be permitted in certain non-residential zoning districts, or if it will be allowed throughout the entire Town.

8 The Route 59 corridor is the major retail hub of the Town and County. Given that the establishments within this corridor have developed over time, there is no cohesive theme relating the stores or strip malls to each other; rather they have developed in a hodgepodge style. Since this corridor is highly visible to Clarkstown residents, other County residents, and non-County residents, a recommendation for façade and streetscape improvements should be included that could enhance the appearance of this corridor. The Town should also consider creating a Route 59 Overlay zone, similar to the one mentioned above for Route 303.

9 On page 44, Figure 14 has a symbol for "Scrub/Shrub Swamp" that is very similar to the color used for lakes and streams. It is very difficult to distinguish between the two features on the map. A different color should be used to represent this swamp feature so it can be more easily seen.

10 The goal at the bottom of page 49 for Water Resources is to require stormwater management to a higher extent than is currently applicable. The paragraph detailing this goal states that the Town now requires this. Therefore, the heading for this goal should be updated to state that the Town will "Continue to require stormwater management to a higher extent than is currently applicable where development is proposed in watersheds that experience flooding."

11 One of the goals of the Aesthetic Resources portion of the Environmental Resources subsection (found on page 55) is to "Implement design standards for future construction." It is mentioned in the body of the subsection that the Town is looking to add design standards for the MF zoning district by adapting those already in place for the Hamlet Center districts. Additional design standards for other areas within the Town must also be considered. Protection for the aesthetics of the major lakes, which are mentioned throughout this subsection and the document, could be implemented. This could be achieved through the creation of an overlay district or the implementation of height and/or bulk restrictions. The Palisades Ridge is also a great aesthetic resource for the Town. The use of earth-toned building materials could be recommended so that residential structures blend in with the scenic backdrop of this area. A ridgeline protection ordinance should also be considered.

12 On pages 47 and 55, the Environmental Resources subsection promotes the creation of Critical Environmental Areas to further protect certain locations within the Town. We support the Town's effort to create such Areas, as this will require more stringent review of any development through the SEQRA process. The Town should consider taking this protection a step further, by establishing Environmentally Sensitive Sites or Features, similar to the provision of the same name, found in Article XIX of the Village of Piermont Zoning Code. This Village law establishes additional protection for water resources, wetlands, floodways, ridgelines, rock outcroppings, and steep slopes within the Village; the entirety of which is designated as a Critical Environmental Area. Methods to protect these features include buffers, lot area deductions, and additional bulk regulations.

13 On page 58, it is noted that a Comprehensive Transportation Plan was created as part of the 2009 Plan, with portions of the study reflected in the Transportation section of the Plan. As this was part of the Comprehensive Plan, it should be stated whether this document is also receiving an update at this time.

TOWN OF CLARKSTOWN - COMPREHENSIVE PLAN UPDATE (C-3073T)

14 In the paragraph on Mixed Use Hamlet Center Zoning in the Housing subsection on page 70, it is noted that more needs to be done in the Hamlet Center, Neighborhood Shopping, and Transit Oriented Development (TOD) zones as little development has occurred since they were established. We encourage the Town to pursue methods to develop these areas, however little is said on how this will be achieved. Several goals for the Housing subsection could be applied to help with the advancement of these areas. By adopting zoning that requires a certain percentage of new units be set aside for people in the workforce or volunteers, this will encourage more people to buy or rent in the area who might not otherwise be able to afford to live in these zones. While apartments over businesses are already permitted in most areas mentioned above, expanding this concept, and potentially altering the code that regulates them, may make these types of units more desirable to construct and subsequently buy/rent. This section must be expanded upon to state how the Town will modify these zoning districts, or if additional studies are required to better understand the best methods to develop these areas.

15 Found at the bottom of page 71, the first goal of the Housing Subsection is to "Permit apartments over businesses." Allowing this mixed-use is beneficial for the Town as it can increase density to meet the housing needs of the Town in areas that are already able to handle a larger capacity of people. The Hamlet Centers are specifically called out for this type of development. However, apartments are already permitted over businesses in the Hamlet Centers, as well as the other zones mentioned in the subsection – Neighborhood Shopping and the Transit Oriented Development zones (except TOD 1). Therefore, this goal should be altered to specifically focus on the need for additional enforcement of the regulation of these units.

16 Another goal of the Housing subsection on page 72 is to "Adopt zoning that requires a set aside of new units for workforce and volunteer housing." Within this goal, it specifies the development of appropriate housing for seniors and volunteer emergency service workers. As the following goal is directed specifically toward senior housing, it is likely the "housing for seniors" was an error and should be related to housing for people in the workforce. This must be clarified.

17 On page 75, it is stated that the Town is continuing to look for locations to construct a new multi-use, domed sports and recreational facility and a permanent area for concerts and events. It should be clarified if the Town is looking to construct these at existing park or recreation areas or if other locations are also being considered. It is mentioned previously in the Plan that, in addition to the Town's commitment to acquiring and preserving open space, vacant land is becoming scarce. If the Town is considering locations beyond existing parkland/recreation facilities, it should place existing underutilized areas at the forefront for this development rather than the use of vacant land.

18 The discussion related to bicycle facilities on pages 82 notes that there is currently no network of bicycle routes and that the bicycle facilities that do exist are primarily within the eastern portion of Town. The goal on page 90 states the Town will work with the State and County to incorporate bicycle facilities into their road design and construction. It should be clarified if the goal is to create a connected network, or if the inclusion of additional facilities will provide more, unconnected, locations for cyclists throughout the Town.

19 Within the Transportation subsection on page 82, Complete Streets is mentioned. At the end of the paragraph, it is mentioned that the Complete Streets Committee created criteria for selected projects and ranked over 700 road segments to produce a prioritized list for use when considering roadway upgrades. The criteria used to select projects, as well as the prioritized list should be included as part of this section (or included in the Appendix if necessary).

20 Figures 25 and 26 (pages 85 and 86) are referenced at the end of the Complete Streets paragraph, and illustrate the Complete Streets project selection by road segment and road length. The legends include a road segment score and road length score, respectively. It is never explained as to what these scores mean, or how they were calculated. An explanation should be provided in the context of the paragraph on Complete Streets.

21 On page 88, a goal of the Transportation subsection is to implement a Complete Streets Program. It is noted in the body of the subsection that this Program has already been started. The goal needs to be updated to state that the Town wishes to further the implementation of the Program.

TOWN OF CLARKSTOWN - COMPREHENSIVE PLAN UPDATE (C-3073T)

22 The Complete Streets Program is the basis for several other goals in this subsection. We encourage the Town to pursue this objective, as Complete Streets are designed to prioritize safety and access for all who use the roadway. They often include traffic calming methods, wider sidewalks, attractive streetscapes, and dedicated bike and/or bus lanes, where appropriate. Two figures (Figures 25 and 26) are provided that illustrate the 700 roadways that are targeted for potential road upgrades in line with the Program. As previously mentioned, it is unclear from the maps which roadways are higher priority, and where the Town actually wishes to make these upgrades. The Plan should include specific locations that are targeted for the Complete Streets Program.

23 As noted above, the Complete Streets Program is a running theme among the goals of the Transportation subsection. The two goals related to public transportation services (pages 88 and 90) reference utilizing the Program for future transit planning. It should be further explained how the Program will be applied. Methods can include providing dedicated bus lanes on certain major roadways, adding additional transit stops, ensuring there are bus pullouts, or giving signal priority to transit.

24 The goal to create a walking environment in the Transportation subsection (page 90) specifically mentions the Hamlet Centers. However, within the body of the subsection, it is mentioned that connectivity between hamlets or residential areas and denser commercial districts are lacking. The goal should be updated to incorporate providing this connection so people living in the residential and hamlet areas can more easily access the commercial centers by foot.

25 On page 93, LEED is used for the first time. This should be spelled out and the terminology explained so that readers understand what LEED certification involves.

26 The paragraph on Transit Oriented Development (TOD), found on pages 93-94, seems out of place within the Sustainability & Resiliency subsection. While TOD can encourage sustainable development, this paragraph only explains what the plans for the TOD zoning are, rather than how they can contribute to sustainability. The description provided seems like it would better fit into the Economic Development and/or Housing subsections. More information must be provided as to how the TOD zoning will help the sustainability and resiliency efforts of the Town.

27 Similarly, the Complete Streets Initiative portion of the Sustainability & Resiliency subsection (page 94) does not go into detail on how it will aid in the sustainability efforts of the Town. The paragraph gives a good description of improvements that could be made as part of the Initiative, of which the Transportation subsection is currently lacking. The information provided should be included in the Transportation subsection, and more information provided as to how the stated methods actually contribute to a more resilient and sustainable Town.

28 On page 96, electric vehicle charging stations are briefly discussed, including the notation that charging stations were installed at the Palisades Center, the Shops at Nanuet, and Town Hall. In the Impact on Air portion of Section VII (pages 122-124), the mitigation method for the "air pollution associated with vehicles" includes the use of hybrid-electric or other alternative-fuel engines. As hybrid vehicles become more prevalent, and as the Town is promoting their use, a goal of the Sustainability & Resiliency subsection should be for the increase in charging station locations throughout the Town. Other Town-owned facilities should be considered for electric vehicle charging stations, such as community centers, libraries, schools, and municipal parking lots. In addition, charging stations could be a provision Planning Board members may wish to request during the site plan review of larger developments where people will spend longer times, such as new hotels and alterations to shopping centers/strip malls.

29 In 2018, the County created an All-Hazard Mitigation Plan (HMP), which was adopted by the Town. The HMP identified drought, flooding, severe storms, winter storms, and wildfire as high risks for Clarkstown. The Water Resources portion of the Environmental Resources subsection (pages 31-38) addresses flooding. Flooding is also discussed on pages 97-98 in terms of resiliency, as well as severe storms. Information on how the Town can/will mitigate drought, winter storms, and wildfire risks should also be included in the Sustainability & Resiliency subsection so that all high hazard risks established in the HMP are addressed.

TOWN OF CLARKSTOWN - COMPREHENSIVE PLAN UPDATE (C-3073T)

30 On page 102, the Land Use Changes portion of the Implementation section mentions amendments to the Town's RS and MRS zoning districts. This is not mentioned in the Goals and Objectives section. If the Town wishes to amend these two zones to accommodate new commercial and residential development, it should be discussed within the Economic Development and Housing subsections of the Plan.

31 In the Impact on Water portion of Section VII (pages 110-121), the mitigation proposed for several impacts involves participating in the development of the County Comprehensive Plan. While the County Plan was in development at the time the 2009 Town Plan was adopted, it was adopted in 2011. There is currently no endeavor to update or create a new County Plan at this time. The reference to the development of the County Comprehensive Plan must be removed or edited to allude to any future updates to the plan.

32 In the Impact on Air portion of Section VII (pages 122-124), the mitigation method for the "air pollution associated with vehicles" includes the use of hybrid-electric or other alternative-fuel engines. This idea should be presented in the Sustainability & Resiliency subsection, and possibly the Transportation subsection. It should be stated what vehicles the Town is referring to when mentioning these types of engines. Will this be for public transportation, Town-owned vehicles, or will the Town encourage residents to purchase hybrid-electric vehicles?

33 A header or footer should be included on each page to notate the chapter/subsection of the Plan so it is easier to locate the different topics and issues that are discussed.

TOWN OF CLARKSTOWN - COMPREHENSIVE PLAN UPDATE (C-3073T)

34 Listed below are typographical, punctuation, format, and update errors that we observed while reviewing the document:

Page 8, first paragraph, third full sentence – remove the word "have" between "since" and "implemented."

Page 10, first paragraph in section c), last sentence – this should indicate it is the 2009 Comprehensive Plan.

Page 13, third paragraph, first sentence - remove the word "the" between "of" and "both."

Page 14, last paragraph, fifth sentence -- add the word "in" between "Railroad" and "about."

Page 15, last paragraph, second sentence – "Rockland State Park" should be corrected to "Rockland Lake State Park."

Page 15, last paragraph, last sentence – Route 9W is a U.S. Route, not a State Route.

Page 22, last paragraph, third sentence – this states the Nanuet Mall was redeveloped in 2003. This should be corrected to 2013.

Page 22, last paragraph, fourth sentence – correct "Palisades Center more" to "Palisades Center Mall"

Pag 27, first paragraph, first sentence - add an "s" to the end of the word "attract.

Two pages are listed as 67. The page that begins with subsection e) Housing should be page 68, with all subsequent pages corrected.

Page 69, first paragraph, penultimate sentence - "increased" should be changed to "increasing."

Page 71, first full paragraph, fifth sentence – add the word "and" between "21 units per acre" and "to allow."

Page 71, last paragraph, second sentence - remove the word "is" between "Clarkstown" and "makes."

Page 77, third paragraph, first sentence – the period after "programs" is colored red. This should be corrected to black to match the rest of the document.

Page 78, first full paragraph, third sentence – "allow more a more" should be corrected to remove the first "more."

Page 78, second full paragraph, first sentence – correct "trials" to "trails."

Page 82, last paragraph, last sentence – a period is missing at the end of the last sentence.

Page 88, second paragraph, second sentence – remove "of" between "in" and "all."

The Transportation subsection includes a section on Land Use followed by one on Quality of Life. The Goals and Objectives portion orders it as Quality of Life followed by Land Use. The Goals and Objectives portion should reverse the ordering, so that the goals maintain the same order as the main body of the subsection, or vice versa.

Page 99, second full paragraph, second sentence – remove the first or last alternative/s from "alternative transportation alternatives."

Page 101, Inter-Municipal Agreements paragraph, last sentence – add the words "as with" between "such" and "the."

Starting with the first mitigation method on page 112 – add the word "as" between "such" and "rain." This must be

TOWN OF CLARKSTOWN - COMPREHENSIVE PLAN UPDATE (C-3073T)

applied to several of the mitigation methods within the Impact on Water portion.

Page 145, first paragraph, last sentence – "2000 Plan" should be corrected to "2009 Plan."

**NYS General Municipal Law Section 239 requires a vote of a 'majority plus one' of your agency to act contrary to the above findings.*

The review undertaken by the Rockland County Planning Department is pursuant to, and follows the mandates of Article 12-B of the New York General Municipal Law. Under Article 12-B the County of Rockland does not render opinions, nor does it make determinations, whether the item reviewed implicates the Religious Land Use and Institutionalized Persons Act. The Rockland County Planning Department defers to the municipality forwarding the item reviewed to render such opinions and make such determinations if appropriate under the circumstances.

In this respect, municipalities are advised that under the Religious Land Use and Institutionalized Persons Act, the preemptive force of any provision of the Act may be avoided (1) by changing a policy or practice that may result in a substantial burden on religious exercise, (2) by retaining a policy or practice and exempting the substantially burdened religious exercise, (3) by providing exemptions from a policy or practice for applications that substantially burden religious exercise, or (4) by any other means that eliminates the substantial burden.

Proponents of projects are advised to apply for variances, special permits or exceptions, hardship approval or other relief.

Pursuant to New York State General Municipal Law §239-m(6), the referring body shall file a report of final action it has taken with the Rockland County Department of Planning within thirty (30) days after final action. A referring body which acts contrary to a recommendation of modification or disapproval of a proposed action shall set forth the reasons for the contrary action in such report.

Subject: [CompPlan2020] Follow up to 2021 Comprehensive Plan

To: <compplan2020@clarkstown.org>

Thank you for listening to the long-term and newer residents of Clarkstown. In order for Clarkstown to continue to thrive we have to both retain our current residents, and find ways to entice people to want to move to our area. I am happy to see that you have incorporated my comments about MRS zoning for residential use into the updated draft plan. Hopefully we can move forward quickly from the past year as I am looking to move back to Clarkstown when more housing options become available.

Warm regards,

- Martha Snider

Re: Letter of Support for Town of Clarkstown Comprehensive Plan

Dear Mr. Simoes,

We are collectively writing this letter to communicate our strong support for the Town of Clarkstown's Comprehensive Plan.

We invested in Clarkstown based on the benefits that the Palisades Center provides, including its location adjacent to the Interstate. It is promising to see the Town's Comprehensive Plan specifically highlight the need to analyze and modify Major Regional Shopping zoning districts to permit residential living units. Major retail centers worldwide have already started implementing this new trend and businesses within those centers are experiencing greater prosperity.

Giving the Palisades Center every necessary tool to revitalize following the pandemic is important to us and the people we employ.

Congratulations to you and the Town of Clarkstown's Planning Board on your forward-thinking leadership. We look forward to seeing the recommendations come to fruition and continuing to contribute to the Town of Clarkstown's economic base for many years to come.

Sincerely,

Subject: [CompPlan2020] Comprehensive Plan

To: compplan2020@clarkstown.org <compplan2020@clarkstown.org>

To Whom It May concern,

I appreciate you considering my original comment on the Comprehensive Plan regarding the state of retail and giving retail venues the opportunity to full evolve. I believe this is the right direction for the future of Clarkstown and I look forward to following the progress.

Respectfully Submitted, Roy Tschudy

Subject: [CompPlan2020] Comments/concern on the Comprehensive Plan Update

To: <compplan2020@clarkstown.org>, <g.hoehmann@clarkstown.org>

Dear Mr. Simeos and Mr. Hoehmann,

Please find my comments and concerns attached.

If you cannot open the document, please let me know and I will resend it. I can be reached at this email or by cell 845-641-3929.

Thank you,

Barbara Pfingst

**Letter of Concern - Comprehensive Plan Update 5-31-2021.pdf**

142K

May 31, 2021

Town of Clarkstown
10 Maple Avenue
New City, New York

Dear George Hochmann and Joe Simoes:

This past month we saw several *90-degree days in May*. As a longtime Clarkstown resident, I am greatly concerned about Climate Change, destruction of our forests, pollution, overdevelopment and its impact on Rockland County and our quality of life. Given that the master plan is currently being updated, I would like to address several of these issues.

The Comprehensive Plan Update states that, economically, Clarkstown is “business friendly in every sense of the term.” I take offense to this for several reasons. Clearly, the Town is less friendly to the residents in “every sense of the word,” because tax paying residents are prioritized below businesses, as evidenced by the overdevelopment of our community. The local wildlife and open spaces are prioritized lower still, as evidenced by the destruction of green and open spaces in favor of business and housing development. I would like to see the value of open spaces prioritized. It will be the only thing that saves us from continuing and worsening climate change.

Town Code and Comprehensive Plan Update regarding Trees and Green Spaces

The removal/reduction of so many green spaces in our area concerns me greatly. In our Town Code it says when a swath of land is cleared, there should be no fewer than 17 trees per acre, however a fully grown acre of forest may contain 5,500 trees! (See: https://www.fs.fed.us/ne/newtown_square/publications/resource_bulletins/pdfs/scanned/OCR/ne_rb124.pdf). Our Town Code and Master Plan leave tremendous room for deforestation and barely any for restoration efforts.

We need to update our Town Code to include a greater number of trees replanted when land is cleared; seventeen trees is an incredibly low number. There is nothing in the Code about the quality of the trees after two years, which means the trees may die without legislative oversight, leaving less vegetation overall. Additionally, the Town Code must include protection for low-lying vegetation, as it is often overlooked.

For example, several years ago when a large section of forest was removed overnight across the street from the Palisades Mall, residents like me were shocked. As I understand it, the company, Tilcon, was fined and they replanted a few trees, but the forest never grew back to its original condition. I miss the beauty that once stood there. They were not tasked in reforesting the area back to its original condition. This situation and numerous others leave us with fewer and fewer natural resources to enjoy in Rockland County. There are countless other examples of this

happening all over Rockland County, such as West Hook Mountain in Valley Cottage (<https://www.rocklandtimes.com/2021/04/08/advocates-stumped-town-opens-criminal-investigation/>); and Congers (<https://dailyvoice.com/new-york/clarkstown/schools/tree-removal-at-school-upsets-congers-residents/594769/>) to name but a few.

The webpage of the Clarkstown Zoning Board Projects reveals a dizzying array of new buildings and rezoning projects. It is evident that Clarkstown is focused on increasing business but does not place the same focus on sustainable environmental solutions. For greed, we are overdeveloping the land for parking lots, businesses, and homes, leaving nothing for nature.

Once the trees and low-lying vegetation are gone, there is nothing helping them to grow back to their original condition without appropriate legislative measures. You can make a difference by updating the Town Code to reflect a higher priority for our vanishing green resources and create contiguous spaces for wildlife to roam throughout Clarkstown. You can make a difference in the Comprehensive Plan Update by prioritizing green and open spaces over businesses and housing.

In addition to prioritizing the remaining green spaces, mitigate the damage already done by planting more trees and shrubbery in parking lots, in and around buildings, and highways. While solar panel canopies over parking lots is a great idea, do not allow that to be where we stop. Continue to reestablish a new forest of trees and greenery in reimagined spaces. Require new construction to include plans with green spaces incorporated in and around the building and utilize green building codes already in existence. This would increase the desirability of those locations and lessen our environmental impact.

I did not see in the Comprehensive Plan Update the hotter zones of our area. For example, cities radiate more heat than urban and farm areas. What about Clarkstown and Rockland County, as a whole? I suspect that we have many hotspots around shopping centers and in towns that need to be addressed in the Plan Update by reestablishing a greater green presence to avoid hotspots and the negative consequences they bring to our animal populations and environment.

Roadways, Traffic, and Overbuilding in Congers

My family and I live in Congers, which is earmarked as an industrial/office space location. The Town has succeeded in making this area more commercialized since we moved here in 2002, and sadly we have experienced a loss in our quality of life. Lots of green spaces have been permanently altered and/or removed to make way for industrial parks. I cannot drive down Route 303 without encountering a great many 18-wheelers, construction vehicles, and *lots* of traffic. Air, noise, and light pollution has greatly increased. Although there is mention about quality of life in the Comprehensive Plan, I have great concerns since “in every sense of the word” you are prioritizing businesses over the residents, and the residents over the green spaces.

There may have been a traffic study conducted on Route 303, however nothing to date has changed and the traffic situation has deteriorated since. Will Route 303 be widened? If so, will

more trees and plants have to go? If Route 303 is widened, it will mitigate the traffic, but not the pollution. How will you hold business owners accountable for the pollution they create? Will you require trucks to be hybrid or electric, as well? Our Plan must be more environmentally sustainable going forward and not shortsightedly accommodate developers and businesses.

In Congers, two area restaurants, Restaurant X and Kennelly's have both been sold to developers. This will bring more traffic, noise, and pollution to our already crowded hamlet. At the former Restaurant X site, the Town has already preliminarily approved plans to build multifamily homes on the 5.3 acres of land. The Clarkstown Planning Board has also given the green light to build senior housing on the 1.3-acre site. Whatever surrounding greenery will be demolished with the buildings, yet you can make a difference. Require builders to create sustainable housing that includes plants and trees in and around its structure(s); mitigate waste and environmental damage by requiring the developers to incorporate green building designs; and replant more than just seventeen trees after the property is rebuilt. These elements will reduce some environmental damage as opposed to constructing traditional buildings with vegetatively sparse lots. (See: <https://newschoolarch.edu/blog/10-benefits-of-green-building/>).

Empty Buildings

There are many empty buildings in Rockland County, yet we continue to build and overbuild. The Comprehensive Plan addressed empty buildings but lacked details. We have many empty stores in both the Palisades and Nanuet Mall, not to mention the nearby industrial parks. The Plan states these will be reconsidered for rezoning, however there is nothing about readapting the land and buildings to include more green spaces. Please make Clarkstown more friendly to native plants and animal species by reusing existing buildings and retrofitting them to be more environmentally sustainable, whatever their use. (Please see: <https://biofriendlyplanet.com/green-ideas/eco-friendly/design/why-green-building-may-be-a-key-to-affordable-housing/>).

Multiuse Domed Sport and Recreation Facility

The Comprehensive Plan did not state where the Sport and Recreation Facility would be built, nor the building size. My suggestion is to use part of the land/buildings where the Palisades or Nanuet Mall resides, since there are empty buildings on the property. There are other options, as many empty stores on Route 59 are already situated close to highways and public transportation and parking structures already exist. Building the Recreation Facility on already developed land would help preserve other green spaces in Rockland. The Master Plan must require this future building to incorporate green spaces and ecological building materials in its plan.

Parks

Because of the greater number of homes and senior housing being built, we need more parks for people to enjoy. For example, Congers Lake is becoming more and more crowded as additional people move into the area. The Plan suggest that there will be more bicycling and walking paths,

but it seems they will be built along highways. Will Clarkstown increase the number tree and green-lined walking paths to accommodate the greater number of residents in search of a forested area to walk?

Where will the new Pickleball Courts be built? The Comprehensive Plan did not state the location, nor what kind of building would be required. Regardless, the courts can be placed inside one of the many the empty buildings that sit idle throughout Clarkstown or on adjacent developed property, as opposed to breaking new ground.

Recycling

Lastly, the issue of recycling needs to be addressed. Recycling is not a sustainable option for the environment. (See: <https://www.npr.org/2020/09/11/897692090/how-big-oil-misled-the-public-into-believing-plastic-would-be-recycled>). Clarkstown therefore, must take responsible action in reducing our overall waste. Our Comprehensive Plan must include alternatives to recycling, such as reduction and elimination of non-biodegradable waste. For example, the elimination of plastic bags was a good start but does not go far enough. We must encourage our residents and business owners to move toward sustainable options. As a resident, I would welcome greater choices for purchasing and disposing products that are biodegradable. Businesses, likewise, need to create alternatives for single-use and non-recyclable items.

Conclusion

The Comprehensive Plan Update is quite detailed, and I appreciate being made aware of the multifaceted approaches to the future of Clarkstown. Green space needs to be our top priority, especially if we wish to preserve this beautiful county for our children and grandchildren. The Haudenosaunee people remind us to think ahead Seven Generations. We must consider the force of our human impact if we want to avoid a future full of 90-degree days.

We have lost much of our beautiful county to overdevelopment, seen a loss of wildlife and bird populations, brought more traffic and pollution to our area. We are promised jobs and lower taxes, in lieu of green spaces, but this is type of mentality not sustainable. We are at a critical juncture and face serious consequences if we do not change our priorities to focus on the environment. You have the Comprehensive Plan Update and are poised to recreate Clarkstown in a new image. Put the needs of the environment above short-sighted profit margins and become a shining example of sustainability, not only for our lifetime but for the lifetimes of generations yet to come.

Sincerely,

Barbara Pfingst

Re: Draft Generic Environmental Impact Statement (DGEIS)
Adoption of the 2021 Comprehensive Plan Update

Dear Mr. Simoes:

Our office has received and reviewed the 2021 Comprehensive Plan Update DGEIS from your department. We thank you for the opportunity to comment on the DGEIS. Our comments are as follows:

1. The DGEIS states that implementation of the Comprehensive Plan will involve zoning text amendments and land use changes. The DGEIS acknowledges that the achievement of specific goals and objectives will result in decreased sewerage capacity, which would be mitigated by coordination with the District. Sections 502A and 1317 of the Rockland County *Sewer Use Law* as last amended in 2010 provide a mechanism by which reduced sewerage capacity resulting from zoning amendments and land use changes can be mitigated:
 - a. For zoning amendments and land use changes that would result in sewer units above that in which development by right under the original zoning regulations would result, an impact fee will be required in accordance with Sections 502A and 1317 of the Rockland County *Sewer Use Law* as last amended in 2010.
 - b. If a land use approval [i.e., by the Town Board, Planning Board, or Zoning Board of Appeals (ZBA)] or a building permit will result in additional sewer units because of zoning amendments and land use changes, the applicant will have to submit a check payable to Rockland County Sewer District No. 1 for the impact fee, which is currently one thousand eight hundred fifty dollars (\$1,850.00) per additional unit, within thirty (30) days of approval.
 - c. If the use or occupancy of a property exceeds the number of units for which a project sponsor applied, or in which development by right under the original zoning regulations would result, the owner will have to pay an impact fee.
 - d. We request that payment of impact fees be made to the District before structures are connected to the sewerage system.

- e. We request that the Town Board, Planning Board, ZBA or Building Department notify the District upon approval of applications that require payment of impact fees.
2. For the record, the United States Environmental Protection Agency (EPA) has designated certain lots in the Town of Clarkstown as Environmentally Sensitive Areas (ESAs). If a lot that is an ESA, was subdivided from an ESA lot, or merged with an ESA lot applies to connect to public sewers, the following requirements shall apply:
 - a. Prior to connecting any building to sanitary sewers, the developer must obtain a waiver of the EPA's grant condition, which restricts sewer connections from ESA lots. Any sewer application for these parcels cannot be approved until the EPA and New York State Department of Environmental Conservation (DEC) approve the waiver.
 - b. An ESA waiver request must be submitted to this office **along with the correct number of plans and narratives** as indicated below. The District cannot forward an ESA waiver request to the EPA and DEC until **four (4)** copies of the information outlined below are submitted to this office:
 - i. **PROJECT PLANS:** Please provide a detailed site plan of the existing and proposed topography, drainage, soils, etc., and other features of the site.
 - ii. **ESA BOUNDARY DELINEATION:** Please provide a precise delineation of the ESA boundary on the same scale as the aforementioned site plan. Also, provide a brief written report that delineates the boundaries of both the wetland and the 100-year flood plain boundaries.
 - iii. **EROSION AND SEDIMENTATION CONTROL (E&SC) PLANS:** Please provide a complete erosion and sediment control plan for the entire site to protect the ESA wetland and floodplain both during and after construction (include standard notes and details).
 - iv. **ESA CHARACTERIZATION AND EVALUATION:** Please describe the current wetland features of the ESA wetland areas on the site in terms of the following parameters: acreage, flora, fauna, wildlife habitat, soils, rock, flood control, and the surrounding setting. Please also evaluate the wetland values in accordance with the latest available U.S. Army Corps of Engineers Wetland Evaluation Manual. Also, please quantify the floodplain characteristics and evaluate the effects of your project on it.
 - v. **EFFECTS OF MODIFICATIONS:** Please explain how the proposed site disturbances would affect the site features and values discussed in response to Item 4 above.
 - vi. **ESA MITIGATION:** Please provide a detailed narrative discussion of your proposed mitigation plan in order to comply with the standards for waiver approval listed below. As necessary, the plan should include the creation of new wetland acreage of, at a minimum, equal size and value to that which would be lost.
 - vii. **STANDARDS FOR WAIVER APPROVAL:** The standards applied by the EPA and DEC for ESA Waiver Approval are similar to the DEC standards for a Freshwater Wetland Permit. There will be a sufficient demonstration of:

- (1) no net loss of wetland acreage or wetland values;
 - (2) no reasonable non-wetland alternate locations existing on the site for this development;
 - (3) minimization of loss of wetland and wetland values;
 - (4) mitigation of any loss of wetland acreage or wetland values;
 - (5) no appreciable increase in turbidity or sedimentation in the wetland or any watercourses above background levels; and
 - (6) no net increase in downstream flooding during storm events.
- c. *The Procedural Rules for Working on Rockland County Sewer District No. 1 Sewers* impose a fee of three hundred fifty dollars (\$350.00) to process an application for an ESA waiver.
- d. Once the above requirements have been met, our office will forward the required information to the EPA and DEC. It should be noted that three (3) of the four (4) sets as requested above are required for EPA and DEC purposes.
3. The DGEIS states that the Comprehensive Plan Update recommends zoning amendments to the non-residential RS and MRS Districts, and to promote a mix of residential, business and retail uses in the Town's hamlet centers. For non-residential projects or the non-residential use of a property, Rockland County Sewer District No. 1's "Commercial/Non-residential Wastewater Questionnaire" and the County Planning Information Certification (attached) must be submitted to and approved by this office before any sewage is discharged into the District's sewerage system. **The owner must sign the wastewater questionnaire.**
4. We request that the Town notify the District upon adoption of the 2021 Comprehensive Plan Update and provide us with a hardcopy of the zoning map and Town Code when they are updated.

Please inform us of any further developments regarding the Comprehensive Plan Update, and of any zoning text amendments and land use changes. If you have any questions, please contact this office at 845-365-6111.

Very truly yours,

Joseph LaFiandra
Engineer II

Subject: [CompPlan2020] Comp Plan comments after Last night's session

To: <compplan2020@clarkstown.org>

Hi Joe and Supervisor Hoehmann!

I have some thoughts and questions as a result of listening in on the Town Hall last night.

Will the Town consider offering discounts in the bidding process to companies/builders/developers that propose sustainable building solutions and circular components for development projects? For instance, designing in organic gardens at the senior housing project at Shimpf's or net zero building design at the three story strip mall going up on Main St?

Does the plan add a goal to pass legislation that limits the use of gasoline leaf blowers during summer months?

When might we see the effects of Complete Streets? You mention problems, like environmental impacts, arising in the process of *solving* other problems or goals of the Plan. What about single *solutions* solving *multiple* problems? This saves money and time and often generates more resilient, sustainable solutions. For instance, Complete Streets represents the opportunity to solve speeding, recreation, safety *and* pollution and biodiversity issues with the addition of sidewalks that contain pollinators planted on the road side.

What is the legality of zone changes? Supervisor Hoehmann mentioned he was surprised the Town has not gotten sued yet when talking about Shimpf's getting senior housing. In the spirit of full transparency I hope you can share what this means.

Thank you!
Sabrina Tenteromano

Bcc: t.dauksza@clarkstown.org

Hi Sabrina,

We will ultimately address your comments within the Final Comprehensive Plan, but I just wanted to clarify a few things. The development of private property, such as Schimpf's or the strip mall you reference does not involve a bidding process on the part of the Town. The Town puts out bid requests for its own public projects (like replacing the roof of Town Hall for example). The Town can incentivize private development to be more sustainable by providing more density, for example, or we can simply require a higher standard for development, like retaining stormwater greater than net zero (which we do require, by 10 percent, by the way).

We received a great number of public comments about noise and air pollution, some related to power equipment. Limitations on gas powered equipment could be considered by the Town, but the specifics of any legislation would have to be hammered out in the future.

I agree that Complete Streets has the potential to solve a great deal of problems, but it still involves committing resources and some disruption of the natural environment. The Comp Plan recognizes that even a sidewalk could result in an impact, by adding more concrete to the Town and removing grass, trees and shrubs to have them constructed. As with all things, we have to weigh the benefits versus the costs and the pros usually outweigh the cons when it comes to Complete Streets, but we still have to recognize the cons. That being said, the Town has an extensive roadway network. We need to prioritize what should be worked on first to get the most bang for our buck. It's going to take time.

I'm not sure what you mean by the "legality of zone changes." In general zone changes are legal if they are in conformance with the Comprehensive Plan. Schimpf Farm did not require a zone change. It required approval from our Planning Board and consequently it meets a Comprehensive Plan goal of providing senior housing. I can't speak for the Supervisor, but I can say that developers are apt to sue municipalities for excessive delays for projects they have the legal right to build.

Sorry for the long-winded explanation.

Thank you for your comments.

Joe Simoes

Thank you for your response!

My only follow up is re sidewalks and concrete: there are alternatives to high carbon concrete as I'm sure you know and just across the water, Hastings is the latest to adopt low embodied carbon concrete rules. Cutting away turf grass in favor of low embodied carbon sidewalks with pollinators seems like it would offer greater environmental benefits than impacts. Of course it requires formal analysis like anything else.

Speaking of analysis, I was glad to hear about the funding for the study that will include 304!

Thanks,
Sabrina

Hello it's Roxanne Watson resident of Clarkstown. I am really disappointed that I was not able to attend the meeting for the concerns at the Palisades Center due to illness. This will be my first missed meeting so I want to add my two cents as a frequent patron of the mall as a shopper and representative of a non-profit.

I appreciate you considering my original comment on the Comprehensive Plan regarding the state of retail and giving retail venues the opportunity to full evolve. I believe this is the right direction for the future of Clarkstown and I look forward to following the progress.

Thank You Roxanne Watson

RE: Comprehensive Plan Update

Dear Mr. Simoes:

Thank you for the extended period to provide comment on the draft Comprehensive Plan Update and DGEIS, and for keeping this project on target during an extraordinarily difficult year. Kudos to you and your team!

My comments and questions are as follows:

- 1) It would be helpful for the public to know who served on the Special Board for the Comp Plan, as well as who served on the various sub-committees, to ensure a fair representation of community interests (if this is included in the draft, I apologize for having missed it);
- 2) Two of the continuing goals outlined in the Plan address the need to “preserve the suburban and remaining semi-rural character of the Town”, and to “preserve neighborhoods by expanding initiatives to safeguard neighborhoods from inappropriately scaled development.”

I appreciate the Town’s ongoing commitment to those goals. However, several of the Town’s current zoning codes and practices seem to be inconsistent with those stated goals, and continue to allow over-scaled development to encroach on our single-family neighborhoods. In particular, I would like to see the following issues addressed in the Comprehensive Plan, or in subsequent code amendments and policy changes:

- a) **Non-Residential Uses Permitted “By Right” in Residential Zones** -- Currently there are a number of non-residential uses that are “permitted by right” in our residential districts, even though the proposed use may not be in alignment with needs identified in the Comp Plan (e.g., the Plan doesn’t anticipate a need for new schools, yet schools are “permitted by right” in residential zones). Developing special use/permit conditions for non-residential uses in residential zones would give the Town more discretion in the review and approval process, and help to align non-residential development more closely with identified community needs;
- b) **Non-Residential Uses Limited to State and County Roads** – I appreciate the intent of the current code which limits non-residential uses in residential zones to State and County Roads. However, it has had the negative effect of over-burdening our county roads—many of which are secondary/connector roads (e.g., West Clarkstown Road). What will be the Town-wide implications if these connector roads become further clogged with density and traffic?

- c) **Merging Adjacent Lots for Development** – In some cases, prospective developers are purchasing adjacent residential properties and bundling them into one property for non-residential development purposes. This leads directly to over-scaled development, as the resulting lot is at least twice the size of surrounding lots and is developed as such; this practice of merging adjoining lots for non-residential development should be disallowed in residentially-zoned areas;
- d) **Bulk Specifications vs. Over-Scaled Development** – What is the Town’s definition of “inappropriately scaled” development? Is a project considered to be appropriately scaled just because it meets code specifications? Many recently proposed developments seem to be out of scale to the surrounding neighborhood, even though they meet all code and bulk use requirements. “One size fits all” specifications do not adequately account for the context of the surrounding neighborhood. Appropriate scale should be defined for each project in the context of the specific neighborhood where it will be located. A building height of 35’, for example, might be within scale in one community, but not in another, based on the surrounding area. Guidelines that require proportionality to surrounding areas, rather than “one size fits all” specifications for height, density, building and lot coverage would offer better protection against inappropriately scaled development;
- e) **Public Participation in Visioning Our Communities** -- There are several areas in our Town that appear ripe for development: 1) the West Clarkstown Road corridor; 2) North Main Street in New City; and 3) the Town-owned property at the former Rockland Country Day School in Congers.

Will development in these areas occur in a piecemeal fashion, guided primarily by private interests, or can we envision cohesive plans for our neighborhoods--plans developed in partnership with residents and developers who are willing to engage in a collaborative and inclusive planning process? By the time projects reach the public hearing phase of the planning process, they appear to be “done deals.” I encourage the Town to foster public/private collaborations that seek a more broad-based input to the planning process. This will help the Town achieve a more cohesive community design, one that is geographically balanced and meets the diverse needs and desires of its residents.

Thank you again for this opportunity to provide comment, and your commitment to goals and initiatives that will more adequately preserve the character of our residential neighborhoods.

Sincerely,

Laura Bidon

Re: Rockland County letter of Support for Town of Clarkstown Comprehensive Plan

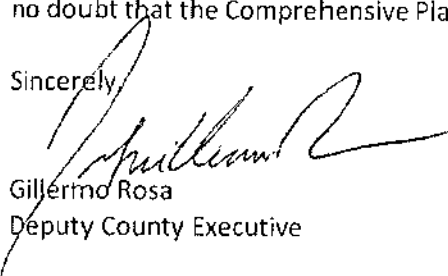

On behalf of the County of Rockland, I am pleased to submit this letter of support for the Town of Clarkstown's Comprehensive Plan. As the county seat and the second largest town in the county, the Town of Clarkstown is the most prominent business center in Rockland, and as such, the proposed updates to its Comprehensive Plan capitalize on this potential and responsibly consider expected future growth.

The first goal listed is economic development which demonstrates the overarching need to foster a healthy economy towards the maintenance and enhancement of the excellent quality of life in the town and county. The plan's objectives align with the county's economic development mission which is to serve as a catalyst for economic diversity, growth, and prosperity for the county through innovative planning and policy interventions.

The proposed goals of the Comprehensive Plan reflect the evolving nature of land use, transportation and business which will help the town achieve its tremendous potential for sustainable economic development. Reimagining commercial districts, corridors and town and hamlet centers will make them more attractive to business, permit greater flexibility to be able to accommodate new and appropriate contextual uses and encourage employment opportunities and quality housing options. Implementing such progressive measures will result in an outcome that will deliver a broad range of equitable social and environmental benefits at both the municipal and county level.

The Town of Clarkstown has a well-documented history of planning for the future and has done an extremely thorough job creating and presenting this plan while allowing for ample public comment. I have no doubt that the Comprehensive Plan will help the Town remain vibrant in a rapidly changing landscape.

Sincerely,

Guillermo Rosa
Deputy County Executive

Comments on the 2021 Comprehensive Plan for Clarkstown From an Environmental Perspective

Transportation

The Transportation component of the Clarkstown Comprehensive Plan of 2009 was prepared by Cambridge Systematics. It correctly recognized that “congestion creates slower travel times for motorists to and from major destinations in Clarkstown.” It correctly recognized that the goal was for Clarkstown to “align transportation with land use changes to create sustainable travel and development patterns, while minimizing congestion and maximizing safety.” It correctly recognized that “while much of Clarkstown’s land is currently developed, redevelopment continues that will create changes in demand for the local transportation network.” For mitigation solutions for “increased traffic congestion/decreased roadway capacity” it repeated over and over again to “promote public transit alternatives” – meaning walking, biking and public transit.

And what has happened since 2009? From 2010-2018, the population of Clarkstown grew 2% and all indications are that it is continuing to grow. Population density is now 2461 people/square mile. (This is greater than, for instance, the city of Binghamton, NY). We know that in the county overall (some statistics are not gathered for Clarkstown alone) there are 217,439 licensed drivers and 202,196 registered vehicles, which would come to about 1 car for every licensed driver. From the Appendix of the 2021 Comprehensive Plan, a survey from 2006 showed that an overwhelming majority of people in Clarkstown own their own homes, over 50% of those homes have 4 bedrooms and most households have at least 1 car. If a more detailed survey had been done then or a new study were done today it would probably show that many of those people in their 4-bedroom homes have 1, 2, or maybe even 3 cars per household. We also know that data probably wasn’t yet available for Cambridge Systematics to consider the source of greenhouse gas emissions in the county, but this data was compiled by ICF International for NYSDERDA in 2012 and the estimate was that 44.2% of Clarkstown’s CO₂ emissions are coming from the transportation sector, probably a large percentage of that was coming from cars. (It was 52.6% for Rockland County as a whole.) This makes it more critical now, over 12 years after 2009, to have included some efforts to discourage people from driving and encourage people to walk, bike, **and** take public transportation. There is discussion in the new plan about the Complete Streets initiative, which does offer suggestions on how to make Clarkstown safer for those walking and biking, but there is no mention that the streets would be safer if we improved public transit and decreased the number of cars on the roads.

What did Clarkstown do between 2009 and 2021? Instead of following the guidance of their own consultants, they actually cut service for their Mini-Trans. The town also did not follow the guidance of their own Comprehensive Plan to “seek creative funding for bus infrastructure that is part of regional developments” and, in order to “change...neighborhood character” to “build [that] consensus through outreach and education programs.” Instead, the town reduced the service, (cut it in half) angering many who relied on that service to get to their jobs, and encouraging more cars on the road.

The 2021 plan now uses the term “sustainable travel options” which is vague. Utilizing the term “sustainable” is the politically correct thing to do today, but without any specifics, it can be useless. Assuming it means encouraging cars to be electric, which would be an improvement and would certainly help with the air pollutants, electric cars will still not help with the congestion. The 2021 Comprehensive Plan draws attention to the charging stations that have been installed at the Palisades and the Nanuet malls, but says nothing about switching to electric buses for their Mini-Trans service. And, whenever there are more cars on the road, there is more congestion, slowing down the buses, which further discourages people from taking those buses, providing further justification for reduction in services. It is a vicious cycle.

Regarding the CO₂ emissions, in June of 2019 New York State passed legislation, the Climate Leadership and Community Protection Act, which among other things, encourages the transition to electric vehicles. It encourages putting our monies into charging stations for electric cars, which makes sense, but only recognizing the need for electric cars and charging stations makes more for rural areas than for suburban areas like Clarkstown (or Rockland). We in densely populated, highly congested suburban areas should put the bulk of monies into building better public transit systems. If existing rebates lure higher income people into buying electric cars, they will be selling their gasoline-operated cars to lower income people who, despite the rebates, still could not afford the electric cars, and we would end up with *more* cars on the road and fewer people on the buses, which would justify cutting bus service even more – again the vicious circle.

The 2021 plan does mention the importance of lobbying for improved air quality and for the monitoring air quality. Good data on air quality would have been essential for the planning process itself. For this 2021 Plan, 2010 data was used for the county. This data has undoubtedly changed in the last 10 years. And, there also needs to be lobbying for *several* monitoring stations or, perhaps the moving of the current monitoring station. The current sole air quality monitoring device for the County is in the middle of Conklin Orchards, where it likely doesn’t pick up the pollution coming from where most of the traffic is, for instance in Nanuet or West Nyack, near Route 59 and the Thruway. The American Lung Association rated air quality in Rockland County (not specifically Clarkstown) with a grade of D. And this did not include particulates. The 2021 plan does estimate that “approximately 1/3 of air pollution comes from motorized travel.”

Specifically addressing buses and other larger vehicles, on July 14, 2020, Governor Cuomo announced a Memorandum of Understanding that New York State would be working toward 100% of all new medium- and heavy-duty vehicle sales (buses and trucks) being zero emission vehicles by 2050 with an interim target of 30% by 2030, making money available through the VW settlement to accomplish these goals. Clarkstown could be taking advantage of this offer by upgrading their Mini-trans buses to electric and installing the charging infrastructure. Additional money would still be needed for improved routes, schedules, and signage and for **marketing** of all of the improvements, including perhaps incentives to encourage people to ride the buses (or disincentives for the driving of cars, which, perhaps, could help fund these improvements.) Without the commitment of the town to these additional improvements to the existing public transit system, it is certain it would fail. And we’d end up with more congestion, greater need for the widening of roadways, more paved over open spaces to make way for parking lots

and causing more storm run-off, plus greater inequity, as poorer people would still be stuck on the ever-deteriorating bus system.

It would make better sense for there to be more discussion with Rockland County about ***improving Transport of Rockland service in Clarkstown***, but this didn't appear in the Comprehensive Plan either. Perhaps, instead of Clarkstown Mini-trans service and TOR buses both going electric with separate charging stations and fleets, we could eliminate Mini-trans service altogether and just improve service and begin to build a new fleet of electric TOR buses. Along with that, there could be more offerings of alternatives to owning a car, such as car rental services, better taxi or Uber services, a service to allow for ride sharing or bringing Zip-Car into Clarkstown (or the County).

Overall, especially with transportation issues, closer cooperation with the county is necessary for that suggestion to "seek creative funding for bus infrastructure that is part of *regional* developments." In other words, it makes sense for the different towns together with the County government to seek monies from the State through the Congestion Mitigation and Air Quality Improvement Program and/or the VW settlement money, for funding the building of infrastructure to convert the bus fleet to all electric and to actually consolidate TOR with Clarkstown's Mini-trans and together work on improving the routes, scheduling, signage and marketing. Just now, there is additional money available from NYSERDA for "Advancing Clean Transportation in Disadvantaged Communities." All the more reason to work with the County Transportation Department to encourage them to apply for such money.

In the long-term, more and more cars on the road is not a sustainable transportation plan. And, the current public transit system is virtually a segregated system. Improving public transit and encouraging more people to use it could help to build a more equitable county altogether.

Regarding school buses, there was not a word in the Comprehensive Plan on requiring a gradual conversion of the school bus fleet to electric buses.

Development/Zoning Overall (which relates to transportation, too):

Almost all new construction mentioned in the 2021 plan would be for commercial or business use, and seems to be along the Route 303 or 304 corridors. And all new housing mentioned in the Plan would be above businesses and for "emergency service workers" with the exception of new housing for seniors. (It is unclear where the senior housing would be.) Throughout the plan there is mention that nothing should "conflict with residential uses". So that implies no further development in residential areas. Viewing this with an environmental lens, there *should be* consideration of changing zoning in those residential areas to allow single family homes be converted to dual family homes. More dense living is more environmentally sustainable and would help justify better public transit. And, wherever the senior housing would be located, public transit would be needed, too.

The Plan calls for requiring solar panels on all new construction, just on "Town Land." Why not require it on all new construction and encourage that it be installed on existing buildings and housing? This would ultimately increase the value of those buildings/houses. One or 2 people who live in 4-bedroom houses

with their 1, 2 or 3+ cars in the driveway or in their garage have a much higher environmental impact than those living in apartments above businesses and using public transit.

The plan mentions the solar farm in West Nyack creating enough electricity to serve 1/3 of Clarkstown, but also mentions it serves 200 homes. This must be inaccurate because there are more than 600 homes in Clarkstown.

Mention is made of putting solar canopies above parking areas. There are environmental benefits of this solution, but there might be bigger benefits if there could be smaller paved parking areas altogether. The Stormwater Commission acknowledged that there is a serious problem with stormwater runoff in Clarkstown and it also came up with suggestions about mitigating this problem. What was not mentioned by the Commission (or at least not in the Plan) was the possibility of fewer paved parking lots, or smaller paved parking lots (with or without solar panels above them) allowing more of that stormwater to be absorbed into the ground. Those smaller parking areas would require better public transit services to and from those areas.

Environmental Education:

The plan includes 1 paragraph about increasing environmental education, which is greatly needed. The plan is rather vague about details. It does not specify for whom, where, on what topics, or how to go about doing this. And the separate Climate Report doesn't mention environmental education at all.

Clearly, the question of who needs environmental education should include students of all ages in all the schools, but also the general public and all town employees, too. It should include the **urgency that there is an environmental crisis and that all have to step up to the plate and be involved**. It could begin with a new survey of young people (the only survey of young people was in the Appendix and was done in 2008.) High School students could be trained to do the educating of the adults. But also, the plan had no suggestion as to how the town could partner with existing organizations for this – Cornell Cooperative Extension, Sierra Club, Rockland Water Coalition, Rockland Farm Alliance, Keep Rockland Beautiful, etc. who are already doing some environmental education. Nor did they explore what is already going on in New City Library – an environmental education program on Learning to Live More Sustainably called Pare Down/Cheer Up. There is urgent need for environmental education about the need for paring down on the driving, to encourage less traffic, less pollutants, less contribution to GHG emissions, and what about environmental education on paring down on the meat consumption, etc, etc.

How about some consideration of environmental justice? From the results of the Saratoga Associates study in the plan's Appendix (2006): The study showed that 13% of the population of Clarkstown were "extremely low income." Might that statistic have changed since 2006? One would think it would be important to incorporate an update of this information for the current plan and to work environmental justice into all aspects of the plan (including transportation).

A few other ideas:

Encourage Street Banking: <https://www.streetbank.com/splash?locale=en>

Encourage neighborhoods to share cars, tools, yard equipment, toys, gardens, a compost piles, etc.

And one more idea: Explore inviting an indoor farm (hydroponic or aquaponic) into some of the empty space in the Palisades Mall.

Thank you for considering my suggestions,

Katherine Schwarz, MS, MPH

**Comprehensive Plan Comments - J. McPhee.pdf**

114K

June 19, 2021

To the Comprehensive Plan Committee, Joe Simoes and the Planning Department,

Thank you for the opportunity to comment on the Comp Plan Update and thank you for all your hard work in putting this together. Below are my comments/concerns regarding the new Comprehensive Plan. Some of my comments address the actual proposals in the new plan however, I'm more concerned about how the town plans to protect our community while working to achieve these goals. There are serious holes in the town's codes, procedures and approval processes that need to be addressed and fixed before any of this becomes a reality.

1. While I agree with many of the suggestions, I feel that our town code allows for development that is inappropriate and out of scale for our single-family neighborhoods. Our codes need to be reviewed and changed to prevent further destruction of these areas.
2. Although it is thought that we need to grow to survive, the amount of growth you are allowing is not sustainable. Our roads are already overcrowded, and our resources (especially water) are already being threatened. I do not see the town taking this into account and looking at the big picture when approving/proposing these new high-density developments and commercial projects.
3. It is mentioned in the plan that there is a desire for a fixed performance area in the town of Clarkstown, thus somebody has proposed building an amphitheater at Germonds Park. I have been on all the comprehensive plan calls and have attended countless town meetings and workshops and I have never heard of a single request for this. Pickle Ball yes, Fixed performance space, no. We are trying to keep the towns expenses down, so that we can decrease taxes or at least remain stable, so that young families can afford to buy homes in our town. How does building this help in that regard? It is just another expense that the town will have to 1) Build and 2) Maintain. This is a definite NO in my opinion. You are also proposing to build it right next to two historical homes. I guess there is no preserving Historical Areas in Clarkstown anymore, as proven with the green light on Schimpfs Farm development.
4. You talk about making our town more walkable and new projects need to factor in sidewalks. Who is going to maintain these sidewalks? Mow or water the grass areas that are sometimes established between the curb and the sidewalk? The new sidewalks on 304 are great, yet half the areas are not being mowed and I see either a town or county truck coming out and watering the grass. Additionally, in the winter these sidewalks need to be plowed. Who is doing that? More expenses added to the town and passed on to the residents. Think about all the money that is now spent when Main Street in New City needs to be plowed after a snowstorm. Due to someone's brilliant idea that we need cutouts for parking along Main Street, these cutouts now need to be shoveled out by hand because the plows cannot get in there. Whose pockets are we lining? Certainly not the residents of Clarkstown.
5. The town needs to review and adjust the procedures for approving new projects in Clarkstown. From experience, it appears that the Planning Board approves projects and only then hands it off to the AHRB for review and approval. However, some of the aspects that are approved at the Planning Board reviews really need to be reviewed and approved by the AHRB. For

example, Schimpf Farm. The Planning Board approved 7 buildings, 3 stories high plus a club house. At the AHRB meeting, they were surprised to see such a project approved based on the density and height of the buildings and even though the code says that the AHRB has a say over the inappropriateness and mass bulking of a development, citizens were told that their "hands were tied" because the Planning Board approved the project. One member of the AHRB seemed to stand with the community, but then a vote was conveniently done while that member was not in attendance. There is a serious problem with how the boards approve projects and interact with each other and if you plan on all this future development to be reviewed and approved in this manner, I fear for Clarkstown.

6. All the boards need to take a BIG Picture view of the projects they approve. On its own a residential complex on North Main Street with 50 units may be fine, however, then they approve another 5 projects just like that on the same road. Another example is West Clarkstown Road. It is a 2 lane "country road" but with all the planned and in some cases approved projects, this road needs to be the new Rt. 59.
7. All land use board members should be required to visit the sites that they are making decisions on. There should be multiple visits that should possibly involve the public as well so we can point out our concerns face to face. How can smart decisions be made based on a paper site plan and mocked up computer generated designs? The AHRB members seems to follow this practice and I think it should be made mandatory.
8. The town needs to enforce and follow its own codes. What is the point of having codes when the boards just grant variances or override concerns? Who is going to be held responsible? I cannot get behind some of these new proposals, because I've already seen how they have been manipulated by developers at the expense of the community.
9. These workshop and comprehensive plan committees need "real people" on them, not the developers and politicians who are basically making decisions that best meet their needs, not the publics. I find it funny that Clarkstown is now pushing and allowing a huge amount of senior housing. Strange that one of the largest and inappropriate developments, Schimpf Farm, is being proposed by a developer and architect who sat on the Housing Committee back and recommended that we need senior housing. Once again, lining their own pockets at the community's expense.
10. This comment is straight from the comprehensive plan draft. Yet the Supervisor and all the land use boards have given the green light to the Schimpf Farm project, an inappropriately scaled, high density development in a residential neighborhood that is already saddled with huge traffic problems. What is the point of these comments and goals if the town does not follow through on them? If the issue is the town's codes, then fix the town codes.

Expand initiatives to safeguard neighborhoods from inappropriately scaled development. Development whose density or bulk far exceeds those of surrounding established residential neighborhoods will be discouraged. Through strict interpretation of zoning laws and outreach and education for officials and developers, the Town can protect its neighborhoods from the environmental and aesthetic damage out-of-scale development can cause. In addition, the Town will require supplemental landscaping, increased buffers and the installation of fencing or other screening to protect neighborhood cohesiveness and mitigate nuisance.

So what initiatives are you proposing? As stated previously, variances are given even when there is clear opposition and reasons for not granting. Comments from the county are overridden, even when the comments are valid. What guarantees do we have that the town will actually stand behind these initiatives?

11. All vacancies for board positions in the town should be published and made public. All committees' positions should be published and made public. We need fresh ideas and new perspectives.
12. I think the town should hold off and thoroughly investigate the concept of the transferring of development rights program. While it sounds like a win-win, we have found that if not properly vetted and implemented correctly, changes of this magnitude can be manipulated and misused.
13. More time and work should be put into sustainability. Outside agencies should be used and their findings should be made public.

Subject: Comprehensive Plan

To: <j.simoes@clarkstown.org>, <compplan2020@clarkstown.org>

During the Clarkstown Comp Plan 2020 comment period, I left comments regarding the need for housing options for millennials, Gen Z and older adults coupled with the Major Regional Shopping Centers need to reinvent and reengineer themselves to keep up with the changing nature of retail. As seen throughout the country, incorporating market rate multifamily housing, hospitality and medical to large shopping centers such as the Palisades Center Mall and the Shops at Nanuet will help to revive and stabilizing the properties; positioning them for long term success.

As I read through the 2021 Comprehensive Plan Update, I was very pleased to see in several areas that my comments and those similar to mine were taken seriously and in one way or another mentioned in the plan update; thank you for that. As stated in section VI Implementation; g) Land Use Changes, "Flexible new zoning" for MRS is crucial, housing should be allowed; as well as, medical. I believe their ability to be a real mixed use property is the key to their success and the overall success of the Town and County.

Again, thank you for all of your hard work and efforts managing this entire comprehensive planning process.

Sincerely,
Scott Milich

Dear Mr. Simoes,

I wanted to submit a comment on the Economic Development section of your comprehensive plan. I believe that changing zoning so our larger retail centers can add housing will help fill the empty space and bring some vibrancy back to those locations. It will also draw young families and new businesses that will help in keeping our economy healthy.

Thank you for your consideration.

Sincerely,

Thomas L. Hinzman

To: <compplan2020@clarkstown.org>

Dear Mr. Simoes,

I'm once again writing in support of both residential and/or hotel space at the Palisades Center. As the CEO of a business within Palisades Center, I have a first-hand account for the need. Residential space for the next generation and a hotel space for Palisades Center's customers and travelers to our county, will grow our economy here in Rockland. The benefits - construction and permanent jobs, generating revenue for the Town, creating a true live/work/shop/play community -- far outweigh any negatives (if any). I truly believe it's time that we think about our retail spaces and help them evolve!

I appreciate you taking the time, Thank you

Sincerely,

Carlos Martinez, LMSW

Subject: [CompPlan2020] Comments on 2021 Town of Clarkstown Comprehensive Plan Update & DGEIS

To: compplan2020@clarkstown.org <compplan2020@clarkstown.org>

Thanks to Supervisor Hoehmann, Joe Simoes, Principal Town Planner, and the Clarkstown Town Board for keeping the public involved in the 2021 Update of the Clarkstown Comprehensive Plan.

While some of the goals of this Draft Generic Environmental Impact Statement are more general than I expected, I think **the plan to form a Town Sustainability and Resiliency Committee to recommend specific actions should definitely be implemented.**

The committee should review and consider specific recommendations made by residents during the development of the 2021 Update. For example, for the goal to "Protect and conserve both the sources and supply of potable water and the natural features which add to water quality" (p. 2), specific recommendations in addition to limiting impervious pavement, acquiring more open space, and requiring stormwater runoff management for new development could include requiring water neutral building practices for new construction and discouraging the use of lawn fertilizers and lawn watering.

The only goals of the 2021 Update that I strongly oppose are those of replacing the soccer field at Zukor Park with artificial turf and constructing a domed sports facility which will also use artificial turf.

Last November, Rockland residents were informed by Suez Water New York that levels of PFOA, one of a family of PFAS chemicals, exceeded New York's Maximum Contaminant Level of 10 parts per trillion in some of the wells which feed into our water supply. Since then, the public has learned a lot more about these "forever chemicals," which have serious health impacts on humans, particularly pregnant women, infants and children. See <https://www.ewg.org/areas-focus/toxic-chemicals/pfas-chemicals>.

Studies have shown that **PFAS chemicals are used in the manufacture of artificial turf.** See <https://www.ewg.org/news-insights/news/new-studies-show-pfas-artificial-grass-blades-and-backing>. Since the soccer field at Zukor Park and presumably the sports facility would be used extensively by children, Clarkstown should strongly consider the health effects from exposure of children to this product through physical contact and breathing the toxic fumes.

A related concern with artificial turf is that it is **not maintenance-free**, as some people assume. Washing it utilizes herbicides and pesticides, which can run off into the water supply along with other toxic chemicals used in artificial turf's production as the turf degrades over time. Because it heats up with exposure to sunlight, it must be wet down so people can walk on it during hot weather. Water for washing and cooling the turf could be better used to water a drought-resistant species of grass, which sequesters carbon dioxide and releases oxygen. See <https://sustainablecrossmoor.org/artificial-grass/> for more details.

In fact, the goal cited above of protecting our potable water will be threatened by installing artificial turf. Therefore, **I urge Clarkstown to reconsider the plan to install any artificial turf; we should be avoiding its use in general and avoiding exposure to it, especially by children.**

Thank you for considering my comments on the DGEIS.

Subject: [CompPlan2020] Additional comment on 2021 Update on Clarkstown Comprehensive Plan DGEIS

To: compplan2020@clarkstown.org <compplan2020@clarkstown.org>

Yesterday I submitted a comment regarding the dangers of using artificial turf, which will expose residents, especially children, to toxic chemicals and impact our water quality.

Today I would like to submit an additional comment regarding water conservation. **I would like to see Clarkstown take more aggressive action than is currently specified in the Plan to promote water conservation** through discouraging lawn watering, promoting indoor water conservation and requiring new construction to be water neutral in many ways, not just with water-saving fixtures, which are already required for new construction by New York State. Ideally, Clarkstown would even limit construction of new houses and businesses, especially in the vicinity of Lake Deforest.

We have a limited supply of water in Rockland, some of it coming from Lake DeForest Reservoir and the rest from wells. Clarkstown surrounds this reservoir, including upstream of the reservoir. Whatever the Town can do to protect the safe yield of the reservoir will help us avoid the need for an expensive new water supply source in the future.

Land in the town that slopes toward the reservoir provides runoff and recharge to the reservoir which, in turn, makes up the safe yield of the reservoir. Any wells that are located in this area will intercept ground water that otherwise would flow into the reservoir and thus reduce its safe yield. These wells provide water to the homes and businesses of Clarkstown, which is converted to wastewater and discharged to the Hudson River, taking it out of our watershed.

In the summer these wells also are used to irrigate the lawns of these homes and businesses. Irrigation is estimated to be 90% consumptive; only about 10% recharges the aquifer flowing into the reservoir. **It would be in Clarkstown's best interest to implement an aggressive indoor and outdoor conservation program that is within its legal authority to protect the safe yield of the reservoir.**

Sincerely,

Gale Pisha

Hey Joe,

I don't have a first comment from Gale Pisha. In this email she references an email from yesterday 6/21 re: artificial turf.
Can you double check?

Thanks,
Tori

Re: Town of Clarkstown Comprehensive Plan 2020

Dear Mr. Simoes:

I am writing this letter to support the inclusion of residential development in the Town of Clarkstown's revised MRS Zones. I have been a resident of Clarkstown my whole life, currently living in Upper Nyack. My extensive background in real estate and vested interest in economic growth within our County, all contribute to favoring this change:

- Real estate owner and broker for over 37 years
- Former board member of Rockland Economic Development Corp for over 20 years
- Owner and developer of Airport Executive Park in Nanuet, Nanuet Commons, and redevelopment of Extra Space Storage in West Nyack

Under your guidance, Clarkstown has been progressive in many of their planning policies in recent years. I have seen the positive benefits of other zoning amendments created to accommodate changing uses by businesses, a new TOD Zone in Nanuet to attract commuters, and the development of downtown areas to retain young people in Rockland County.

It is time we look at how the retail market is changing throughout the country. This past year's pandemic has accelerated the need to diversify Clarkstown's major mall sites into lifestyle centers that include shopping, healthcare, dining, housing, hotels, and more. The inclusion of housing in our MRS Zones will help retain our youth, firm up our tax base, and stabilize these properties for years to come.

It is important to note, that the impact of traffic should be minimal, if at all, since the site and road improvements to handle these retail centers were designed to handle much greater volume. My partners and I strongly ask for Clarkstown to allow housing as part of their modification to the MRS Zone. Any questions, please feel free to call me at 845-356-2400 ext 102 or on my cell at 845-641-0490.

Thank you for your time and consideration in this matter.

Sincerely,

Steven Yassky

New City, New York 10956

RE: Tilcon NY Inc.
Comments on Town of Clarkstown Comprehensive Plan Update

Dear Town Board Members:

Please accept this letter on behalf of Tilcon NY Inc. ("Tilcon") on the Town Comprehensive Plan Update and Draft Generic Environmental Impact Statement.

As the Town is aware, for decades Tilcon has and continues to operate two mining operations in the Town of Clarkstown, known as the Haverstraw Quarry and the West Nyack Quarry, respectively. Tilcon's mining operations provide high quality construction aggregate that is used in the local and regional area for the construction of roads, bridges, highways, related infrastructure projects, and in residential, commercial and industrial development projects, among other uses.

The Haverstraw Quarry and West Nyack Quarry operate pursuant to mining permits issued by the New York State Department of Environmental Conservation ("DEC") under the New York State Mined Land Reclamation Law. Both operations are subject to numerous operating conditions in their DEC mining permits which regulate the operations and ensure the protection of the environment and surrounding areas. For example, both permits contain operating conditions that requires Tilcon to minimize dust generated by the mining operations and to prevent visible dust from leaving the mining properties. While we are aware that that are certain general statements in the Comprehensive Plan regarding alleged dust impacts from Tilcon's mining operations, please note that Tilcon takes great efforts to utilize best management practices to control dust at its mining operations to satisfy the conditions in its DEC mining permit. Tilcon takes great pride in its environmental compliance record and in being a good neighbor. If there are alleged issues with respect to dust, or any operational issue, we ask that they be brought to our attention so that they can be reviewed and responded to.

We have reviewed the Comprehensive Plan Update and offer the following comments.

The Comprehensive Plan does not recognize the importance of the geologic deposits found in the Town and the need to preserve these resources for future needs of governmental infrastructure projects, highway projects, and commercial and residential developments. The Comprehensive Plan should

TILCON NEW YORK INC.

PHONE: 973-366-7741 • 9 ENTIN ROAD • PARSIPPANY, NEW JERSEY 07054

recognize that the Town contains important geologic sources that are available to meet the present and future demand for aggregate resources both locally and regionally.

The Town Board should consider the following in the Comprehensive Plan:

- The Town should allow for zoning that allows the extraction of aggregate resources in the Town to meet local and regional demand for aggregate resources.
- Construction aggregate is an essential raw material for any construction project. Aggregate is used to build, repair and maintain highways, bridges, dams, and bank abutments; in bituminous and ready mix concrete products; for flood control; ice control during winter driving conditions and in residential and commercial developments.
- There exists a continuing need for this resource that the Town should recognize in the Comprehensive Plan. Planning for future supplies is vital for the local economy.
- Tilcon's mining operations are an important contributor to the local economy. This economic contribution goes well beyond just direct employment of local residents. Companies supply goods and services to Tilcon's operations use local stores, restaurants and other local amenities. Real estate, highway use tax, fuel tax and sales taxes from these operations are a major portion of local, county and state government income.
- Location of aggregate resources is a function of geology, not political boundaries. Appropriate aggregate reserves are only found in locations determined by the geology. So, while other uses subject to zoning may be located in areas of the town using traditional planning tools, planning for the use of aggregate resources to meet the community's future need for aggregate must take into account where the resource is located.
- If other development is allowed in the areas where quality sand, gravel and stone resources are geologically located, the resources will be built over and made unavailable for future generations.
- Importantly, distance from source to end use is a crucial factor in determining cost to the purchaser, including municipalities whose financial ability to meet increased costs is limited. It has been found that on average the price of the material will approximately double for each additional 20 miles construction aggregate has to be trucked. This is especially important for local governments and their highway departments who have strict budgetary constraints. This is another reason why the Comprehensive Plan should recognize and protect its sources of local aggregate.
- Aggregate resources are non-renewable. Local supplies are being depleted. Municipal planning dictates that future reserves should be set aside to meet future needs of the municipal users and to promote regional development. This is consistent with sustainable and smart planning. The availability of reasonably priced aggregate products for towns, villages and Rockland County and its residents is directly dependent on local sources of aggregates.

TILCON NEW YORK INC.

PHONE: 973-366-7741 • 9 ENTIN ROAD • PARSIPPANY, NEW JERSEY 07054

We urge the Town to consider the above and to incorporate the planning for preserving future mineral reserves in the Town into the Town Comprehensive Plan, which can serve as the basis for future zoning decisions in the Town, which will be necessary to protect the Town and regions' aggregate resources and ensure that those resources continue to be available for use in future infrastructure projects, such as road, highway and bridge construction, and residential, commercial and industrial development projects. We are happy to discuss this further and provide any information that the Town requires to provide for this planning.

Please include this letter in the record of the Town's Comprehensive Plan Update.

Thank you for gathering community input on the Proposed Comprehensive Plan. The plan has some incredibly solid pieces and is obviously brought forward from lots of thought and input. I am attaching a few key considerations that I feel should be strengthened or included.

Comments on the Clarkstown Comprehensive Plan
6/20/21

Thank you for the opportunity to comment on this plan. I think the goals and objectives of the plan are strong and forward thinking on many levels and offer some strong guidelines to planning, building community, protecting our resources and assets, and establishing a sustainable future for our residents. With this solid footing in mind I suggest some additions for inclusion and some areas that seem to fall outside those goals.

I want to begin with a focus on areas in the plan where water use and protection should be further incorporated and strengthened.

Water use and protection has been the focus of countywide attention for many years, most especially since the proposed desalination plant by Suez Water, the subsequent PSC decision overturning this plan and the 2014 establishment of the **Rockland County Task Force on Water Resources Management**. The towns and villages are an important part of Rockland's water use and planning and this should be identified and incorporated into this plan. Water is a shared resource and actively incorporating water best practices into the Town planning will benefit both members of the Town and all of Rockland. I applaud the note on page 36 of the plan that "groundwater resources will be preserved or enhanced" and on page 38 that the responsible use of this crucial resource is vital to the community. Additional discussion of impervious surface reduction is noted both in the context of flooding and water infiltration on site. However, ending this section with a note that Clarkstown is a member of the Stormwater Consortium, while important, does not include any real specifics about how to better protect our resources and plan with water conservation in mind. I suggest several inclusions:

WaterSense: As chair of the Water Conservation Committee I wanted to remind the Town that in 2016 they became a *WaterSense Partner*, joining the County and many other communities in Rockland to be part of this EPA program dedicated to water conservation and education. WaterSense provides resources and guidance on a wide array of water conservation measures that fit directly into the planning process and should at minimum be cited as a guidance resource for the Town in their planning decisions. From residential properties, to business and industry, to improved operations to new development, there are myriad opportunities for WaterSense practices and resources to be used as a guide. **Including that Clarkstown is a WaterSense partner and will incorporate WaterSense into regular communications and programming with the residents will strengthen the plan.**

County Water Conservation Plan: I note that the only mention of Water Conservation in the plan is on page 38 where it mentions it in relation to drought and stormwater management. Drought and storms are two extreme situations that do not encompass the need for comprehensive water conservation! A Water Conservation Plan for Rockland County was accepted by the County Legislature on March 3, 2020, in resolution 97 of 2020 and subsequently signed by the County Executive which addresses water conservation through a comprehensive approach. The plan has 20 key elements, all of which are important and have a role in Clarkstown's planning, with several that should be incorporated directly into your planning blueprint. All of the items highlighted here should be included in the Sustainability section of the Comprehensive Plan, but additionally I would encourage adding the County Water Task Force as a listed partner and Water Conservation highlighted as a partnership program.

- **Item #12: Water Conservation for Variances for New Development:** tie land use of subdivision code variances to measures documented in a water conservation plan prepared by the developer (pg. 58 of the plan)
- **Item #16: Time of Sale Plumbing Standards:** adopt a retrofit-on-resale ordinance that either requires the buyer or the seller of a property to replace inefficient plumbing fixtures upon sale (pg. 68 of the plan)
- **Item #18: Require Water Conservation Practices in New Development:** establish requirements for new construction to include water efficiency standards for indoor and outdoor water use (pg. 72 of the plan)
- **Item #20: Green Building Codes and Ordinances Related to Water Conservation:** implement green building codes related to water conservation, efficiency and management (pg. 77 of the plan)

In addition, I noted that **Education** plays into several other sections of the Comprehensive Plan including the **Historic & Cultural Resources section (pg. 67)**. Water education is critical for its protection and conservation. The following items are directly related to education and can become part of a partnership program:

- **Item #3: Sustainable Landscaping Education Program**
- **Item #4: Water Awareness Events**
- **Item #5: Water Conservation Education Program**

Furthermore there are **incentive programs** that work both to build recognition for businesses and residents in the community. I will not recite the full Water Conservation Plan here but linking and leveraging through naming and connecting to this important document will benefit both the Town and the broader community of Rockland. The Water Conservation Committee will commit to working alongside you to bring this to life.

Other items to note in the plan

Environmental Resources:

Wetland Protection Ordinance (pg 50). It is indeed a high priority to establish a wetland protection ordinance. This is critical in protecting water quality and water function in the Town. This should be a high priority for action.

Plants & Animals:

As noted, in the 2009 Comprehensive Plan John Mickelson completed an extensive biodiversity study. A summation of some of the findings is included, but it appears an update to the Tree Preservation Law and invasive species removal are the two outcomes of this work. These are both important steps but are baseline in the planning process. Consider habitat protection in relationship with the rich bird species noted in the study, with 75 of the 250 noted to be considered by the State Audubon Society to be on decline related to loss of habitat (pg. 45). Protecting existing habitat is critical for their continued presence. **Continued work in educating community members** of the environmental resources that exist in our parks and opened areas should be prioritized for inclusion. This will help with ongoing support for both **acquisition of open space to preserve natural habitats and establishing habitat corridors**, as well as with **work to designate critical environmental areas in Clarkstown**. Both of these measures benefit from strong community support for their adoption. Protecting our environmental resources is time sensitive. Once they are gone, they cannot be recovered.

Recreation, Parks & Open Space:

Zukor Park: I spent over a decade as an assistant soccer coach with Clarkstown Soccer Club and I recognize the challenges of trying to improve the use of the Zukor Park playing fields. The fields are constructed in a wet area adjacent to a stream where the soil drains poorly. Additionally the field was graded badly not allowing for proper drainage. While I can see the goal of trying to build in additional use time for the field I am adamantly opposed to installing artificial turf for several reasons.

- Artificial turf has been tied to an increase in sports injuries as it does not offer the same 'give' or response to the placement of a foot or body weight. ACL and other sports injuries for soccer players are high as noted in this study published in 2019 by the University Hospitals Sports Medicine Institute found athletes were 58% more likely to sustain injuries on artificial turf than real turf – specifically of 953 injuries, 585 were on synthetic turf. A medical journal study published in 2019 cited that artificial turf is an important risk factor for specific knee injuries, in some cases increasing the injuries at 2.94 times the rate as natural surfaces. Female athletes and adolescents as they grow are at even higher risk for ACL and knee related injuries. This has become a real concern in the youth sports community.

- Skin abrasions are much more of an issue with artificial turf as the material used is rough and abrasive, generating opened wounds when athletes fall on the material.
- There are other health related risks with artificial turf. The materials have been linked to health issues in the inhalation of small particles and materials and are associated with PFOA and PFAS chemicals.
- Heat is another consideration with artificial fields. Grasses actually cool the area and keep the field at a lower temperature for players, where artificial turf is associated with heat stress in players, especially in the summer months. Instead of reducing heat it increases the temperature of the playing area.

Indoor Domed Playing Fields: The entire discussion above applies equally to the development of indoor playing fields with artificial turf.

Sustainability: Built Environment

Zoning Initiatives that Encourage Environmentally Sound Building Design: this is a place where the water conservation items discussed at the top of the document (#12, #16, #18 and #20) should be included. The discussion here is around LEED certification, but WaterSense development is also a critical factor in sustainable design. Planning with water use at its heart in order to create new development that is self-sustaining in water use and reuse is important. Working with planners and builders who focus on incorporating WaterSense design in their work is critical for sustainability.

Develop programs to educate Clarkstown residents on issues of sustainability and resilience: This is an important goal and one that will have long reaching effects. Partnering with groups already involved in doing this in the County will build a broader network of outreach. Again linking with the Water Conservation Plan is critically important.

Hello,

As a lifelong Clarkstown resident who grew up here, I would love to see more bike lanes and signage for connecting our town with public transit options for kids and families to get around. A bike lane from Zukor Park to Main Street and Downtown New City would be great to see.

Thank you,
Darwin

Good afternoon,

Here is my rushed review. I want to compliment you on all the hard work. Unfortunately there have been several other major land use reviews to address that were related to more problematic applications.

I am asking for you to consider extending the review time but a lot of my comments I think will be addressed when you consider zoning changes to implement the DGEIS.

Please let me know yo got this. I am out of the country on vacation and I don't know who else to submit this to so please route it as necessary.

Best wishes,

Deborah Munitz

**Clarkstown Comp Plan 2021-06-22 Munitz Comments.pdf**

59K

June 22, 2021

To: Planning Board of Town of Clarkstown

From: Deborah Munitz, 5 Rose Hill Road, Montebello, NY

Re: Comments/question on Clarkstown Comp Plan

I am a board member of ROSA 4 Rockland and have been advocating for sustainable planning in Rockland County for over a decade with a particular emphasis on water protection and planning. The following comments are from me personally as there wasn't enough time to organize comments on behalf of ROSA. I can speak for ROSA in asking that Clarkstown consider an extension to the comment period for the DGEIS. The DGEIS documentation is very substantial and three weeks' time from the time of the presentation/hearing is not sufficient for volunteers like me to review the Update DGEIS (156 pages) and its Appendix (2335 pages). To do a proper review also requires reference to the prior Town of Clarkstown 2009 Plan as well (169 pages). If one spends 5 days a week reviewing the documentation its hundreds of pages a day of materials to review.

When considering an extension, please consider creating an additional appendix that contains the local laws that were passed to meet the objectives of the Comprehensive Plan that are referenced in the initial pages of the appendix.

Some comments may already be addressed in recent local laws, and I did not have time to check my comments against existing legislation and all the appendix documents that were included. Additionally, I did not have time to cross reference the impact section with other sections.

Overall, this document is reflective of a lot of work and consideration and is a good representation of the Town's aspirations.

1. First goal to change zoning to expand commercial and industrial development without conflicting with residential uses should be expanded to state that new zoning will not conflict with environmental goals such as protecting remaining forested areas, affecting water supply quantity and quality, and not substantial increasing water demand. For example, a data center is a commercial and industrial use that is environmentally impactful to water supply and does not generate a lot of local jobs; this type of commercial expansion may not be suitable in Rockland County where we are constrained to the water supply within the Rockland County borders.
2. The goal of reusing existing built retail space for residential can serve the purpose of decreasing the pressure to rezone residential areas where there are still trees. Perhaps that objective should be added to that goal.

3. Under environmental resource goals, limits on total development coverage should be expanded to consider limits on land disturbance. Too many land use projects rely on substantial clear cutting of land and the replacement of mature trees with small saplings. This Rockland County wide problem should be addressed.
4. Under environmental resource goals several goals from 2009 that had not been addressed were repeated. Is there a reason these objectives had not been address since 2009? For instance, enacting a wetland ordinance or stream protection ordinances? (Consider reviewing the Village of Montebello ordinances.)
5. Add to environmental resource goals the objective of tracking water demand projections for all applications that are going through planning, zoning board and Town Board rezoning and special permit reviews.

Rockland County needs a way to figure out where we are with respect to water supply and the annual reports submitted by Suez only account for current demand. The potential demand based on full development under existing zoning, approved projects that are not yet built and on any increases beyond that which can be built under existing zoning due to rezoning or zoning variances needs to be calculated to form a basis for future planning reviews. Clarkstown must do its part and should consider lobbying for this accounting function to be addressed by the Rockland County Department of Health across all Towns in Rockland.

This water demand tracking should be tracked so that approved projects can be tallied separately from those in consideration. Included in the tracking should be a listing of projects submitted to Clarkstown from adjoining municipalities as well.

6. The DGEIS environmental objective should include reviewing existing zoning ordonnances to make sure that there is built in variability that relates to areas in Clarkstown. Building heights that are taller affect community character less when closer to commercial areas versus in the more rural areas of town. The planning board should consider better ways to build in adjustments to zoning to preserve community character. For example, the zoning for active senior housing creates larger disparities with existing zoning as you go north creating concerns like that for Buckley Farms. Requiring more substantial zoning buffers to maintain a buffer of trees would help to address disparate zoning and maintain community character.
7. In the health and safety section, Clarkstown should consider setting a good planning precedent where it requires that all planning applications be reviewed by local fire companies and that the fire departments are given escrowed funds to help pay for professionals to support their review efforts. Fire department review is more than minimum fire code and often reveals a different level of concern and recommendations.
8. Recreation: Should speak with Town of Ramapo concerning the disastrous waste of money that was its ice rink.

9. No mention of light pollution. Need to establish standards for commercial development regarding leaving lights on after sunset. Create standards for turning off unused lights and standards for window shades to mitigate the introduction of commercial uses (including houses of worship and private schools) introducing new lighting styles into residential neighborhoods. Building mounted lighting should be regulated to ensure all lighting faces down and does not cause visual glare to roadways.
10. Groundwater resource discussion should be expanded to include some analysis of how basements can affect groundwater flow in commercial and multifamily developments where the ground is significantly dug up and made into subterranean impervious surfaces. The Town should consider getting an opinion from a hydrogeologist regarding whether there are recommendations on ways to adjust zoning codes to ensure less impact on groundwater flow.
11. No discussion anywhere regarding consideration of where vertical parking should be considered to ensure that commercial area remained more vegetated and include usable open space/patio areas for workers and visitors to use. We need to end the cycle of turning commercial areas into parking lots. This topic should be considered and thoughts as to how to incentivize the development of new developments with publicly accessible patios and parks where parking lots would generally be included.
12. The Town should consider a study of noise throughout the various rural areas of the Town near vacant lots to establish a baseline of natural bird song and levels of noise. The loss of mature trees leads to a loss of bird habitat that affects the community character in a way that residents can't easily articulate before the planning board but is important and should be considered.
13. There was no reference that I could find to the need to include more car charging stations and incorporating this into new development. The high-speed charging stations in Nanuet are instrumental in the Town but it's a large number in only 1 area. Requirements for requiring charging stations in large existing lots and in all new lots should be considered.
14. There was no discussion of cell service towers or boxes on light poles. This is a common concern when introduced into residential areas and there should be a discussion as to how such applications will be considered.
15. There is no discussion of battery storage trailer installations. The Town of Ramapo has already had two applications. This is something that is a new technology that has positive and negative impacts that should be considered in advance. This should be considered. The positive benefit is regional at the expense of people in the area or the environment. There should be standards for screening and locating such installations. One such installation was approved on top of the primary aquifer on Dieltz road, and a key concern was what would

happen if the batteries leaked or there was a fire since you don't want certain fire-fighting chemicals used in that area.

16. Has the Town reviewed all zoning codes for how they relate to fire codes and considered a guide to the zoning board when considering variances? This is a problem in Ramapo where setbacks get reduced in way that do not violate fire code but cause fire safety situations where insufficient clearance is left to even be able to put up rescue ladders or where 3 story buildings are considered on streets with electric utility poles that get in the way of aerial apparatus trucks. The recent spring valley fire revealed problems with fire flow that were not adequately planned for. How will the Town make sure similar problems don't occur in the future?

Subject: [CompPlan2020] Public Comment

To: <compplan2020@clarkstown.org>

To the Clarkstown Board, Planning Board and Zoning Board.

Thank you for having extended the public comment period and we do hope that comments we made in person before the Board earlier this month are on the record.

We also thank you incorporating a few of our comments from August 2020 regarding the Comprehensive Plan.

Although it seems that Clarkstown has moved forward in some ways, we are concerned about moving backwards. On water conservation and on over development of Clarkstown.

Many of the 10-15 projects before the Town are very large complexes that will strain the natural resources of Clarkstown and even of Rockland County itself.

Just because something can be done - does not mean it should be done.

Water conservation is of utmost importance and we do not believe that Clarkstown is doing enough to educate and inform citizens as well as builders and landscapers of the need to conserve water.

Furthermore, just because Suez must sign off on its willingness to serve letters, doesn't mean that we won't run out of water. And then what? Desalination?

Clarkstown continues to Pave Paradise with impermeable parking lots instead of permeable paving in it's eagerness to please developers and bring in "rateables."

Part of the problem is zoning. Changing zoning to accommodate developers.

To not be strong against people and companies who flout the rules.

To not enforce fines. When zoning is changed to accommodate more "housing" whether "senior", 55+ etc, it creates more pollution as well. Fine particulate matter, emissions from trucking during construction, emissions from concrete, emissions from all of the cars of all the people who will be living in this housing. Please refer to page 90 of your draft plan. This does not align with the concepts of conservation and sustainability.

This kind of over development (over scaled buildings) does not enhance the quality of life for residents, does not fit in with the character of neighborhoods and is gravely concerning that developers are not encouraged or mandated to build in a forward thinking manner to consider climate change, resiliency or sustainability.

We must do more to protect our woods and watershed. Please ensure that there is a superior and strong water conservation plan for now and for future generations.

We have a great concern regarding "Accommodating New Industrial/Commercial Ventures in your New Goals section. We know that developers want to create "storage companies" and we are also very concerned about big block warehouse with diesel fuel pollution. Please do not set a precedent.

We also have a major concern about artificial turf and the PFA's and toxins associated with artificial turf. We suggest no artificial turf in Clarkstown as the tuft contains PFA's, PFOA's and other toxins that inevitably will make their way into our water system. These PFA's and PFOA's are "forever chemicals." Turf used in public places such as Clarkstown Parks

expose children and pregnant women to toxic fumes. Furthermore, carbon sequestering and drought resistant grasses (ie, zoya) is a much more sustainable alternative.

We are also concerned about the lack of a real - put into action public transportation plan in the draft.

We do wish there was more time to comment and do hope that Clarkstown will take more into account, the information and thoughts from the very many citizen scientists and environmental advocates that Clarkstown is able to tap into.

Thank you very much,
jacquelyn drechsler and
jocelyn DeCrescenzo

Subject: [CompPlan2020] FW: Comments on Draft Pan

To: compplan2020@clarkstown.org <compplan2020@clarkstown.org>

We are developers who have created several very successful age restricted communities including Pearl River. WE would offer the following comments with respect to your draft plan

Is there a definition that defines senior housing as different from age restricted housing?

We concur with Mr. Gillies comment to encourage more market rate and rental age restricted (55+) multifamily dwellings at higher densities. 30 per acre.

Age restricted (55+) should include rental properties not just condominiums.

Age restricted (55+) are as indicated, empty nesters. With no school age children the municipalities have another ratable with multifamily rental properties

Bedroom counts should be market driven. Most empty nesters want 2 bedrooms for office/guest room. One bedrooms are not preferred. As seen in the last year telecommuting is on the rise. 2 bedrooms will be in greater demand. People work into their 60's.

Additionally, the 2 Bedrooms should be larger than 1,200 sf (closer to 1,500 sf), most of the senior renters are coming from larger homes and want larger spaces.

Thank you,

Charles Thomas, Jr. PE, PP

Joe Simoes, Principal Planner
Planning Department
Town of Clarkstown
10 Maple Avenue
New City, NY 10956

Mr. Simoes:

There are some omissions in the draft Clarkstown Comprehensive Plan that limit its effectiveness.

Stream Protection

Increased building in Clarkstown has affected its streams; over the years, runoff from construction has dumped large amounts of debris into them. We are especially concerned about Crum Creek and West Branch, the streams that run into Lake Lucille and become the headwaters of the Hackensack River.

Stream buffers protect the land adjacent to the streams from flooding, the streams themselves from degradation, and the habitat that lives near the streams from extinction. Clarkstown residents have built too close to too many streams. We urge you to set buffers for new construction at 100 feet on both sides of the streams.

Water Conservation

Clarkstown should take measures to avoid water shortages; we recommend that the new Comprehensive Plan include water conservation as a consideration in planning and in allowing new construction; and that it regulates certain water use and promotes water-saving measures.

- Lawn watering is a major factor in creating water shortages. Clarkstown should limit it to avoid them. Some steps that we recommend incorporating into the Comprehensive Plan are:
 - . Establish lawn watering schedules. Ways to implement this are described in "Water Conservation Measure 19" of Rockland County's "Comprehensive Water Conservation and Implementation Plan" of March 3, 2020. They include: allowing private irrigation to be set by address on a limited schedule of once or twice a week; not allowing outdoor irrigation when it's raining; limiting the length of time any user can water a lawn.
 - . Prohibit runoff from properties during irrigation.
- Give temporary exemptions by application and permit to allow for newly-planted grass, sod, vegetable gardens.
- . Promote reduced lawn area and use of native plants.
- . Promote self-administered residential indoor water audits.

- Develop green building codes and ordinances related to water conservation, as described in “Water Conservation Measure 20” of the County’s 2020 document. These should include modifying Clarkstown’s building code to incorporate recommendations in the US EPA’s Sustainable Design and Green Building Toolkit for Local Governments, which is a detailed guide that takes user through an assessment, then offers guidance on addressing water reduction, innovative plumbing systems, wastewater treatment, water-efficient landscaping and irrigation.
- Remove requirements for paved driveways and encourage use of pervious pavement in both residential and commercial development.

Climate Control

As weather becomes more unstable, power outages are anticipated to happen more frequently. Clarkstown’s Comprehensive Plan should address this. Suggested measures include:

- Absorb flooding via plantings and other nature-based features.
- Encourage or require green infrastructure in all new construction beyond the minimum stormwater requirements.
- Upgrade the Town building code to the NYStretch Energy Code 2020, which requires energy-efficient building design in new construction and substantive renovation.

Watershed Protection

Both the Ramapo/Mahwah watershed and the Hackensack watershed should be protected from development. Clarkstown should lead in creating and participating in a Watershed Council comprising the five towns and County government that makes recommendations and, as possible, establishes rules related to water resources, aquifer protection, and water quality.

Open Space Program & Historic Preservation

- Clarkstown has been a leader in obtaining and maintaining open space. Recently, though, it appears to promulgate building senior housing on areas that should be parkland or open space. It should consider obtaining property on South Mountain Road and elsewhere that adjoins already-existing open space and will mitigate some of the damage that apparently will be done by extensive building in next-door Ramapo.
- Davenport Preserve is the only property in Clarkstown that comprises undeveloped land and has a restrictive covenant designed to allow it to remain that. The house that belonged to Zipporah “Zippy” Fleisher and her husband Walter and the house and studios that belonged to Millia Davenport have been neglected by Clarkstown and allowed to fall into disrepair. Although the 1976 gift of land to Clarkstown did not mandate upkeep of the buildings, several years ago, West Branch’s then-president Martus Granirer was told by a representative of the U.S. National Register of Historic Places that if Millia Davenport’s buildings were repaired properly and maintained, they would be eligible for a listing on that Register. They should be repaired and turned into a small museum. The Fleisher house could be rented for public events.

- There are several property easements in Clarkstown. Some now are held by West Branch Conservation Association and some by Skyview Acres Land Trust (SALT); others are held by not-for-profit organizations such as the Trust for Public Land. Although the land held through the easements is neither owned nor managed by Clarkstown, it might be useful for Clarkstown to have a registry of these—consideration could be given to their existence when the Town is considering whether to acquire open space; if the parcel is near or adjacent to land held as an easement, a larger piece of open space would be created.
- Incorporate protection of aquifer recharge as one of the goals of Clarkstown's open space protection program.

PFAS Chemicals

New York State has limited the amount of PFAS chemicals found in drinking water to a Maximum Contaminant Level (MCL) of 10 parts per trillion. Those chemicals, found in larger amounts in Rockland's water, have been linked to many adverse health outcomes, including kidney and testicular cancer, thyroid problems, liver disease, decreased fertility, and developmental problems. They are found in everyday products such as artificial turf, fabric protectors, waterproofed clothing and shoes, certain nonstick pans, sunscreen, mascaras, some dental floss, sneakers, swimwear, takeout food containers, and other consumer products.

The draft of Clarkstown's 2021 Update of its Comprehensive Plan calls for using artificial turf on the soccer field at Zukor Park and at a proposed domed sports facility. This product should not be used; a drought-resistant species of grass could be used on the soccer field. The domed sports facility, which would bring heavy traffic and noise to its neighborhood, should not be built. If it is, then drought-resistant grass could be used there, too.

We look forward to your incorporation of these recommendations into the 2021 Town of Clarkstown Comprehensive Plan Update.

Cordially,

Terri Thal
Treasurer

Comments on DRAFT Clarkstown Comprehensive Plan

June 22, 2021

GENERAL COMMENTS

I want to start by mentioning a few specific points in the Draft Plan that are particularly welcome, such as the emphasis on Smart Growth, the commitment to establish a Sustainability Committee, and the commitment to establish more Critical Environmental Areas.

Some of my comments below are similar to what I submitted in August because **I'm asking for the final Comprehensive Plan to address these goals more explicitly and more clearly.**

As I wrote in August, there are three environmental issues that will profoundly shape our future. **On all three issues, there are actions that must be taken at the town level.**

The Comprehensive Plan should be the first step to confronting all three:

- **The climate crisis.** According to a report by the UN International Panel on Climate Change, the next ten years or less are critical years to change course in order to avoid runaway irreversible climate change. The town has already done a lot in terms of renewable energy and planning for resilience. Given the scope of the challenge, much more will be needed. This is the major challenge of our time and it will impact everything. **The plan should be much more forthright and more specific.**
- A very serious crisis of **biodiversity**. As with climate change, the impacts will be profound. We can't solve this crisis, but it is our responsibility to address it. The plan should be more specific.
- We must plan for **limited water resources in Rockland County**, which will be affected by possible extended drought and by rapid population growth and development in Rockland and in Orange County. My hope is that Clarkstown will lead on these issues and will model best practices. **The draft plan mentions both water conservation and water quality, but only in very general terms.**

WATER ISSUES: Water Conservation, Watershed Protection and Water Quality

Water Conservation

Rockland faces water shortages in coming years, which could be exacerbated by extended droughts due to climate change and which will surely be exacerbated by residential and commercial development that pushes the limits of our resources.

In March of 2020, Rockland County adopted an official Water Conservation Plan. Due to home rule, many of the initiatives in the plan will depend on the municipalities for implementation. **I urge the Town to do more to incorporate the goals in the Conservation Plan into the town plan.**

With close to one fourth of the County's population, Clarkstown has an essential role to play in conserving our water resources. In fact, Suez's Conservation Plan cites a study that shows that peak summer water use increases more in Clarkstown (and in Orangetown) than in the other towns¹. Given the fact that peak summer use is a key driver of demand and of the potential for need for new water supply, **the town has a responsibility to set summer water conservation as a key goal.**

Even if the town does not feel it is appropriate to include the specifics of implementation, the goals could nonetheless be much more specific than those currently included.

Goal: Consider water conservation as a goal in all public decisions.

Water Conservation Regulations and Incentives

1. **Work to establish tracking for projected water demand for all new construction proposals.** In a county which faces potential water shortages, it is essential to review water demand as new projects are reviewed. The town should work with the county to establish a coherent, continuously updated system that will inform decisions at the town level.

¹ Water Conservation Plan, BLACK & VEATCH PROJECT NO. 190485, PREPARED FOR SUEZ Water New York Inc., APRIL 29, 2016, page 20 and others.

2. **Review projected water demand as one of the criteria in the review process for all new projects.** Rockland County has limited water supply. The County needs a water budget and a strict tracking system.
3. **Encourage less water intensive development.** We should not be approving, let alone encouraging, water intensive new projects or industries. Note that the draft plan mentions water efficient fixtures as an offset. Water efficient **indoor** fixtures (which meet WaterSense standards) are already required by the state building code for all new construction. However, more efficient processes, cooling systems, and outdoor irrigation systems could make a measurable difference in reducing demand. The plan could include more specifics.
4. **Establish tax benefits for new construction that meets WaterSense *Home* standards.** (WaterSense Certified Homes go beyond installation of WaterSense fixtures.)
5. **Establish protection of critical aquifer recharge areas as one of the goals of an open space protection program.**
6. **Incentivize green building practices (for water and energy) in new construction, such as those encouraged or required in advanced building codes such as LEED standards.**
7. **Encourage recharge of aquifers and reduce stormwater runoff by discouraging impervious surfaces.** Consider revising requirements for impervious driveways to encourage pervious paving and consider reducing space requirements for commercial parking spaces.
8. **Pass a ‘water waste’ ordinance and use public education to promote it.** ‘Water waste’ ordinances typically include:
 - a. Outdoor irrigation is prohibited when it is raining.
 - b. Handheld hoses used for lawn and landscape irrigation, vehicle washing, and other tasks must be equipped with an automatic shutoff nozzle.
 - c. Prohibit runoff from properties during irrigation
 - d. Prohibit hose washing of driveways, sidewalks, and patios
9. **Encourage rainwater harvesting with tax incentives.**
10. **Help to distribute rain barrels from Cornell Cooperative Extension of Rockland.**
11. **Reduce lawn watering, which is one of the key drivers of peak water demand.**
 - a. Require moisture and rain sensors on any new irrigation systems.
 - b. Discourage in-ground automated irrigation systems in new construction. Consider banning automated lawn watering systems in new construction.
 - c. Require that all automated systems be checked annually for leaks and needed adjustments. Provide information on how to perform a do it yourself irrigation system audit.

- d. Establish lawn watering schedules. Recommendations for lawn watering restrictions are recommended in the County's new Water Conservation Plan.
 - e. Incentivize reduced lawn area and native plantings in new construction.
 - f. Use educational programming and resources to encourage reduction of lawn in favor of native flowers or food gardens.
12. **Encourage self-administered residential indoor water audits through educational programs.** Provide template online.

Watershed Protection

Rockland will need watershed protection plans. This seems particularly urgent for the Ramapo/Mahwah watershed, where rampant development in Ramapo and Orange County threatens the adequacy and water quality of our shared watershed. We will also need a watershed protection for the Hackensack watershed.

- 1. Work with the County Water Task Force and with other municipalities to create a shared watershed protection plan and an ongoing Watershed Council to address development beyond our water resources, protection of aquifers, and water quality issues.

Water Quality Protection

- 1. In order to protect the water quality of local streams and groundwater, ensure that the town is using less harmful alternatives to 'road salt', the minimum effective quantity of road salt or the least harmful effective type of road salt.
- 2. **Establish a program to actively discourage homeowners and landscapers from overuse of fertilizers and other lawn chemicals.**
- 3. **Focus on education about lawn chemicals for homes around the reservoir and its tributaries.** Consider creating a zone around Lake DeForest in which lawn chemicals would be banned. Establish a wide buffer zone for the reservoir, in which vegetation cannot be cleared unnecessarily.
- 4. Take a closer look at possible runoff from French Farms composting facility into the reservoir in order to avoid the growth of bacteria and algae.

CLIMATE MITIGATION & ADAPTATION

The Sustainability Committee could become an important forum to craft a policy on climate adaptation and mitigation. In order to get public input and secure public acceptance, I suggest that the Sustainability Committee include representatives from different sectors in the community. I hope that this committee will develop an actionable Climate Action Plan.

Adaptation

In recent years our area has been struck by flooding, extreme wind, and severe storms in which power was knocked out for large parts of the community for hours, days and sometimes weeks.

1. Establish micro-grid renewable energy-powered centers, perhaps distributed in Clarkstown community centers, which could provide energy, heating, and cooling in emergencies.
2. Consider working with local partners, such as schools and houses of worship to obtain grants to establish other micro-grids and emergency centers.
3. Plan for future severe storms, with appropriate plantings and other nature-based features to help absorb flooding.
4. Encourage and incentivize green infrastructure beyond minimum stormwater requirements in all new construction.
5. Remove requirements for paved driveways and incentivize pervious pavement.
6. Reduce requirements for parking lots in commercial development.
7. Protect water resources in the face of projected extended drought (as well as projected extreme precipitation). See recommendations above.

MITIGATION

1. **Participate in New York State programs that guide and assist communities through the process of mitigating their carbon footprint and increasing climate resilience: Climate Smart Communities and Clean Energy Communities.**
2. **Develop a much more detailed Climate Action Plan, that lays out a roadmap for action.**
3. Encourage the transition to renewable energy, electric vehicles, and sustainable electric heating. The town can promote these strategies through educational programs and tax breaks for:
 - a. installation of renewable energy
 - b. residential electric vehicle charging stations,

- c. sustainable electric heating and cooling, such as air source heat pumps and geothermal installations
- 4. Require air source heat pumps in all new construction instead of furnaces powered by natural gas plus air conditioning².
- 5. Promote sustainable building design - i.e., design that minimizes impact on environment. Consider tax breaks for sustainably designed new homes, such as Energy Star construction – and higher tax breaks for LEED certification or National Institute of Building Sciences Whole Building Design certification.
- 6. Require certification in one of the building performance codes listed above for new construction over a certain size.
- 7. **Upgrade the town building code to the NYStretch Energy Code 2020 in order to require more energy efficient building design in new construction and substantial renovation.**
- 8. Launch an energy and water initiative for town buildings, including community and pool centers. Apply for funding for energy and water audits. Audits plus energy efficiency retrofits will save taxpayers' money and could be a first step toward renewable energy installation.
- 9. Install renewable energy to power town buildings and community centers.
- 10. Encourage backyard composting of leaves and of food. Use educational programming to teach composting of food and leaves. Set up annual dates to distribute discounted and secure food composting units from CCE.
- 11. Encourage mulching of leaves in the fall in programs such as Bedford's Leave Leaves on the Lawn. This would also cut costs for leaf collection.
- 12. Discourage illegal idling. Very few people are aware that idling beyond three minutes is illegal in Rockland County. Use public education and reminders at key spots, such as schools during pick up time, to make people aware of the law and of the harm that idling does to our air quality. Use spot enforcement to telegraph the message.
- 13. Use public education to encourage vegetable gardens.
- 14. Consider creating community gardens in areas that have less access to back yards.

PROTECTION OF TREES AND NATURAL HABITAT

- a. Adopt a tighter tree preservation/landscape ordinance that more strictly *limits* disturbance to or clearing of existing trees and vegetation and requires replacement of trees with native and climate resistant trees.

² <https://www.sfchronicle.com/business/article/SF-bans-natural-gas-in-new-city-buildings-may-14984899.php>

- b. Extend protection to younger trees. (If only mature trees are preserved, then we are losing younger trees that would have become mature trees.)
- c. Extend protection to non-native trees and secondary growth.
- d. Ensure effectiveness of the tree ordinance with higher financial penalties and with **stronger enforcement**.
- e. Incentivize the planting of **new**, native and climate change-resistant (drought resistant and deeper rooted) trees during construction so that we can **restore** the canopy as much as possible.
- f. Establish an online set of recommendations to residents in regard to native, climate resistant trees. Consider establishing a tree commission that could advise residents and better inform plantings by the town.
- g. Street trees can be one measure to relieve extreme heat. Set targets to plant climate resilient street trees for shade and aesthetics and apply for funding to make this possible. Develop a street tree maintenance plan relying on local volunteers or Rockland Conservation & Service Corps.
- h. Incentivize clustered development in new construction, in a way that maximizes retention of natural habitat, including trees and brush, instead of lawn.

HABITAT PRESERVATION

We are on the brink of a very serious crisis of declining biodiversity and species extinction. Up to 1 million species are facing extinction, many within just decades³. Other species are declining dramatically, too. Habitat destruction is among the leading causes. Among many other impacts, many scientists see climate change and species extinction as among the key drivers of the recent increase in pandemics and epidemics⁴.

As with the climate crisis, we cannot solve this problem in Clarkstown, but the only responsible course is to desist from practices that are driving species extinction. Clarkstown has been a leader on environmental issues of all kinds. Clarkstown can set the pace for Rockland by adopting cutting edge practices to preserve habitat.

I have suggested some solutions under other headings. I hope the Comprehensive Plan will address this in ways that draw on best practices from other communities that are in the forefront on environmental protection. Many of the land use decisions that further the decline in biodiversity are made at the town level.

³ UN Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services (IPBES), 2019

⁴ <https://www.caryinstitute.org/news-insights/feature/how-stop-next-pandemic>

We must establish guidelines such that Planning Board decisions and Zoning Board variances will be seen in the framework of the larger picture, of the **cumulative** impact of their decisions. It's not enough to include the right language in the comprehensive plan. It's got to be enforced and carried out by the Planning and Zoning Boards.

OPEN SPACE PROGRAM

Part of the special draw of our area is the beauty of the remaining natural areas and historic buildings. Once gone, we have lost something that cannot be recovered. Preservation of natural areas (in addition to parks used for recreation) provides a multitude of benefits: critical preservation of habitat for wildlife, watershed protection, enhanced quality of life for residents, recreation, cleaner air, carbon storage, help in absorbing stormwater, and finally, enhancing property values.

1. Prioritize an **active** open space program to preserve habitat.
2. Rockland faces serious water issues. **Prioritize protection of critical areas for aquifer recharge.**

TRANSPORTATION

According to data compiled for the Regional Greenhouse Gas Emissions Inventory⁵, 44% of our carbon footprint in this region is from transportation.

Accordingly, it is important to address greenhouse gas emissions from transportation and promote better health by promoting public transportation, electric vehicles, walking and biking.

1. Proactively plan electric vehicle infrastructure and vigorously promote maps with information about electric vehicles and charging stations.

⁵ Mid-Hudson Regional Greenhouse Gas Emissions Inventory, Prepared for NYSDERDA by ICF International, 2012.

2. Increase the use of mini-vans or other smaller alternatives to large buses in order to establish a more useful network of public transit.
3. Consider consolidating and merging with County fleets.
4. **Convert to an electric bus fleet, using funding currently available from the state.**
5. Install bike racks at critical locations, such as shopping areas, parks and transit hubs. Request bike racks at state and county parks.
6. Establish more bike lanes on critical arteries.
7. Require complete streets strategies.
8. Require review of complete streets checklist with any new development over a certain size.
9. Plant street trees to make walking and biking more attractive.
10. **Incentivize mixed use development with small businesses included in any major new development.** The best way to get people out of their cars is to put more things they need and want within easy and attractive walking distance. No one wants to walk on Route 59, no matter how wide the sidewalk, but they will walk if stores are close enough and on side streets.

RECREATION AND PARKS

I strongly oppose the construction of a domed stadium - and the use of artificial turf. I oppose both on the grounds of unnecessary expenditure, given all of the athletic fields already available at schools, and I also oppose both on environmental grounds. Artificial turf and its backing contain PFAS and other harmful chemicals, some of them carcinogenic⁶. Artificial turf would expose children to these chemicals, which apparently are more likely to off gas in hot weather. Chemicals from the turf would also leach into our groundwater. This makes no sense, to knowingly expose ourselves to a non-essential use of PFAS.

LIGHT POLLUTION

Light pollution leads to energy waste, disruption of sleep and disruption of animal ecology. Declining numbers of lightning bugs are partly ascribed to light pollution and amphibians are also affected by light pollution.

1. Consider reducing or turning off lights on streets where the residents do not welcome the light and it is not needed for public safety. This could also reduce municipal costs.

⁶ <https://www.ehhi.org/turf.php>

2. Use public education to discourage use of floodlights on private property, in favor of lower wattage or lights on motion sensors.
3. Require motion sensors on any floodlights in new construction.

NOISE POLLUTION

1. Consider much stronger ordinances to limit noise pollution, including for leaf blowers and other landscaping equipment.
2. Consider a ban on **the least necessary** use of **gas-powered** leaf blowers, over the winter and summer months, as was recently passed in Upper Nyack. There are no leaves on the lawn in the summer and winter.

Dear Joe:

Attached are comments submitted for your consideration , as you and your team evaluate the best changes or additions to Clarkstown's Comprehensive Plan. I appreciate the opportunity to share ideas which may be helpful in your decision-making and which may also be helpful county-wide.

Best regards,

Harriet

Comments on Draft Clarkstown Comprehensive Plan Update

By Legislator Harriet Cornell

A comprehensive plan is an important guiding document that presents an opportunity to set goals and objectives which safeguard the economic, social, and ecological well-being of the municipality through thoughtful planning. It is important that all key resources as well as challenges are considered and addressed for both short and long-range visions of the future. It is equally important to consider the context of the municipality in its geographic and regional setting, namely, its synergy with the rest of the County of Rockland. Clarkstown has modeled this important perspective in prior planning decisions which is encouraging, because many of my comments relate to Clarkstown's place in the larger context of the County.

Watershed protection, water conservation, and water quality issues should play major part in the updated Comprehensive Plan. WATER is a vital resource for the Town as well as the whole County and I request that greater consideration be given to the topic in the Comprehensive Plan. In my comments below, I stress the link between the protection of precious natural resources and economic consequences and offer some specific recommendations for action.

As the originator of the legislation creating Rockland's Task Force on Water Resources Management¹, with a membership that includes government and community members, I offered Water Conservation as an alternate solution to the Public Service Commission in place of the proposed desalination plant which was widely opposed. The precept was that Rockland County had the will and capability to plan its own water future. With funding awarded to the Task Force from the State of New York, Rockland now has a series of options for water conservation, which can be selected by towns, schools, businesses, et al.

I have linked below the **Comprehensive Water Conservation and Implementation Plan**², adopted by the County of Rockland on March 3, 2020³ and urge Clarkstown planners to include it in your updated Comprehensive Plan. I suggest that the Town include a goal to collaborate with the County Task Force on Water Resources Management as an implementation partner for the Rockland County Comprehensive Water Conservation and Implementation Plan.

¹ A link to Rockland County website of the Water Task Force: <http://rocklandgov.com/departments/planning/task-force-on-water-resources-management/>

² Link to the County Website PDF file of the County Water Conservation Plan: http://rocklandgov.com/files/2416/0331/9060/RocklandCo_CompWaterConsPlan-Final_v2.pdf

³ See Rockland County Resolution 97 of 2020 accepting the County Comprehensive Water Conservation and Implementation Plan.

Water Quality & Watershed Protection:

The Town of Clarkstown is the home of a large part of the County's overall drinking water supply. Lake DeForest has been experiencing issues with water quality and algae blooms for some time. As a result, Suez-NY, the drinking water provider, is forced to pump water from lower elevations of the Lake that contain higher contents of manganese that must be then removed at a great cost, including the cost of byproduct removal. This represents millions of dollars every year in higher operational costs for the water provider, which is then passed down to water users throughout the County. This is but one example of the direct link between water quality issues and economic consequences to all residents of the County.

Recommendations:

- Include a goal of assessing and establishing **Critical Environmental Areas (CEAs)** as set out by the SEQRA process and recommended by the 2009 version of the Town's Comprehensive Plan. Not one CEA has been designated in the town as of yet. Specific action steps for the implementation of this goal should be included, such as the designation of a board or commission that may take up the task of getting started and creating a list of criteria for the selection of priority choices. A specific target number of CEAs could be included as an aspirational goal to get the process started. Only 4 CEAs have been designated in all of Rockland County to date⁴. The Town has an opportunity to distinguish itself and lead in an effort in which it should be joined by other municipalities.
- **Work with the County Water Task Force** and with other municipalities to create a shared watershed protection plan and an ongoing Watershed Council to address development beyond our water resources, protection of aquifers, and water quality issues.
- Include as one of the goals the participation in the State's DOH and DEC's **Drinking Water Source Protection Program (DWSP2)**⁵ and any associated assessments and protective actions. This initiative will most certainly be connected to grant funding in the future and would offer a vehicle to specific action for protection of Lake DeForest and its tributaries. Planning to conduct an assessment would be the first step toward grant funds for specific projects. The admirable effort demonstrated by the Town planning staff and community in developing the updated Comprehensive Plan demonstrates the full capability for the Source Water Protection effort in which the County Water Task Force would prove to be a willing and active partner.
- **Enact source-water protection Rules and Regulations (R&R), in accordance with the provisions of chapter 45 of the Consolidated Laws (Public Health Law).** The Rules and Regulations must protect the drinking water resources located in the town, including public drinking water wells as well as natural or artificial reservoirs and their tributaries inside and outside of the Town's borders, from the currently known sources of contamination and pollution. The R&R should be regularly updated. These R&R should be duly included in the 10 CRR-NY 139 (Official Compilation of Codes, Rules and Regulations of the State of New York under Title 10/Department of Health)⁶
- Related to the R&R, or alternatively through inclusion in overlay zoning districts and/or ordinances, create **specific protective buffers around wetlands, rivers and streams** to protect drinking water resources from land uses that could disturb or contaminate them during or after construction. Further, create **protected groundwater recharge zones**. Meaningful goals and strategies for these steps must be set out to assure implementation success.
- Similarly, through R&R or other ordinance or zoning strategies, create and implement specific **guidelines and/or restrictions for construction on steep slopes**, particularly in flood-prone areas and/or areas adjacent to water sources.
- In order to protect the water quality of local streams and groundwater, ensure that the town is using the **minimum effective quantity of road salt** and the least harmful effective type of road salt.
- Establish a program to actively discourage homeowners and landscapers from overuse of **fertilizers and other lawn chemicals**. Put special emphasis on education program for homes around the reservoir.

⁴ NYS DEC Webpage designated to CEAs, including a list of all existing CEAs in Rockland County:

<https://www.dec.ny.gov/permits/6184.html>

⁵ A link to NYS DEC website with DWSP2 Program information: <https://www.dec.ny.gov/chemical/115250.html>

⁶ A link to Rockland County existing Rules and Regulations noted in 10 CRR-NY Title 10:

[https://govt.westlaw.com/nycrr/Browse/Home/NewYork/NewYorkCodesRulesandRegulations?guid=I0fa72d80b65611ddb903a4af59fec65a&originationContext=documenttoc&transitionType=Default&contextData=\(sc.Default\)](https://govt.westlaw.com/nycrr/Browse/Home/NewYork/NewYorkCodesRulesandRegulations?guid=I0fa72d80b65611ddb903a4af59fec65a&originationContext=documenttoc&transitionType=Default&contextData=(sc.Default))

- The Town is further encouraged to refer to the **County Comprehensive Plan - Rockland Tomorrow**, adopted March 1, 2011, in order to couch its decisions in a regional perspective.

Drinking Water Conservation:

As previously mentioned, in 2010, the County's major water provider raised the specter of the County "running out of water" by 2015 and the apparent "need" for a new water supply source. By 2015, this scenario did not come to pass. However, the proposed new source, a desalination plant, highlighted the dire economic consequences in absence of conservation. The proposed desalination plant would have come at an exorbitant cost to the ratepayers, as well as other ecological impacts. Needless to say, Rockland County residents already pay the highest for potable water in all of New York State. A public backlash and a re-examination of "the need" for this particular solution have led to further conversations with the water company's regulator, the Public Service Commission.

I have personally pushed back on behalf of Rockland residents, and brought WATER CONSERVATION on the table, along with a combination of other incremental solutions. Once the issue of "need" and feasibility were properly re-examined, it became apparent that water conservation is a superior solution, which comes in feasibility comparison at a much lower cost to all of us in Rockland than any proposed "new source." I have advocated for Rockland to take control of our water future, but it is now up to us to spring into action and collaborate on water conservation.

Recommendations:

- **Join the Rockland Water Task Force as a partner in the implementation** of the above-mentioned Rockland County Comprehensive Water Conservation and Implementation Plan.
 - **Designate a Town representative** to join the County Task Force's Water Conservation Committee.
 - The conservation plan includes 20 water conservation measures/strategies to help conserve our limited drinking water resources and prevent or delay the need for new water supplies – work with the Task Force on identifying the best strategies to be employed by the Town.
- Include specific **demand-side water conservation goals that go beyond** the current requirements of national and state laws.
 - For example, while WaterSense fixture standards are now required by the State Building Code for new construction, include the same requirements for all retrofits and conduct an audit program in municipal buildings to replace old fixtures with new water efficient ones. Pass a procurement resolution to only purchase WaterSense efficient fixtures for any replacements in municipal buildings. **Lead by example** and work with the Task Force to encourage other partners to do the same.

Climate Change and Flooding:

In the last few decades, the County has seen an increase in flooding and superstorms that result in great damage and cost in every respect, including cost to human health and life. Climate resiliency and adaptability are a necessary part of planning for the future. The Comprehensive Plan must include specific goals pertaining to enhancement resiliency, sustainable design and development, and preservation of areas at high risk of recurrent flooding events (even if not yet included on FEMA Maps) and thus unsuitable for development.

Open Space Program:

The Town of Clarkstown contains areas of great natural beauty, important natural resources and habitats, historic areas and buildings and other features that should be protected to enhance environmental protection for sensitive lands, for the overall human as well as economic health and well-being of the Town residents. In 2019, I sponsored **county legislation to include an Open Space Acquisition and Preservation Program**⁷ in the 2020 County Capital Budget with an estimated project cost of \$30 million which is designed to provide all necessary protections.

Recommendation:

- **Re-prioritize the open space program** to preserve and protect the existing ecological and cultural treasures of the Town

⁷ See Resolution 406 of 2019 adopted September 3, 2019, signed by the County Executive on September 24, 2019.

- **Collaborate with the County** on the Open Space program, see a link to County page with further information on the program and process of nominations for acquisition:
<http://rocklandgov.com/departments/environmental-resources/open-space-acquisition-program/>
- Utilize the open space program to protect **aquifer recharge zones**

In Summary:

I encourage the Town to include specific goals and objectives that deal with the Climate Change issues to enhance adaptability and resiliency, Source Water Watershed Protection, specific water quality goals, and demand-side water conservation goals and strategies. In addition, I urge the Town to reassert efforts to **acquire Open Spaces** for conservation and preservation. I suggest that the Town include a goal to collaborate with the Rockland Task Force on Water Resources Management as an implementation partner to the Rockland County Comprehensive Water Conservation and Implementation Plan.

Finally, I urge your attention to the comments and recommendations submitted by Peggy Kurtz, Margie Turrin and Gale Pisha--all active and knowledgeable environmental advocates in the community and beyond.

As a Clarkstown resident since the summer of 1958, I am grateful for the opportunity to present comments for your consideration. Thank you for the opportunity.

Best regards,
Harriet Cornell

1. The trend of developing warehouses is concerning. Warehouses bring trucks, which, in turn, bring traffic and pollution which could negatively affect residences.
2. With additional redevelopment being proposed for the Palisades Center, more vehicle traffic will be generated which will create noise. A sound barrier should be constructed along Route 59 to mitigate this impact.
3. Truck traffic generated by commercial businesses on Western Highway and the industrial complex in West Nyack owned by Onyx needs to be directed to Route 303.
4. Developments should be designed to include a mix of both senior citizens and young adults. Smaller starter homes should be built to accommodate seniors who are downsizing and young adults who are starting to work and cannot afford and do not need larger, more expensive homes designed for families.

To: compplan2020@clarkstown.org <compplan2020@clarkstown.org>

As a town resident, I would like to see the town of Clarkstown preserve its quite suburban character. This can be done by placing a high priority on regulating DENSITY. Earlier town planners seemed to have understood that less density was the reason for suburbs, and strict zoning codes were assuredly their method for maintaining land space. In my area, West Burda Place & West Clarkstown Road, most of the lots are designated R-22 which basically means that for 42 years since my home was built, every acre of land comprised a minimum of two wood framed houses. If you calculate the average family size, 3.15 people according to census numbers for 2020, one acre of land has been the standard accommodation for six to eight people. Yet recent commercial developers in my residential community have proposed apartment units that would push density rates to 16 persons per acre. This will cause an enormous amount of QUALITY OF LIFE issue if the town does not figure out a course of action to limit this type of building density.

COMMENTS ON THE CLARKSTOWN MASTER PLAN

Joanna Galdone 234 Phillips Hill Road New City NY 10956

June 22, 2021

I am a member of the County Park Commission and the County EMC. I write these comments concerning Clarkstown's environmental resources as a private citizen.

I would like the Town to actively continue open space acquisition. Whatever parcels are left that can be saved from development should be considered. They are all critical since their inventory has dwindled so drastically.

Any parcel of open space has the important potential to provide vital habitat.

Stream protection corridors should be created. Crum Creek runs through my property as well as through properties up and down stream. Some of the properties are maintained with no buffer zone along the stream, adding to storm water run-off from lawn areas.

The Town should make the Hackensack Watershed a Critical Environmental Area. This vital water resource must be protected.

Senior Housing should not be created on parcels of open/undeveloped land. That the town seeks to preserve open space while at the same time endorses senior housing on untouched land is contradictory!

I endorse the removal of invasive flora from as much land in the town as possible. However, as someone who is very involved with the removal of invasive plants from my own property, I can safely say that it is not an easy task. The best management practices for the land and habitat preservation should be employed.

The routes for the trails at Davenport Preserve should be carefully plotted to avoid having the routes interfere with sensitive land/flora. Add Phillips Hill Road to the town's list of Historic Roadways. This roadway is a pre-Revolutionary roadway which in part follows Crum Creek. There is the site of an old blacksmith shop on my property just

above Crum Creek as well as the foundation of a barn. A nearby sandstone house is from the 1600's. The sharp turn just north of my property was made for horse and buggies- not fast-moving cars, as numerous accidents have proved!

If our tree preservation law protects only large trees, where will the successive suburban forests of the future come from?! We must enact management practices that include the protecting of seedlings and saplings- both from deer and from developers.

Identify on town open space maps those parcels of land that are protected by private land trust/s. For example, my 5.2 acre parcel as well as the +8 acre parcel across Phillips Hill Road comprise Crum Creek Preserve. Both parcels provide habitat protection for flora/fauna as well as flood plain and stream corridor protection. There are a number of other protected parcels on the town.

Deer management in the town is critical for protection of our native landscape, as well homeowner's plantings. I try to maintain the majority of my property in its natural state, nurturing many indigenous plants. I spend much time and effort in the way of fencing and sprayed deterrents to protect this small bit of our natural heritage.

Finally, I have witnessed so much loss here of our natural world. I would like to acknowledge some species that are no longer seen in my area:

Yellow-bellied sapsucker, Veery, Nighthawk, Whippoorwill, Yellow/Black-billed cuckoos, Eastern box turtle, Black snake, Wood turtle, Eel, Sucker, Fringed gentian, Pink/yellow lady slipper, Wood Betony, leopard frog, several salamander species

Re: Comprehensive Plan Comments

Dear Mr. Simoes,

Thank you for the opportunity to comment on the Draft Comprehensive Plan Update (Comp Plan.) Please include these comments in the Comp Plan, and I request that they be read out loud at the next Public Meeting that the Town will have regarding the Comp Plan. My comments are as follows:

1. The Comp Plan lists a set of goals and objectives that require a little more clarity to detail as to when these will be accomplished. A general schedule detailing the process length for these goals, with expected target end-dates should be included to ensure that they are addressed in a timely manner. The schedule should encompass a period of time until the next Update or new Comp Plan is expected.
2. Under a) Economic Development Goals, The Comp Plan goal on page 55 states : "Preserve the suburban and remaining semi-rural character of the Town." This requires additional detail as to how this will be accomplished. In addition, Zoning Laws need to be enacted to actually preserve existing residential areas and not allow increase of density of any type.

Preventing over-developement in single-family zones, will help preserve the "suburban and remaining semi-rural character of the Town" as a byproduct. I feel that the Town should modify it's code to prohibit the adjoining of residential zoning lots. Developers are circumventing bulk table requirements by creating larger lots in order to build large out of scale projects that destroy the "suburban and remaining semi-rural character of the Town." Allowing this activity contradicts the Town's goal of preservation. This prohibition is enforced by other municipalities NY State and would cost nothing to implement.

Also, the Comp Plan states: "Where Increasing density is warranted (i.e. active adult or volunteer housing,) enhancing the appearance or screening of the new development to lessen the impact of the surrounding area." This is not preserving the suburban and remaining semi-rural character of the Town. This is contributing to its disappearance. Increasing density in Single-family zones should not be warranted.

3. Goals and Objectives stated in the plan seem to be contrary to projects that have been presented, entertained and in some cases approved by the land use boards this past year. Specifically, projects that overdevelop single-family zoned areas with construction other than

single-family buildings have been or may yet be approved that destroy the suburban and rural character of the Town.

Q. Why wasn't a limited moratorium for the benefit of the Town's residents implemented this past year? A moratorium is in fact recommended by NY State whenever a Comprehensive Plan is considered for change or update. Especially a moratorium on permits and construction in Single-family zones to prevent what has happened in the case Schimpf Farm, or is currently being proposed on other properties around the town, which are destroying the suburban and semi-rural character of these neighborhoods.

I was told by the Town back in June of last year that a moratorium would take too long to approve (around 6 months), yet here we are a year later, and a flurry of over development type projects that are blatantly out of scale with the surrounding neighborhoods, are being proposed and heard at the T.A.C. and Planning Board with a Comprehensive Plan still in the Draft stages.

The Comp Plan should require the Town enact an automatic moratorium prior to the next New Comprehensive Plan or update to the existing one. In addition, the review of every land-use project submitted should be reviewed and required to ensure that it conforms with The Goals and Objectives in the Comprehensive Plan as well.

4. Under b) Environmental Resources.

A goal is stated that the Town will: "Continue the acquisition of open space to preserve natural habitats." This goal conflicts with the Town's intention to explore the possibility of developing the Rockland Country Day School Property. The goal refers to figure 18 in the draft, which appears to indicate that the Rockland Country Day School Property is an "Edge/Adjacency Parcel." If it's important enough to indicate that it's an "Edge/Adjacency Parcel," in an environmentally sensitive area, then it's important enough to be, and should be preserved, not developed.

5. The Town should have a goal to include the need for Affordable and Senior housing in areas that are convenient to their "use," such as hamlet centers and or zones outside of but adjacent to the Single family zones, closer to, or within hamlet centers that will service them.
6. I understand that the answers to public comments will be provided in the Final Plan Update to be approved by the Town Board. Why is the public not being given the courtesy of responses in the draft form of the Plan? This is not giving anyone an opportunity to have a discourse about responses the Town gives. I urge the Town to allow the public a chance to view the Town's responses to their comments with a second chance to comment before the Town Board's final vote on approving the Comprehensive Plan.

Thank you.

Sincerely,

David Ramirez, R.A.
